*Gelsemium*.—In the description of this drug the new Pharmacopœia brings out the fact that the numerous distinct medullary rays are eccentric in the rhizome, and with four groups of internal phloem. To the description might have been added the statement that the virtues of this drug reside almost entirely in the bark, the wood being practically inert and almost tasteless.

*Gentian*.—It is to be noted, in the description of this drug that the dried rhizome as well as root is recognized. The powder is stated to be free from starch grains and sclerenchymatic tissue.

In the old Pharmacopœia we find the term "meditullium" employed (as in the description of *Gentian*), but in the new this term seems to be absent. Pharmacognosicists do well to drop this indefinite, or misleading, term, which was intended, doubtless, to mean the portion inside the canebium, in cross sections of roots, etc.

*Hydrastis*.—To the description of this drug has been added the following:

Sections of *Hydrastis* treated with sulphuric acid show under the microscope the separation of the alkaloids in prismatic, tabular, and acicular crystals.

*Ipecac*.—Twelve lines are devoted to the description of this root (formerly seven lines). The Rio and Carthage *Ipecac* are described; the former description (the Rio) brings out the details of *Ipecac*, as well as the special characteristics of this variety. The Carthage is referred to as having its special physical properties only.

*Krameria*.—Fifteen lines are occupied in description (formerly six lines); separate descriptions are given for the Peruvian and the Savinilla and Brazilian *Krameria*. In the Peruvian the pinkish brown bark occupies less than one-third the radius, while the darker brown bark of the Savinilla occupies two-fifths or more of the radius. The taste of the latter is more astringent than that of the former.

*Nux Vomica*.—The description of the drug itself has been somewhat expanded, the important addition to the description being the following:

Powder light gray, the epidermal cells modified to strongly lignified hairs; endosperm cells thick walled, containing a fixed oil and aleurone grains and giving a blue or violet color with potassium dichromate and sulphuric acid; in the tissues of adhering fruit pulp [present in the powder] occur a few small, nearly spherical starch grains.

*Quassia*.—The description of quassia includes a paragraph devoted to Jamaica quassia and one to Surinam quassia. The medullary rays of the Jamaica quassia are stated to contain tetragonal prisms or small, arrow shaped crystals of calcium oxalate. In tangential section, the medullary rays of the Jamaica are observed to be mostly three or five rows of cells in width, while in the Surinam they are mostly one or two rows of cells in width.

*Scammonium*.—It is stated in the new description that an alcoholic solution is not colored blue on the addition of tincture of ferric chloride; not less than 75 per cent. should be soluble in ether, and when the residue left on the evaporation of the ethereal solution is dissolved in a hot solution of potassium or sodium hydroxide, it is not reprecipitated on the addition of diluted sulphuric acid; ash, not more than 3 per cent.

*Scopola*.—The first part of the description of this drug reads as follows:

Of horizontal growth, more or less curved and shortly and sharply flexuous, cylindraceous and somewhat flattened vertically, occurring mostly in pieces from 2.5 to 7.5 Cm. long and 0.8 to 1.6 Cm. broad, often split before drying; upper surface marked with closely set, large, cup shaped stem scars, margins irregularly contracted, etc.

*Strophanthus*.—The source of this is stated to be the ripe seed of *Strophanthus Kombé* Oliver. The physical characteristics, it will be noted, are different in some respects from the former official drug. The odor is stated as slight or heavy when the seeds are crushed and moistened.

The endosperm, and often parts of the cotyledons, quickly

assume a green color when crushed or cut and treated with concentrated sulphuric acid. Under the microscope the hairs are seen to be of a light greenish brown color, 1 Mm. or less in length and to consist of but one thin walled cell.

**Serpentaria.**—The 1890 Pharmacopœia, in its description of this drug, simply refers to the two varieties, the Virginia and Texas variety. The present Pharmacopœia gives each of these varieties a separate description. The Texas rhizome is about twice as large as that of the Virginia, of a grayish-brown color, and the roots are fewer, less interlacing and thicker.

**Sinapis.**—Much more space is given to the description of the two mustards. The extra space, however, is taken up very largely by a limit test of starch. Reference to this test was made in a preceding paper.

**Tragacantha.**—The description of this gum is expanded slightly, and the test is slightly modified as will be seen from the following:

On treating tragacanth with 50 parts of water, it swells and gradually forms a cloudy, gelatinous mass, which, on warming with solution of sodium hydroxide on a water bath, becomes yellow and is tinged blue on the addition of iodine T. S.; the addition of alcohol to the fluid portion causes a precipitate, but the liquid is not colored blue by iodine T. S.

**Vanilla.**—Added to the former description is a statement to the effect that the fruit is frequently covered with an efflorescence of vanillin in acicular crystals, and the seeds contained within the pulp are stated to be ovoid and flattened.

**Veratrum.**—The definition of this drug has been changed so as to cover both the American (*viride*) and the white (*album*). A somewhat similar case of an expanded definition is found in the Apocynum, which is now no longer the dry rhizome of *Apocynum Cannabifolium* Linne, alone, but also of "closely allied species" of Apocynum. This would seem to include also the *androsemifolium*. We do not know what our eclectic brethren will say to this liberty we have taken in the case of this drug, for many of them assert that these two species have decidedly different properties. Such cannot be said, however, of the two veratrums. They are practically the same therapeutically. The description of veratrum is changed very slightly. The old description refers to the external color as blackish-gray. The new gives it as "light to dark-brown or blackish."

**Viburnum.**—The two species *Opulus* and *Prunifolium* are distinguished in transverse sections by showing several bands of bast fibers (*Opulus*), and groups of stone cells readily distinguishable (*Prunifolium*).

**Xanthoxylum.**—The two varieties, the Northern and Southern have almost precisely the same descriptions they had in the Pharmacopœia (1890).

**Zea.**—The description; "a matted mass of slender filaments, thread-like yellowish or brownish," is an improvement on the former description.

**Zingiber.**—The official description is as follows: "Laterally compressed, irregularly branched pieces; externally whitish or pale buff, longitudinally striate; fracture short-fibrous, mealy, showing numerous small oil resin cells and circular groups of fibrovascular bundles; odor agreeably aromatic; taste aromatic and pungent."

We are glad to see that the terms referring to measurements are here entirely omitted. It seems to us that there are many cases where a similar procedure (of omission) would have been desirable. For example, in cinchona, possibly also Saigon cinnamon and wild cherry.

**Vitose** is a new ointment basis, which is said to be readily miscible with aqueous liquids, fats and glycerin. It forms a soft, neutral, odorless mass, and is understood to be a mixture of water, albumen, fat and glycerin. Made by J. E. Stroschein, Berlin, Germany, who also puts up vitose cream.

**Zinc peroxide soap** is a new antiseptic soap made by adding moistened zinc peroxide to ordinary household soap melted on a water bath in the proportion of 88 parts of soap to 20 parts of peroxide.

## CASCARA, AN IMPORTANT PRODUCT OF THE COUNTRY OF LEWIS AND CLARK.<sup>1</sup>

BY JOHN E. GHOFF, PH.G., PH.C.,

Professor of Botany, Materia Medica and Pharmacology in the Rhode Island College of Pharmacy and Allied Sciences, Providence, R. I.

The Northwest is rapidly passing its pioneer age. All the forces and products of nature are being laid hold of, and not the least important among them is cascara bark, indigenous to the very verge of the great territory revealed by Lewis and Clark. The pharmacology of the drug was assigned as the theme of this paper, but inasmuch as the rise and extensive use of it has been phenomenal and typical in its way of the country where it grows, we will consider it also in its other interesting aspects.

In the United States Pharmacopœia of 1880, 25 years ago, the drug is not mentioned. It is in the list of articles added to the Pharmacopœia of 1890. In the eighth decennial revision it is named and defined as follows: "*Rhamnus Purshiana*; *Cascara Sagrada*. The dried bark of *Rhamnus Purshiana* De Candolle (Fam. *Rhamnaceæ*), collected at least one year before being used."

### HISTORY.

In King's Dispensatory we learn that "Cascara was discovered by an eclectic physician, Dr. J. H. Bundy, its virtues being first extolled in *New Preparations*, Detroit, 1877. Parke, Davis & Co. introduced the fluid extract to the medical profession and gave it great conspicuity. It may be confidently said that to their efforts is due the widespread celebrity of this drug and its preparations."

In this connection, illustrating the truly Western commercial growth of this drug, I quote in full a letter received from Parke, Davis & Co:

It is impossible to give you more than a rough estimate concerning cascara. From the data at our command, we are inclined to believe that about three million pounds are consumed annually. These figures are probably as accurate as any that could be given without a lengthy and systematic canvass of all manufacturers.

### PHARMACOGNOSY.

The requirements of the Pharmacopœia are these:

In quills or curved pieces of variable length, and 1 to 5 Mm. thick, outer surface reddish brown, frequently more or less covered with grayish or whitish lichens, several of which are peculiar to this bark, and with small groups of their brownish fruit-heads; inner surface, yellowish to light brownish, becoming dark brown with age and reddened by alkalies; longitudinally striate; fracture short, with projections of bast fibers in the inner bark, and the medullary rays forming converging groups; color distinct; taste bitter and slightly acrid.

In addition, according to Jelliffe, "The medullary rays are thin and extend about three-fourths of the width across the bark. They occur in groups which converge at their outer ends, thus differing from *Rhamnus Californica*. Stone cells are present, thus distinguishing it from *Rhamnus frangula*. The powdered bark turns orange on the addition of alkalies, while *Rhamnus Californica* turns deep red."

While the new Pharmacopœia gives the microscopic features of some of the vegetable drugs, it does not give those of cascara, and again I quote from Jelliffe:

"The powder shows the following elements: crystals, starch, resin, cork, bast fibers, parenchyma, medullary ray tissue, stone cells, and fragments of long celled tissues from the phloem part of the fibrovascular bundles.

"Crystals are the most characteristic constituents of the powder . . . the rosette forms are the most common; these vary in size, but on the average run about 15 to 20 microns. Cubical crystals are found clinging about the bast fibers in numbers; these are smaller, averaging between 5 and 10 microns. The starch grains are small, and usually inconspicuous; size about 4 microns. Cork cells are abundant, often isolated and 15 to 25 microns in size. The yellow or brown bast fibers are 5 to 15 microns in short diameter and contain clustered cubical crystals in small crystal sacs along their diameter."

<sup>1</sup> Written for the Pharmaceutical Congress of the Lewis and Clark Exposition, Portland, Ore., 1905.

## CHEMICAL COMPOSITION.

Professor Prescott found the chemical composition to be: (1) A brown resin, bitter to the taste, turned purple red by caustic alkalies, acids precipitating it from the solution; occurring in the middle and inner layers of the bark. (2) A red resin, nearly tasteless, colored brown by caustic alkalies; occurring in the corky layer. (3) A light yellow resin, tasteless, and not colored by potassium hydroxide. Besides these, a neutral crystallizable body not giving alkaloidal reactions.

A. R. L. Dohme and H. Englehardt have succeeded in isolating from cascara a glucoside which they named purshianin.

H. F. Meier and J. Le Roy Webber found a ferment occurring in recent bark and destroyed by heat. To this latter principle, it is claimed, the vomiting and griping of recent bark are due.

## PHARMACOLOGY.

In Cushney's "Pharmacology and Materia Medica" we find the statement that: "Many classifications of the purgatives have been based on their effects, and some of the terms are still retained, such as aperient, laxative, purgative, cholagogue, hydragogue, cathartic, drastic eccoprotic, etc. But the effect of the purgative is determined largely by the dose and by the condition of the intestine, so that a small dose may act as an aperient, laxative or eccoprotic, while a large dose of the same drug, or even the same dose in a more susceptible individual, may act as a drastic or hydragogue cathartic. It is therefore preferable to classify them according to their chemical nature as far as that is known, and in this way three classes may be formed: (1) purgative oils; (2) purgatives of the anthracene series; (3) the jalapin group. This classification places cascara among the anthracene purgatives.

A number of purgatives owe their activity to the presence of irritant anthracene ( $C_{14}H_{10}$ ) compounds, only a few of which have been isolated.

Their chemical examination is a matter of great difficulty, as they contain several active principles which are very nearly related to each other, and some of which are undoubtedly the products of the decomposition of more complex bodies. In addition, several pure substances have been found to be less certain in their purgative action than the crude drugs; probably because the colloids in the latter aid in their solution.

All the principles that have been isolated have proved to be derivatives of anthraquinone, and some of the oxyanthraquinones seem to be widely distributed. Thus all the members of this group contain trioxymethylanthraquinone, or emodin.

It is still undecided whether the emodin found in different drugs is identical or merely isomeric.

An acid glucoside, cathartin, has been found in cascara. Cathartin has been used in its pure state experimentally.

In moderate doses purgatives simply hasten the normal movements of the intestines and the stool is of the ordinary appearance and consistence.

In larger quantities they cause a more profuse evacuation than normal, and the stools, which are repeated at short intervals, are of a looser, more fluid consistency. Their action is accompanied by considerable pain and colic, and the hurried movements are shown by the characteristic gurgling sounds.

## PREPARATIONS.

There are but two official preparations of cascara, the fluid and solid extracts. There are, however, numerous elixirs, so-called tasteless preparations, cordials, etc., introduced into the market by the manufacturing pharmacists, and the money value of the drug must be enormous. It has risen into favor rapidly and evidently is here to stay, and the Northwest may be proud to be its home.

**Vaporin for Whooping Cough.**—Under this name Montini employs a mixture of naphthalin, 180; camphor, 20; eucalyptus globulus oil, 3, as a vapor for the treatment of pertussis. The mixture is put in boiling water, and the room in which the child is located saturated with the vapor. This is stated to give immediate relief.—*Med. Press*, through *Phar. Jour.*

PROPRIETARIES AGAIN.<sup>1</sup>

The baneful condemnation by many of our official organs of the use of proprietary preparations in general has reached a stage of that condition commonly known as "overripe." The repeated literary tirades against these interests, mainly judged by what is commensurate with the ideals of the editor, has been especially effective upon that class of members of the profession who tremble lest they side-step in the path of organized medicine.

A representative of one of our well-known pharmaceutical firms dropped in upon one of the younger members of our local fraternity for the purpose of "sampling" him. This brother, evidently "nightmared" by the "ethics" in proprietary administration, greeted the representative with a bluff demand for the formula of the preparation he wished to present to the consideration of the doctor. The representative answered the question propounded in as affable a manner as possible, but was given little opportunity to present the special features in connection with his preparation. However, before returning his samples to his case, which, by the way, he refused the physician because of his manner of reception, he casually inquired if the doctor had been accustomed to make use of a well-known preparation as a gargle, and inquired as to the merits of it. The doctor spoke flatteringly of the preparation, manifesting full confidence in its virtue. The representative's parting shot to the physician was: "Doctor, what's the composition of the preparation we have just discussed?" This was a knockout blow, and the self-gratified representative left the physician, mumbling incoherently, at the same time rustling through a pack of miscellaneous magazines, evidently for the purpose of locating a copy of the formula of this proprietary preparation that he had just previously so vociferously lauded.

Another illustration of where the "war cry" was taken up is in the following: A physician of seven years' practical experience, backed by a diploma from one of our foremost Northern institutions, located in our State for the purpose of practicing medicine. After a month's residence, during which time he had emphasized the fact among his brother physicians that he had never prescribed a proprietary medicine, but prided himself on his ability to arrange his own combinations, he became aware of the fact that an examination before the State Board was an essential in his case. The result was a failure to successfully pass our State Board of Examiners, and we are told his main stumbling block proved to be materia medica. This strict adherent to the nonuse of proprietaries is now back in Northern climes. The tendency for some "sticklers" to overdo this question reminds us of the following story:

It is said that there was at one time an individual who had so indissolubly bound himself up in the disasters incident to the Galveston flood that to any and all whom he chanced to meet he constantly referred to this terrible calamity. The public, tiring of this, now a record of history, persistently shunned him. In due course of time this poor mortal shuffled off to the better world. Heaven, however, proved no relief, for he immediately began his pessimistic tirades of the direful results of the Galveston flood. One day he fell into conversation with one of the ancients, who gave no heed to his recitations upon this subject. In despair he called to one of the angels, and asked if this fellow was deaf and dumb, but received the reply, "There are no deaf and dumb in Heaven." "Pray, tell me who can this individual be who gives no heed to my story." The reply came, "Knowest thou not this man? Why, it is Noah, and he has had some experience with water himself."

And so it is with those official organs that are howling against the general use made of proprietaries. We tire of this constant harangue against those physicians who do not prescribe to their liking.

While we are ready to indorse the attempts that are being made to place the practice of medicine upon a higher basis, yet we are not led to believe that the great army of medical men throughout our country will marshal themselves at the bugle call of the editor of the *California State Journal of Medi-*

<sup>1</sup> *Courier-Record of Medicine.*

one and others. There is a marked degree of independence in the profession that will forever and eternally prevent any attempts to curtail independent action on the part of the individual physician. With the years of hard study of the causation and symptomology of disease, it does not stand to reason that the average physician will habitually prescribe preparations, the composition of which he is in absolute ignorance, and concerning the manufacture of which he is equally ignorant. The statement that the average physician to-day is as capable of compounding a tonic that will prove both as efficient and palatable as that furnished through our proprietary houses is nonsensical.

Medicine, among its revisions in the past century, has included a new field—that of the pharmaceutical chemist. The time is past when it falls to the physician's lot to act as a referee upon all matters pertaining to sciences. To-day these subjects are in the hands of those who have given to them a life study, as a result of the demands of this world's progress. Pharmaceutical chemistry to-day owes its advanced strides to the painstaking efforts on the part of our pharmaceutical houses to supply the physician with both a palatable and efficient preparation.

The question of secrecy or nonsecrecy lies, as a matter of fact, with the individual physician. There are at present relatively few preparations, the essential constituents of which would not be divulged by the makers upon application. That they are not divulged is more a result of financial protection against unscrupulous druggists than for the purpose of defrauding the physician. Pharmaceutical preparations differ in no wise from others of the world's goods, their true virtue being in the intrinsic value. The writer cannot conceive of any

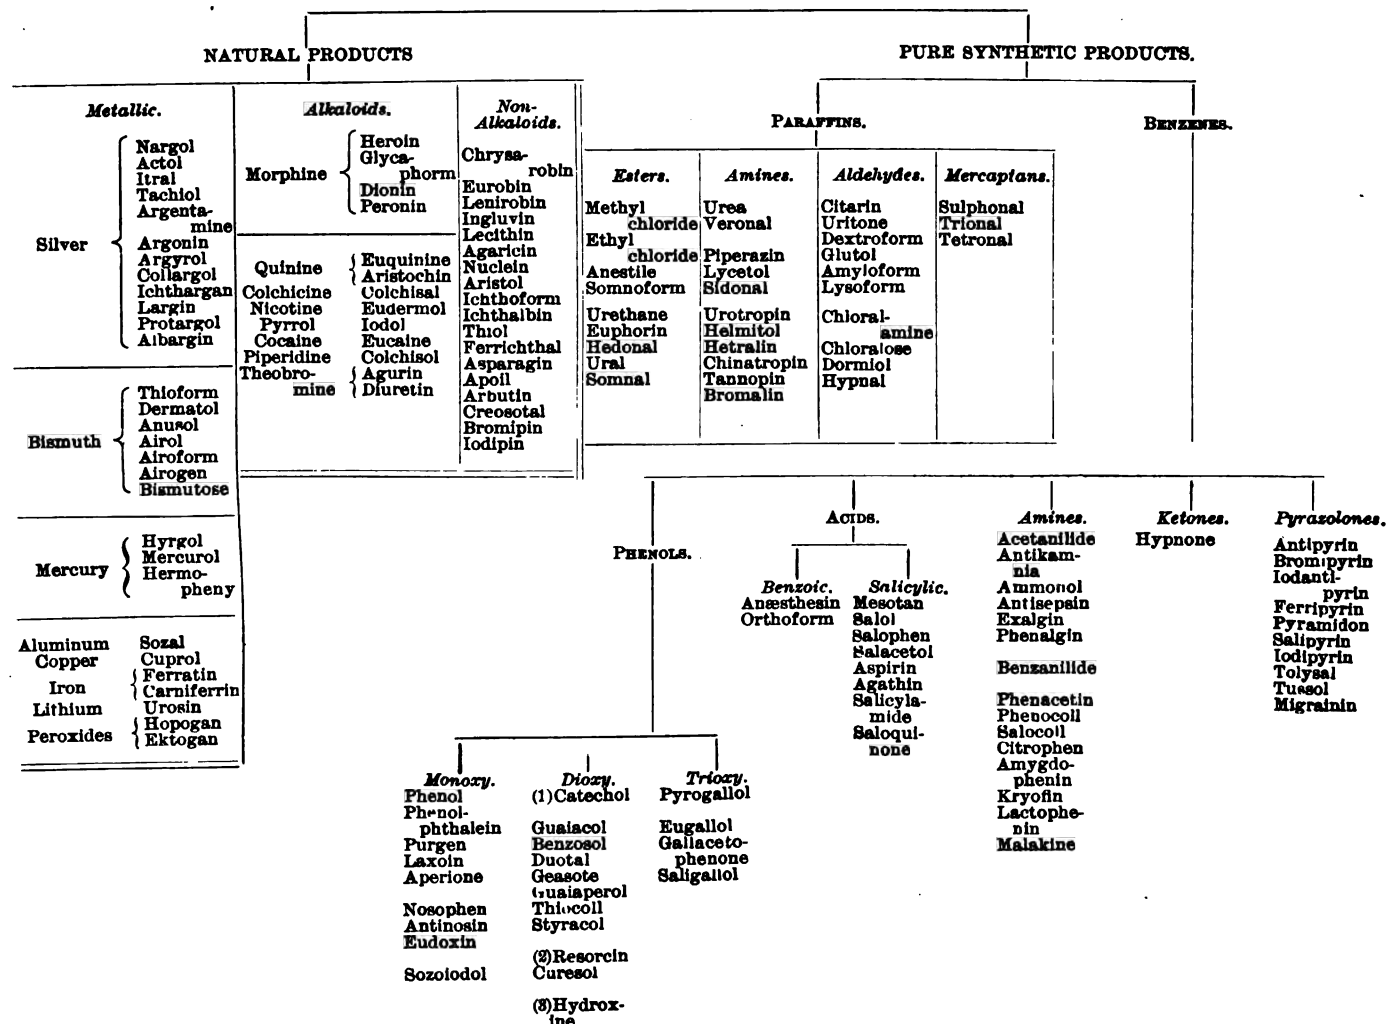

physician prescribing preparations, the composition of which he is in absolute ignorance, and at the same time is of no therapeutical value.

We believe that the great proprietary scare is now over, and that precious few are those men who have been led to modify their system of therapeutics by the appearance of this proprietary ghost.

### Classification of the Newer Remedies.

At a recent meeting of the Cheltenham and District Chemists' Association, which was reported in the *Pharmaceutical Journal*, William Palmer showed, by means of the accompanying chart and by diagrams and formulas on a blackboard, the relations existing between a large number of modern chemicals. In most cases the formula was given for the typical substance of the group to which it belonged, and the chief characteristic reactions explained. The natural products divided into the three groups—metallic, alkaloidal, and non-alkaloidal bodies—were briefly dealt with, while the pure synthetic products were treated with in a more detailed manner. It was suggested that in studying the compounds they should be reviewed in groups and not as isolated units, by which method no great simplification is effected. For instance, in the group comprising phenacetin, the outline process for its preparation was shown by means of graphic formulas, and its derivatives, phenocoll, salocoll, etc., were then dismissed with a few brief remarks on each. In this way the whole chart was concisely gone through and explained in the course of an hour, and a bird's-eye view of the entire scheme of modern therapeutics was thus presented in a clear and intelligible manner.

### MODERN MATERIA MEDICA.

HYDRARGYRI OXIDUM FLAVUM.<sup>1</sup>

BY G. PINCHBECK, Ph.C., F.C.S.

Yellow mercuric oxide has been in use for a great number of years as a remedy for chronic ophthalmia, ulceration of the cornea and all forms of conjunctival inflammation, having been first publicly recommended in a paper contributed by Mr. Balmanno Squire. It was first used by Prof. H. Pagenstecher in 1856, on the suggestion of Apotheker Hofman, of Wiesbaden, who recommended the freshly precipitated oxide in place of red oxide, which the professor had up to that period employed in his ophthalmic treatment. Further prominence was given to its value in eye treatment by Dr. Pagenstecher and Dr. Hofman in the *Ophthalmic Review* of July, 1865, and as a consequence it began to be used in place of the red oxide.

Reference to the foregoing paper will show that the intention was to have a freshly precipitated oxide for the preparation of eye ointment.

The therapeutic value of the oxide when exhibited in the form of an eye ointment depends to a large extent on its freshness, as the varying conditions of storage—irregular phases of temperature and exposure, accidental or otherwise, to light or moisture—tend to promote physical changes—e. g., heightened color, aggregation of particles into masses, etc. The presence of pointed particles or particles of irregular size causes the ointment to produce intense irritation when applied to the conjunctiva. The subject of elimination of all danger from these sources has been the object of recent investigation.

The method of preparation generally followed and preferable to any other, owing to the comparative purity of the substances employed, is the process given in the *British Pharmacopœia*, 1885—viz., precipitation of a solution of mercuric chloride by a solution of potassium hydroxide.

Various modifications of the manipulation of the precipitated oxide obtained by this process have been advocated by different workers. Schweissinger (*Pharm. Zentr.*, 1898, 874) suggested removing the water from precipitate in filter by suction and finally mixing the mass with a good vehicle. Since the ointment prepared by this method contains water, P. Knapp (*Deutsch. Med. Zeit.*, 1904, 27, 295) recommends the removal of the adhering water from the precipitated oxide by percolating with alcohol and ether—mixing the ethereal residue with white vaseline—and removal of the ether by subsequent evaporation. Although this process yields an ointment containing mercuric oxide in a very fine state of division, F. Schanz (*Zeitschrift, Augenheilk.*, 1904, 529) has shown that mercuric oxide is decomposed by alcohol and that it is difficult to remove the ether from the paraffin basis.

The writer has investigated the above modifications and favors the method of incorporating the precipitated oxide (deprived of a portion of its adhering water) with a suitable basis. The reasons for arriving at this conclusion are: (1) The freshly precipitated oxide is in an extremely minute state of division; (2) the oxide can be more intimately divided when mixed with the basis; (3) any possibility of pointed particles being present is obviated by the fineness attained during the process of incorporation.

The following are the details of the method of procedure: Precipitate the oxide in the shade (a photographic dark room is better), wash by decantation, finally transfer precipitate to a calico filter and continue washing with water till free from alkali (using phenolphthalein as an indicator); remove the adherent water by the use of a filter pump and then dry gently on a water bath, or water oven, stopping when not more than 20 per cent. of water remains (deduced by assay); finally, incorporate with the basis (to be described).

In choosing a suitable basis it is necessary to bear in mind (a) the consistence of the precipitated oxide; owing to the contained water it is desirable to introduce a fat (preferably animal) of an absorbent nature, and as the latter may have a low melting point or be too soft when employed alone, it may be necessary to incorporate some other fat, or a mixture of fats; (b) the uniform distribution of the particles; in order to

successfully combat the ravages of the invading bacteria answerable for the different forms of ophthalmia and induce a return to the normal condition of the surfaces affected it is highly desirable that the oxide be uniformly diffused through a basis which will comply with the following stipulations, viz.: (1) Remain soft, without being too fluid; (2) melt at the body heat; (3) be devoid of chemical action, and (4) be stable.

A combination of wool fat either with spermaceti ointment or white soft paraffin yields excellent results.

The spermaceti ointment should be freshly prepared and minus the benzoin; it is preferable to soft paraffin, owing to its highly emollient qualities.

The following formula is suggested:

|   |         |
|---|---------|
| Yellow mercuric oxide (+ $\infty$ per cent. H <sub>2</sub> O) ..... | 0.1-1.0 |
| Anhydrous wool fat.....   | 1.0     |
| Spermaceti ointment (— benzoin), or white paraffin, to.....         | 10.0    |

## Mix.

The ointment prepared according to this method is homogeneous, keeps well and does not show any stratification or fluorescence (cf. Ung. Hydrarg. Oxid. Flav., B. P.) on keeping.

BENZIN, NAPHTHA AND GASOLINE.<sup>1</sup>

BY OTTO RAUBENHEIMER, Ph.G.,

Brooklyn, N. Y.

Much confusion exists in regard to the products termed respectively benzin, naphtha and gasoline. I have repeatedly sent to paint stores and even to drug stores and asked for gasoline and received instead ordinary benzin. When I would return it as not the fluid asked for I would be invariably told that it was "all the same."

Benzin, naphtha and gasoline may be compared to 94 per cent. alcohol, deodorized alcohol and absolute alcohol. If a customer asked for absolute alcohol the pharmacist would not think of giving him 94 per cent. alcohol in place of it, but the very same pharmacist would have no hesitation about dispensing benzin for gasoline. Of course, he might make the argument that gasoline was too explosive and too highly inflammable, and therefore too dangerous, to use. The customer, however, ought to be told these facts and warned not to use it in a room in which a light is burning. For cleansing purposes it is best to use it outdoors. In addition, a red danger label ought to be attached to the container.

Let us consider for a moment the difference between benzin, naphtha and gasoline. When crude oil is subjected to fractional distillation the very lightest hydrocarbons distil over first, the product being called gasoline. The next distillate, of a heavier specific gravity, is naphtha, and the next heavier is benzin, the last and heaviest being kerosene.

The specific gravity of these liquids is ordinarily taken with a Baumé hydrometer for liquids lighter than water, or what is called a coal oil hydrometer. It is graduated from 10 degrees at bottom of the stem to 100 degrees at the upper part. The lighter the liquid the deeper the coal oil hydrometer will sink into it.

The instrument is adjusted for liquids at a temperature of 60 degrees F. To correct differences arising from a change of temperature 1 degree Baumé is added for every 10 degrees of temperature below 60 degrees F. For fluids at a temperature above 60 degrees F. 1 degree Baumé must be subtracted.

As I use considerable quantities of benzin, naphtha and gasoline in one branch of my business I have devised a simple method of distinguishing these three hydrocarbons—namely, by taking the Baumé degree standard. The following figures represent approximately standard readings:

|   |
|---|
| 60 to 69 degrees B. = benzin, usually 62 degrees.   |
| 70 to 79 degrees B. = naphtha, usually 76 degrees.  |
| 80 to 89 degrees B. = gasoline, usually 86 degrees. |

I hope that these figures will be of service to the profession, especially since most of the reference books reveal confusion as to the difference between benzin, naphtha and gasoline.

<sup>1</sup> The Pharmaceutical Journal.<sup>1</sup> Presented to the American Pharmaceutical Association, 1905.

### A MODEL PREREQUISITE LAW.<sup>1</sup>

Under a republican form of government, the greatest danger that can come to any reform is for it to acquire legislative sanction before it has received the sanction of public opinion, upon which it must depend for its continuance and enforcement.

Human institutions, both legal and of custom and opinion, are not like buildings which can be torn away and restored *de novo*; and hence changes and reforms in either, to be permanent, must be made to fit into the pre-existing structure without greatly disturbing prevailing sentiment or routine.

That the nature of the pharmacist's employment is such that public safety demands that no one should be admitted thereto without preliminary training afforded by a reputable college of pharmacy there is perhaps no difference of opinion among those who have given the subject sufficient consideration. That the college course should be preceded by a general literary education at least equivalent to a first-class high school course is likewise generally assented to. The only difference of opinion is as to the manner in which these reforms are to be brought about and the time when they shall take effect.

Instead of fixing a definite amount of preliminary literary training, the present form of prerequisite law leaves it to the pharmacy boards to adopt such a standard as may seem to them sufficient and feasible of enforcement.

That these boards will be as exacting in this respect as the circumstances of the case will warrant is fully demonstrated by current history. Given the power to enforce proper preliminary training, there is no doubt but that the boards will quite generally raise the standard to as high a point as seems to them expedient, and of this expediency the boards are in a better position to judge than any other authority.

These principles, as they are understood by the committee, have been kept in mind in the preparation of the proposed form of law which is hereby respectfully submitted.

Be it enacted by the General Assembly of the State of \_\_\_\_\_ that Section \_\_\_\_\_ (of the act regulating the Practice of Pharmacy) be amended so as to read as follows:

Section 1. In order to be licensed as a pharmacist within the meaning of this act an applicant shall be not less than 21 years of age and shall have been licensed as an assistant pharmacist for not less than two years prior to his application for license as a pharmacist, and he shall present to the Board of Pharmacy satisfactory evidence that he is a graduate of an incorporated school or college of pharmacy or a department of pharmacy of a State university which shall possess a satisfactory equipment for giving instruction in the art and science of pharmacy, and which shall enforce such requirements for admission and graduation as shall be satisfactory to the Board of Pharmacy, and that he has had four years' experience in pharmacy under the instruction of a licensed pharmacist, and he shall also pass a satisfactory examination by or under the direction of the Board of Pharmacy.

Provided, however, that the actual time of attendance at a college of pharmacy or department of pharmacy at a State university approved by the Board of Pharmacy shall be deducted from the time of experience required, but in no case shall less than two years' experience be required for registration as a licensed pharmacist.

Sec. 2. That sections \_\_\_\_\_ (of the act regulating the practice of pharmacy) be and the same are hereby repealed.

Sec. 3. This act shall take effect and be in force from and after \_\_\_\_\_.

### Pharmaceutical Etymology.

Words of pharmaceutical interest between "pennage" and "pfennig" might not be expected to be numerous, but there are in fact a considerable number dealt with in the new part of the "Historical English Dictionary." The majority of these are, however, scientific terms constructed in methodic fashion, and devoid of historic or traditional attractions. Such are the "pers" (perchloride, peroxide, persulphate, etc.), the "pents" (pentavalent, for example), and the "peris" (like perianth).

Among the words which may be said to have grown instead

of being built are, first, "pennyroyal." This is a modification of the older English form, "puliole ryale," which was imported from the Old French *pouliol*, thyme, and this was a diminutive of the Latin *pulegium*. Skeat explains *pulegium* as formed from *puleium regium*, a sovereign remedy against fleas. "Peppermint" is a word which came into use two or three centuries later than "pennyroyal." Murray's earliest quotation is from Ray, 1696, "Mentha . . . saporis fervidæ . . . piperis."

"Pepper" has a very long history. The Latin *piper* and the Greek *piperi* are traceable to the Persian *pulpul* and the Arabic *fulful*, while the Sanskrit *pippali*, applied to long pepper, takes us back to prehistoric days. The condiment and its name were evidently introduced to the Germanic races more than 15 centuries ago.

"Pepsin" was a name devised by Schwann in 1836. He took it from the Greek *pepsis*, digestion, a derivative from *peptein*, to cook. "Percolate," from *percolare*, to strain through, presents no particular history.

"Perfume" is an old Italian word meaning to spread smoke or vapor. A little note on the pronunciation tells us that in the seventeenth and eighteenth centuries, and frequently among the poets of the nineteenth century, the accent fell on the second syllable. In Shakespeare, however, there are seven "per'fumes" and three "perfu'mes."

"Pessary" is medical Latin, formed from Latin *passum*, Greek *passos*, an oval stone used in playing a game like draughts. *Pessarum* was a plug used for medical purposes, of the same shape.

"Pestle" comes through Old French and Italian from the Latin *pistillum*, diminutive of *pistus*, the supine of the verb *pinere*, to pound. The mortar and pestle are as old as civilization, and were particularly familiar to the Israelites, as several allusions in the Bible show. Wyclif (1382) translates the word which appears in our version "threshing instrument" (2 Chron. xxi:23) by "pestle." A question from Lanfranc's "Cirurgerie," 1400, is worth reproducing, it reads so familiarly: "Make clene the mortar and than lele thereon camphore. Than do therto oile and grinde hem wel togidere with the pestel."

"Petroleum," rock oil, Latinized, was known to the ancients under the names of naphtha, asphaltos and bitumen. "Petroleum" was a happily invented word of more modern times. The first use of it is found in an Exchequer account of 1348, "Domino regi de precepto suo in cameram suam apud Calais viii lb de petroleum." Edward III was the lord king, and Calais the place where he was supplied with the 8 pounds of petroleum. Apparently he indulged in the luxury of a naphtha lamp in his chamber there.—Xrayser in *Chemist and Druggist*.

### Thinking Pharmaceutically.

Think pharmaceutically is the exhortation of the President of the Western Chemists' Association. In the sense in which Mr. Rogers gave the advice it may have been sound, but as a general maxim the wisdom of the counsel is open to controversy. Thinking pharmaceutically means thinking in a groove, and it promotes that reverent contemplation of our esteemed selves which inevitably manifests itself in hopeless resolutions, impossible claims, and an Ishmaelish attitude to the world generally. No doubt people of one idea are often terrible forces in a community, but, as Carlyle's mother said, "they are gay hard to live with." Napoleon had one such among his generals, and he said of him he could not do without Vandamme, but if he had two Vandammes he should certainly shoot one of them. The modern and obviously the more agreeable way of accomplishing an aim is to try to think the thoughts and realize the prejudices of our possible adversaries. If we get no other advantage from that policy we at least learn of the currents and rocks which we had better avoid.—Xrayser in *Chemist and Druggist*.

A good cement for metal joints consists of ground white lead worked up with enough powdered red lead to bring it to the consistency of putty, boiled linseed oil being finally added.

<sup>1</sup> Report of the A. Ph. A. Committee on Form of Law Requiring Graduation from a College of Pharmacy Before Registration, presented at Atlantic City, September, 1905.

## Cream of Current Literature

A summary of the leading articles in contemporary pharmaceutical periodicals.

**The Cure of Warts.**—According to Mantenin an excellent method for curing warts is as follows (*Pharmazeutische Zentralhalle*, October 12, 1905): Ten grains of magnesia are given daily, and a daily application to the warts is made of the following solution: Chloral hydrate, acetic acid, each 1 part; salicylic acid and ether of each 4 parts, and collodion, 15 parts. The warts disappear within a month.

**Synthetic Balsam of Peru.**—A synthetic balsam of Peru is on the market under the name of "perugen" (*Pharmazeutische Zeitung*, 1905, page 307). It is intended to replace the natural product and is probably obtained by dissolving aromatic gum resins or viscid balsams in ethers of the aromatic series. According to Dr. Evers, the manufacturer, this artificial balsam of Peru contains 60 per cent. of cinnamoin, and when it is kept for some time it is difficult to distinguish the natural from the artificial balsam of Peru, the physical and chemical properties of both being similar.

**A New Vegetable Powder for Modifying the Bitter Taste of Quinine.**—A Russian writer, Madame Otótzkaya (*Bulletin Medical*, September 23, 1905), has contributed an interesting chapter to the question of the best means of disguising the intensely bitter taste of quinine. She recommends the powder of a plant belonging to the order of Asclepiadaceæ, known as *Gymnema Sylvestris*, which grows in India and upon the east coast of Africa. The action of this powder in destroying the taste of quinine is quite peculiar; for it does not substitute a different taste for the original flavor, but paralyzes the endings of the nerves of taste on the surface of the tongue for a very short time. This action is due to the presence of a glucoside, known as gymnemic acid, which acts when it is in an alkaline solution. The powder is used by dissolving one gramme of it in 10 grammes of water, and adding a sufficient amount of caustic potash to make the mixture markedly alkaline. The solution is then boiled in a closed vessel and strained. [This is not new, having been noticed in the *American Journal of Pharmacy* in 1876.—Ed.]

**A New Form of Ice Bag for the Neck.**—Lowenstein (*Münchener Medizinische Wochenschrift*, 1905, page 1,463) describes a new ice bag for the neck which undoubtedly will prove useful. In treating sore throat, especially in its early stages, and particularly in singers, orators, etc., when the vocal cords are affected, physicians often advise the use of cold compresses. These are not very convenient, because they must be frequently changed, and the amount of refrigeration which can be obtained by this means is somewhat doubtful. An improvement, such as the ice bag which Lowenstein has invented, is therefore welcome. The ice bag is of elongated oval shape, and is intended to extend from one angle of the jaw to the other. It is attached to the front part of the neck by means of an adjustable rubber strap, which is tied behind. A small hook is attached on one side of the ice bag, so that the patient can unhook it without lifting his head. A second elastic strap is attached to the upper edge of the ice bag, and pulls it firmly upward, when it is passed over the head of the patient. The ice bag is easily filled and is closed with a rubber ring, so as to make it completely water-tight. It is made in two sizes, for children and for adults, by Garschaden & Rothstein, of Düsseldorf.

**The Chemistry of Maizine.**—Donard and Labbé, in a report to the Academy of Sciences (November 3, 1902), gave the results of their researches on maizine, an albuminoid principle derived from corn flour. They found a method of isolating the proteid material of corn flour in a chemically pure state. For this purpose they utilized the property possessed by iso-amylic alcohol of dissolving when hot a part of the proteid material of maize. The authors took maize flour, dried it, and treated it with benzine in order to remove all the oil. They then exhausted the product with about its own weight of anhydrous amylic alcohol, precipitated the amylic solution by means of three times its volume of benzine, filtered so as to

precipitate the flocculent deposit which formed, washed this precipitate with benzine, until the benzine no longer contained any amylic alcohol, and dried at first *in vacuo*, and then in the oven at 100 degrees. Maizine, thus prepared, is a light, white powder which does not dissolve in water or in solutions of salts, but is soluble in alcohol, acetone, etc. Corn flour contains about four or four-and-one-half per cent. of maizine. From the weight of the sulphur contained in maizine the authors deduced a minimum weight of 4,000 for the molecule, which would correspond to a formula of  $C_{120}H_{200}N_{10}O_{20}S$ . Its use in coating pills for enteric solution is described elsewhere.

**The Cause of the Red Color of Cinchona Bark.**—According to Tschirch (*Schweiz. Wochenschr. f. Chem. und Pharm.*, 1905, p. 125) the red color of cinchona is due to an enzyme. The author observed that kola nuts assume a red color upon their cut surface, under ordinary conditions, but if these nuts are kept in water at 80 degrees C. for a little while, and are then cut, their cut surfaces do not turn red. Furthermore, he observed in Java, in 1889, that the bark of the cinchona tree is colorless when it is detached from the tree, but after 65 seconds it turns red. He then instituted four series of experiments for the purpose of determining the cause of this change of color. It was found that the red color does not appear under the following conditions: (1) When the cut branches are at once placed in water at 80 degrees C. for at least half an hour; (2) When the cut branches are at once placed in steam at 80 degrees C. for half an hour, and (3) when thin branches of the living plant are bent down into a vessel of water at 80 degrees C. and kept there half an hour before cutting. The bark when detached remains colorless under these conditions, even after drying in the sun. The material turns red, however, when the twigs are not placed in steam, but are heated to 80 degrees or 100 degrees in a drying oven. This result evidently depends upon the defective conduction of heat through the air. From these experiments it appears that the cause of the red color of cinchona bark is an enzyme which is destroyed by a heat of 80 degrees C. in from 15 to 30 minutes.

**Maizine.**—A new material has been recently introduced for the purpose of coating pills and capsules which are not intended to dissolve before they reach the intestine. The name of this substance is maizine, and it is intended to supplant some of the other substances hitherto recommended for the same purpose, such as gluten, salol, fats, soap, collodion, keratin, etc., none of which completely satisfy all the requirements of pills intended solely for the intestines. In a recent report presented by Vaudin, Donard and Labbé to the Association of Doctors of Pharmacy in France (*Répertoire de Pharmacie*, October 10, 1905), maizine is highly recommended as a coating agent. It is prepared from corn flour, and was first extracted by Donard and Labbé. It occurs as a white non-hygroscopic powder which shows a property that is somewhat unusual in view of the fact that it is a proteid—namely, it dissolves in alcohol. It is also soluble in acetic acid, and is dissolved but very slowly in the juice of the stomach, while intestinal juice dissolves it very rapidly. It is this difference in solubility which makes it valuable for coating capsules or pills intended for the intestine. Solutions of maizine may be prepared by dissolving from 40 to 100 parts of this substance in alcohol. Fifty per cent. solutions in acetic acid may also be prepared. These solutions are thick and viscid, and thin and pliable coats can be prepared by means of them. By evaporating the solutions of this substance wafers can be made which are very useful in closing various medicinal substances, either liquids or solids. Of course, alcohol and tinctures containing alcohol cannot be enclosed in these wafers. The pills and capsules coated with maizine keep very well, and are not changed by hot weather or moisture. It is very easy to demonstrate the fact that they do not dissolve in the stomach, by simply keeping them in a test tube containing some gastric juice, obtained by means of the stomach tube, or even some artificial gastric juice.

**White Balsam of Peru.**—Heilmann (*Archiv der Pharmacie*, 1905, page 228) reviews the literature of the investigation on balsam of Peru, and the question as to the plants from which it is derived. He describes a white balsam which he examined, and which is interesting because it contains over 25 per cent. of cinnamic acid, and is, therefore, very valuable for medical purposes. It occurred as a cloudy, syrupy fluid of a yellowish color, and a marked odor of storax. A portion of it which was insoluble in alcohol was designated as "honduresen," and melted at 130° C., containing cinnamic acid. It was not identical with the myroxocerin described by Germann in 1897. By shaking the balsam with 5 per cent. sodium carbonate solution the author obtained "honduresinol," melting at 286° C., also containing cinnamic acid and having a formula of  $C_{16}H_{20}O_4$ . By shaking the ethereal solution of the balsam with 1 per cent. potassium hydrate, he obtained a substance, probably identical with styresonal (Tschirch) containing a great deal of cinnamic acid and resino-tannol, and having a formula of  $C_{20}H_{28}O_{10}$ . By distilling with steam an essential oil was obtained in which a terpene and a phenyl-propyl-alcohol could be demonstrated. The residue of the distillation contained cinnamic alcohol and phenyl-propyl-alcohol, which showed that the balsam could not be derived from the fruits of *Toluifera Pereira*, and therefore could not have been obtained by incising the stem of this plant. The balsam is also in several respects different from storax. Its employment in medicine should be of advantage, as it does not stain as does the dark balsam. Another white balsam of Peru from Honduras was examined (Tschirch), and by comparing it with true balsam Peru it was shown that the new balsam had nothing in common with the fruits of *Myroxylon Pereira*. It belongs rather to the storax balsams, and in addition to free cinnamic acid it contains a free resin ester of cinnamic acid and a colorless solid resin-alcohol, similar to storesinol, as well as a mixture of fluid resin esters of cinnamic acid with alcohols—(*Pharmazeutische Zentralhalle*, October 12, 1905.)

#### Are Codliver Oils That Become Cloudy Adulterated?

—Every pharmacist knows how codliver oil becomes cloudy at times without discoverable cause, and often the suspicion arises that some adulteration has been practised. The public is accustomed to buying a clear, limpid codliver oil and to regard these characteristics as signs of purity. Whether this is justified scientifically or not is a question recently discussed by Moreau and Bietrix (*Union Pharmaceutique*, September, 1905). These authors procured some genuine codliver oil from Bergen and from Dunkirk, whence come the best codliver oils sold in France. They investigated the exact way in which the samples which they purchased were obtained, and the exact methods which the oil underwent before being marketed. From the results of their investigations they concluded that the oils which they examined could be divided into two categories. First, oils that had been clarified, and second, oils that did not become clouded at a temperature of zero Centigrade. The natural oil, such as comes directly from the liver, is not clarified, is opalescent and contains some solid fatty material in suspension. In winter this oil becomes clouded, as the low temperature solidifies some of the fatty matter. The oil which does not cloud at zero is oil which has been allowed to stand during the winter and then drawn off. Usually this oil has been allowed to undergo a temperature of less than zero, and is then filtered, so as to remove any fatty material with relatively high melting point. When this oil is cooled it does not cloud any longer. According to the information obtained by the French authors named the white oil, which is obtained by pressing the livers in barrels, does not become clouded at 0° C., while the oil which is obtained by the steaming process becomes clouded at this temperature or even above it. The higher the temperature at which the oil is obtained the greater its tendency to become clouded, the best temperature for manufacturing being sixty degrees. As the method of manufacture of these oils varies in different regions, the composition of the oil naturally differs according to its source. The question now is, Does this congelation of the oil modify its composition, by re-

moving useful constituents, such as, for example, the iodides? In order to determine this question the authors took two samples of oil, one of which was not clarified and the other rendered unfreezable at zero. They filtered the non-clarified oil through filter paper and obtained a limpid, clear oil, having a normal taste and odor which did not cloud at zero. A part of this oil was frozen in a mixture of salt and ice and gave an abundant precipitate. This sample was again filtered, and the filtrate was tried in the same way as the other samples. The authors found, first, that all three varieties of oil, the non-clarified, the filtered and frozen, gave the same reactions with the tests recommended by the future edition of the Codex. The iodine figure for all three oils was practically identical. On the other hand, the non-clarified oil gave a greater proportion of fatty acid than the frozen oil. The iodine indexes exceeded the limits fixed by the future Codex, and therefore these limits should be increased. The frozen oil, which loses its solid fatty material when cooled, is very rich in oleic acid and yet does not show a higher iodine-index than the non-clarified oil. It is possible, however, that the iodine-index, being taken in only 0.25 gramme of oil cannot show a considerable difference in such a small quantity.

#### Incompatibilities of Some of the Quinine Alkaloids.—A.

B. Lyons (*Pharmaceutical Review* Vol. 22, p. 365) brings out some facts interesting to pharmacists who prepare pharmaceutical compounds into which enter the alkaloids of cinchona and some of its salts. Not long ago attention was called to the incompatibility between quinine sulphate and ammonium acetate, and the author mentioned a number of experiments with a view of studying this incompatibility.

He dissolved 1 gramme of quinine sulphate in 50 Cc. of water, to which were added 2½ Cc. of sulphuric acid (5 per cent). In the same manner he prepared solutions of quinidine, of cinchonidine and of cinchonine. To these solutions he added various salts, such as ammonium acetate, ammonium citrate, sodium salicylate, benzoate, borate, etc. In each case the amount of salt added was known. He then observed what occurred when the alkaloidal solution was precipitated by the addition of these salts. The results which he obtained with two of these salts, ammonium acetate and ammonium citrate, which are used in the preparation of elixirs containing the salts of quinine and phosphorus, or iron, are of considerable interest to the practical pharmacist.

**Ammonium Acetate.**—When 1 Cc. of a concentrated solution of ammonium acetate is added to the same amount of a solution of quinine sulphate, almost immediately some crystals will be formed. When the ammonium acetate is diluted the same result occurs. The precipitate is dissolved rapidly in alcohol. On adding equal parts of ammonium acetate to a solution of cinchonidine sulphate, very few crystals appear, and then only after shaking vigorously, but the crystals appear more rapidly when more of the ammoniacal solution is added. No precipitate occurs, however, when ammonium acetate is added to a solution of quinidine or cinchonidine sulphate. It will be seen from this how important these observations are when, for some reason or another, a pharmacist wishes to replace sodium citrate by ammonium acetate in preparing elixirs containing iron phosphate or pyrophosphate. In these preparations there is no danger of precipitating the quinine on account of the presence of alcohol.

**Ammonium Citrate.**—A 10 per cent. solution of ammonium citrate containing a slight excess of acid was used, and equal parts of this were added to a solution of quinine sulphate after diluting the ammoniacal fluid with a variable quantity of water. When 1 Cc. of water was added an abundant precipitate was formed, which was only partly dissolved by 1 Cc. of alcohol, and was dissolved by an excess of the latter. When 3 Cc. of water was added to the combination the precipitate was formed more slowly, and when 5 Cc. was added the precipitate formed only after shaking, and was dispelled by the addition of alcohol. Finally, with 8 Cc. of water no more crystals appeared, even after shaking.

## Queries and Answers

We shall be glad, in this department, to respond to calls for information on all pharmaceutical matters.

**The Responsibility of Principals for the Acts of Their Agents.**—L. C. B. propounds the following interesting query:

"Can I hold a firm for goods sold to me by their regular salesman, providing I have a witness to the transaction and tender the house the full cash payment in advance? What is the usual course followed by respectable houses?"

In our opinion a sale by an agent is not complete until the order has been accepted by the firm which has the goods for sale. The usual course followed by respectable houses is to honor the acts of their representatives, where such acts are not incompatible with the policy of the firm or with certain trade regulations in force at the time. Not knowing all the circumstances connected with the particular case cited we can only reply in this way.

**Elixir of Terpin Hydrate and Heroin.**—P. M. M. writes: "Would you kindly publish in your next issue a good formula for elixir terpin hydrate and heroin, each fluid drachm to contain 1 grain of the terpin hydrate and 1-24 grain of heroin."

By modifying the formula for elixir of terpin hydrate proposed by the Committee on National Formulary of the American Pharmaceutical Association, at the Philadelphia meeting in 1902, our correspondent will be able to produce a satisfactory elixir of the kind named by him. First make an elixir of terpin hydrate composed of the following:

### *Elixir of Terpin Hydrate.*

|  |              |
|--|--------------|
| Terpin hydrate (powdered).....         | grains 128   |
| Oil of sweet orange.....               | fl. drachm ½ |
| Glycerin .....                         | fl. oz. 10   |
| Alcohol, a sufficient quantity to make |              |
|  | fl. oz. 16   |

Dissolve the terpin hydrate in the glycerin with the aid of gentle heat, and when cold add 5 fluid ounces of alcohol. Dissolve the oil of sweet orange in ½ fluid ounce of alcohol, and mix with the solution of terpin hydrate, glycerin and alcohol, and pass through a plug of cotton placed in the neck of a funnel. Return the first portion until it comes through clear. Lastly, add enough alcohol to make 16 fluid ounces. Each fluid drachm represents 1 grain of terpin hydrate.

### *Elixir of Terpin Hydrate and Heroin.*

Heroin .....grains 5 1-3

Hydrochloric acid, dilute, a sufficient quantity to dissolve the heroin.

Elixir of terpin hydrate (modified), a sufficient quantity to make.....fl. oz. 16

Dissolve the heroin in the dilute hydrochloric acid, and add enough elixir of terpin hydrate to make 16 fluid ounces.

Each fluid drachm represents about 1 grain of terpin hydrate and 1.24 grain of heroin.

**One in One Solution of Sodium Phosphate.**—A. L. D. asks how he can make a 100 per cent. solution of sodium phosphate.

A solution of this kind is now official in the United States Pharmacopœia, it being made according to a formula which has been printed more than once in the AMERICAN DRUGGIST. The formula will be found at page 272, under the title *Liquor Sodii Phosphatis Compositus*.

A simpler formula, recommended by the Committee on National Formulary of the American Pharmaceutical Association, is the following:

|                                   |          |
|-----------------------------------|----------|
| Sodium phosphate in crystals..... | Gm. 100  |
| Citric acid .....                 | Gm. 23.4 |
| To make .....                     | Cc. 100  |

Triturate them together in a warm mortar until a liquid is obtained.

**Violet Perfume Tablets.**—W. M. F. writes: "Would you please furnish formulas for violet perfume tablets that will give out a lasting perfume."

We cannot place a formula for tablets of this kind, but their manufacture should not present any special difficulty. Powdered orris root would make a good vehicle for the violet perfume, and cherry gum or some similar adhesive agent might be used to form the tablet. If W. M. F. will write to one of the larger manufacturing houses stating his requirements we feel confident that he will experience no difficulty in obtaining what he desires.

**Mouth-Wash Tablets.**—I. McC. wishes to know how he may make a tablet which can be used for the extemporaneous preparation of an antiseptic mouth wash.

The composition of the tablets which are sold under the name "mouth-wash tablets" resembles the following:

|                                     |          |
|-------------------------------------|----------|
| Helliotropin .....                  | Gm. 0.01 |
| Saccharin .....                     | Gm. 0.01 |
| Salicylic acid .....                | Gm. 0.10 |
| Menthol .....                       | Gm. 1    |
| Milk sugar .....                    | Gm. 5    |
| Alcohol, scented with rose oil..... | q. s.    |

Sufficient alcohol is used to make a mass which is divided into 100 tablets. The mass may be colored red with eosine dye, green with chlorophyll, or blue with indigo carmin.

**Perfume Tablets.**—W. M. F.—As a cosmetic specialty for the winter months scented paraffin tablets are suggested. Paraffin is melted on a water bath and mixed with any desired portion of perfume, the whole being then cast into molds, and the tablets employed either as an application to chapped surfaces or by placing them in the clothes drawer in the same way as sachet powder. The following formulas are suggested:

### I.

|                    |         |
|--------------------|---------|
| Lavender oil ..... | Gm. 7   |
| Clove oil .....    | Gm. 3   |
| Geranium oil ..... | Gm. 1   |
| Bergamot oil ..... | Gm. 7   |
| Vanillin .....     | Gm. 0.5 |
| Paraffin .....     | Gm. 125 |

### II.

|                    |          |
|--------------------|----------|
| Neroli oil .....   | Gm. 8    |
| Geranium oil ..... | Gm. 3    |
| Lavender oil ..... | Gm. 3    |
| Bergamot oil ..... | Gm. 7    |
| Clove oil .....    | Gm. 0.25 |
| Helliotropin ..... | Gm. 1    |
| Glycerin .....     | Gm. 8    |
| Paraffin .....     | Gm. 250  |

### III.

|                       |         |
|-----------------------|---------|
| Ylang-Ylang oil ..... | Gm. 7   |
| Cumarin .....         | Gm. 1   |
| Essence of musk.....  | Gm. 1   |
| Clove oil .....       | Gm. 8   |
| Sandalwood oil .....  | Gm. 2   |
| Glycerin .....        | Gm. 3   |
| Paraffin .....        | Gm. 125 |

**Sponge Bleaching Process.**—D. G.—The sponges to be bleached are first to be deprived of their sand and other obvious impurities or damaged portions by beating, washing or trimming, and then soaked in a 1 per cent. solution of potassium permanganate for about 15 minutes. They are then removed and washed with water until the latter runs off colorless. The sponges are next placed in a solution of sodium thiosulphate containing 1 troy ounce to the pint. To this solution is added hydrochloric acid in the proportion of 1 fluid ounce of acid diluted with 4 fluid ounces of water for every pint of the last mentioned solution. The sponges are macerated in this liquid for about 15 minutes or until sufficiently bleached. They are then removed and washed thoroughly with water.

Another method of bleaching sponges calls for the use of two solutions, as follows:

### I.

|                              |           |
|------------------------------|-----------|
| Potassium permanganate ..... | part 1    |
| Water .....                  | parts 100 |

## II.

Sodium sulphite crystals.....part 1  
Water .....parts 100

The sponges are placed in the first solution for one hour, then well wrung and transferred to the second, to which is then added:

Common hydrochloric acid.....parts 2½

The sponges quickly become bleached on soaking and then wringing them out several times.

They are then at once washed out with warm water and placed in a ½ per cent. solution of sodium thiosulphate to remove any traces of acid. Alkali must not be used for this purpose, as the sponges are liable to become brown.

### Correspondence.

#### The Restriction Regarding the Publication of Comments on : the Pharmacopœia.

To the Editor:

Sir,—Since it was at my request that the Board of Trustees of the United States Pharmacopœia issued the statement that has been printed in most of the pharmaceutical journals regarding the date when it was permissible to publish works making use of the text of the United States Pharmacopœia, and since that statement has excited considerable discussion, it seems proper that I should state publicly the circumstances which led to that action.

It was the original expectation of the authors and publishers of the National Standard Dispensatory that, according to the previously invariable rule, commentaries on the United States Pharmacopœia could be published simultaneously with it. The last Pharmacopœial convention re-elected to its presidency one of the authors of a Dispensatory which has regularly followed this course, and the Committee of Revision elected as its chairman his associate author. This is presumptive evidence that these bodies approved of the procedure referred to, and no author or publisher could fail so to assume. Nevertheless, when the Board of Trustees adopted a resolution that declared it to be their opinion that members of the Committee of Revision could not honorably publish their books until after the Pharmacopœia had become official, our plan was changed so as to conform to this opinion. This action was entirely voluntary, as our publishers were already in possession of a contract regularly purchased from the Board of Trustees entitling them to the use of the Pharmacopœia text in the customary way and with no stipulation as to any delay in publication. There is no law or rule of business which can compel a change in the terms of a contract duly executed. Our publishers voluntarily agreed to conform with the wish of the board for a delay, regardless of their obvious interests.

In due time the chairman of the Revision Committee issued the following notice to publishers interested: "The Board of Trustees has taken action upon the subject of furnishing information concerning the text of the Pharmacopœia, and this advance copy is sent you with the understanding that your publication using part of the text of the book shall not be placed on sale before September 1, 1905, the time officially set for the Pharmacopœia to go into effect."

A few days previous to the meeting of the American Pharmaceutical Association at Atlantic City, the *Pharmaceutical Era* published an editorial statement that it had been informed by a member of the Revision Committee that the dispensatories could not be published until ninety days after the Pharmacopœia had become official. At the Atlantic City meeting this statement in the *Era* was industriously used to prevent sales of the National Standard Dispensatory. Professor Caspari and myself therefore appeared before a meeting of the United States Pharmacopœia Board, then in session, and asked for a statement of the facts. This board assured us that our publishers and ourselves had fulfilled all legal and honorable obligations to the Pharmacopœia, and they resolved to publish their previous resolution in order to make this fact known.

H. H. RUSBY.

*Under this head will appear suggestions and plans for increasing trade, advertising experiences, information, and notes of interest useful to the pharmacist in the preparation of his advertising matter. Specimens of current advertising will be reproduced, with suggestive analysis and criticism, and queries relative to advertising matters will be answered. To avoid delay address communications to the Department of Business Building, AMERICAN DRUGGIST, 66 West Broadway, N. Y.*

#### PROFIT IS MADE IN BUYING, NOT IN SELLING, GOODS:¹

By W. C. ALPERS, Sc.D.,  
New York.

The low selling price of many commodities generally sold in pharmacies has become such a universal evil that it may justly be said that at least 99 per cent. of all pharmacists suffer more or less from this deplorable state of affairs. It is natural, therefore, that such an evil should be considered, not only by the individual, but also jointly by pharmaceutical associations, whether local or national, and that the best talent in our profession should have worked for years to find satisfactory remedies.

In most of the arguments touching on this subject we find a tendency to attribute mischievous and wicked motives to those who sell at remarkably low prices, and it is often stated that pharmaceutical goods are especially selected and sold at cost, or even less, for the purpose of using them as catching advertisements and thereby deceiving the public. Now, while it may be true that once in while such a mischievous motive exists, induced very often by abusive attacks on this method of conducting a business, it is yet by no means the rule. A sane business man, particularly one who has charge of large concerns and must give account of large invested capital, is not guided in his doings by smallness, meanness or narrowness. He is subject to the same general influences of the tendencies of trade, and being generally a sharp, keen observer he discovers in advance where a successful move of this kind can be made, and he is not willing to risk his reputation or position for the sake of spiting his neighbor.

It would seem at first sight that efforts on our part to combat the large dealer were hopeless, even admitting that his influence ought to be combatted. An evolution of such magnitude and universality cannot work mischief alone. The common sense of mankind would revolt against it, and it would have been crushed out long ago if it had not its beneficent sides. It has always been my opinion—in fact, one of the principles of my business life—to study those more successful than myself, with a view to discover the reason why they succeed where I fail, and to see if my failure and their success cannot teach me a lesson. If my competitor is more successful than I am it does not appeal to my good judgment or common sense to say that his methods are wrong and mine are right. Success in business is not a theory, but a fact, and is not accomplished by chance. If the correctness of these ideas is admitted we can learn at least one good lesson from our larger competitors—a lesson which, it seems to me, has been steadily ignored in the gigantic efforts to better our condition.

There are probably several reasons why large dealers are able to sell goods at lower prices than the smaller retailers. Let me point out only one of them: It is that they buy cheaper than we do, and, buying cheaper, they can sell cheaper. One of the steps of the commercial evolution of modern times has been the gradual reduction in the number

¹ Read in the Commercial Section of the American Pharmaceutical Association at Atlantic City, September, 1905.

of middlemen that stand between the manufacturer and the public. The oftener goods are handled and passed from one business to another the higher their price must naturally be, and the direct transmission of merchandise from the producer to the consumer is one of the leading principles of large dealers. It therefore seems that we should heed this lesson and pay more attention to the buying of goods. So long as we pay prices for goods which are as high as those for which our large competitors can sell them with a good round profit we cannot expect to compete with them. There is no one article in the world, and never will be, that cannot be bought to greater advantage if bought in large quantities. Trade discounts and cash discounts are not benefits that are granted the buyer; they are the positive and just right of the buyer, which he can and will demand.

The final success in all economic matters depends on the continued reproduction of labor; so capital, small or large, which is only accumulated labor, must again be productive and its power and investment must be recognized by those who wish to obtain it. This is the fundamental principle of all trading, and will remain its fundamental principle, because without its recognition the very impetus of invested capital is taken away, and dullness and stagnation will be the result. In this direction, then, our efforts should be led. Instead of buying small quantities of goods twelve or twenty times a year a large quantity should be bought at one time. A strict record of all purchases should be kept by means of stock cards, which I have repeatedly described and recommended in this association. A record of all prices for years back should be at the pharmacist's disposal at a glance, and in this way a proper measure of the various purchases obtained.

It will, of course, be said at once that in order to carry this out in all details would require a larger capital than the average pharmacist has at his disposal. This is certainly true, but the first answer to this will be that hundreds of pharmacies in this country have been started, and are starting every day, that from a commercial standpoint have no right to exist. We all know that, again and again, without the capacity of conducting business successfully, young men will start in business with almost no capital, induced by agents of wholesale houses who are willing to run the risk of long credits and doubtful returns. These young men must, of course, pay the highest prices for every article that they buy, and they start under an enormous load of unpaid bills, far in excess of the reasonable allowance for the size of their business. Their calculations of the cost of goods and the profits they must make are wrong from the beginning, and often remain so until they break down, or throughout their whole lives. They take away just enough business from established stores to also ruin the latter's prosperity, without being able to show in the least any benefit to themselves or the public.

These words may be hard and appear heartless, but they are true and according to facts. One of the objects of united efforts in this direction should therefore be to induce jobbers and wholesalers not to accept orders from beginners or new stores unless the whole first purchase is paid for in cash. Such an arrangement would in the course of some years be of enormous advantage, not only to the profession but to the retailer now in business, to the public in general and principally to those deluded young men who, in an outburst of misdirected enthusiasm, waste their energy and are more miserable as proprietors than they were as clerks.

Coming back to the buying prices of goods where individual capital for large purchases is lacking, a remedy of the evil conditions consists in a combination of a number of druggists in each city for the purpose of buying jointly. Just as a large department store is to some extent a combination of many smaller businesses who all buy jointly and all share the advantage of such buying, so in every city where the number of druggists is less than 200 a club can be formed and successfully maintained. In large cities there is of course room for more than one club. Wherever such clubs or organizations have been formed they have been successful. With an investment of \$200 from each member a considerable capital can be invested, and it is a fact that in some cases the

invested capital has been turned over more than twelve times in one year. The management of such an organization does not amount to more than 3 per cent. in small cities; this is little more than the cash discount that can be obtained in most instances, so that the full trade discount, which is never less than 10 per cent., and runs up to 25 per cent. in some goods, will accrue to the benefit of the stockholders.

The goods selected should be, of course, such as are the best sellers in the respective vicinities, beginning with the leading patents, extending to chemicals, where the possible profit is very large, taking in rubber goods, such as atomizers, syringes, etc., the manufacturers of which grant enormous jobbing profits, and thus going through the whole line. Even glassware might be bought jointly at a remarkably lower price than each dealer pays now for the same.

An organization of this kind in each city would exert a very beneficial influence on trade in general. The relations of druggists to each other would become much more harmonious and satisfactory than they are now; they would be tied together by the strongest tie, that of personal interest, and small jealousy and envy would be eliminated much quicker than by other methods. There could even exist a combination of such clubs in a whole county or State, and the great amount of benefit and blessing that could be derived from them is incalculable.

In advocating this method I do not wish it to be understood that I personally advocate low prices. Since the beginning of my business career I have advocated high prices, not only in agitation and words but in fact. But I believe that wherever there is a benefit to be derived in business life it should be taken advantage of and those who may be less fortunately situated than I am and are compelled to yield to the public demand of low prices can by this system recover some of their profits and continue their business in comfortable ease. Nor do I wish to say that this is a universal remedy for existing evils; it is only one of the points that should be earnestly considered by every progressive druggist and the execution of which should be made one of the leading objects of united efforts.

I will never forget the words of one of the most successful business men of this country whose methods I once had the privilege of observing. I expressed my surprise at the small profits he derived, and he replied: "There is no profit in selling goods; the profit is made in buying them."

Let us heed this lesson and act accordingly.

#### METROPOLITAN WINDOW DISPLAYS.

The Hegeman Corporation, at its main store, on lower Broadway, has had some very unique and interesting window displays during the past week or two. One was a "drive" on whisky. The bottles were artistically arranged among sheaves of rye. The rich red color of the liquor in the bottles made a very pleasing contrast with the straw color of the sheaves. The latter were meant to emphasize the fact that the rye whisky handled by the firm was pure and genuine. Last week the same firm devoted its entire north window to a display of glycerin soap, three cakes in a box, which were offered at 10 cents a box. The boxes were neatly arranged on the floor of the window and on raised platforms, with banks of the boxes in either corner of the window to the rear. The boxes were green and red and made a very striking exhibit that attracted the notice of passersby. The south window was given up to a display of a special cough remedy made by the firm. The buff color of the wrappers blended very nicely with the dark maroon covering of the floor of the window. The bottles—25 and 50 cent sizes—were symmetrically arranged in groups and on raised platforms. In the center of the window was a large placard with the inscription: "To cough or not to cough is a question of vital importance to all. Tolu and Liverwort Expectorant will answer the question promptly and safely," etc.

The store of J. Milhau's Son, on lower Broadway, has very little window display space, but the available space in the

south window was taken up last week with a display of fine bath towels, which were offered at 25 cents each.

There is a growing tendency among some proprietors of pharmacies to depart entirely from the line of goods one usually expects to find in a drug store in their window displays. A notable instance of this was the exhibit last week in the window of J. N. Hegeman & Co., Park row, where pocket electric lights and similar electric novelties were shown. It might be added in this connection that Milhau's window recently contained a rare painting by one of the old masters, which attracted a good deal of attention.

#### A DEPARTURE.

One of the most interesting departures from the usual run of window exhibitions was that seen in the Broadway window of the Alpers pharmacy, at Thirty-first street and Broadway. It was a display of crude drugs and chemicals. A card bore the inscription: "An exhibit of the high-class and pure drugs and chemicals used in this pharmacy in the prescription department." The articles shown included the following: Rolls of sarsaparilla root; a box of peeled colocynth apples; four bundles of extra fine vanilla beans, grown in Mexico and specially selected for the store's soda water trade; a large copper container of rose water, imported from Duval Frères, Grasse, through Lehn & Fink; a tray full of genuine Spanish flies (which attracted especial attention because of their iridescent colors), to be used in making hair tonics; a fine specimen of Cape aloes done up in the original monkey skin package in the form in which they are imported and tied with cords made from monkey skins; a large ball of opium as it was imported from Turkey and very valuable; jars of lavender flowers, bleached Jamaica ginger root and arnica flowers, and a large block of gum benzoin. One of the principal features of the display was a jar of cocaine hydrochloride, valued at \$250. Then there were specimens of Ceylon cinnamon, calamus root (sweet flag), Calisaya bark, labeled as the source of quinine, and a large piece of bryonia root. All of the samples were of the highest quality and the display attracted a great deal of attention.

The Alpers Pharmacy, at Thirty-first street and Broadway, had another unusual display last week. This time it consisted of an exhibit of powerful poisons, the chemicals shown, it was announced on a card, being sufficient to kill more than 40,000 persons if properly divided and administered. The display included morphine sulphate in cubes, potassium cyanide in lumps, a vial of gelseminine, a small tube of digitoxin, and bottles of strychnine, atropine, corrosive sublimate, potassium permanganate, potassium ferrocyanide and others. Judging from the interest shown by the public, the exhibit was a decided success.

#### A VARIED DISPLAY.

It would be hard to find a drug store window that contains a greater variety of drugs and sundries than that of Reid, Yeoman & Cubit's Nassau street store. Special preparations, toilet articles, candles and bonbons, cigars, brushes and combs, bath requisites, hand brushes, manicure sets, nail files, liquors, chamois skins, razors and shaving sets are a few of the articles shown, all with prices plainly marked and calling attention to exceptional values. A feature of the display last week was a fine safety razor set offered as a prize to the first person guessing the correct number of cakes of shaving soap in a pile of these at the base of the pedestal on which the razor set stood. The guessing contest was open to any one, without the usual requirement in such contests of having to purchase a certain amount in order to be entitled to a guess. Some two hundred guesses were made, the lucky number being 275. One of the most conspicuous features of this window is the display of souvenir and comic postal cards which are hung up in strings on the front window. At all times during the day a crowd may be seen in front of this window studying these cards and the array of novelties and sundries shown. The window is too crowded for the ordinary drug store window, but this firm has an exceptional location and the display is of the kind that evidently appeals most to the thousands of people who pass through that thoroughfare.

## One of "MY LONG SUITS"

Is making suppositories. If there is one thing that I do pride myself in it is making suppositories. I never use a machine nor a mold nor the hollow coca butter capsules (unless same are signified). A suppository made here will be found to have the ingredients thoroughly and evenly incorporated with the butter so that immediately upon insertion canal will receive medication. No having to wait for an outer capsule to melt, nor contending with a machine made suppository that is pressed so hard that you couldn't break it with an axe.

I don't have to use ice in summer time, nor heat any time—it's all in knowing how.

**D. G. KILBURN, Druggist, 10th and Maine Streets.**

Let me have some blanks made for you.

#### A Good "Professional" Ad.

The Right Sort of Advertising for Building Up Prescription Trade. Process details, working methods, dispensing and business systems, interest the doctor and his patient—and every one else, even those who never saw the word "suppository" before. The original of this ad. was printed on the left half of the smooth side of a coated blotter about 3½ x 7 inches. The right half blank, for address and stamp, so that it can be used as a mail card.

## AN ETHICAL PHASE OF DRUG BUYING

New York, Sept. 15, 1904.

DEAR DOCTOR: The proposition that physicians are interested in drug buying is one which we would not advance, although the subject is one in which the integrity of prescription work is necessarily involved; but the competitive methods employed by manufacturers to install and secure preference for individual brands may not be without interest.

A quarter of a century ago there were few manufacturers who commanded the confidence of physicians, and it was the fashion for enterprising pharmacists to boast of carrying "entire lines" of the products of these favored makers.

The conditions which then justified this method of stock-building have changed; but the boast is still heard, at times, for it has now become a favorite device of the manufacturers to "control the trade" of a druggist by offering special discounts on large assortments purchased in one lot or within a stated time—the inducement being larger, proportionately, as a brand is unpreferred or less frequently specified in prescriptions.

The trade of the druggist may in this way be "controlled" for a time, because the quantity to be

considered, in most cases, constitutes an overstock, the most serious feature of which lies in the fact that advance stocks favoring individual manufacturers tend to make compliance with specifications impracticable and mark an easy, down-grade course to substitution. Overstock also implies deterioration.

The ideal stock of the dispenser, at the present time, is eclectic and comprises the best products of the various makers.

It is built up on the consensus of the prescription demand rather than from the manufacturers' standpoint.

The purpose of this leaflet is to state that we endeavor to maintain a clean, practicable stock—not larger than our output requires; to anticipate future requirements along lines that are engaging the attention of prescribers, and to avoid such extreme anxiety for discounts as may lead to the necessity for serving time in the interests of individual manufacturers.

We would be pleased to have you subject the workings of our methods of stock-building to any proper test in your emergencies, and meantime, we remain,

Yours very truly,

P. B. KNAPP & SONS.

Telephone No. 4914 Spring.

Compliments of Knapp's Drug Store, 362 and 364 Hudson street, Corner of King street, New York. Established 1839.

corner of King street,  
NEW YORK.

Established 1839.

August 15, 1904.

DEAR DOCTOR: The combination of Salol and Castor Oil appears to be winning recognition rapidly from physicians as an intestinal antiseptic—for dysentery and other prevalent disorders of the intestinal tract—but has not yet been generally introduced by pharmacists in presentable form.

We supply this remedy in the form of soft, elastic capsules, presenting 5 grains of Salol and 5 minims of Castor Oil in each capsule, which we shall be glad to deliver to your patients as occasion requires. The formula may be conveniently designated as "SALOLICOL."

Awaiting your commands, we are,

Yours very truly,

P. B. KNAPP & SONS.

## LOOK OUT FOR THIS MAN!

## Asks Druggists to Cash Draft—Some of the Trade Taken in.

Members of the local wholesale drug trade were favored a short time ago with a call from a very smooth individual who gave his name as Albert Kahn. Every firm that he visited heard about the same story of how he had been away on a vacation in the mountains and had run a little short of ready cash, how he had written to his company down South for a remittance, and pending its arrival he wished to have a draft cashed. It was a very embarrassing position, but of course it was only temporary. He pretended to have friends among the drug trade who would readily help him out of his difficulty. His story was meant to touch the sympathy of his hearers, incidentally their pocketbooks, and his scheme succeeded partly. Be it said to their credit, however, local druggists, so far as has been learned, were not badly bitten this time. A. C. Stallman, of the Stallman & Fulton Co., gives the following account of Kahn and his operations:

"Albert Kahn first called at this office during my absence in the morning about one month ago, representing himself to my brother, F. L. Stallman, as an old friend of mine, and stating that he had spent a few weeks in the mountains, had spent more money than he should have, and was temporarily short of funds; he said he was connected with the Richardson Drug Company, of Greensboro, N. C., which firm has since changed its name to the Justice Drug Company, but of which change he apparently was not aware. He said he had written to that firm for a remittance, and in the interim pending its arrival he wanted a draft on the above house cashed for \$15. My brother requested him to wait a few minutes until my return to the office, and after waiting but a very few minutes he told Mr. Diamond that he had no time to wait and would have the draft cashed at McKesson & Robbins without any trouble. A few days later he called on Ungerer & Co., representing there that he was a friend of mine and giving the same story as above stated; he even went so far as to suggest to Mr. Ungerer that he send a telegram to Greensboro to ascertain if it were not all right. Mr. Ungerer's suspicions were immediately aroused when he said he was a friend of mine, and he thought it very strange that he did not come here to get money from me. Mr. Ungerer then handed him a telegraph blank and also called a messenger boy, who came in due course. When Kahn saw that he was cornered he tore up the telegram and again declared he would get the draft cashed at McKesson & Robbins, where there would be no questions asked. On Saturday he called on E. J. Barry with the same story late in the afternoon, knowing that we closed at 1 o'clock on Saturdays, and he suggested to Mr. Barry that he call me up on the 'phone. So far as I can learn he has not succeeded in getting any money, and as he is evidently a fraud he should be exposed. I have never seen the man, but from various descriptions, all of which seem to tally, he is of middle height, of dark complexion, well dressed and very bold."

It is understood that this Mr. "Kahn" called at the local offices of Parke, Davis & Co., where he told substantially the same story and succeeded in getting a modest sum to tide him over his temporary financial embarrassment.

## The Indiana Board of Pharmacy.

At the last meeting of the Indiana Board, held October 11, the following candidates were registered as pharmacists:

Paul Grace, Mt. Vernon; W. P. Johnson, Greenfield; Jno. E. Stevens, Cynthiana; Otto Hironimus, Mt. Vernon; B. J. Winger, Williamsport; E. D. Turner, Indianapolis; Everett Denton, Winslow; H. D. Stappenbeck, Valparaiso; J. D. Malcolm, Evansville; C. B. McDonough, Lafayette; F. R. Rigrish, Evansville, and William Durkes, Indianapolis.

Assistant certificates were issued to:

Louis Harth, Chicago; L. L. Shull, Greentown; R. E. Sherman, Brookston; L. B. Wakeman, North Judson; T. W. Morgan, Bluffton; J. V. Riesbeck, Greenfield; P. J. W. Koellinger, Ft. Wayne; L. R. Foltz, Indianapolis; F. W. Martineau, Indianapolis, and A. R. York, Cloverdale.

## THE RETAIL DRUGGISTS' SYNDICATE.

Incorporated Under Name American Druggists' Syndicate.

The American Druggists' Syndicate, which has been in process of formation for several months past, has been formally organized. On November 2 the syndicate was incorporated under the laws of Rhode Island with a capital stock of \$200,000, the subscribers to this stock being exclusively retail druggists. The membership includes 1,000 retail druggists and covers every State in the Union. The organizer was Charles H. Goddard, formerly of San Francisco. The headquarters of the company will be in this city, and are now located, temporarily at least, in the Metropolitan Life Building, corner of Madison avenue and Twenty-third street.

The capital stock, which is all treasury stock, fully paid and nonassessable, is divided into 20,000 shares of the par value of \$10 each. The members agreed to purchase one share of stock each at \$10 a share every month for nine months, provided it becomes necessary to do so in order to conduct the enterprise profitably. Mr. Goddard, it is understood, holds 1,000 shares of stock as compensation for securing copyrights, services and in consideration of his advancing all the cash necessary to meet the expenses of organizing the syndicate. As soon as payments from the members are no longer necessary a stock dividend, according to the prospectus put out while the syndicate was being formed, will be declared, distributing without further cost all the remaining shares in the treasury among those shareholders who have complied with the terms of their agreement.

The members selected the following representative dealers to serve as directors for the first year:

George Ramsay, the vice-president and general manager of the Hegeman Corporation; J. Jungmann, owning three of the largest stores in the city of New York; R. Scherick, president of the Scherick Drug Company; Ewen McIntyre, jr., one of the oldest druggists on Sixth avenue; E. F. Ennis, general manager of the Milhau Pharmacy; A. E. Cosden, of the W. B. Riker & Sons Company; George Hackenberger, general manager of the Miner Drug Company; I. Cohen, proprietor of the Reading Terminal Pharmacy, of Philadelphia; Charles A. Godman, the head of the Standard Drug Company, owning four of the largest drug stores in Cleveland; Herman Brunke, with two stores in Cincinnati; E. L. Weston, of Weston & Cook, Syracuse; Dr. C. S. Roberts, C. H. Goddard and George W. Luft, secretary of the Utah Retail Druggists' Association.

These directors met at the Park Avenue Hotel on November 2 and organized by the election of the following officers: George Ramsey, president; R. Scherick, first vice-president; E. F. Ennis, second vice-president; I. Cohen, third vice-president; J. Jungmann, treasurer, and C. H. Goddard, secretary. The organization was completed by the election of a Finance and Auditing Committee and an Executive Committee.

The members of the Finance and Auditing Committee are E. L. Weston, Ewen McIntyre, jr., George Hackenberger, Charles A. Godman, Herman Brunke and George W. Luft. The Executive Committee consists of three members: J. Jungmann, C. H. Goddard and C. S. Roberts.

The directors were in session all day, outlining a general policy for the management.

Whatever apprehensions may have existed as to the new syndicate's attitude toward the N. A. R. D. and the direct contract and serial numbering plan, was dissipated by the important action taken by the directors at their meeting on November 2. They unanimously decided to market all products of the syndicate under the N. A. R. D. plan.

## SECRETARY GODDARD'S VIEWS.

In speaking of the general policy and plans of the syndicate, Secretary Goddard said:

"The formation and growth of this company have been phenomenal in the history of industrial corporations. Its membership, which comprises 1,000 persons, all actively engaged in the drug business, was obtained in a few weeks

and represents the more aggressive portion of the drug trade in every State in the Union.

"The object of the company is to advance the business interests of its members and improve their material condition.

"It is proposed to manufacture a line of ready made medicines, household specialties, toilet articles, etc.; to maintain a bureau of information on any subject connected with the drug business for the benefit of its members; to exert the combined purchasing power of its large membership as one force, for the benefit of all, whenever the opportunity presents itself or whenever it would be of advantage to do so.

"There exists and probably always will exist a large demand for some medication, ready made, for the cure of many of the minor ills and the alleviation of the chronic complaints with which people are afflicted. This demand is now met in a most imperfect way by the so-called patent or proprietary medicines. The manufacturers of these goods are in many instances devoid of medical, pharmaceutical or chemical education. They have either inherited or in some other way acquired a formula, which they exploit by the most exaggerated statements and the most brazen advertising. Many of these goods are absolutely worthless; as merchandise they are no longer profitable, and as their composition in nearly all instances is a secret one conscientious dealers are unable to recommend them.

"Now, as the public are largely governed in the choice of these remedies by the advice of the druggists, in whom they have confidence, it is proposed to meet this demand for ready made medicines in an intelligent manner by the marketing a line of household remedies, specialties and toilet articles, the composition of which, if known to all the members, they may safely recommend.

"The management of the company will be conservative; it will profit by the mistakes of similar organizations. It will avoid useless expense for elaborate plants until actually required. It will market its goods through the established channels of trade. It may have but one stockholder in a town, but every other druggist will be enabled to get the goods. It will thus avoid making the one dealer a friend and all the others enemies. In short, its affairs will be managed energetically, but economically, with the end of earning the largest possible dividends for its stockholders."

#### The Registration of Pharmacy Schools in New York State

The committee of the New York State Board of Pharmacy which deals with matters requiring attention between stated meetings of the board, and especially with affairs pertaining to the Board of Regents, met at Albany September 26 and decided a number of questions that have been recently brought up. Those present, constituting the Ad Interim Committee, as it is called, were Dr. W. G. Gregory, Warren L. Bradt, F. P. Tuthill and Dr. Taylor, of the State Education Department, who joined the conference and acted as secretary. Dr. William Muir, of Brooklyn, served on the committee in place of C. O. Bigelow, of New York, who was absent in Europe. The subject of the number of required counts for the entrance examination was discussed and it was decided that not less than 12 regents' counts or their equivalent at the time of entering a registered pharmacy school should be required. The Medico-Chirurgical College of Philadelphia and the Pittsburgh College of Pharmacy not having completed some necessary requirements the registration of these colleges was temporarily deferred. Some discussion was had regarding the reregistration of the Philadelphia College of Pharmacy, but no action was taken. The State Education Department was given a vote of thanks for the publication of Hand-book No. 11, entitled Pharmacy.

A meeting of the Pharmacy Council was held after the adjournment of the meeting of the Ad Interim Committee. This council includes the members of the Ad Interim Committee and the deans of the various registered pharmacy colleges throughout the State. Dr. Muir presided at this meeting and Dr. Taylor acted as secretary. The action of the Ad In-

terim Committee with regard to the minimum requirement of regents' counts was indorsed, but it was voted that the secretary of the council secure an opinion from the Attorney-General regarding the Ad Interim Committee's construction of the law. Other action taken by the council provided: (1) That students in course for a degree be not permitted to begin their attendance on any session later than November 15; (2) that the pharmacy student certificate issued by the department must be filed with the executive officer of the pharmacy school not later than December 31 of the year in which he enters on his first course.

The effect of the last action taken by the council with regard to the filing of certificates by the end of the year will be to relieve those students who may present themselves for registration at the college of pharmacy but who may not be able to produce at the time the evidence necessary to enable the regents to grant them certificates.

#### AN AGREEMENT AMONG JOBBERS.

Unite to Abate Trade Abuses—Stirred Up by Proprietors—  
Rumored Violations of Rebate Terms and Contracts—Jobbers  
form the Metropolitan Drug Club.

Wholesale druggists of this city have been notified by leading proprietary medicine manufacturers that henceforth they must strictly observe the terms of their contracts with the proprietors, and the jobbers have decided to comply with this request. This means quite a radical departure from practices which have been more or less common in the wholesale drug trade of this city and vicinity and which have been partly responsible, it is believed, for unsatisfactory price conditions in the retail drug trade of the city. Under this new order of things wholesale druggists in Greater New York will be on the same footing, as regards their relations with manufacturers, as the jobbing trade is in all other cities of the country. It is a move by proprietors to stop any and all violations of terms of rebates or contracts by the jobbers. It is an open secret in the trade that New York has not been free from shortcomings in the past, and this is about the only city in the country where such conditions have been allowed to exist. Most manufacturers have individual contracts with jobbers specifying the amount of discount that is to be allowed by jobbers to their customers for certain quantities of goods, but local wholesalers have not stuck very closely, it seems, to the terms of those contracts, but have given discounts where they were not warranted, on broken lots, etc.

It is known that New York jobbers have come to a mutual understanding—they are very sensitive about its being called an "agreement"—whereby such conditions will cease to exist and the manufacturers have been given assurances that hereafter the terms of sale will be rigidly complied with. The result will no doubt be very beneficial, not only to the jobbers themselves, but to the drug trade generally. The wholesalers will know now that they are all on the same footing and will not have to meet competition resulting from the granting of irregular or excessive discounts; the proprietors will benefit, for they can order jobbers not to sell to any retail cutter and can dictate how their goods are to be marketed and to whom they shall be sold. This in turn cannot but help the retail trade generally in coping with the cut rate evil.

Another interesting development in the local jobbing trade is the fact that leading wholesale druggists of New York have at last effected an organization among themselves. It is known as the Metropolitan Drug Club, and, while its objects are declared to be purely social, business matters will probably not be entirely excluded from its meetings, which are occasionally held at the Drug Club, 100 William street. Similar organizations exist and have existed for some time in other cities, but outside of the Drug Trade Section of the Board of Trade and Transportation, the local jobbing drug trade has had no regular organization.

**Greater New York News.**

No date has as yet been fixed for a meeting of the M. A. R. D. this month.

Joseph Plaut, of Lehn & Fink, returned last week from a sojourn in the Berkshires with his family.

H. Burroughs, of the Burroughs Bros. Mfg. Company, Baltimore, visited the local drug market recently.

President A. Klipstein, of A. Klipstein & Co., returned last month from a three months' tour of Europe.

Among the recent visitors in the local drug market were J. B. McIntosh, of Waynesville, N. C.; H. C. Cleveland, of Whitman, Mass., and G. F. Sullard, of A. F. Sullard & Sons, Franklin, N. Y.

H. J. Braker, of H. J. Baker & Bro., of this city, sailed recently on the Kronprinz Wilhelm for Europe. He will remain abroad until Christmas and will spend part of his time automobiling through southern France.

J. Milbau's Son has decided to move. The firm has been located at 183 Broadway for considerably more than half a century, and is perhaps the only Broadway establishment that has not moved in that time, except the Chemical Bank. The Milbau store is to occupy 205 Broadway, adjoining the Mail and Express Building.

The Greater New York Drug Clerks' Association, at a recent meeting, elected the following officers: President, J. Kramer; vice-president, E. Sander; treasurer, A. Sherman; financial secretary, W. Rogan; corresponding secretary, I. Elysowitz; recording secretary, D. David Cohn; sergeant-at-arms, E. V. Bookstaver. A drug clerks' labor bureau was established, with H. Nisselson and S. Kramer in charge.

The German Apothecaries' Society, at its regular monthly meeting on Thursday night, November 2, appointed E. C. Goetting, Felix Hirseman and Emil Roller a committee to represent the society in the joint conference of pharmaceutical associations, which is to urge upon the incoming Mayor of New York the desirability of placing a pharmacist on the advisory board of the City Board of Health.

At the meeting of the New York Board of Trade and Transportation last month, a report was received from the special committee appointed to investigate complaints made by manufacturers that the questions asked by the Census Bureau were too inquisitorial. The report, which was signed by J. L. Hopkins, John M. Peters and W. S. Armstrong, declared that the answers to the questions, which covered every detail of a manufacturing business, would place on record in the Census Bureau a complete balance sheet of a manufacturer's business. A conference was held by the committee with Director of the Census S. N. D. North and Chief Statistician Stewart, who assured them that there was no intention to intrude on the private affairs of manufacturers to an extent which the latter might consider inimical to their interests. Messrs. North and Stewart asked the committee to co-operate with them in preparing a schedule for the next census which would meet all objections.

**Civil Service Examination for Apothecary.**

An examination to secure an eligible list of apothecaries for appointment in the Department of Health is announced by the Municipal Civil Service Commission. The examination will be held at 10 o'clock on Tuesday, November 21. The receipt of applications will close on Tuesday, November 14, at 4 p.m.

The subjects and weights of the examinations are as follows: Technical, 6; mathematics, 2; experience, 2.

The percentage required is 75 on the technical paper and 70 on all. Candidates must be licensed pharmacists, and must have such knowledge as is required of graduates in pharmacy. At present there is one vacancy in the Department of Health. The salary attached to this position is \$720 to \$1,200 per annum. The minimum age is 21.

**WESTERN NEW YORK.**

**Sectional Associations to Keep Interest Alive—Buffalo Headquarters for N. A. R. D. Organizer—Lockport Lines Up—Buffalo Bowlers at Work.**

*(From our Regular Correspondent.)*

Buffalo, November 10.—The Buffalo retail dealers are feeling just secure enough in the position they have taken to keep them active in adding to the strength of their position. President Darrin, of the Buffalo Retail Druggists' Association, has selected his committees, of which the trade's interest committee is the principal one, reappointing Dr. W. G. Gregory chairman. He has also set to work dividing the city into groups, so that a closer feeling can be maintained. For instance, there are eight druggists at Black Rock and they have been formed into a club, with one of their number to look out especially for price cutting. When a customer declines to pay the regular price for an article on the claim that So-and-So sells it for less, the closer acquaintance with this dealer emboldens the asking of the direct question and when the charge is denied the customer is refused the cut asked.

**THE DIRECT CONTRACT PLAN BEING ENFORCED.**

Then the lines are drawing closer in the direct contract system. There are three proprietary concerns engaged in perfecting their agreements in this city. It is known that some of the downtown stores are selling marked goods and the source of them has been discovered and cut off. As soon as they are out they will have to sell at full prices or stop selling. Of course this means that the price cutting has not all been stopped by the late proceedings, but it is so much reduced that the state of things is a long step bettered from the universal cutting of last spring.

**N. A. R. D. HEADQUARTERS ESTABLISHED.**

J. D. Bellaire, a N. A. R. D. representative, on November 4 established his headquarters in Buffalo, not so much to watch matters in that city at present as to look after trouble in other parts of the district. A bad state of the trade is reported from Fillmore, in Allegany County, and he will go there a while, after which he will organize Niagara County on the lines followed in Buffalo. It will be a comfort to know that a close touch is kept with the National Association, which did so much to stop cutting in Buffalo.

**LOCKPORT IN LINE.**

The city of Lockport is doing what it can to hold up prices by forming a druggists' association within the past few days, with J. W. Zimmerman president. The work of forming a price list will be taken up as soon as practicable, but it appears that the difficulty is largely in some of the small towns near Lockport and the effort will be to get them into line as soon as possible. The N. A. R. D. representative may be depended on to give some valuable help in the matter.

**THE BUFFALO DRUGGISTS' BOWLING CLUB**

is already in a flourishing condition, with attendance much larger than it used to be and several good players still unable to attend regularly on account of lack of help. At last accounts W. H. J. Smith was high man at the alleys, lately making a score of 224, with the next best man only a trifle over 200. The players who produced muscle and general good feeling by cultivating baseball on the park meadow have laid up bat and ball for the season and are mostly in the bowling club.

**IN SUSPENSE REGARDING THE ALCOHOL RULING.**

Buffalo druggists are still much exercised over the new alcohol ruling of the Government. November will soon be over and then the selling of certain preparations will be dangerous. It was hoped that the State would do something to define its position in the matter before this time, but as it has not the uncertainty is still greater. Of the 151 druggists in Buffalo only 63 have Government licenses and but few have full State licenses. With the matter as little defined as it is there is nothing to do but go ahead and see what is done to enforce the ruling.

## THE BUFFALO COLLEGE OF PHARMACY

is rejoicing in the largest number of students it has ever had, the entering class being about 65 and the senior class about the same size. A new microscopical laboratory with apparatus and accommodation for 64 students has been opened and the regular laboratory has been arranged for use out of regular hours by placing students in possession of the lockers. Everything is in a very progressive stage. The authorities will welcome University extension when it arrives, though it still seems quite far away.

## BRIEF WESTERN NEW YORK DRUG NOTES.

F. A. Kowal, formerly connected with the Brzezicki drug store on Pechham street, Buffalo, has opened a new store on outer Clinton street of that city.

The fine new store building by R. K. Smither at Main street and LeRoy avenue, Buffalo, will be ready for occupancy in December, when the store occupied by him across the street will be given up. He has two other drug stores in Buffalo.

Miss Anna Frey, who graduated with honor at the Buffalo College of Pharmacy and who has been in the Dalton store in Syracuse some of the time, has engaged as head clerk with J. A. Lockie, Buffalo, taking the place of W. S. Robeson, who is now with A. H. Reimann.

## NEWS OF THE TRAVELERS.

C. N. Riggs, who left Buffalo to take a position on the road with McKesson & Robbins some years ago, is still selling their specialties, paying a visit to Buffalo early in November on his regular three-months' round. He sold piles of calox.

The Baltimore house of Gilpin, Langdon & Co. sends us its special salesman, H. Brossy, for a slice of the regular fall trade, and he went away with it in his possession.

The Solon Palmer perfumes in all their variety increased sales in a large way a few days ago on the visit to the city of C. L. Pettis, who has long represented the house.

The trade in drugs and essential oils always takes a long step forward whenever a visit is made to the city by E. H. Powell, who was here a short time ago in the interest of his old firm, Lehn & Fink.

J. S. Marvin is still a Buffalonian, but the road claims him so much of the time that his trips about the city, the last one made quite lately, selling Lundborg's perfumes, are welcome, if not made often enough to be called strictly neighborly.

## CANADIAN NEWS NOTES.

(From our Regular Correspondent.)

T. F. Smith, druggist, of Elora, Ontario, died recently.

H. E. Waller, druggist of Kelowna, B. C., has sold his business to P. B. Willits & Co.

M. A. V. Armstrong, druggist of Goderich, Ont., has sold out his establishment to E. J. Foster.

William Hughes has purchased the drug business of Dr. R. F. Preston, of Carleton Place, Ont.

John McCrostle, druggist, of Paisley, Ontario, has assigned to S. A. S. Simons.

Dr. C. F. Bayard, of Montreal, has sold out his drug business to Kenneth Campbell & Co.

H. F. Morrow has purchased the drug store of W. H. Cummins, Grimsby, Ontario.

J. W. Yeomans, druggist, of Sutton, Ontario, has removed to Newburgh, Ontario.

J. J. McCann, of Toronto, has disposed of his drug business to C. B. Graham.

O. W. Wakelin, druggist, of Battleford, Saskatchewan, has removed to the neighboring town of North Battleford.

F. P. Sanderson has purchased the drug business of F. W. Jeffs, Wallaceburg, Ontario.

W. A. Vrooman, of Portage la Prairie, Manitoba, has sold his branch drug store at Kawende, in the same province, to W. M. Lamont.

I. A. Snider, of Winnipeg, has sold his Portage avenue business to the recently incorporated Speer-Stevenson Drug Company, and his Broadway avenue business to R. Telton.

Read Holliday & Sons, incorporated in Britain, to manufacture and deal in dyes, dye stuffs and chemicals, have been licensed to carry on business in Ontario on a capital of not over \$40,000.

The will of the late Senator Fulford, of Brockville, who made a fortune in the proprietary medicine trade, was entered for probate on October 31. The estate is valued at \$4,820,019, the bulk of which is left to the widow and family.

M. E. Vanzant, Limited, has been incorporated—head office, Toronto; capital, \$10,000—to manufacture and deal in drugs, etc., wholesale and retail. The provisional directors are Elias Vanzant, Mervin E. Vanzant and Leigh C. Todd.

Prof. Charles F. Heebner, Dean of the Ontario College of Pharmacy, Toronto, was seriously injured recently while bicycling, by a collision with an express wagon, the point of the shaft striking his breast. Though considerably hurt, he is progressing favorably.

The J. P. Lawrason Company, Limited, has been incorporated, with head office at Milton, Ont., and a capital of \$50,000, to manufacture patent medicines and to carry on a wholesale and retail drug business. The provisional directors are James R. McKinney, Neil McMillan, John P. Lawrason, James W. McKinney, George Hardy and James H. Fleming.

Milton J. Luckham, of Guelph, Ont., committed suicide on October 19 by taking a dose of carbolic acid. He had recently bought out the drug store of Charles Law, of which he had been in possession for about three weeks. Ill health and despondency over financial affairs are assigned as the cause. He leaves a widow and two children.

Good progress is being made with the scheme for the merger of the wholesale drug houses of Canada into one concern with a capital of \$6,000,000. A large proportion of the firms engaged in the trade have been secured, but there is necessarily a good deal of delay involved owing to the fact that the joint stock companies interested cannot take final action without receiving the consent of their shareholders. On this account it will probably be some time longer before the deal is consummated even if no unforeseen obstacles arise.

## The Kentucky Board Pass List.

At the regular meeting of the Kentucky Board of Pharmacy, held in Lexington October 10, the following candidates passed the examination:

W. H. Bristow, Covington; W. L. Gaines, Carrollton; James D. Kelley, Woodburn; O. F. King, West Point; John D. Talbott, Bardonia; J. H. Woolridge, Leitchfield; G. E. Porter, Berea; George P. Craig, Muskegoe; I. T. Gus A. Hardwick, Livia; Harry L. Kendrick, Dayton; Robert Ratliff, Pikeville; H. D. Thornton, Murray; J. T. McIntyre, Louisville.

There were twenty-six applicants for examination. The next examination will be held in Covington January 9.

At the annual meeting, which immediately followed the regular quarterly meeting, it was announced that the Governor had selected from the names submitted by the Kentucky Pharmaceutical Association D. A. Yelser, of Paducah, to fill the vacancy on the board caused by the expiration of the term of office of E. L. Pleck, of Covington.

During the year 146 applicants had been examined, 71 of whom passed. The total registration in the State is 1,800.

The following officers were elected for the ensuing year: President, C. S. Porter, Somerset; secretary, J. W. Gayle, Frankfort (not a member); treasurer, George T. Wilson, Bowling Green, and chairman of the executive committee, C. Lewis Diehl, Louisville.

## Unusually Quick at That.

"No," said the melancholy druggist, "there is nothing in life for me now. She has jilted me, and nothing in this world can take the place of her love."

"Oh! I don't know," replied Sinnick, "you should be able to find 'something just as good.'"—*Philadelphia Press*.

## BOSTON.

**Boston Druggist Association Starts Season's Meeting—A Flattering Success—A Druggist's Welcome Surprise—Pass List of the Massachusetts Board—A Druggist Candidate for Mayor—The Quality of Drugs in Massachusetts.**

(From our Regular Correspondent.)

Boston, November 8.—President Flynn, of the Boston Druggists' Association, inaugurated the fall meetings of that organization at Young's Hotel on the evening of October 31, before a large assemblage. He was fortunate in selecting a timely subject for discussion—namely, that of Reciprocity as a General Proposition. The pros and cons of this matter were ably put forth by Col. Albert Clarke, of the Home Market Club, and the Hon. Eugene N. Foss. Much applause was given the telling points made by the orators, who were subsequently piled with questions by the listeners. The president has just cause to feel flattered with the success of this meeting.

## PRESENTED WITH A CLOCK.

Frederick J. Sheehan recently opened a new store at Broadway and C street, South Boston, and as a mark of esteem his friends called on him one evening recently and presented him with a handsome marble clock. The affair was a complete surprise. After the presentation the gathering adjourned to a hall over the store and enjoyed a substantial collation. Several well known druggists were present, including C. P. Flynn and C. A. Curtis.

## MASSACHUSETTS PASS LIST.

The Board of Pharmacy held five examinations in October, and granted certificates to the following: Hubert H. Bearce, Chelmsford; Edwin D. Gibbons, Westfield; Wadsworth H. Macalowski, Cambridge; John A. McLellan, Lynn; Frank M. Merrigan, Boston; Kenneth J. Mitchell, Merigomish, N. S.; William V. Orcutt, St. Johnsbury, Vt.; Arthur L. Bangs, Everett; Leopold Bartel, Jr., New Bedford; John L. Dunne, Hyde Park; John H. Groh, Webster; Ernest L. Snell, New Bedford; George H. Stoddard, East Douglas; Alfred M. Bessette, New Bedford; Bernard C. Burdette, Northboro; John W. Connors, Leominster; Thomas B. Hassett, Boston; Frank Hoyt, Newburyport; Harmon J. Kelsey, Worcester; Hyman Alkon, Boston; Emile Cousineau, Fall River; Michael H. C. Maloney, Quincy; Joseph A. Phenix, Lewiston, Me.; P. Eugene Rudden, Springfield; Silvio Sissa, Boston; Raymond V. Willey, Holyoke, and Elmer D. Full, Rockport.

Justin F. Bartlett, of Chelsea, was last year elected to the board of aldermen of that city for a two years' term and received a very complimentary vote. He has just resigned to compete for the mayoralty nomination and it is confidently predicted that he will sweep the primaries November 21.

## DRUGS EXAMINED.

The last monthly report of the State Board of Health shows the examination of 49 drug specimens, of which 38 were found to be of good quality. The samples of drugs found to be adulterated were: Calx chlorata, oleum limonis, oleum olivæ, sulphur præcipitatum and tinctura iodi. A specimen of olive oil obtained from a drug store in Worcester contained over 50 per cent. of sesame oil.

In Fall River Sunday there was a fight in the store of Leonide A. Auger over a sale of whiskey. Two policemen sent in an accomplice, who is alleged to have purchased whiskey and then signalled the officers. The latter entered and then Auger and his clerk, George Buron, began an attack on the three. A lively tussle and rolling about ensued, which ended with the proprietor being landed in the lockup on a charge of unlawful sale of liquor.

## TALKED ABOUT.

At Pierson's store, Washington and Essex streets, some trouble has recently been experienced through the settling of the subway now under construction.

Clark & Mahoney's store, Saratoga and Marion streets, East Boston, was recently broken into and some small merchandise taken.

## PENNSYLVANIA.

**Typhoid Breaks Out in the Philadelphia College of Pharmacy College House—Druggists Interested in Politics—Meeting of the P. A. R. D.—Interest in the Loder Suit.**

(From our Regular Correspondent.)

Philadelphia, November 9.—The typhoid epidemic at the College House of the Philadelphia College of Pharmacy has been thoroughly investigated, not only by the State authorities, but by the local Board of Health. A clean bill of health has been issued to the management and all blame has been shifted to other sources. Out of the total number of boarders at this house 15 of them have been stricken down with typhoid fever and they had to be removed to a hospital. As soon as the first student developed the disease an investigation was made by the management of the House, and nothing in or around the building could be found which would warrant the belief that there was anything there that could cause the attack. Then a further investigation was made, and it was ascertained that the milk dealer who supplied the home with milk had in his employ a man who filled the bottles. To do so he used a siphon and put the hose repeatedly in his mouth. This man had walking typhoid fever some time before it was discovered. It is believed that this is one of the reasons for the contagion. The same dealer supplied a number of private families in the neighborhood of the House, and some of them were also attacked with typhoid. The State Board of Health and the Bureau of Health of this city have not only disinfected the building, but have given to the management a clean bill of health.

## DRUGGISTS INTERESTED IN POLITICS.

There was never a time when the retail druggists of this city took such an interest in the political affairs of this city. All the leading druggists have done yeoman service in the late campaign, and it is understood that there is likely to be formed an association composed of retail druggists, whose aim will be to look after the good name of this city. At a meeting of a number of retail druggists here last week, out of 75 present there were only two who stood up for the political parties that have for so long ruled affairs in this city. The formation of the Retail Druggists' Association has done a good thing in making the druggists see that in union there is strength. They recognize the fact that by banding together they can accomplish more than if they were working individually. While the Philadelphia Association of Retail Druggists as a body is not taking any part in the political affairs of this city, it is the fact, nevertheless, that at the regular monthly meeting there were many derogatory remarks made about the present "gang" leaders, and often they were applauded. Almost to a man the members of this association are in favor of reform.

## P. A. R. D. MEETS.

The regular monthly meeting of the Philadelphia association was held November 3. It was enthusiastic, and while there was little business of a great magnitude accomplished there was, however, a large attendance, and the remarks of the various speakers were frequently applauded. This association is now on "easy street." The meetings are looked forward to, and some of the druggists who were the most bitter against the organization are now the hardest workers for its success. At every meeting there are new members elected. At the last meeting there were five druggists elected to membership. There is no let up as regards the efforts of the officers to get all the druggists of this city into the organization.

Since this association has been in working order there have been many things done which are of great interest to the local retail druggists. Many proprietary articles have been advanced in price, and some of the proprietary manufacturers have been induced to sell only to such druggists as live up to their agreements. Besides this the Philadelphia Association of Retail Druggists has been instrumental in squashing attempts at legislation detrimental to the drug business in this State. There never was a closer watch kept upon the Pennsylvania Legislature than at the last session, the consequence being that no

bill became a law which in any way affected the interests of the retail druggists. It is understood that many plans have been made for the further bettering of the retail drug trade in this city. Although the Legislature of this State meets only every two years the Legislative Committee as well as other committees of the local association are at work devising plans of mutual interest to all retail druggists. There are very few druggists in this city who are not members of the association. It is predicted that within the next year every druggist who is worth having as a member will be in it. The city has been divided up into districts, and a chairman of each district has been appointed.

Considerable interest is displayed in the Loder suit. This suit was to have been begun on November 1, but was postponed until November 6 and then to the 9th. The lawyers representing the defendants are ready to go ahead with the case, but it is thought that there will be another postponement. The Judge has asked if the case will take over two days, as he is not desirous of having the jury sit any longer than the prescribed time. It is said that the case will last at least two weeks, and it will be a tedious one. John G. Johnson, the leading counsel for the men sued, is anxious to go ahead. He has taken great interest in the case, and those who have been consulting with him are sanguine of success. Mr. Loder's suit has attracted attention throughout the entire country. He has brought into the suit not only the leading druggists' associations, but also many prominent wholesale and retail druggists.

#### DIRECTORS OF PHILADELPHIA DRUG COMPANY.

A meeting of the newly elected directors of the Philadelphia Wholesale Drug Company will be held this month to elect a president. It is understood that the present incumbent, E. R. Gatchell, has given notice that he will not again accept the office. Since then there has been a quiet canvass made for a new president. It is said the directors are desirous of electing some one to succeed Mr. Gatchell who is conversant with the business of the company. The annual meeting of this company was held October 18, at which the following were elected managers: Henry C. Blair, Otto Kraus, Charles Leedom, A. T. Polard, W. Fred. Steinmetz, James Buckman and Frank R. Rohrman. David H. Ross was elected secretary and treasurer. Besides electing a president the board will also select a vice-president. The meeting was the largest in the history of the company, there being 189 votes cast for the managers. After the election a banquet was held in Odd Fellows' Temple.

#### NOTES OF THE TRADE.

L. S. and N. S. Steltzer mourn the loss of their mother.

P. Mertz has succeeded J. H. Masholder at Twenty-eighth and Master streets.

Lum Bros. have purchased the drug store owned by J. B. Thompson, Twentieth and Tloga streets.

G. Warren Phillips, Twelfth street and Passayunk avenue, has been appointed druggist in chief at the Jefferson Medical College.

Miss Willard, daughter of Roland Willard, the druggist, of Haddonfield, N. J., was recently married to James D. King, of H. K. Wampole & Co.

William R. Warner, jr., with his wife and two daughters, sailed for Europe on the Finland last week for an extended tour of Great Britain and the Continent.

On October 31 the bowling games resulted in Smith, Kline & French Company taking three straight from the College of Pharmacy Blues. The Wanderers showed up in good form, taking two from the College of Pharmacy Whites. J. Ellwood Lee Company took three from Geo. D. Feldt & Co.

The Pennsylvania Railroad Company has notified Mr. Stoever, of the Broad Street Station Pharmacy, to vacate at the expiration of his lease, which will be May 1 next. So anxious is the Pennsylvania road to get the room that they have offered Mr. Stoever a bonus to move January 1. It is the intention of the railroad company to make ticket offices of the space. Mr. Stoever has not yet decided what he will do in regard to the matter.

#### THE SOUTH.

#### Bowling Averages of Drug Teams—A Session of the Wedgewood Club—Chain of Pharmacies for Baltimore.

(From our Regular Correspondent.)

Baltimore, November 8.—The first series of games to be played by the Baltimore Drug Trade Bowling Club was completed during the week ended November 4, when each club had participated in fifteen contests. The sport so far has been very enjoyable and some excellent scores have been made. Nearly all the teams are stronger than ever before, and as a result the race for the prizes to be awarded at the end of the season has been rather close. Sharp & Dohme are far in the lead, but this is in part due to the fact that they have encountered some of the weaker teams. With the changes provided for by the schedule the situation later on may present a different aspect. The standing of the several teams at the close of the series was as follows:

|                           | Won. | Lost. | Percentage. |
|---------------------------|------|-------|-------------|
| Sharp & Dohme.....        | 13   | 2     | .867        |
| James Bailey & Son.....   | 9    | 6     | .600        |
| H. B. Gilpin Company..... | 9    | 6     | .600        |
| McCormick & Co.....       | 8    | 7     | .533        |
| Calvert Drug Company..... | 6    | 9     | .400        |
| Muth Bros. & Co.....      | 1    | 14    | .067        |

Averages of 160 and over were made by the following:

|  |     |
|--|-----|
| Lemar, Sharp & Dohme.....                | 180 |
| Colston, Sharp & Dohme.....              | 180 |
| Lockwood, H. B. Gilpin Company.....      | 178 |
| Brauer, James Bailey & Son.....          | 172 |
| James, Calvert Drug Company.....         | 169 |
| William Smuck, H. B. Gilpin Company..... | 168 |
| Davis, McCormick & Co.....               | 168 |
| Goldsborough, Sharp & Dohme.....         | 166 |
| Jahries, James Bailey & Son.....         | 163 |
| Hayes, McCormick & Co.....               | 163 |
| Holzerman, James Bailey & Son.....       | 162 |
| Baumgartner, Sharp & Dohme.....          | 162 |
| Fairley, James Bailey & Son.....         | 161 |
| Armor, McCormick & Co.....               | 160 |
| Beaumont, McCormick & Co.....            | 160 |

#### THE WEDGEWOOD CLUB.

The monthly social session of the Wedgewood Club for October was held on the evening of the 26th and took the form of a theatre party to see Cissy Loftus at the Maryland. After the performance the club members went to Kruse's Hotel and had oysters in every style, in addition to the speeches.

The Pharmaceutical Journal Club, an organization of young Baltimore druggists, which discusses articles of special interest in drug journals, had its first fall session on October 26 at Kernan's new hotel and combined the discussion of professional matters with that of an excellent menu.

It is stated that William Dawson and Henry H. Klingel, well known Baltimore druggists, intend to establish a chain of pharmacies in this city, while Druggist Sprague, who conducts the store at Liberty and Fayette streets, has opened another at Park avenue and Fayette streets, diagonally across the way. Mr. Sprague is also credited with the intention to establish a chain of cigar stores.

A meeting of the Baltimore Retail Druggists' Association was called for Wednesday, November 8, in Sonnenburg's Hall, Baltimore and Greene streets, to discuss the advisability of fighting an aggressive cutter of this city with his own weapon. It has been so far found impossible to get him in line, all others having accepted the association price list, and the proposition has been made for all other druggists to sell patent medicines at cut rates.

Samuel L. Robinson, the druggist at Greene and Franklin streets, Baltimore, who was sued by Dr. Samuel B. Hartman, the manufacturer of Peruna, on the ground that he had defaced the serial numbers on the bottles of the preparation secured from sources other than those considered regular, filed his answer August 7. In the answer the issue of defacement is avoided, Mr. Robinson setting up the claim that he had made no contract to sell Peruna at a certain figure, and therefore was not guilty of a breach of contract. This, according to the other side, is not the question at stake at all, the contention being solely one of alleged defacement of the wrappers, which, Dr. Hartman avers, is contrary to law.

## OHIO.

**Local Association in Good Shape in Columbus—But Little Cutting Save on Department Store Goods.***(From our Regular Correspondent.)*

Columbus, November 7.—The local association of druggists is in good shape and is doing good work. It has been in existence for some years and most of the druggists are members. The older men in the trade say that the organization is of much more benefit to the stores in the residence portion of the city and on the outskirts than up in the business portion of the town. Regular meetings are held and there is a feeling of fellowship among those who attend, although each fellow, of course, is looking out for himself when it comes to doing business. There is no question, however, that much good is accomplished, even through the social features that are made prominent at times.

No fight has been made for some time against any of the evils that sometimes come up in the business. Like any other city, Columbus has its drawbacks in this respect, and the association takes cognizance of them and does what it can to mitigate them without too stringent measures. The members have felt for some time that quiet work is better than an open fight upon any subject.

So far as rate cutting goes, the city has its share, but the cutting is confined in a large measure to those articles that are handled in department stores and upon which special prices are always made. Competition is met on all these articles and the association cannot interfere. On the outskirts there is always some cutting on patent medicines and other articles of the kind. It is hard to keep clear of this trouble entirely.

**PRICES MAINTAINED IN THE BUSINESS CENTER.**

Up in the business section of the city prices are maintained well on all articles. Some of the best men in the trade have been open with the assertion that they will not be the first to cut prices, but if others start it they will be the last to quit. The big stick has done its work well. Only once or twice have special prices been made by any of the houses and then they were withdrawn at once, when it was found that the others meant business from the start. Some of the High street stores have an excellent business on goods that are handled in department stores and upon which special prices would maintain them in case of a fight upon patent goods and it would avail the others little to make the start in the wrong direction. The result is a satisfactory business and it is believed that there is no desire now to cause trouble in this way.

**CLEVELAND NOTES.**

G. W. Glines has sold his store at 147 Franklin avenue to Isa Leist, formerly of Napoleon, Ohio.

W. H. Tissot, formerly of Wellington, Ohio, has purchased the Bolton Avenue Pharmacy, at the corner of Bolton avenue and East Prospect street.

**OHIO NOTES.**

J. W. Houghton has again opened a drug store at Wellington.

F. P. Shanafelt has sold his interest in the firm of W. I. Bolender & Co., Canton, to W. I. and D. J. Bolender.

C. W. Meggenhof, Columbus, has sold his store to C. W. Goebel.

**Registered in the District of Columbia.**

At the examination held October 9, 1905, by the Commissioners of Pharmacy, there were six candidates, of which number two were successful, John A. Nelson and Cyrus W. Nelson.

Examinations are held on the second Monday in January, April, July and October. Candidates for examination must file with the secretary, Dr. Henry A. Johnston, 1,221 New Jersey avenue, N. W., Washington, their applications, together with the fee provided by law, not later than the Monday preceding the date of examination.

## ILLINOIS.

**Proprietors' Publicity Bureau—Tincture of Iodine Prosecutions in Chicago—The New U. S. P. Alcohol—A Query.***(From our Regular Correspondent.)*

Chicago, November 8.—Members of the Proprietary Association of America have established the Commercial Publicity Bureau, which has offices in the Woman's Temple, 184 Lasalle street, the quarters of the bureau being next door to those of George L. Douglass, attorney for the association. Manager Funk has charge of this bureau. Mr. Land, of Dr. Kilmer & Co., Binghamton, N. Y., is the chairman. It is said that the object of the bureau is to send out information that will tend to offset the statements made in certain periodicals which have attacked patent medicines.

**TINCTURE OF IODINE BELOW STRENGTH.**

Prosecutions by the State Board of Pharmacy for the sale of tincture of iodine not up to the U. S. P. standard may result in important discoveries according to those who are studying the matter closely. The U. S. P. requires 7 per cent. of iodine and the board has found all the way from 7-10 to 15 per cent. The experts employed by the defense in a recent case found that tincture of iodine loses with age. In the U. S. Dispensatory this subject is discussed and one expert found that 1-12 per cent. was lost in 10 months by exposure to light. Others claim that there is a loss of 1 per cent. in three months. None have found how iodine can strengthen with age or lose down to 7-10 per cent. Quite a number of druggists have admitted that they make one grade for counter sales and another for dispensing. The grade is lowered in the counter sales so as to reduce the selling price and thus meet competition. It is thus difficult for honest druggists to hold their own. The present crusade was begun by druggists who complained about unfair and unscrupulous competition. In the tests the board gave a wide margin by passing all tinctures that were between 6 and 8 per cent., a margin of 1 per cent. each way.

**HOW ABOUT U. S. P. ALCOHOL?**

Numerous druggists in Chicago would like to know what the trade is doing in other cities in regard to the new U. S. P. alcohol. Are they getting the increased percentage alcohol? How much more do they have to pay for it? How do they sell it? It is recalled that at the time of the 1870 revision the committee tried to increase the strength, but that when this became known protests were filed by distillers, jobbers, and dealers, and the matter was dropped. It is generally understood that the increase in the cost of the higher percentage product is out of all proportion to its value. It is questioned in some quarters if the committee has not let this change slip through without consulting with those who are familiar with distilling alcohol.

**NEWS AND NOTES.**

The State Board of Health is preparing to go gunning after druggists guilty of counter prescribing.

The store recently opened by Kidder & Lewis at Forty-seventh street and Lake avenue has been sold to H. B. Cole.

James Knapp has bought the store of C. B. Seales at Sixty-fourth street and Rhodes avenue.

L. H. Norwood, who formerly carried the Sharp & Dohme line for seven years, has signed a contract with Eli Lilly & Co., and will represent this firm in Wisconsin.

The funeral of Isaac H. Fry, who died in California recently, took place in Chicago. It was largely attended by members of the Chicago Veteran Druggists' Association, and the pall bearers were all members of this historic organization.

A Chicago druggist recently put up this sign near his stamp drawer with good results: "A Problem.—If a person goes to a store 25 times a month for a 2-cent stamp, how much time would be saved if he bought 50 cents worth at one time?"

Druggists in Will County are trying to have the nickel-in-the-slot telephone introduced there. Their effort recalls the

struggle that was necessary to get the plan into operation in Chicago. Every one now accepts these instruments here and realizes their advantages.

The University of Illinois School of Pharmacy began its forty-sixth annual session with a total enrollment of 170 students. Many of the students went to Champaign to attend the initiation of President James.

The new store of the Central Drug Company, at the southwest corner of Washington and State streets, is one of the handsomest in the West. It was opened for business recently under charge of Messrs. Young and Tabor.

Earl Ryan, formerly manager of the Chicago office of the Pacific Coast Borax Company, has assumed the duties of assistant manager of the Eastern territory, with headquarters in New York. He was very popular and successful in the Western territory and will be missed by a host of friends.

Thomas W. Golden, who represents the water department of the French Lick Springs Hotel Company, was receiving congratulations from his friends on the morning of November 6. He wired Tom Taggart that the Pluto Water had another representative in Chicago; it was a boy.

W. Haasse, who was manager of the Colbert Chemical Company's drug store at State and Monroe streets, has resigned and accepted the management of Siegel-Cooper Company's drug department. T. L. James, who has managed this department, has accepted the management of the drug department of The Fair, until recently conducted by the great and only Catlin.

The University of Illinois School of Pharmacy (Chicago College of Pharmacy) began its 46th annual session with an increased attendance. The total enrollment is 170 students, and of these 57 are seniors and 113 are juniors. Seventeen States are represented in the classes, besides which there is a student from Porto Rico and one from Mexico, in attendance.

Frank L. E. Gauss, Western manager of the traveling force for Eli Lilly & Co., left November 7 for a month's trip through the West, and will visit St. Louis, Oklahoma and Denver. Mr. Gauss is one of the highest salaried managers on the payroll of any pharmaceutical house, but his record proves that he is worth all he costs.

James E. Clark, whom the Chicago trade remember as having been connected with the Searle & Hereth Company, has, after a service of ten years with the latter firm, severed his connection and engaged with Eli Lilly & Co. Mr. Clark will be assigned work in connection with the Chicago branch under R. A. Hevenor, of the Chicago branch.

David Kaplasky, formerly proprietor of the Reliance Pharmacy and later of Kaplasky & Moran, of Michigan City, Ind., has accepted a position with Eli Lilly & Co., and has been assigned to California by Frank L. E. Gauss, the manager of the traveling force, with headquarters in San Francisco. Mr. Kaplasky has a large circle of friends in medical and drug circles in Chicago who wish him success and Godspeed.

#### UNIVERSITY OF ILLINOIS SCHOOL OF PHARMACY.

The faculty, students and many of the alumni of the University of Illinois School of Pharmacy visited Champaign on October 18, the occasion being the installation of Dr. Edmund J. James as president of the University of Illinois. The exercises attending the installation began Sunday, October 15, but the principal event occurred on Wednesday, when Dr. James was formally installed as president of the university. The installation procession was participated in by the faculties, students and alumni of the various departments of the University, who acted as an escort for the trustees and officers of the institution, together with the distinguished guests. The senior class has organized, and elected officers as follows: President, C. E. Tilton; vice-president, A. G. C. Ackermann; secretary, W. S. Mayhew; treasurer, F. E. Bucklin.

#### A Correction.

In our issue of September 25, on page 196, reference was made to Parke, Davis & Co. when the firm of John D. Park & Son was intended. The latter firm was so obviously meant,

however, that any one familiar with the drug trade would have understood that a slip of the pen had been made.

#### Board of Pharmacy American Pharmaceutical Association Prizes.

The Oklahoma Board of Pharmacy now offers nomination for membership and one year's dues in the A. Ph. A. to the person receiving the highest average at the examination for registration. James Whittet, of Carnegie, Okla., obtained this prize at the October 10 meeting. His general average was 85 per cent. Nine applications for membership have been filed since the Atlantic City meeting.

#### The Market Position of Menthol.

The position of menthol is at the moment one of great uncertainty and interest. Earlier in the season the crop of Japanese crude peppermint oil was reported to be fully equal to last year's crop, which was by far the largest on record, amounting to about 600,000 pounds, as against 400,000 pounds the previous year. Large quantities of menthol were, on this assumption, sold by Japanese houses at rather below 6s. per pound, c.i.f., these sales reaching a total, it is reported, of fully 200,000 pounds, or nearly 3,500 cases. With the normal percentage of crystals in the crude oil this would necessitate a total "crop" of 500,000 pounds of crude oil. There have been many conflicting estimates of the crop this year, and lately it has been reported that the first and second cuttings have turned out to be less than half those of last year. Even if the third cuttings prove eventually to be in the same proportion as in former years a supply of not over 250,000 pounds of crude oil has to be faced by the "bears," or about half the quantity required to produce, under normal conditions, sufficient menthol to cover the "bear" sales already made.

In addition, it is stated that owing to the unfavorable weather, exceptionally heavy rains having been experienced, the first and second cuttings have proved very poor in menthol, but it is usual for the third cuttings, which are now about in course of collection, to yield a larger quantity than the total of the first two. Should the eventual output, however, prove to exceed these estimates it would seem that this year's supply of menthol will be considerably less than last year, which was a record of about 4,000 cases. Some at least of those who have sold "bear" appear to realize this, for large purchases have lately been made at steadily advancing prices, up to 9 shillings 3 pence per pound at the time of writing, for Kobayashi on the spot, whilst offers for shipment are not to be obtained from first hands.

The "bears" are doing their utmost to discredit the truth of the position as detailed above, and to depress the market by occasional offers of small parcels below the ruling nominal price. What the actual results of the crop will be cannot, of course, be known yet, but the stocks are not large, and are thought to be insufficient to supply wants until the product of the third cuttings will be available, which cannot be until well in the new year, and as far as can be seen at the moment the prospects seem to point to a higher range of prices. The demand for the dementholized oil has not been so active as for menthol, nor has the price advanced in the same proportion as that of the crystals, although the article remains very firm at 4 shillings 9 pence per pound for spot goods. The great difference in price between the American and Japanese oils cannot very well be maintained, and now that the American crop has established a firm position it seems probable that the Japanese oil will, with a little demand, materially advance in value.—*Pharmaceutical Journal*.

#### 580 Tons Cascara Bark.

A total of fully 580 tons of cascara bark for the past season was peeled in Lewis county, according to reliable estimates given out by the Northwest Chittim Company, of Chehalis, which is the largest buyer of bark on the Coast, says the *Advocate*. Of this amount probably 400 tons has been sold, mostly for 3 cents a pound by those peeling it. Some got a shade better than 3 cents. Between 400 and 500 tons of the bark are in Washington and Oregon awaiting better prices.

## The Drug and Chemical Market

The prices quoted in this report are those current in the wholesale market, and higher prices are paid for retail lots.  
The quality of goods frequently necessitates a wide range of prices.

### Condition of Trade.

NEW YORK, November 11, 1905.

Business in the wholesale drug and chemical market has been of a somewhat limited character during the past fortnight, though the volume in the aggregate reached fairly satisfactory proportions and the market as a whole is steady in tone. The unsettled political situation in Russia has tended to impart firmness to Russian products and higher prices are quoted on ergot, lycopodium and some other staples. Messina essences are held with increased firmness, and menthol has advanced into stronger position. The advance in camphor, foreshadowed in our last issue, has materialized, and the gum remains in firm position at the higher range. The bark sales at Amsterdam on the 2d inst. resulted in lower prices, and holders of quinine are less firm in their views in consequence, though quotations are as yet unchanged; the impression prevails that values will go lower, though the tone of the outside market remains firm. Competition has forced down the price of opium, and cocaine has been reduced by the manufacturers. The market for codliver oil is quiet for the season, and Central American copaiba balsam is unsettled by competition. In essential oils, anise, cassia and cubeb have advanced in value. The market as a whole is considered in good shape, the prices of most staple lines being maintained with confidence and strength.

#### HIGHER.

Camphor,  
Saffron, Spanish,  
Cubeb oil,  
Cubeb berries,  
Peppermint oil,  
Lavender flowers,  
Menthol,  
Pink root,  
Musk root,  
Valerian root, Belgian,  
Squills,  
Anise seed,  
Anise oil,  
Ergot,  
Clove oil,  
Buchu leaves, short,  
Ipecac,  
Lycopodium,  
Uva ursi,  
Monobromated camphor,  
Spermaceti,  
Burgundy pitch,  
Wahoo,  
Silver nitrate,  
Kava Kava,  
Juniper berries,

#### LOWER.

Opium,  
Codd liver oil, Norwegian,  
Cocaine,  
Resorcin,  
Colocynth apples,  
Glycerin,  
Senega,  
Lemongrass oil,  
Citronella oil,  
Rhatany,  
Acetone,  
Tannic acid,  
Millet seed,  
Saffron, American,  
Caraway seeds.

### Drugs.

Acetone, which declined in the interval to 15½c to 16c, is steady at the lower range, and the usual demand is experienced.

Alcohol, grain and wood, is maintained steadily at previous quotations, or, say, \$2.49 to \$2.51 for the former and 70c to 75c for the latter.

Balm of Gilead buds are finding about the usual inquiry and values are maintained steadily at 43c to 45c.

Balsam copaiba, Central American, reflects the influence of competition among holders, values having eased off during the interval to 28½c to 30c; Bara is held and selling at 37c to 40c.

Balsam fir, Canada, is maintained steadily at \$3.10 to \$3.20, with small sales at this range; Oregon has sold from first hands during the interval at 70c.

Balsam Peru continues inactive, though no special change in price has come to the surface, recent sales being \$1.00 to \$1.10.

Balsam tolu is meeting with increased inquiry, but values continue easy on the basis of 20c to 22c.

Barks.—Bayberry is in demand, but the quantity in stock is small and values are firmly maintained at 13c to 14c. Black haw is in limited supply and wanted at 17c to 18c. Cramp offers in a limited way only and values are well sustained at 7c to 8c. Cottonroot is held with increased firmness, recent sales being at 8½c to 10c. Cascara sagrada is without change of consequence, either as regards price or demand; sales at 5½c to 9c. Wahoo is scarce and the limited available supply is closely concentrated; last sales were at 40c.

Bay rum is not coming forward from Porto Rico and holders of spot goods have advanced quotations to \$2.25 to \$2.50.

Buchu leaves, short, are held with more firmness in the face of stronger advices from primary sources; sales at 15c to 17c.

Burgundy pitch is in improved demand and firmer at an advance to 4c to 4½c. Prices are higher in primary markets, the present lay down being close to the inside figure.

Cacao butter sells very slowly, but no attempt is being made to urge the distribution, previous quotations of 28½c to 29½c for bulk still prevailing.

Calendula flowers have eased off a trifle during the interval, and 28c will now buy German.

Camphor, monobromated, is firmer in sympathy with the advancing market for camphor, and quotations have been advanced to the range of \$1.25 to \$1.30, as to quantity.

Cannabis indica is meeting with increased inquiry and the tone of the market is firm at \$1.00.

Cantharides, Russian, are tending higher, though sales were made recently at \$1.25 to \$1.30; Chinese are in light supply and wanted at 52½c to 55c.

Cassia buds are fractionally lower, holders being willing to accept 19c to 19½c, as to quality and quantity.

Coca leaves are in better supply and offered more freely at a slightly lower range, or, say, 17c to 18c for Truxillo, and 30c to 32c for Huanuco.

Cocaine is unsettled in sympathy with conditions abroad, and manufacturers have reduced prices 25c per oz., to the basis of \$3.25 to \$3.45 for bulk, with outside holders offering at 5c under these figures.

Codd liver oil does not improve in tone, and only a moderate degree of interest is extended to the article, despite the advance of the season. The better grades of oil are still available at \$26.00 to \$30.00, as to brand and quantity. Newfoundland is held at \$24.00.

Colocynth apples continue very dull, and prices of Spanish are a shade lower, with sellers at 28c to 27c.

Cubeb berries are moving into stronger position and holders manifest considerable firmness at the present range of values. While 8½c is named for ordinary, XX berries command 10c.

Cuttlefish bone is a shade firmer and large jewelers' does not offer at less than 70c, though the smaller grade is obtainable at 40c to 42c; French and Trieste are held at 12c to 13c and 15c to 16c, respectively.

Ergot is attracting more attention and Russian is distinctly stronger owing to conditions in primary markets. Cable advices put the lay down cost at 45½c, but sales are making at 44c. Spanish is in light supply and up to 50c is named for this variety.

Glycerin is lower, influenced by competition among manufacturers. An average demand is experienced for C. P., which is held in selling at 11½c to 12c for drums, 12½c to 13c for cans.

*Grindelia robusta* is offered more freely in face of the near arrival of new crop and quotations show a decline to 8c to 8½c.

Haarlem oil is very scarce for prompt delivery and holders of the limited available supply have advanced quotations to the range of \$2.15 to \$2.25.

Juniper berries show increased strength owing to unfavorable crop reports, and some holders have advanced their price to 3½c to 4c, and the tendency is still upward.

*Lycopodium* is higher at primary sources and the local market shows corresponding strength, unlabeled being quoted at 60c.

Manna is firmer in tone, and while some goods were available at 33c, some holders ask 35c for small flake. Sorts and large flake are unchanged.

Menthol is held at the full recent advance and the market continues firm in sympathy with the position of the article in London and Japan; while \$3 is generally quoted, some business has been reported in broken lots at \$2.75 to \$2.85.

Opium reflects the influence of competition between dealers, values being weak and unsettled, and buyers hesitant. Quotations for cases show a decline to \$3.17½ to \$3.30, while broken lots are available at \$3.22½ to \$3.25, with sales reported at a fraction under these figures. Powdered is finding a moderate jobbing outlet at the range of \$3.60 to \$3.65, as to test and quantity.

Quinine remains in an unsatisfactory position, and the requirements of the trade appear very limited. The result of the bark sale at Amsterdam on the 2d inst. has had a weakening influence on the market. The average unit value at this action was 5.20 Dutch cents against 5.55 at the previous auction on September 28, when only one-half the quantity offered was sold. Although some dealers talk of the possibility of lower prices, this opinion is not generally entertained, the belief being that quinine prices are as near to the cost of production as they can go. Meanwhile manufacturers' prices are maintained on the basis of 20c for bulk in 100-oz. tins, and for stock in second hands the nominal quotations are 19c for German and 18½c for Java.

Resorcin has been reduced by the manufacturers to the range of \$1.05 to \$1.10, as to quantity, a decline of 10c.

Saffron, American, is in downward tendency, the inside quotation having been reduced to 72½c. Spanish is very firm in sympathy with advices from abroad, Valencia being quoted at \$7.75 to \$8.50. Alicante is without change at \$4.75 to \$6.00.

*Uvi ursi* is in limited supply and wanted, at an advance of 3½c to 4c.

Vanilla beans, Mexican, have sold actively since our last and values are well sustained at the previous range of \$2.75 to \$6.50 for whole and \$1.75 to \$2.00 for cut.

Wax, Japan, is maintained in firmer position and sales are reported at 14c to 14½c.

#### Chemicals.

Acetate of lime has been in good demand since our last, and prices are steadily maintained at the range of 1.60c to 1.65c for brown and 2.35c to 2.40c for gray.

Alum is without quotable change; a moderate demand is reported at 1.75c to 1.80c for lump and 1.75c to 1.90c for ground.

Arsenic, white, is meeting with a moderate sale, but stocks are limited and transactions through second hands have been at 3½c to 3¾c; red is held and selling at 6¾c to 7c.

Blue vitriol is without improvement; holders continue easy in their views, and 5½c to 5¾c is named in a jobbing way.

Brimstone, crude seconds, is in good demand and quotations are well sustained at \$22.12½ to \$22.25.

Chlorate of potash prices for the season of 1906 have been announced, the range standing at 8½c to 8¾c for crystals and powdered respectively. On spot sales are making in a jobbing way at 9¼c to 9½c.

Corrosive sublimate has been advanced by the manufacturers to 73c, a 5 cent rise in values.

Cream tartar remains quiet. The moderate jobbing inquiry is being met at 23½c to 23¾c for crystals and powdered respectively.

Nitrate of silver has advanced in the interval in sympathy with the price of the metal, and the revised range is 40c to 43½c.

Nitrate of strontia is firmer, and values show an advance to 7½c to 7¾c for barrels and kegs respectively.

Saltpetre is in steady moderate request and the market is firm at 4½c to 4¾c for crude.

Tannic acid prices are lower, the new range from manufacturers showing a decline to 48c to 55c for crystals. Powdered is nominally unchanged at 34c to 40c.

Tartaric acid is seasonably dull, there being only a retail demand at the quoted range of 29c to 29¼c for crystals and 29½c to 29¾c for powdered.

#### Essential Oils.

Anise continues in upward tendency and values are higher in sympathy with advices from primary sources. High test oil commands \$1.25, and down to \$1.15 is named for low grade oil.

Camphor is maintained with firmness, and a good demand is experienced at an advance to 9c to 15c.

Cassia is maintained with noticeable strength in the face of limited offerings from producing points; 77½c to 80c is asked, but sales do not exceed jobbing quantities at this range.

Cedar wood has developed increased firmness, and values show an advance to 21c to 25c; leaf offers at 55c to 65c.

Citronella remains quiet and values are fractionally lower, down to 40c being named.

Clove has attracted increased attention since our last, and values have advanced to the range of 85c to 90c for cans and 87½c to 92½c for bottles.

Cubeb is firmer, in sympathy with the berries, and some holders have advanced prices to 90c to \$1.00, as to quantity.

Lemongrass has weakened in the interval, owing to freer receipts from producing points, and quotations show a decline to \$2.90 to \$3.00.

Peppermint continues in good demand and firm at the range of \$2.40 to \$2.50 for bulk, a fractional advance over previous quotations.

#### Gums.

Aloes, Curacao, is in good demand and holders are firm in their views at 6¼c to 6½c. Barbadoes is held and selling at 14c to 16c, while Cape is well maintained at 8½c to 12c.

Arabic sorts is in good demand and values are firmly maintained at the range of 7c to 11c.

Asafoetida is quiet under the influence of a limited demand, but values are unchanged at the previous range of 14c to 18c for good to prime.

Benzoin is meeting with a moderate jobbing inquiry, and quotations are maintained at 40c to \$1.00 for Siam and 28c to 30c for Sumatra.

Camphor has advanced twice since our last, the latest rise on the 6th inst. bringing quotations up to the range of 82c to 82½c for barrels and cases, respectively. Japanese is held at 81c for 2½-lb. cakes and 82c for ounces.

Gamboge is inquired for, and we hear of sales of broken pipe at 75c and of prime pipe at 77½c to 80c.

Guaic is in good seasonable demand at nominally unchanged quotations, or, say, 15c to 25c, as to quality and quantity.

Kino has been inquired for and we hear of numerous jobbing sales at 26c to 28c, as to quality and quantity.

Tragacanth is finding a good jobbing outlet, and values are well sustained at the range of 30c to 65c for Aleppo, and 35c to 80c for Turkey, as to quality and quantity.

#### Roots.

Arrowroot is in light supply and firmer, with quotations marked up to 7c to 7½c.

# AMERICAN DRUGGIST

## and PHARMACEUTICAL RECORD

PHILADELPHIA.

NEW YORK, NOVEMBER 27, 1905.

CHICAGO

ISSUED SEMI-MONTHLY BY

AMERICAN DRUGGIST PUBLISHING CO.

62-68 WEST BROADWAY, NEW YORK.

CHICAGO, 221 Randolph St. PHILADELPHIA, 8713 Walnut St.

A. R. ELLIOTT, President.

CASWELL A. MAYO, Ph.G. .... Editor.

THOMAS J. KEENAN. .... Associate Editor.

ROMAINE PIERSON. .... Manager Chicago Office.

\$1.50 a year. 15 cents a copy.

ADVERTISING RATES QUOTED ON APPLICATION.

THE AMERICAN DRUGGIST AND PHARMACEUTICAL RECORD is issued on the second and fourth Mondays of each month. Changes of advertisements should be received ten days in advance of the date of publication. Remittances should be made by New York exchange, post office or express money order or registered mail. If checks on local banks are used 10 cents should be added to cover cost of collection. The publishers are not responsible for money sent by unregistered mail, nor for any money paid except to duly authorized agents. All communications should be addressed and all remittances made payable to American Druggist Publishing Co., 62-68 West Broadway, New York.

Entered at New York as Second-Class Matter.

### EDITORIAL COMMENT.

TECHNICAL QUIBBLES. It would appear that the Greater New York Branch of the State Board of Pharmacy had abandoned its efforts to "catch" retail pharmacists on tincture of iodine deficient in iodine

strength and was now bending its energies in directions calling for the exercise of less chemical knowledge and more of finesse and adroitness. Prescriptions are being circulated by inspectors of the board calling for "acid. tannic." and "alumin. sulph.," and when the unsuspecting apothecary dispenses the ordinary potash alum of the drug store for "alumin. sulph." he is taken to task by the minions of the board. Many of the prominent members of the trade in this vicinity share our own opinion that the board might find a better outlet for its energies than in harassing retail pharmacists over such trivial technicalities as this.

It will be welcome news to the retail drug trade that the Internal Revenue Department has decided to postpone the date when the ruling in regard to the Federal liquor tax on certain proprietary medicines containing alcohol will take effect. Latest advices indicate that the new order will not become operative until January 1, instead of on December 1, as originally announced. The reason for the postponement, as stated by Commissioner Yerkes, is that the department desires to give the trade sufficient time in which to dispose of stocks of such medicines as may be affected by the ruling. It is expected that a list of such preparations will be made public by December 1 and thus afford retailers sufficient time in which to prepare for the enforcement of the order. Washington advices indicate that it is the department's intention to add to the list of dutiable proprietaries from time to time as analyses proceed. It is satisfactory to note that the manufacturers of such remedies as are placed under the Government ban will have an opportunity by the postponement of the ruling to change the nature of their compounds by reducing the percentage of alcohol contained therein so as to escape liability to the Federal liquor tax; whether proprietors will take such a step or not, of course, remains to be seen.

A QUEER OBITER DICTUM. The New York State Board of Pharmacy has maintained in the face of contradiction that the pharmacist has no right to put up a preparation official in the Pharmacopœia of a different strength from the official standard, even if the pharmacist should indicate on the label of the container that it was "Jones' Tincture of Iodine" he was selling and not the preparation of the Pharmacopœia. The western (Buffalo) branch of the board has been at pains to get legal advice on the question, and a firm of Buffalo attorneys has obligingly responded with an *obiter dictum* fully sustaining the board in its contention. This opinion is so curiously wide of the mark that we reprint it in full, *verbatim, literatim et punctuatim* elsewhere, merely pausing here to remark that it is so evidently prepared to suit the exigencies of some particular case as to make it of no value whatever in a court of law. Leaving out of consideration the value of an attorney's opinion on a question subject to review by the courts, and any question of the purely ethical side of the matter—it being unnecessary for us to reiterate our abhorrence of willful adulteration or sophistication—it yet seems to us that a consumer of tincture of iodine or any other pharmacopœial preparation has a perfect right to demand and obtain a special preparation, either weaker or stronger than the pharmacopœial standard if he so elects. There is no question here of substitution or misrepresentation, and it is on all fours with the special directions of a physician on prescription that —e. g.: Heyden's *Unguentum Hydrargyri* he employed in fill-

ing it. We do not think the board has strengthened its position by the publication of the opinion in question.

#### The Loder Suit.

The hearing in the suit brought by Constantine G. A. Loder against various proprietors, wholesale druggists and retail druggists of Philadelphia has attracted much general interest, not only in trade circles, but likewise among those not engaged in the business. A report of the hearing appears in another column.

It is pretty generally understood that this is not the suit of Mr. Loder alone, but that he is assisted in this effort by the entire "cutting" fraternity in the country. In other words, it is simply a continuance of the legal battle which has been fought for many years between the advocates of price protection and those of price demoralization.

Those who are familiar with organization work understand thoroughly that there are no combinations or agreements between the three different associations connected with the trade, as such, and that whatever action is taken is the result of individual contracts and individual business judgment. The wholesale druggist has contracts with rebate and tripartite proprietors which he is bound to maintain or take the risk of having supplies of proprietary goods denied to him. The Direct Contract Serial Numbering proprietors have contracts with wholesale druggists as wholesale agents and with retail druggists as retail agents. These are the only classes of contracts in force and there are no others. It is unfortunate, however, that some retailers in their zeal have at times been more or less imprudent in their actions, and these conditions, when brought out on the witness stand, have been unfortunate, not because the acts mentioned were illegal of themselves, but because, when taken in connection with other conditions, they might seem to one not otherwise informed to indicate the collusion which the plaintiff claims.

The testimony given by proprietors and wholesale druggists seems thus far to have been practical and vigorous. One wholesale druggist testified that he is willing even now to sell Mr. Loder any goods the sale of which is not controlled by his contract with proprietors. Two others testified that their action in refusing goods was based entirely on their own business judgment and not on any influence brought to bear by retailers. The representative of a large manufacturing house testified that his firm refused supplies because Mr. Loder cut their individual minimum prices and not because he was listed as an "aggressive cutter."

The newspapers have given much space and wide publicity to the case for several reasons. The general outcry against trusts no doubt leads them to believe that the subject is interesting to the public. It is of course impossible for the average reporter, without any previous knowledge of the subject, to grasp the details of the various price protective plans, and consequently he is disposed to dilate especially upon what strikes his fancy. Generally the points to which he calls attention are the unimportant ones, and the really important elements of the case he passes by. In addition to this the attorney for the plaintiff is evidently using the case as a means of advertising himself, and before the trial really commenced furnished the local newspapers with an unlimited supply of sensational matter.

The case has been in many respects monotonous and tiresome, and a large part of the evidence placed before the jury has been in the shape of depositions taken at Chicago and In-

dianapolis, over 5,000 pages in all. In addition to this there have been innumerable extracts read from the annual proceedings of the National Wholesale Druggists' Association, and these as well as the depositions have seemed uninteresting to the jury. One attendant stated that "all the members of the jury had not been asleep all day, but there had been no time during the session that at least one of them had not been asleep."

The attorney for the plaintiff, Henry J. Scott, talks loudly, points his finger at the witness, distorts his testimony and then tries to browbeat him into accepting the garbled version as correct. On behalf of the defense there is quite a group of lawyers gathered, the chief of whom is the eminent attorney, John G. Johnson, who leads the action in the defendants' behalf. His methods are diametrically opposed to those of Mr. Scott. Suave in manner, velvety in speech, he leads the witness on cross examination to a dangerous spot and then by one sudden question dumps him into the pit of despair, says "That's all," and leaves him there. His handling of his side of the case has been masterful, and it is quite interesting to note the degree of respect which his legal attainments cause to be tacitly accorded him. His objections are almost always sustained by Judge Holland; those of Mr. Scott are generally denied.

As has been previously stated, this suit is brought in the United States Circuit Court and under the Sherman act. In this respect it differs radically in character from all other cases of this kind which heretofore have been brought under State laws. It is said that it is the hope of the defense that the judge will decide on points of law that the case has not been sustained, and that it will not be given to the jury. The charge having been made that this is a case of conspiracy, it of course logically follows that if any one of the three parties charged with conspiracy is not guilty the case would fall to the ground.

It is sincerely hoped by all those interested in the drug trade that Mr. Loder will not win. It would simply be an invitation to every "aggressive cutter" in the land to take similar action—in fact, it has already been authoritatively announced in Philadelphia that in case this suit is successful another lawyer is ready with another client to start a similar suit.

#### Dispensing Problems.

We print in another column a series of dispensing problems with comments thereon which we commend to the consideration of our readers. The gentlemen who have been kind enough to favor us with their views as to the best methods of dispensing the several prescriptions shown are men whose skill, whose experience and whose knowledge entitles them to speak with authority. Notwithstanding this fact, there is a marked difference of opinion on several of the prescriptions. One of the members of the American Pharmaceutical Association having privately criticised this discussion as lacking in a scientific basis was invited to contribute his views, but declined to avail himself of the opportunity, stating that the problems would be given one of his students to study and report upon next year.

In the meanwhile the pharmacist is daily confronted with just such problems as these, and he must solve them at once, not after a year's study and experiment.

We hope that this discussion will prove both interesting and instructive to our readers, and we should be pleased to hear from those who are particularly interested or who should like to see similar articles in our columns in the future.

## PRESCRIPTION PROBLEMS.

## A Symposium on Practical Dispensing Difficulties.

At the Atlantic City meeting of the American Pharmaceutical Association Wm. F. Kaemmerer, of Columbus, Ohio, presented for discussion copies of 20 prescriptions taken from his files, each of which contained some point of interest. The prescriptions, written out in chalk on blue seidlitz powder paper and suspended before the members, were discussed by the practical dispensers interested in this branch of work.

In order to present this matter in interesting form we have submitted copies of the prescriptions with Mr. Kaemmerer's comments to a number of pharmacists in different sections of the country. The comments made by them are appended to each prescription, the name of the commentator being given in each instance.

Our thanks and those of our readers are due to these gentlemen who, though busy men, have taken the time to give us the benefit of their advice. In returning the slips sent with his annotations Mr. Rapelye, of Hartford, asked that in justice to himself we should state that his observations were made hurriedly and, save in one instance, without attempt at actual trial. The same conditions no doubt obtained in the case of several other contributors, though some evidently did make experiments.

Following is a list of those whose comments are given:

George M. Beringer, Camden, N. J.

William L. Cliffe, Philadelphia.

H. A. B. Dunning, Baltimore.

W. T. Hankey, Cleveland, Ohio.

Henry P. Hynson, Baltimore, Md.

Thos. D. McElhenie, Brooklyn.

Charles F. Nixon, Leominster, Mass.

Charles A. Rapelye, Hartford, Conn.

E. A. Ruddiman, Nashville, Tenn.

Wilbur L. Scoville, Boston, Mass.

G. G. C. Simms, Washington, D. C.

M. I. Wilbert, Philadelphia.

The problems and comments were presented at a meeting of the Kings County (N. Y.) Pharmaceutical Society, and the discussion aroused much interest. An account of this discussion appears on another page.

Mr. Wilbert submitted some general observations in connection with his comments, which will be found in our editorial column.

The comments which immediately follow the prescriptions are by Mr. Kaemmerer himself, as is also the following introductory note:

The following prescriptions are offered with the hope that they will bring out points that will be of service to others, should they be called upon to compound prescriptions of a like character. No attempt has been made to classify them. I shall give them just in the order in which they were received. Some of those prescriptions will bring out a few points not generally known. In one or two of them I shall call attention to a few things which are sometimes overlooked; while with others I have not been quite certain as to whether I did the proper thing in each case or not. Take prescription No. 1 as an instance:

## I.

Ferrous sulphate..... 5 grains.  
Magnesia .....10 grains.  
Peppermint water.....11 fluid drachms.  
Spirit of nutmeg.....1 fluid drachm.

## Mix.

Of such dose make 1 pint.

Directions: One teaspoonful twice a day.

This was a foreign prescription, and I had to use my own judgment. I concluded that the writer had simply neglected or forgotten to write the word "sulphate" after the word

"magnesia," and this seems to have been the case, because the prescription was refilled several times and no complaint made. This prescription is also of interest because of the way it is written. The order to make of such dose 1 pint is a little out of the ordinary method of writing a prescription.

MR. HYNSON: Without experience with this physician's prescriptions I should have used magnesium oxide. A solution of the iron salt should be made in about half of the peppermint water; a smoother mixture of the "magnesia" with the balance of the peppermint water; pour this into a suitable bottle. Wet the mortar with the solution of iron and add spirit of nutmeg. Dispense with a "shake well" label on bottle. In case a number of prescriptions of a similar character had been filled from this same physician and in all other instances he had prescribed magnesium sulphate, then only Mr. Kaemmerer's action would be justified.

MR. WILBERT: This is an instance of where the pharmacist might well call attention to the possible evils of self medication. Failing in this it is his duty to compound the formula as written. The dispensing of magnesium sulphate in place of magnesia, without further explanation, would, by many people at least, be considered counter prescribing pure and simple.

MR. DUNNING: In this prescription I think magnesia (light calcined) should have been used, unless the dispenser was able to learn from customers that, when first filled, a solution was received and not a mixture.

MR. NIXON: This prescription is an old one with us, and the sulphate of magnesia is always wanted. I believe it was wanted in this case.

MR. HANKEY: I would not feel justified in using magnesium sulphate in this prescription. I think the prescriber intended the iron to be administered in the form of the bland hydroxide instead of the astringent sulphate, as would be the case if the magnesium sulphate were used. Would therefore compound as written, using the official magnesia—viz., magnesii oxidum.

MR. SIMMS: I think magnesium oxide was intended in the above prescription, and not magnesium sulphate.

MR. BERINGER: In my opinion the intent of the prescriber is apparent. Magnesia (magnesium oxide) is plainly written and should have been dispensed. While mixtures containing ferrous sulphate and magnesium sulphate are frequently prescribed, the quantity of the latter is generally more than 10 grains. On the other hand, *magnesia* is frequently prescribed, and I have seen a number of similar prescriptions calling for this in combination with ferrous sulphate.

MR. CLIFFE: Ferrous sulphate and magnesia sulphate are commonly used in solution as a saline chalybeate and in the absence of positive information from the prescriber we should assume the sulphate of magnesia to be intended, as the resulting preparation would certainly be more efficient therapeutically than the insoluble ferric oxide which would be rapidly formed in the prescription as written.

MR. RAPELYE: This being a foreign prescription and it therefore being impossible to confer with the prescriber the method of dispensing would depend on the individual judgment of the dispenser. Taken literally he should have used magnesium oxide, but in dispensing it as he did he took the ground that the sulphate had been omitted and dispensed the commonly used mixture of ferrous sulphate and magnesium sulphate, and I am not sure but that he used good common sense in so doing.

MR. SCOVILLE: Probably magnesium sulphate was desired, as Mr. Kaemmerer decided.

MR. McELHENIE: I cannot think of any change from Mr. Kaemmerer's treatment of this unless, perhaps, to raise a query whether the foreign physician meant to have a pint made in the proportions given—i. e., about ten times the quantity. Otherwise the dose would be trifling.

## II.

Bromine ointment, 10 per cent.....1 ounce.  
Use as directed.

The base to be used is not stated. In order to make a satisfactory bromine ointment it is necessary to make a solution of bromine in water with the aid of some potassium bromide, just as we do with iodine in making ointment of iodine, where we use potassium iodide and water to dissolve the iodine; only in the case of bromine it was found necessary to use considerably more water to dissolve the bromine. I prepared this ointment in the following manner: Into a small bottle I weighed 150 grains of water, 100 grains of potassium bromide and 50 grains of bromine. These were shaken together until the bromine and the potassium bromide were dissolved. Two hundred grains of anhydrous lanolin were then placed in a mortar and the solution of bromine gradually added with constant stirring. The

result was a nice, creamy ointment without any escaping fumes of bromine.

**Mr. HYNSON:** Without experience with bromine ointments and with no information as to the base desired, I believe Mr. Kaemmerer's procedure would bring most satisfactory results. It is certainly desirable to prevent the escape of bromine, which appears to have been accomplished. Some possibly profitable experimentation might be made as to the quantities of potassium bromide and water necessary.

**Mr. BERINGER:** The external application of bromine in the form of brominated oils and ointments has been recommended and several years ago an ointment of bromine made up with petrolatum base was considerably prescribed for rhus poisoning. I should not have made a solution of the bromine, but dispensed an ointment made by rubbing up the bromine and petrolatum so as to have the bromine in as free a state as possible and in a form easily liberated on application.

**Mr. DUNNING:** Unless one is familiar with a prescription of this kind the best thing to do is to experiment with it. First of all I surrounded a large glass ointment slab with four porcelain dishes containing ammonia water and then proceeded to make the ointments by rubbing a weighed quantity of bromine directly with the base, using vaseline, lanolin and lard in turn. I also made up three lots with vaseline, lanolin and lard, respectively, the bromine having been mixed with water and potassium bromide in this proportion, viz., bromine, 48 grains; potassium bromide, 48 grains; water 60 minims. Any one of these six ointments might be called satisfactory. The bromine and lard, direct, was the best, possibly, although the solution of bromine with bromide and water is easier to work with.

**Mr. SIMMS:** Owing to the insolubility of bromine in lard or petrolatum I should decline to compound the above prescription unless the physician would allow me to use sufficient bromide of potassium and water to make a perfect ointment.

**Mr. CLIFFE:** We should treat it in the same manner as an iodine ointment of the same strength, only using a bromide instead of an iodide to effect solution. The best ointment base would be lanolin on account of complete miscibility with aqueous solutions.

**Mr. RAPELYE:** I should question the use of lanolin unless the purpose of the prescriber was known to be the absorption of the bromine. The direct mixture of the bromine and simple ointment would have been better, although the dispenser had good precedent in proceeding in the manner that he did.

**Mr. McELHENIE:** Mr. K.'s course is capital; could not be better.

**Mr. NIXON:** I should dispense as Mr. Kaemmerer. If the bromine is incorporated with an ointment base directly it will work out in fumes. Anhydrous lanolin is the only base that will retain the necessary amount of watery solution.

### III.

Calcium sulphide.....15 grains.  
Make into 60 pills.

I have found glucose to be the best excipient for making pills of calcium sulphide. The pills hold up well and are as small as those turned out by the different pharmaceutical houses. It is not necessary to add anything in order to give size to the pills.

**Mr. SIMMS:** I should add 20 grains of sugar of milk to the calcium sulphide, and use as an excipient mucilage or glycerin of tragacanth. I think a gelatin coated pill would be acceptable to most physicians.

**Mr. HYNSON:** I believe physicians generally prefer to have such substances as calcium sulphide, the valerates, sumbul, assafoetida, etc., dispensed as coated pills. When they prescribe them in pill form glucose is undoubtedly the excipient to use, although good honey is quite as satisfactory for dark pills.

**Mr. BERINGER:** Such pills should be coated with an ethereal solution of tolu to protect from the action of the air.

**Mr. WILBERT:** There always has been, and probably always will be, a difference of opinion as to the most generally acceptable all round excipient; at least some pharmacists, and I must admit that I am one of them, prefer glycerite of tragacanth on account of its hygroscopic qualities.

**Mr. CLIFFE:** I should make  $\frac{1}{2}$ -grain pills with a mixture of cane sugar, 10 per cent.; acacia, 5 per cent., and milk sugar, 85 per cent., using syrup as an excipient.

**Mr. SCOVILLE:** I should add an equal weight of sugar of milk and mass with glucose.

**Mr. DUNNING:** I think it would have been well to have added an equal weight of milk sugar.

**Mr. NIXON:** I think it a mistake to dispense pills weighing much less than 1 grain. I should add 15 grains of powdered althæa, when with the necessary glucose a pill of presentable size would be produced.

### IV.

Calomel .....1 grain.  
Urotropin .....1 drachm.  
Mix. Divide into 12 powders.  
Directions: One every four hours.

Calomel and urotropin are incompatible.

**Mr. WILBERT:** This is one of the instances where it becomes the evident duty of the pharmacist to call the attention of the physician to the incompatibility, with a view of preventing a recurrence of the same mistake in other cases.

**Mr. HYNSON:** A trituration of calomel with milk sugar or pure kaolin is generally a safe and desirable procedure when the substance is to be mixed with other chemicals. It does not appear that calomel is incompatible with perfectly pure hexomethylenamina, but may be decomposed by the impurities of the marketed products.

**Mr. CLIFFE:** I should dispense exactly as ordered.

**Mr. McELHENIE:** I should suppose this was not dispensed at all.

**Mr. DUNNING:** I find that reaction between these two substances is very slow, and I recommend the careful drying of the urotropin (which like all chemical substances contains a little moisture) before mixing with calomel; and, further, to first dilute the calomel with a little milk sugar and mix the whole as lightly as is necessary for thorough distribution.

**Mr. SIMMS:** I should object to putting up the above prescription as written. The ingredients are incompatible, and there would be a deliquescence in the papers. The physician should be consulted if possible.

**Mr. BERINGER:** The attention of the prescriber should be directed to this and the physician should separate these remedies into two prescriptions; given at least a short time apart.

**Mr. NIXON:** I am not aware of any incompatibility between calomel and urotropin that would prevent dispensing this prescription, containing but 1 grain of calomel.

### V.

Potassium bicarbonate.....3 drachms.  
Potassium citrate.....1 ounce.  
Tincture of hyoscyamus.....3 fluid drachms.  
Syrup of tolu...A sufficient quantity to make 8 fluid ounces.

Directions: One teaspoonful every two hours.

In compounding this prescription considerable effervescence takes place owing to the potassium citrate containing an excess of acid.

**Mr. RAPELYE:** Effervescence cannot be avoided in this mixture, as a bicarbonate and a citrate always effervesce more or less. I do not agree with the dispenser that the effervescence is due to an excess of acid in the citrate of potassium, as my sample showed almost neutral.

**Mr. HYNSON:** Anything less than a trial would not be sufficient to enable me to discuss this prescription. I believe the tendency of potassium citrate in concentrated solution to separate or throw out any alcohol present will be noticed here also.

**Mr. WILBERT:** The U. S. Pharmacopœia's eighth Decennial Revision says: "The aqueous solution of the salt (potassium citrate) is alkaline to red litmus paper." Potassium citrate containing an excess of acid should, therefore, not be used in compounding prescriptions.

**Mr. SCOVILLE:** If the ingredients are right there should be no effervescence in this mixture. I have never seen an acid citrate of potassium. If an effervescence occurred I would sooner suspect the syrup of tolu than the citrate.

**Mr. RUDDIMAN:** Potassium citrate should be alkaline to litmus and not contain an excess of acid. However, there might be some effervescence even then. Many fluid extracts and the tinctures to a less degree are sufficiently acid to liberate carbon dioxide from a bicarbonate.

**Mr. CLIFFE:** As the alkaline potassium bicarbonate is palpably intended and desired by the prescriber there is nothing to be done but dispense as written—even if the bicarbonate is in excess of the limit of solubility—with a "shake well" label if necessary.

**Mr. BERINGER:** The potassium citrate used could not have complied with the official requirements. Query: Was the syrup of tolu fresh and free from acids of fermentation?

**Mr. SIMMS:** I should mix the above in a capacious mortar, half-pint or one-pint size, and allow it to stand until effervescence had about ceased. I should then put it in a four or six ounce bottle, and caution the customer to be careful in unstopping the vial, and to keep it in a cool place.

**Mr. NIXON:** Neutral potassium citrate is easily obtainable. Slight effervescence is likely to occur when fairly concentrated solutions of some salts, although neutral, are mixed with solutions of the bicarbonates of the alkalis.

**Mr. DUNNING:** The effervescence is due to the action of the acids (cinnamic and benzoic) contained in the syrup of tolu

and of the acid of the tincture of hyoscyamus on the bicarbonate. Potassium citrate should not be acid, and I do not find any in stock that will liberate carbon dioxide.

MR. McELHENIE: Make by trituration in a mortar and allow time enough.

## VI.

Sodium phosphate.....2½ ounces.  
Sodium bromide.....¼ ounce.  
Directions: One teaspoonful four times a day in water.

When sodium phosphate and sodium bromide are triturated together in a mortar, as in this preparation, a pasty semi-liquid mass results. Matters are helped somewhat if the two salts are lightly mixed on a piece of paper with a spatula. If potassium bromide is used a more satisfactory mixture is obtained, the mixture becoming only slightly moist.

MR. HANKEY: The use of a proportionate amount of dried sodium phosphate and enough of some inert soluble material like milk sugar to bring up to the required weight would probably obviate the difficulty.

MR. NIXON: Sodium phosphate contains a large amount of water of crystallization, and this causes the moist condition of the mixture. An equivalent amount of anhydrous sodium phosphate should be used and dispensed in waxed paper to protect from moisture.

MR. DUNNING: If a proportionate quantity of dried sodium phosphate is used or if the crystallized article be dried in a current of warm air a satisfactory mixture may be made. It may be advisable to also dry out the sodium bromide, to remove absorbed moisture, this salt being hygroscopic. The fact that sodium bromide usually contains more moisture and is more soluble probably explains why potassium bromide was more satisfactory in Mr. Kaemmerer's hands. Before proceeding as above suggested it would be necessary to consult the physician in regard to the altered dose.

MR. RUDDIMAN: Sodium bromide has the property of attracting a considerable amount of moisture. Rubbing in a mortar increases this property. No chemical reaction takes place in this prescription.

MR. RAPELYE: Dried sodium phosphate should have been used, but as the use of that would increase the dose it would be necessary to confer with the prescriber.

MR. CLIFFE: I should use exsiccated sodium phosphate, with which there would be no trouble.

MR. BERINGER: With consent of the physician the dried sodium phosphate should be substituted.

MR. SIMMS: I should mix the above on a piece of paper as indicated with a spatula, and transfer to a wide salt mouth bottle; would inform the customer that the mixture would become a pasty mass; but would not be rendered unfit for use on that account, as there would be no chemical change in the ingredients.

MR. SCOVILLE: Anhydrous sodium bromide I would expect to act in the same way as potassium bromide. Did Mr. Kaemmerer's salt contain water of crystallization? Sodium bromide sometimes does.

MR. HYNSON: I believe if the sodium phosphate were dried, not enough to materially lessen its bulk and the sodium bromide wholly dried, the two then lightly mixed and dispensed in a well stoppered bottle there would be no difficulty.

MR. WILBERT: There is no reason why mixtures of this kind should be triturated in a mortar; carefully mixing them by means of a spatula will insure the necessary subdivision and prevent liquefaction.

## VII.

Gold bromide.....6 grains.  
Water .....6 fluid ounces.  
Make a solution.

If a small quantity of potassium bromide be added the solution takes on a beautiful bright and clear color. Without the potassium bromide, although the gold bromide seems to be dissolved, the solution does not look bright and clear.

MR. BERINGER: The tendency of the auric halogen salts to be partially decomposed into aureous salts in evaporation is well known, and the commercial gold bromide is probably such a mixture. The addition of just sufficient sodium or potassium bromide to make a double salt will insure a permanent solution without affecting the therapeutic action.

MR. SCOVILLE: I should add a little bromine to the water and then expel the excess by heat, to get a clear liquid free from brown tint.

MR. HYNSON: If the gold bromide is not greatly decomposed the addition of the small quantity of potassium bromide cannot be objected to; it seems a convenient expedient.

MR. WILBERT: The addition of an alkaline bromide not alone facilitates solution, but also retards decomposition.

MR. RAPELYE: I see no objection to the addition of the potassium bromide.

MR. SIMMS: I should put up the prescription as written, and transfer to a glass stoppered vial; using, of course, distilled water.

MR. NIXON: I should dispense with the addition of an equal amount of sodium bromide, to retard the possible reduction of the gold salt, and put in a dark colored bottle.

MR. DUNNING: I do not see any real objection to the use of a small quantity of potassium bromide, but the most logical thing to do is to add a little bromine water and warm until clear solution is effected and excess of bromine driven off; gold tribromide is the salt intended.

MR. HANKEY: Gold bromide in good condition should dissolve in water without other additions.

## VIII.

Mercury bichloride.....A sufficient quantity.  
Petrolatum .....2 drachms.  
One in ten thousand.

I used 12 minims of a one in a thousand minims solution of mercury bichloride and enough petrolatum to make 2 drachms.

MR. HANKEY: Parts by weight should have been used throughout to insure correct results. Probably 1 grain of bichloride was used (instead of 1 minim as stated) to 1,000 minims of water, in which case the solution started with contained 1 to 948, and by using 12 minims of this solution in 2 drachms the mixture would contain theoretically 1 in 10,000 as intended, but in ordinary practice, where the minim graduate would be used, we very much doubt whether very accurate results would be obtained. When necessary to use a graduate I should prefer to measure, say, 30 or 60 minims, and increase the amount of petrolatum proportionately. For measuring small amounts of liquids we prefer to use a small (30 minim) pipette, and thus avoid the loss of liquid occasioned by adherence to the glass when using a graduate.

MR. HYNSON: Mr. Kaemmerer's method of preparing this prescription I think is an ingenious and extremely simple one and the one that will give most satisfactory results. There is no doubt but that small quantities of water easily mix with petrolatum and the possibility of the small amount of mercuric chloride crystallizing because of the evaporation of the water is a little too minute to be considered. Of course the use of metallic spatulas should be avoided.

MR. RAPELYE: The use of water was a mistake, as the petrolatum would not hold it in combination for any length of time. I should have used an alcoholic solution and warmed the petrolatum to evaporate the alcohol and then stirred while cooling or rubbed when cool.

MR. BERINGER: I consider the use of aqueous solutions of soluble salts in such ointments objectionable for several reasons. The water is apt to separate in drops from the base (especially petrolatum), and again if these watery parts evaporate the salt is left in a crystalline form. Thus in either case there will be an uneven distribution of the medicinal ingredient. I would compound such ointments by rubbing up the medication with a portion of the base till thoroughly disseminated and triturated and then incorporate with the remainder. In this particular instance, where the percentage of medication is so small, I should have first prepared a basic ointment containing 1 per cent. of mercuric chloride and 99 per cent. of petrolatum, and used the requisite amount of this to prepare the dilution specified.

MR. NIXON: I doubt if petrolatum will hold permanently 10 per cent. of an aqueous solution. I should use 6 minims of a 1 in 500 solution of mercury bichloride.

MR. SCOVILLE: I approve Mr. Kaemmerer's method.

MR. CLIFFE: I should use the equivalent of one eighty-third of a grain of the bichloride in stock solution and substitute 25 per cent. of lanolin for its equivalent of the petrolatum. It would be impossible to make a stable homogeneous ointment with the aqueous solution and petrolatum alone.

MR. SIMMS: I concur with Mr. Kaemmerer as to the manner of making the above ointment.

MR. DUNNING: The use of water is objectionable in this prescription, especially to the extent of 10 per cent. If this salve is intended for an eye ointment, I would, first, pass a small quantity of mercury bichloride through a bolting cloth, then weigh 1 grain and mix with two or three drops of olive oil and enough petrolatum to make 100 grains. I would then take 10 grains of this mixture and mix with enough petrolatum to make 100 grains. Finally I would add enough petrolatum to 12 grains of the last mixture to make 120 grains.

## IX.

Quinine sulphate.....3 drachms.  
Dilute sulphuric acid.....Sufficient to dissolve.  
Sodium salicylate.....4 drachms.  
Extract of malt—A sufficient quantity to make 12 fluid ounces.

Directions: One teaspoonful three or four times a day.

In this case I omitted the acid entirely.

MR. DUNNING: The acid should be omitted. A portion of the malt extract should be used to give the mortar a heavy coating. The quinine sulphate, previously finely powdered, should be added and rubbed to a homogeneous mixture, the sodium salicylate then added, and finally the balance of the malt extract.

MR. RUDDIMAN: It is better to leave out the sulphuric acid. If put in it would increase the amount of insoluble matter by liberating salicylic acid.

MR. SCOVILLE: A better mixture is obtained without the acid. In this case none is "q. s."

MR. RAPELYE: The omission of the acid was correct.

MR. CLIFFE: As the prescriber has ordered sodium salicylate it is proper to assume that he wishes that and not free salicylic acid, which would be the result of compounding as written. I should omit the acid and call attention of prescriber to the omission.

MR. BERINGER: I believe that pharmacists will approve of the action of the dispenser as the only correct course to pursue.

MR. SIMMS: I should compound the above as written, being careful not to use too much dilute sulphuric acid.

MR. NIXON: With or without the acid, quinine salicylate would be formed and thrown out of solution. A clear solution cannot be made. I should therefore dispense as written, using heavy extract of malt.

MR. WILBERT: Good practice, but should properly be brought to the attention of the physician.

MR. HYNSON: I am of the opinion that separate solutions of the quinine sulphate and sodium salicylate could be made in divided portions of the extract of malt and the two mixed without the decomposition of the sodium salt within the time required for the medicine to be taken. No more acid should be used than is absolutely necessary.

## X.

Ammonium iodide.....1 drachm.  
Apomorphine.....1 grain.  
Dilute hydrochloric acid.....10 minims.  
Syrup of licorice.....1 fluid ounce.  
Peppermint water.....2 fluid ounces.

Directions: One teaspoonful every three or four hours.

Here again the acid was omitted entirely.

MR. NIXON: Apomorphine alkaloid is not easily obtainable. Whether the alkaloid or a salt is used an insoluble apomorphine iodide is formed. The acid prescribed will liberate hydriodic acid, and this in turn will liberate free iodine. It is questionable if a prescription should be dispensed in which a powerful alkaloid is held in suspension, but in view of the fact that this alkaloid is a powerful emetic I should dispense it with special precaution to shake well. I should leave out the acid.

MR. SIMMS: I think the acid should be omitted in the above.

MR. HYNSON: I indorse the action of the dispenser in this instance.

MR. WILBERT: Here again the reasons for omitting the acid should be brought to the attention of the physician.

MR. CLIFFE: I should omit the dilute hydrochloric acid, making separate solutions of ammonium iodide and apomorphine previous to mixing with syrup of licorice.

MR. RAPELYE: The omission of the acid was correct, but I should have used apomorphine hydrochloride.

MR. SCOVILLE: I should use the acid in this case to insure the solubility of the apomorphine. The mixture would be more presentable without it, but with alkaloids I would prefer to precipitate the glycyrrhizin rather than take chances with an insoluble excess of alkaloid.

MR. DUNNING: The acid should be left out and apomorphine hydrochloride used. The apomorphine hydrochloride should be dissolved in 1 ounce of the peppermint water and mixed with the syrup of licorice; the ammonium iodide dissolved in the other ounce of peppermint water and the two solutions mixed.

MR. RUDDIMAN: Leaving out the acid in this prescription is questionable, since apomorphine is called for and not the salt. If apomorphine hydrochloride is used a better mixture will be obtained by leaving out the acid.

## XI.

Salicylic acid.....3 drachms.  
Potassium acetate.....4 drachms.  
Glycerin.....1 fluid ounce.  
Water.....4 fluid ounces.

Directions: One teaspoonful four times a day.

Quite contrary to what one would expect, this makes a perfectly clear solution without any difficulty. This is not entirely due to the solvent action of the glycerin on the salicylic acid, but I am inclined to believe that the solutions of alkali acetates have the power of dissolving considerable salicylic acid.

MR. WILBERT: This is a fact not generally known that might very profitably be brought to the attention of physicians with a view of having the therapeutic action of such a mixture compared with the action of the now popular acetylsalicylic acid.

MR. SCOVILLE: Salicylic acid is dissolved by several of the potassium and sodium salts of organic acids.

MR. RAPELYE: I should have expected this to be a solution as the alkaline acetates are solvents of salicylic acid.

MR. CLIFFE: A common form of prescription for the administration of salicylic acid in Philadelphia. I should dispense as written, which would yield a clear, permanent solution.

MR. HYNSON: Concentrated solution of potassium acetate or ammonium acetate are well known and excellent solvents from salicylic acid. The acid should be dissolved before these solutions are fully diluted. Alcohol and glycerin naturally assist in these instances, although not necessary. The same observation applies to the prescription following this.

MR. BERINGER: This is not contrary to what should be expected. It is a very well-known fact that solutions of such salts of the alkalies as ammonium acetate, potassium acetate, potassium citrate and sodium phosphate are excellent solvents for salicylic acid.

MR. RUDDIMAN: Salicylic acid is rendered more soluble in water by the presence of several neutral salts, such as citrates, acetates and phosphates of the alkalies. (Allen, Org. Anal., III, Part I, 51.) In all probability salicylic acid displaces some acetic acid forming the soluble potassium salicylate and citric acid.

MR. SIMMS: There is nothing to criticize in the above.

MR. NIXON: It is well known that acetates, citrates and phosphates of the alkalies dissolve salicylic acid. I should expect a clear solution.

MR. DUNNING: It is a comparatively well-known fact that alkali acetates will facilitate the solution of salicylic acid.

## XII.

Salicylic acid.....2 drachms.  
Solution of ammonium acetate.....2 fluid ounces.  
Spirit of nitrous ether.....1/2 fluid ounce.  
Syrup.....1/2 fluid ounce.

Directions: Two teaspoonfuls every three hours until relieved.

In compounding this prescription the salicylic acid was mixed with the solution of ammonium acetate and filtered. To the filtrate I then added the spirit of nitrous ether and the syrup. Salicylic acid is incompatible with spirit of nitrous ether, but as no harmful compound is produced I think it was proper to dispense this prescription. As the greater part of the salicylic acid was dissolved by the solution of ammonium acetate, I thought it best to filter the solution and dispense a clear preparation.

MR. SCOVILLE: The appearance of this will depend upon the condition of the spirit of nitrous ether. If neutral, no action will be noted at first. If acid, the brownish nitro-salicylic acid will be formed. This is likely to form in the first case on long standing.

MR. HANKEY: I should have the solution of ammonium acetate slightly alkaline, and if necessary use a small additional amount of ammonia water to dissolve the remaining salicylic acid rather than filter out part of the most active ingredient in the prescription.

MR. NIXON: This is another case of an alkaline acetate being used as a solvent for salicylic acid. The U. S. P. solution of ammonium acetate is slightly acid, and for this reason the salicylic acid is not wholly dissolved. If the solution is neutralized with ammonia a clear preparation will result.

MR. DUNNING: There is insufficient ammonium acetate to effect solution of the salicylic acid, yet it should not have been filtered out, because the addition of the strongly alcoholic spirit of nitrous ether and the syrup is sufficient to cause solution. Solution is facilitated by very little heat.

MR. BERINGER: The syrup and likewise the spirit of nitrous ether will aid in dissolving the salicylic acid. I should have expected entire solution in such a mixture of diluents, and would have filtered only if necessary to obtain a clear solution after all the ingredients had been added. The incompatibility of salicylic acid and spirit of nitrous ether is probably imaginative.

MR. CLIFFE: I should make 1 fluid ounce of neutral liquid ammonia acetate of double strength, in which I should dissolve the salicylic acid with the aid of the spirit of nitrous

ether (which should not be acid), and 2 or 3 fluid drachms of alcohol; then add syrup and water to make the quantities of liquid as ordered. The result is a clear, permanent solution containing all of the ingredients in solution.

Mr. SIMMS: In my opinion the above was properly mixed by Mr. Kaemmerer.

## XIII.

Potassium citrate.....1 ounce.  
Ammonium benzoate.....4 drachms.  
Water..A sufficient quantity to make 4 fluid ounces.  
Directions: A teaspoonful every three hours.

This does not make a clear solution, as one would expect. I dispensed it with a "shake well" label attached.

Mr. DUNNING: Ammonium benzoate is soluble in 5 parts of water, potassium citrate in 6 (6-10) parts. This prescription should produce a clear solution. The cloudy mixture is probably due to the fact that in evaporating the ammonium benzoate solution in course of manufacturing the ammonium benzoate ammonia is given off and some acid ammonium benzoate formed, which requires 60 parts of water for solution. Further, ammonium benzoate loses ammonia on standing, especially if not tightly corked. Either the sparingly soluble ammonium acid benzoate may be formed or, in the latter case, the almost insoluble benzoic acid left behind. A clear solution may be and should be made of this prescription by dissolving ammonium benzoate in 3 ounces of water, adding sufficient water of ammonia to make it slightly alkaline, warming to drive off excess of ammonia, then dissolving the potassium citrate in the solution and making up to 4 ounces.

Mr. WILBERT: Reasonably pure chemicals should make a perfectly clear solution, and one that will remain clear. There are two possible sources of trouble: Chemicals that contain an appreciable amount of insoluble admixture, and chemicals that contain an excess of free acid, either of which is objectionable.

Mr. NIXON: Ammonium benzoate, as found in the store, has frequently lost a part of its ammonia, leaving insoluble benzoic acid. By adding ammonia drop by drop to make up for this deficiency a clear solution will result.

Mr. RAPELYE: A perfect solution can be made by dissolving the ammonium benzoate first, and then adding the potassium citrate and then slightly warming. Much will depend on the condition of the ammonium benzoate, as if that salt is old it is quite insoluble, and would need the addition of more or less ammonia to make it entirely soluble. Later, the solution on standing for some time showed a flocculent precipitate, which was unmistakably benzoic acid, as it was readily dissolved on the addition of ammonia.

Mr. RUDDIMAN: Ammonium benzoate requires 10.5 parts of water at 25 C. for solution, consequently in this prescription there will be some undissolved.

Mr. SCOVILLE: I should add enough ammonia water to obtain a neutral solution of the ammonium benzoate. This salt is liable to lose ammonia and become less soluble. I should expect to obtain a clear solution by the use of ammonia water.

Mr. HYNSON: I am surprised at this. I think the ammonium benzoate must have been faulty, although after trial I conclude that the combination may have resulted in a super-saturated solution. Let the experimenter try ammonia water carefully added, drop by drop.

Mr. CLIFFE: Adding 4 fluid drachms of alcohol in place of that much water and gently warming would result in a permanent solution that would remain clear.

Mr. BERINGER: The intent of the prescriber to administer in each dose 15 grains potassium citrate and 7½ grains ammonium benzoate is apparent. To dispense with a "shake well" label and a suggestion to the patient to dilute each dose with water appears sufficient.

Mr. SIMMS: I approve of Mr. Kaemmerer's treatment of this mixture.

Mr. HANKEY: A practically clear solution can be obtained by the addition of a few drops of stronger ammonia, or solution of potassa to take up the liberated benzoic acid and replace any deficiency of ammonia in the ammonium benzoate. An excess of alkali is not necessary.

## XIV.

Morphine sulphate.....8 grains.  
Potassium cyanide.....4 grains.  
Aromatic sulphuric acid.....2½ drachms.  
Syrup of wild cherry..A sufficient quantity to make 4 fluid ounces.

Directions: A teaspoonful three times a day.

This was dispensed without any harmful results following.

Mr. HYNSON: This is simply a question of resulting dosage.

Mr. CLIFFE: I should dissolve the morphine sulphate and the cyanide separately in small portions of water; add each solution in turn to about half the syrup of wild cherry, shaking after each addition; then add the acid and balance of syrup of

wild cherry. We have frequently dispensed similar mixtures with "shake well" labels.

Mr. HANKEY: I should want to be satisfied that this was for an adult.

Mr. BERINGER: The physician understood what was required and got it.

Mr. SIMMS: I should dispense the above as written.

Mr. NIXON: The dose of potassium cyanide is not excessive. This is evidently used as a cough sedative.

Mr. DUNNING: There is no criticism to be offered of this prescription because the amount of hydrocyanic acid liberated from the potassium cyanide will not exceed the ordinary doses of dilute hydrocyanic acid.

## XV.

Magnesium sulphate.....3 ounces.  
Aromatic sulphuric acid.....2½ fluid drachms.  
Syrup..A sufficient quantity to make 8 fluid ounces.  
Directions: Take a tablespoonful two or three times daily in water.

The magnesium sulphate was first dissolved in 3 fluid ounces of water, the acid was next added, and then enough syrup added to make 8 fluid ounces.

Mr. CLIFFE: A common prescription in Philadelphia. We should use a couple of ounces of water in place of the equivalent of syrup.

Mr. DUNNING: Somewhat contrary to my expectations the magnesium sulphate will not remain in solution after standing over night when dissolved. Use the syrup without addition of water by the aid of gentle heat. If the magnesium sulphate is dissolved by the aid of heat in a mixture of water, 1½ ounces, and syrup sufficient to make six ounces the solution will be permanent.

Mr. NIXON: No comment seems necessary.

Mr. SIMMS: I approve of Mr. Kaemmerer's mode of mixing.

Mr. BERINGER: The substitution even of water for a portion of the syrup is a questionable expedient. Warming the syrup should have been sufficient to insure solution.

Mr. HYNSON: I should compound this prescription by dissolving the epsom salt in four fluid ounces of water with the aid of heat. In this solution I would dissolve four ounces of sugar and add sufficient of this syrupy solution to the aromatic sulphuric acid to make eight fluid ounces.

## XVI.

Fluid extract of digitalis.....1 fluid drachm.  
Put into 20 capsules.  
Directions: One every three hours.

Carbonate of magnesia was used to absorb the fluid extract of digitalis and the mixture then made into a pill mass with the aid of glycerite of tragacanth. This was then divided into 20 equal parts and each inclosed in a capsule.

Mr. RAPELYE: It is a good principle where the addition of anything is necessary to the better dispensing of a prescription that such addition shall be an absolutely inert substance; magnesium carbonate not being absolutely inert should not have been used. I think a better method would have been to have filled a small capsule with sugar of milk and then have dropped the fluid extract on that.

Mr. HYNSON: Sufficient milk sugar to fill twenty No. 3 capsules should be used and the fluid extract triturated with it. If not sufficiently dry the surplus moisture should be driven off by gentle and carefully applied heat.

Mr. WILBERT: The massing of materials that are directed to be dispensed in capsules is a practice that is very properly, I think, objected to by many physicians, unless, of course, it is specifically ordered. The addition of an innocuous powder is, of course, permissible, but should be followed by a courteous explanation to the physician with a view of inducing him to direct the more desirable absorbent on other occasions. The use of magnesium carbonate might be objected to.

Mr. NIXON: In the absence of capsules designed for liquids this might be dispensed as above. I should prefer, however, to use dried starch as an absorbent. The alkaline character of the magnesium carbonate might change some of the complex constituents of digitalis.

Mr. DUNNING: I should put these capsules up dry by evaporating (with gentle heat on a water bath) the fluid extract of digitalis with milk sugar.

Mr. SIMMS: I should put the fluid extract into a dish and evaporate the alcohol; then mix with sufficient quantity of licorice powder and form a mass with glycerite of tragacanth. Divide into 20 equal parts and put each in a capsule.

Mr. RUDDIMAN: Magnesium carbonate is a little alkaline and in continued contact with the active principles of digitalis it would be liable to decompose them. I should prefer to evaporate the most of the liquid and dry with powdered licorice.

MR. BERINGER: Every pharmacist has his own preference as to the method to be adopted for making capsules. Magnesium carbonate is neither inert nor without action on the constituents of digitalis. I should have distributed the fluid extract on some sugar of milk, starch or other inert substance, allowed to partly dry and then made into a mass with tragacanth and divided the mass.

MR. CLIFFE: I should gently warm the fluid extract in a small watch glass to get rid of alcohol and mass the residue with powdered althaea and licorice.

MR. SCOVILLE: I should prefer to use powdered licorice root to absorb the fluid extract.

## XVII.

Creosotal ..... 1½ fluid drachms.

Basham's mixture ..... 4 fluid ounces.

Directions: Two teaspoonfuls after each meal.

The creosotal was emulsified with the aid of 1 drachm of acacia and 2 drachms of water. The Basham's mixture was then gradually added to this emulsion.

MR. WILBERT: Prescriptions of this kind are always the outcome of lack of knowledge or of thoughtlessness, and are usually corrected, if properly brought to the attention of the physician. In case a physician insists on having the prescription dispensed, as written, the use of tragacanth in place of acacia would be preferred by many.

MR. HYNSON: I should use sufficient accacia and water to make a 2 fluid ounce emulsion of the creosote, and to this add gradually 2 fluid ounces of *double strength* Basham's mixture.

MR. BERINGER: This is possibly as well as could be generally done. If the physician was accessible I would have suggested the advisability of administering these two remedies separately.

MR. CLIFFE: I should emulsify in a warm mortar and then add the Basham's mixture.

MR. RAPELYE: Without experimenting I should say that the course pursued is probably as well as could have been done.

MR. SIMMS: I approve of the manner of mixing the above adopted by Mr. Kaemmerer.

MR. NIXON: I should dispense as does Mr. Kaemmerer.

MR. DUNNING: I agree with Mr. Kaemmerer's method of compounding this prescription.

## XVIII.

Tincture of chloride of iron ..... 1 fluid ounce.

Dilute phosphoric acid ..... 2 fluid ounces.

Glycerin ..... 2 fluid ounces.

100 per cent. solution of sodium phosphate.

A sufficient quantity to make 8 fluid ounces.

Directions: A teaspoonful in a half glass of water after each meal.

This makes an unsatisfactory mixture no matter how you prepare it. The most satisfactory mixture was obtained by shaking the glycerin and the solution of sodium phosphate in a bottle and gradually adding the dilute phosphoric acid previously mixed with the tincture of chloride of iron. This makes a creamy looking mixture.

MR. DUNNING: I find that a perfectly clear light greenish solution may be made of this combination in the following manner: Mix the glycerin, dilute phosphoric acid and the tincture of iron chloride, then add the sodium phosphate solution and warm until solution is effected. The cause of precipitation is no doubt the formation of ferric phosphate,  $Fe_2(PO_4)_3$ . There are many reasons why this prescription should make a clear solution. The first reaction is probably this:

(This causes solution of ferric phosphate.)

Besides the free phosphoric acid there is considerable free citric acid in the solution of citro-phosphate of sodium. Citric acid also has solvent action on ferric phosphate. It must be remembered that the concentrated solutions of sodium phosphate on the market often contain different proportions of citric acid or other agents to effect solution of sodium phosphate. It is, however, suggested that by the careful addition of citric or phosphoric acid a clear solution may be made of this prescription with any make.

MR. CLIFFE: To make a perfectly clear, stable solution I should proceed as follows, using the tinct. ferri citro-chlor. N. F. in place of the U. S. F. tincture of iron. To the tinct. ferri citro-chlor. add the glycerin and solution of sodium phosphate, mixing thoroughly, and, lastly, add the dilute phosphoric acid.

MR. WILBERT: The best remedy for this prescription, as for a number of others, is a sensible heart to heart talk with the prescriber.

MR. HYNSON: This is an interesting prescription and can, I believe, be dispensed in clear solution by adding the phosphoric acid directly to the concentrated solution of sodium phosphate.

MR. NIXON: I should dispense as Mr. Kaemmerer does, since a clear solution cannot be obtained.

MR. SIMMS: I cannot suggest any better way of mixing the above ingredients than that followed by Mr. Kaemmerer.

MR. BERINGER: It is presumed that the solution of sodium phosphate used was that now official. The addition of a slightly increased amount of citric acid might clear the solution.

MR. RAPELYE: This would require considerable time for experiment in order to determine the best method and therefore I shall have to pass it.

MR. HANKEY: The same result would be obtained by adding the glycerin to the tincture of chloride of iron, followed by the acid and then gradually adding this mixture to the sodium phosphate solution, with constant agitation.

## XIX.

Iron pyrophosphate ..... 2 drachms.

Dilute phosphoric acid ..... 8 fluid drachms.

Syrup. A sufficient quantity to make 8 fluid ounces.

Directions: A teaspoonful in water an hour after meals.

Notwithstanding the fact that it has been preached for the last 20 years that the official dilute phosphoric acid is incompatible with solutions of phosphate of iron and pyrophosphate of iron, and that in cases of this kind we are to use the dilute metaphosphoric acid of the National Formulary, I feel satisfied that a great many druggists either forget about it or leave out the acid entirely whenever they get a prescription of this kind. I am led to this conclusion by the difficulty I had in finding some of the metaphosphoric acid.

MR. HANKEY: No difficulty need be experienced with this prescription even when ordinary diluted phosphoric acid is used, providing the iron pyrophosphate is first dissolved in 3 fluid drachms of hot water, the syrup added and lastly the diluted phosphoric acid in small quantities, agitating after each addition.

MR. NIXON: In this prescription diluted metaphosphoric acid should no doubt be used. I should expect, however, that after a time precipitation would occur by the change of the meta- to orthophosphoric acid.

MR. WILBERT: It is better to confer with physicians too frequently than not enough. Many practitioners add acids to prescriptions with a view of facilitating solution and are usually duly grateful when the fallacy of this practice is pointed out to them. Articles mentioned in prescriptions, unless otherwise specified, are to be considered as being those described by the U. S. Pharmacopœia. The use of articles of different strength or different quality is substitution, unless, of course, it is done with the knowledge of the prescriber.

MR. SIMMS: I would use the solution of metaphosphoric acid in the above.

MR. BERINGER: The prescriber's attention should be called once more to this incompatibility.

MR. CLIFFE: Use solution of glacial phosphoric acid, C. P., 10 per cent. instead of official dilute phosphoric acid.

MR. RAPELYE: The use of metaphosphoric acid was the correct method.

MR. DUNNING: Ordinarily, in prescriptions of this class, if there is sufficient phosphoric acid presented to cover precipitation I agree with Mr. Kaemmerer that the dilute metaphosphoric acid should be used (though I am somewhat reluctant to admit that I would not have thought of it). In regard to this prescription there is scarcely sufficient phosphoric acid directed to cause precipitation in an aqueous solution. (This assertion depends somewhat on the make of the scale iron pyrophosphate.) If the iron pyrophosphate is dissolved in the syrup by heat (any water lost being replaced), the solution allowed to cool and then the dilute phosphoric acid added a perfectly clear, permanent solution will result.

## XX.

Hyosine hydrobromate ..... 2 grains.

Make into 21 pills.

Directions: One after each meal.

In cases of this kind I always add enough of some inert powder to make the pills weigh about 1 grain each. In this instance I used 15 grains of powdered arrowroot and a little glucose as an excipient.

MR. BERINGER: Was this 2 grains or 0.2 grains? As printed, 2 grains, should not have escaped comment and correction. While the manipulation may be correct, I hope that the patient survived the dose of nearly 1-10 grain of hyosine hydrobromate. Untoward effects are frequently obtained from relatively quite small doses of hyosine, and I will not dispense doses in excess of 1-100 grain unless certain that the physician is intentionally exceeding that limit.

MR. WILBERT: The dose here given is ten times the average dose of the U. S. Pharmacopœia, and should not be dispensed without consulting the prescriber.

Mr. RAPELYE: In dispensing the above I should have made pills of  $\frac{1}{2}$  grain.

Mr. CLIFFE: I should make all granules of this kind of about  $\frac{1}{2}$  grain each, with a mixture of cane sugar, 10 per cent.; acacia, 5 per cent.; milk sugar, 85 per cent. I should not dispense this dose of hyoscine hydrobromate unless specifically authorized to do so by a responsible prescriber.

Mr. SIMMS: The manipulation of Mr. Kaemmerer is, I think, unexceptionable.

Mr. NIXON: The comment is on the large dose, the maximum dose usually prescribed being 1-60 grain.

Mr. DUNNING: I would make these pills weigh about  $\frac{3}{4}$  grain each, using milk sugar as diluent and honey as an excipient.

(Written for the American Druggist.)

## CHARACTER AND CONFIDENCE—THEIR PART IN ORGANIZED STRENGTH.

By JOEL BLANC.

A great financier, in speaking of a man who had gone astray, said: "After all is said and done our only protection is in common honesty. Confidence in a man of character is better protection than any bond."

How true this is can be proven on a moment's reflection: In our personal dealings with men how little we think of the protection of law. In business and credit, in religion and belief, in doctor and medicine, in friend and favor, we depend upon common honesty and show our dependence by the confidence through our judgment of character. Confidence in those whom we know is our guide, comfort and strength, and we depend upon it everywhere, except in our drug trade organizations.

In those whom we should know best, because of the fact that their thought and action follow the same paths as our own, we show no confidence. All our organized effort is clouded by dark pessimism. Why? Because we do not know each other; because we cannot place confidence in a man until we know his character and we cannot know his character until we know him. We base our ever changing judgment upon his reputation, forgetting that a reputation may be made or ruined by the babble of the village gossips, while his character is himself—the man.

A man's character cannot be measured by the money he has made nor yet by what he has done. The man of character is greater than his performances, no matter how great the latter may be. In the presence of such a man we are surprised at no great act of his, but feel that within him lies the power to do much greater things. This feeling is confidence, and, though our judgment may sometimes fall, it is the safest, surest measure of man by man that man has ever known.

We cannot know a man's character except by personal contact. Through printed or written words we may know all that he does, all that he says, but without direct contact we cannot know the motives from which emanate these doings and sayings; without knowing him we cannot know what he is. If we know what he is we not only know how much confidence to place in him, but by comparison we learn how much confidence he can place in us; and in the consciousness of our own comparative frailty we determine to be stronger—to possess character.

The man of character may say little, may do little, but in his presence we feel a something which makes that little great. We follow his lead, knowing, absolutely knowing, that he leads in the right direction in the right way.

Another may appear more brilliant, may say—even accomplish—more; we may be unable to detect a wrong action; we may vote for him and with him; we may follow him; and yet in his presence we feel that the acts are greater than the man; that there must be some ulterior motive in what he does; we feel that he lacks in character and we cannot confide in his common honesty. On the other hand, there is something in the very atmosphere surrounding a man of character which makes us feel that we prefer defeat with him to victory with the other. That temporary defeat with him presages permanent victory, while temporary victory with the other presages

disgraceful, permanent defeat, because our personal knowledge of each is the key to the character that prompts the motives governing their actions.

In our organization work many men have risen to prominence. Think for a moment of one who has become prominent and has several fine stores, then permit your mind's eye the next moment to rest upon one who has become equally prominent and yet whose place in the code of Bradstreet is humble indeed. Which is the man of character? Which the man of mere reputation? We cannot tell unless we know them both.

This questioning of motives because of the lack of knowledge of character through personal contact is the greatest drawback to the progress of our organization work to-day. It is the cause of all our suspicions and accusations, of our lack of solidarity, of our financial weakness, and of all those things which hinder us from procuring and following the mightiest of leaders to greatest success.

Before organization we were in the position of individual bodies, each of which was surrounded and hidden by its own atmosphere of fog. Now the personal units have partly gathered into groups or constellations, but they are still vastly outnumbered by the pathless, frictionless meteoric atoms.

We have too many members who pay pew rent and then stay away from church because they do not like the preaching they have never heard. In local, State and national meetings we find that not only is the attendance but a small percentage of the membership, but that the same men come and the same men stay away.

If we can only get these stay aways to attend we must surely find among them some whose character will make of them leaders greater than any we have ever had. Or through their presence we may develop among our present leaders men with power of which we have never dreamed.

What can we do to increase attendance, so that we may judge each other as we truly are? To know each other's character and support and develop the characters of those who are fitted to lead?

We must tear away the last vestige of old-time diplomacy; we must adopt the diplomacy—the new diplomacy—of the men who lead the world to-day. We must remember that diplomacy no longer means indirectness, suavity, deception. We must practice the diplomacy that has been given to and defined for us by Roosevelt, Hearst, Folk, Weaver, La Follette, Jerome and Emperor William. The diplomacy that goes straight to the mark and not in the curves of a boomerang; the diplomacy that is blunt without bitterness; that creates discussion without invective, personal effort without personal abuse; the diplomacy that shows the crystal-clear character of the man rather than the turgid policy of a party.

Use this diplomacy in every meeting from the village local to national convention. "There will be wars and rumors of wars," but these will be wars in which the defeated shall find victory and the victors gain brothers.

I want to see the time when the man who wants to be elected to an office will come right out and say so, and then hustle to get it. I want to see the time when men will go to their meetings and speak just as plainly on the floor as they do behind their counters. I want to see the time when the kicker will take his kicks to meeting and kick with both feet. I do not want to see the time when personal abuse, unprovable accusations, petty localism or braggadocia shall be used as weapons of war. I want to see the time when every man who goes to a meeting will know what his organization is for and with clear ideas as to how he thinks its purposes should be achieved. I want to hear him express his beliefs in clear, emphatic and yet self-possessed argument. Then will the blood flow through the veins, then will voices ring with sincerity, then will the nonattendants rush to the next meeting to join in the fray, then will each man fight until he conquers or is thoroughly whipped, then will the conqueror grasp the hand of the vanquished and raise him to true fraternity. Then shall all faces be turned toward the outward foe. Then shall we have a fearless, invincible army, an army in which each man has confidence in all the others because every one shall have proven to be a man of sterling character.

## Questions of the Pennsylvania Board.

At the last examination of the State Pharmaceutical Examining Board of Pennsylvania the following questions were asked of candidates:

- (a)—R. Pepsin. lam.....3j.  
Ac. hydroch. dil.....3vss.  
Glycerini opt.....3iv.  
Syr. aurant. flor.....3vj.  
Aqua destill., q. s. ft.....3iv.

Sig.—A teaspoonful after meals.

What kind of a mixture will the above make? Write in full all the abbreviated terms; give the meaning of the abbreviations lam., opt., and flor.; state how you would make the Syrup. aurant. flor.

- (b)—R. Infusi rad. valerianæ,

15.0 = 150.0.

Syrupus simplicis, 30.0.

Sig.—A tablespoonful every three hours.

How would you prepare the above prescription, and about how many fluid ounces would the finished mixture measure?

(c)—How should the following prescription be prepared:

- R. Hydrarg. chlor. mite.....gr. ij.  
Pulv. opii.....gr. jss.  
Tinct. verat. viride.  
Ext. grindellæ fld. aa.....gtt. xij.  
Tinct. aconiti rad.....gtt. xxiv.  
Sacch. albi.....3ij.

M. ft. pulv. et divide in chart. xij.

Sig.—One three times a day.

(d)—Give the rational adult dose of each of the following drugs: (1) Apomorphine hydrochloride; (2) silver nitrate; (3) arsenous acid; (4) carbolic acid; (5) acetanilid; (6) atropine; (7) antipyrine; (8) codeine; (9) morphine acetate; (10) strychnine.

(e)—Antidotes: Give the antidotes for the following poisonous drugs: (1) Ammonia water; (2) carbolic acid; (3) formaldehyde; (4) nux vomica; (5) oxalic acid; (6) phosphorus; (7) resorcin; (8) antipyrine; (9) rough on rats; (10) opium.

(f)—Name the symptoms by which you would recognize poisoning by the following drugs, and give antidotes for each: (1) Acetanilid; (2) cocaine; (3) colchicum; (4) colocynth; (5) morphine.

(g)—Oleoresins: (1) What are oleoresins? (2) name the official natural oleoresins; (3) give the official Latin names of those made pharmaceutically; (4) which of the manufactured oleoresins is directed by the Pharmacopœia to be mixed or agitated before being dispensed? (5) which of these oleoresins should be separated from the deposit formed in them before dispensing?

(h)—Aloes: (1) Give the Latin names for the official aloes; (2) from which is *aloe purificata* prepared? (3) give the pharmacopœial directions for preparing the same; (4) by what simple chemical test would you distinguish official aloes from Natal aloes? (5) what official preparations are made from *aloe purificata*?

(i)—Aloin: (1) Give the official Latin name; (2) how long has it been used in the treatment of disease? (3) since when recognized by the U. S. Pharmacopœia? (4) how is it classed chemically? (5) there are many varieties of aloes, is the aloin derived from any of the commercial varieties identical? (6) name the different aloins; (7) which is considered the most active? (8) what two varieties are official? (9) what is considered a purgative dose for an adult? (10) mention two other drugs which are usually combined with aloin, making one of the popular laxative pills.

(k)—Carbon: (1) In what forms is carbon official? (2) give method of preparing them; (3) give properties and use; (4) what is CS<sub>2</sub>? (5) give its properties and state what care should be exercised in handling it.

(l)—Give the full official Latin names and the ingredients of the following preparations: (1) Vegetable cathartic pills; (2) syrup of hydriodic acid; (3) aromatic spirit of ammonia; (4) Dover's powder; (5) compound tincture of benzoin.

(m)—Squills: (1) Give the official Latin meaning of squills; (2) give the botanical name of the plant; (3) to what family does it belong? (4) give its habitat; (5) what portion of the plant is used? (6) describe it as it exists in its natural state; (7) describe it as found in the drug stores; (8) name its active ingredients; (9) give its therapeutic properties; (10) give the dose of the powdered drug.

(n)—Tinctura opii deodorata: (1) Briefly state how this preparation is made; (2) what objectionable constituent of opium is removed in its preparation? (3) what percentage of opium does it represent? (4) give the adult dose; (5) of what official preparation is it an ingredient?

(o)—Unguentum Hydrargyri: (1) Name the different ingredients contained in the official mercurial ointment; (2) what percentage of mercury does it contain? (3) why is mercuric oleate used? (4) how much of the latter is used in making the ointment? (5) by what simple method would you ascertain the quantity of metallic mercury present in a sample of the ointment?

(p)—Flaxseed: (1) Give the official Latin name for flaxseed; (2) name the plant yielding it; (3) what are the important constituents of flaxseed? (4) which of these make it more valuable for cataplasma than bread or grain meal? (5) what percentage of the oil should flaxseed meal contain? (6) how would you ascertain the percentage of oil present in a sample of the meal? (7) how would you detect adulteration with oatmeal or middlings? (8) how is flaxseed oil obtained? (9) how would you detect the presence of non-drying oils? (10) in what official preparation is flaxseed oil used?

(q)—(1) What is magnesium? (2) what is the official magnesnia; (3) what variety of magnesium carbonate is official? (4) what two varieties of magnesium oxide are official? (5) give the official Latin name of each; (6) how is each prepared? (7) how are they affected when exposed to air? (8) what effect have dilute acids on them? (9) give dose of each; (10) what medical properties do they possess?

(r)—(1) What is an emulsion? (2) what is a mixture? (3) what is a solution? (4) what is a fluid extract? (5) how would you prepare 500 Cc. of an emulsion containing 40 per cent. of cod liver oil, 10 per cent. of syrup of wild cherry, and 5 per cent. each of sodium and calcium hypophosphite?

(s)—Oxgall: (1) What is oxgall? (2) give the official Latin name; (3) how is it purified? (4) what is separated and rejected when purified? (5) how can you tell whether it has been purified or not? (6) what is its reaction on litmus paper? (7) what are its principal constituents? (8) what is the appearance of purified oxgall? (9) what are its medical properties? (10) give adult dose.

(t)—(1) What is combustion? (2) describe a Bunsen burner and its flame; (3) how is the heat measured? (4) what is the official scale of the heat measure? (5) why is mercury especially adapted for thermometers?

(u)—By what simple chemical tests would you distinguish between: (1) Morphine and quinine? (2) sodium bicarbonate and powdered borax? (3) paraffin and white wax? (4) potassium bromide and potassium iodide? (5) zinc oxide and calcium carbonate?

(v)—Lithium: (1) What is lithium? (2) give its source; (3) by what test is it identified? (4) name the official lithium salts; (5) give their medicinal properties and dose.

(w)—Oil of cade: (1) What is oil of cade? (2) describe appearance, odor and taste; (3) give the official Latin name; (4) for what purpose is it used on domestic animals? (5) for what disease is it used in the human family?

(x)—Lycopodium: (1) What is lycopodium? (2) from what plant is it obtained? (3) describe the physical properties and peculiarities of lycopodium; (4) with what is it frequently adulterated and how would you detect the adulterant? (5) give its medicinal properties and uses.

(y)—Chloroform: (1) What is the chemical formula for chloroform? (2) what is its specific gravity? (3) if the specific gravity of a sample of chloroform be considerably less than the minimum specific gravity required by the pharmacopœia what would be the natural inference? (4) how is it directed to be

kept? (5) four of its preparations are official, name them.

(z)—Ether: (1) Give the chemical formula for ether; (2) what percentage of alcohol does the official ether contain? (3) give the specific gravity of ether; (4) if the specific gravity be greater than that given in the U. S. P., what would be the natural inference? (5) how would you ascertain the presence of alcohol in undue proportion to that required by the U. S. P.?

#### The Latest Remedies.

**Alcohol-Silver Ointment.**—According to Loewe (*Therapeutische Monatschrift*, 1905, page 546), this is an ointment consisting of 0.5 parts of collargol, 96 parts of alcohol and 70 parts of soda soap, some wax and some glycerin. It is a soft and smooth brown ointment which keeps well in an air-tight receptacle. This ointment is made by the chemical works at Helfenberg, formerly E. Dietrich. It is said to be excellent for sprains, contusions, burns, inflammations of the skin, infected wounds, felons, etc. It is applied to the cleansed skin by means of a spatula and then covered with a double layer of linen or with four layers of surgeons' gauze, over which is placed some gutta-percha tissue, and the whole is held in place with a bandage. The dressing is renewed daily, or twice a day, and before every new application the affected part is to be bathed in warm water. After the application of the salve a feeling of warmth is felt which lasts about an hour, but the pain is relieved, the fever in the part is removed and a general improvement in the condition of the inflamed member is felt. The ointment is an antiseptic and at the same time causes an increased supply of blood to flow to the part, which helps the absorption of the silver compound.

**Hematothyroidine** is a liquid preparation of thyroid gland; of which, four dessert spoonfuls a day were given in a case of exophthalmic goitre, complicated by hæmorrhage into the pleura, in a woman, 69 years of age, with good results.

**Thyminic Acid (Soluro).**—Some years since Professor Minkowski expressed the opinion that the products of cleavage of nucleic acids, particularly nucleotin-phosphoric acid or thymonucleic acid, are the natural organic solvents of uric acid. The difficulties in the way of preparing such a compound as nucleotin-phosphoric acid free from bases were very great, but they appear to have been surmounted in a product made by Max Elb, Limited, of Dresden, and named Soluro, which is an amorphous, brownish yellow powder, soluble in cold water, readily fusible, nearly tasteless and reacting slightly acid. Minkowski gives it the formula  $C_{10}H_{10}N_4O_{12}P_2O_6$ . Soluro dissolves its own weight of uric acid at 20°C. and half as much again at blood heat. The dose is four grains several times daily.

**Thymol trichloracetate** is a combination in molecular proportions of trichloroacetic acid and thymol. It forms colorless crystals, insoluble in water. Used as an antiseptic dressing for ulcers and wounds.

**Trichlorisopropylalcohol** is obtained by the action of magnesium-halogen-methyl double salts on choral and decomposing the product with water or dilute acids, according to the statements of the makers, Farbenfabriken of Elberfeld Co.

**Trichophytin** is a solution composed of the filtrate obtained from cultures of trichophyta (the fungi which destroy the hair cells) which has been sterilized and then preserved with 25 per cent. of phenol. Used for diseases of the hair and scalp.

**Tuklin** is said to consist of an acidified mixture of formalin, alcohol and ether, flavored with aromatic essential oils. Intended for use as an antiseptic inhalant in treatment of diseases of the air passages. Made by C. T. Hausmann, St. Gall, Switzerland.

**Turicin** is represented to be a chemical combination of tannin and gluten. It is a yellowish powder, insoluble in water. Used in the diarrhoeas of adults. Being resistant to the action of the gastric juice its decomposition takes place in the intestines. Made by Blattmann & Co., Wädenswil, Switzerland.

**Tutulin** is the name given to a vegetable albumen. It is a white powder intended as a food in the dietetic treatment of typhoid fever and other cases where it is found difficult to give a nourishing diet. Marketed by L. Tolhausen, Homestead, Pa.

**Ungrol** is a glycerin-gelatin preparation medicated with sub-lamin, intended for the treatment of gonorrhoea and syphilis. It is supplied by the maker, H. Unger, Berlin, in tin tubes, accompanied with a canulla for the application of the remedy.

**Urocitral** is the trade name of theobromine sodium citrate, a white powder readily soluble in warm water. Used in anginal and cardiac asthma, dropsy and pleurisy in doses of 7½ to 15 grains several times daily. Made by Rump & Lehnert, Hanover, Germany.

**Uropurgol** is another name for urotropine new (methylene citric acid urotropine).

**Valofin** is a patented liquid preparation of valerian intended to replace recently prepared infusions of the drug. It is stated to contain ethyl valerate, ammonium valerate and the active constituents of peppermint. Dose, 10 to 25 drops on a lump of sugar. Made by Helfenberg Chemical Works, Helfenberg, Germany.

**Valyl** (valerianic acid diethyl-amide) is stated to be the active constituent of valerian, and is recommended in hysteria, neurasthenia, migraine and neuralgia.

**Vasanol** is an ointment base prepared by mixing petrolatum and fatty alcohols derived from wax, spermaceti and lanolin. It is said to have the property of taking up considerable water. It is put up as a soft, ointment-like mass and as a powder by A. Kopp, Leipzig-Lindenau, Germany.

**Vasopolentum** is the name applied to an olein-paraffin, which in the solid form is intended for use as an ointment basis and in the liquid state as a solvent for various medicaments, in the same way as petrolatum vasoliment or vasogen. Made by Rump & Lehnert, Hanover, Germany.

**Velosan** is an ointment compound of salicylic acid, salol and fetron which is intended for use in all the external applications of salicylic acid. Made by Lüthi & Buhtz, Bremen, Germany.

**Vulnoplast** is the name of a new antiseptic gauze dressing composed of three layers. The lowest layer is medicated with protargol 10 per cent. and zeroform 5 per cent. in a gelatin basis, while the second layer is composed of absorbent cotton and the third of gauze again. Made by Dr. Wasserzug, Frankfurt-am-Main, Germany.

#### Stovaine Preparations.

##### SYRUP OF STOVAINE.

Stovaine, ..... 1  
Simple syrup, ..... 200

Dose: One teaspoonful.

##### COMPOUND POWDER OF STOVAINE.

Calcined magnesia ..... 0.6  
Calcium carbonate, ..... 0.4  
Sodium bicarbonate, ..... 0.4  
Stovaine, ..... 0.02

Dose: One powder three times a day.

##### STOVAINE DROPS.

Stovaine, ..... 0.3  
Atropine sulphate, ..... 0.01  
Morphine hydrochloride, ..... 0.1  
Chloroform water, ..... 10.0

Dose: Five drops every two hours to control vomiting.

**Hungarian Oil of Juniper.**—According to Stroecker (*Pharmaceutische Post*, 1905, page 236), Hungarian oil of juniper is quite as valuable as the oil of juniper of other countries. The Hungarian oil is obtained not by distillation with steam, but as a by-product of juniper brandy. Formerly the small manufacturers did not purify their oil sufficiently and thus a greenish product was obtained. The better qualities of Hungarian oil, however, are said to be colorless, or very slightly yellowish, and have a balsamic odor and a bitter taste which is never like that of oil of turpentine. The specific gravity fluctuates between 0.860 and 0.870. The old oil shows changes in odor and taste as the result of oxidation, and is therefore less valuable. The oil of juniper should therefore be kept hermetically sealed.

## Cream of Current Literature

A summary of the leading articles in contemporary pharmaceutical periodicals.

**To Test Urine for Sugar Without a Reagent.**—At times one is obliged to test urine for sugar without having the necessary reagents at hand. A practical hint as to how this can be done is given by Sabrazes (*Nouveaux remèdes*, October 24, page 471). Nothing is needed but an ordinary test tube. The latter is filled with urine, and the upper layers are heated over the flame of a lamp. If sugar is present there will develop a ring of sepia-brown color, which is due to the conversion of the sugar into caramel. At the same time the characteristic odor of caramel will appear. The tube should be gently shaken during the application of heat, in order to prevent it from breaking. This reaction is produced even when the urine contains only a small proportion of glucose, but does not occur when the urine contains albumin, bile substances, blood or the urates. If the urine contains much blood a brown deposit may form on the wall of the tube, but this deposit is thick and is easily distinguishable from the caramel color due to the presence of sugar.

**Studies on Gentian.**—Some interesting facts concerning the old and well known drug gentian appear in a recent article by Tanret (*Nouveaux remèdes*, October 24, page 457). He calls attention to the fact that gentian is scarcely used nowadays except as a bitter. And yet this drug had formerly a certain reputation in the treatment of intermittent fevers, and in some countries, especially in Corsica, it is still used by the natives in the treatment of malaria. The author found that gentian contains some glucosides which are excellent antimalarial remedies. In the fresh gentian roots two glucosides which are important from the medical viewpoint are found—gentio-picrin and gentio-marin. Gentio-picrin, which was discovered in 1862 by Kromayer, could not be obtained easily until now, but the present author devised a practical method for preparing it, based on the solubility of gentio-picrin in acetic ether. He determined its formula as  $C_{14}H_{20}O_8$ . It is very bitter in taste and is split up by hydrolysis into glucose and gentio-genin. Gentio-marin is an amorphous glucoside with the formula  $C_{14}H_{20}O_{10}$ , and is still more bitter than gentio-picrin. In addition to these two glucosides, the author found small quantities of other glucosidal bodies in fresh gentian root, also the following sugars: Gentianose, gentiobiose, saccharose, glucose, levulose, some fats, a cholesterine, a phenolic acid, a trioxanthone and gentisin. An important fact in the pharmacology of gentian is the disappearance of gentio-picrin in the dry root. This phenomenon is due to the action of two ferments, one of which oxidizes and the other hydrates, and both of which are contained in the fresh root. During dessication these ferments act in concert and transform gentio-picrin, at the same time partly oxidizing it. It is evident, therefore, that the official preparations of gentian in which the dry root is recommended to be used should in reality be prepared with the fresh root. In malaria, gentio-picrin and gentian-marin can be used successfully in doses of from 1.5 to 2 Gm. Although they are less active than quinine they are useful in cases in which the latter alkaloid does not act satisfactorily. Gentio-picrin also possesses marked purgative properties, but is not poisonous in man or in the higher animals.

**The Chemical Properties of Vioform.**—Thomann, of Berlin, investigated the physical and chemical properties of vioform (*Pharmazeutische Zentralhalle*, October 19, page 819), and found them to be as follows: Vioform changes color under the influence of direct sunlight, and when kept in damp air for some time, but this change of color does not indicate a decomposition. Vioform does not well stand sterilization with hot, dry air, for when heated to a little over 100 de-

grees C. it loses considerably in weight, and at a temperature of 160 degrees C. begins to melt and to give off iodine. Dressings made with vioform can be successfully sterilized with steam, however, even with steam under pressure of a temperature of 110 to 120 degrees C. Vioform is quite insoluble in the usual solvents, but is best dissolved in acetic ether, in boiling glacial acetic acid and in boiling chloroform. It is not decomposed, even on boiling, in solutions of common salt, borax or in weak soda solution.

**Toxicological Detection of Morphine.**—The difficulty of isolating morphine or oxymorphine in the usual course of toxicological examination is attributed to the fact that the alkaloid forms in the body a sulphoderivative which is not removed by the method of Stas Otto, or the processes generally followed. By the following method the authors have succeeded in obtaining evidence of morphine and oxymorphine from the organs of a rabbit, into which, six hours before being killed, 0.01 Gm. of morphine hydrochloride had been injected. The organs were pulped, treated with an equal weight of water, then acidified with pure hydrochloric acid in the proportion of one part by weight of acid for each ten parts of the organs. This large excess of acid is necessary to liberate the morphine and oxymorphine from the organic compounds formed in the body. The mixture is then digested for two hours on the water bath, neutralized with ammonia, and extracted three times with amyl alcohol saturated with ammonia. The amyl alcohol extract is set aside, the aqueous portion evaporated to dryness and rubbed down with sand. The powder is again extracted with ammoniated amyl alcohol, and the solution added to the amyl solutions at first obtained. The bulked amyl alcohol extract is then shaken out with water acidified with hydrochloric acid, and separated; the acid aqueous extract is rendered alkaline with ammonia, and again shaken out with ammoniated amyl alcohol. On separating this, and distilling off the solvent, morphine and oxymorphine may be detected in the residue. This is best accomplished with Marquis's reagent, a mixture of strong sulphuric acid, 30 Cc., and formalin, 20 drops. A little of the amyl alcohol residue is spread on the sides of a white porcelain capsule, and a few drops of the reagent allowed to flow over it. Morphine gives a red-violet color, oxymorphine a green tint; with a mixture of both, both colors are obtained. If the alkaloidal residue is sufficient in quantity, morphine and oxymorphine may be separated by converting the bases into sulphates, oxymorphine sulphate being nearly insoluble in water. The fact that some investigators have generally succeeded in isolating only oxymorphine is considered to be due to the use of insufficient acid to decompose the morphine sulpho-compound formed.—(*Jour. Pharm. Chim.*, through *Phar. Jour.*)

**Some Peculiar Constituents of Sake, the Japanese Cordial.**—In the *Journal of the Pharmaceutical Society of Japan* for October, H. Kimura gives the result of an investigation of the composition of a saké, manufactured in Nada. Discovering in it a substance which turned violet-red in contact with alkalis, he proved that it came from the cedar cask in which the saké was contained. He distilled the saké and found acetaldehyde in the distillate and vanillin in the residue. Knowing the relationship between the fragrant flavor of saké and the cedar cask, he examined the wood and isolated from it a sesquiterpene and vanillin, which he also obtained from the saké. His conclusions are most ingenious, for, determining that the substance which gave the violet-red coloration with alkali was a quinone body, probably an oxidation product of pyrocatechin, he reasoned that the vanillin, pyrocatechin and orthoquinone had their origin in the coniferine contained in the cedar wood.

## Queries and Answers

We shall be glad, in this department, to respond to calls for information on all pharmaceutical matters.

**Camphor and Arnica Lotion.**—R. S.—Various formulas are extant for the preparation so named, one of the simpler compounds being represented by the following:

|                         |            |
|-------------------------|------------|
| Tincture of arnica..... | fl. oz. 3  |
| Rosewater .....         | fl. oz. 3  |
| Glycerin .....          | fl. oz. 2½ |
| Spirit of camphor.....  | fl. oz. 1  |

**Is Cresol, U. S. P., Commercially Obtainable?**—From H. T. Eberle, Watertown, Wis., we are in receipt of the following communication:

"Recently I inquired of the firm of Lehn & Fink as to whether they could supply cresol, one of the new additions to the Pharmacopœia and described as a colorless or straw-colored liquid. The answer of L. & F. was: 'We regret to have to advise you that cresol as described in the United States Pharmacopœia is not commercially obtainable, hence we are unable to furnish same or quote prices.'

"The question is, What is the object of adding an unobtainable article to the list of official drugs of the Pharmacopœia. Can the AMERICAN DRUGGIST throw any light on the subject?"

At the Atlantic City meeting of the American Pharmaceutical Association, in the course of a discussion on the new Pharmacopœia, M. I. Wilbert, apothecary to the German Hospital, Philadelphia, said he had no difficulty in buying a satisfactory cresol, and others reported similarly. The AMERICAN DRUGGIST has made inquiries among wholesale druggists and has been informed by Smith, Kline & French Company, Philadelphia, and Schieffelin & Co., New York, among others, that cresol complying with the requirements of the United States Pharmacopœia is readily obtainable. Market quotations are 30 to 35 cents a pint, according to quantity, the higher price being charged for single pint bottles, while the inside quotation is named for gallon lots.

In connection with the foregoing the following statement by George M. Beringer, of Camden, N. J., will be interesting:

"When the question of introducing into the new revision of the Pharmacopœia *Liquor cresoli saponatus*, so as to give our physicians an official preparation which they could prescribe in place of the numerous proprietaries, was under consideration I was consulted and made some experiments on the matter. In a letter to the chairman of the committee, Prof. Joseph P. Remington, I recommended that the title, '*Acidum carbolicum crudum*' (U. S. P., 1890) be dropped as not appropriate for a mixture of phenol and cresol in which the latter predominated and that in the new revision the title 'Cresol' be used for a product simulating the *Cresolum crudum* of the German Pharmacopœia. If this recommendation had been entirely adopted there would now be no misunderstanding or trouble in obtaining at reasonable price a satisfactory cresol for the uses intended. Samples of commercial cresols of American, German and English manufacture were submitted.

"The German Pharmacopœia recognizes as crude cresol for official purposes commercial cresol or cresylic acid containing from 85 per cent. to 90 per cent. of pure cresol, and the presence of 10 to 15 per cent. of other phenols is not considered objectionable.

"The description in the United States Pharmacopœia was evidently written by a chemist who had in mind the definite characters and properties of cresol as stated by standard chemical authorities. The official definition requires cresol to be 'freed from phenol,' and in the tests one is given for determining the 'absence of and distinction from phenol.'

"As cresol is only useful as an antiseptic and disinfectant the requirements of the German Pharmacopœia are sufficient, and much of the commercial cresylic acid, and the so-called crude carbohc acid or the No. 5 carbohc acid of some of the manufacturers would have met the requirements if practical

medical and pharmaceutical needs had determined the official requirements."

**Kumyss.**—J. B. O. asks for the formula of a kumyss that can be drawn from a bottle without the use of a champagne tap.

Our correspondent is referred to the National Formulary, on page 71 of which he will find a formula which has been approved by the American Pharmaceutical Association.

**Book on Mineral Waters.**—A. L. D. asks for the name of a publication which gives the formulas of the more popular mineral waters.

Nearly all books of formulas include information of the kind desired by our correspondent, one of the most satisfactory reference books being "The Standard Manual of Soda and other Beverages," published by G. P. Engelhard & Co., Chicago, at \$4.00.

**Putz Pomade.**—L. D. C.—A paste resembling the polishing compound known as Putz pomade has the following composition:

|                         |       |
|-------------------------|-------|
| Ferric hydroxide .....  | oz. 8 |
| Paraffin .....          | oz. 2 |
| Liquid petrolatum ..... | oz. 6 |
| Oleic acid .....        | oz. 1 |
| Oil mirbane.....        | M. 30 |

Melt the paraffin wax with the liquid petrolatum, and mix with the ferric hydroxide previously well levigated; then add the oleic acid and mirbane.

A variant on this formula is provided by the following:

|                                       |       |
|---------------------------------------|-------|
| Crocus martis (iron subcarbonate).... | Gm. 1 |
| Oleic acid .....                      | q.s.  |
| Petrolatum .....                      | q.s.  |

Incorporate with the crocus martis enough acid to make a stiff paste, then add sufficient petrolatum to make the whole weigh 4 grammes.

**Producers and Dealers in California Olive Oil.**—M. E. H. asks for the names of "a few firms who deal in or produce California olive oil, either in New York or on the Pacific Coast."

Beyond the fact that the California oil is much dearer than the Italian or French oil very little is known about California olive oil in this market. It is not handled by wholesale druggists, The Fountaingrove Vineyard Company, of Santa Rosa, Cal., with New York offices at 58 Vesey street, put up an oil expressed from olives grown in their own olive groves, which sells at \$1 a bottle. Other producers of California olive oil known to us are James Hill & Sons Company, Los Angeles, Cal., and the L. A. Olive Growers' Association, Los Angeles, Cal.

California olive oil is said to be of fine quality, as compared with the European oil, but its higher cost is a bar to its general use, even if it were produced in any considerable quantity.

**Book on Optics.**—L. M. J. asks if we can supply him with the numbers of the AMERICAN DRUGGIST containing the Druggist's Course in Optics, which was a feature of the paper a few years ago. He advises us that it is his intention to study our course, in order to learn how to fit eyeglasses without taking a regular college course. He also asks if the course has been published in book form.

Our correspondent's reference is to the Druggist's Course in Optics, which was begun in the AMERICAN DRUGGIST for September 24, 1900, and continued through the issues of 1901 and 1902, the author being C. H. Brown, M.D., president of the Philadelphia Optical College and author of "The Optician's Manual." It was Dr. Brown's intention to republish the American course in book form, but we do not know whether he ever did this or not. We are unable to supply back numbers of the DRUGGIST containing this series of lessons, as they are out of print.

*Under this head will appear suggestions and plans for increasing trade, advertising experiences, information, and notes of interest useful to the pharmacist in the preparation of his advertising matter. Specimens of current advertising will be reproduced, with suggestive analysis and criticism, and queries relative to advertising matters will be answered. To avoid delay address communications to the Department of Business Building, AMERICAN DRUGGIST, 66 West Broadway, N. Y.*

(Written for the American Druggist.)

### CHRISTMAS TRADE.

By W. T. O'CONNER.

Christmas trade for the druggist can and should be made a veritable gold mine. If there is any time in the year when the careful spender opens up his purse and lets the money fly it is the holiday season. It is not even necessary to cultivate a Christmas trade in the sense that cultivating is understood in the advertising world; to wit—developing or creating buyers where none existed. At Christmas buyers have been created and developed through ages of gift giving. It is only necessary for the man with something to sell to draw this ready made purchasing power to him, a thing infinitely more easy than developing it.

It is, of course, necessary to have in stock lines that have a distinctive gift value. You can hardly imagine a man buying a box of pills for his sweetheart, or a girl buying a porous plaster for her "steady."

Cigars, perfumes, stationery, candy, fountain pens and any other side lines you carry that have the qualities that make them suitable for presents are the things for you to exploit.

In the beginning, be sure of your stocks. Look to them well that they will be lacking in neither quality or quantity. You will find that at the holidays you can sell an article much more readily and easily if it is put up in an especially attractive manner. A goodly percentage of you in the course of your life have no doubt received a "box" of suspenders or handkerchiefs as a gift, and the box apparently has cost as much as the contents.

Put your best stock foot forward when arranging your Christmas display.

BY WORD OF MOUTH.

The problem of bringing your stock to the attention of the buyer is next in order. The old as the world method of verbal communication is mighty useful for this particular object, and, in fact, at all times. It is good advertising, and it is inexpensive. Talk, you know, is cheap. In addition, if you are striving to bring your personality into your business it will help to that end. Call your customers' attention to your stock when they come to the store. If you have time show them some of the things you have for the holidays and give them a line on the prices.

### SPECIAL PRINTED MATTER.

Have a leaflet printed for inclosure in the packages you wrap. We print a series of advertisements herewith which can be combined into a very effective leaflet. With your verbal advertising and the leaflet you will get to the people who use your store. The next thing is to get the people who are not enrolled among your regular customers, but who will buy if you go after them properly. These may be roughly divided into two classes, people who pass your store regularly and those who do not.

### THE USE OF WINDOWS.

To secure the favorable attention of the first class, use your windows. For a few weeks before Christmas display the lines that you are pushing. Give the windows to one line, or display one line to a window, as you prefer, for two or three

days a week. Dress them with mistletoe and the greens that are associated with Christmas. A small Christmas tree hung with the gifts you carry will be very attractive. If your store is wired for incandescent lights, two or four candle-power lamps will make it look very pretty at night.

If you follow the plan of displaying only one thing at a time, have a list of the things not in the window made up by a sign painter. Put the prices on it and hang it in a conspicuous place in the window. Do not neglect to put the price in the window with each article that you show.

For the man who never or rarely comes into your neighborhood you will have to use the newspaper. Even if your store is on one of the principal business streets it will do you no harm but a pile of good to use the newspapers. If you do not know what to put into the newspapers, the advertisements given below will fill the bill, we believe.

### Suggestions for Christmas Advertisements.

#### CHRISTMAS HINTS.—NO. 1.

You may imagine that you would not be likely to find either useful or attractive Christmas gifts in a drug store. But a glance at our stock will show you that a high grade of gifts and a correspondingly low price are here together.

Here are some suggestions.

(Print a list of gifts and give an idea of the prices.)

#### CHRISTMAS HINTS.—NO. 2.

Cigars are the proper gift for the man who smokes and there is nothing that he will appreciate more.

If you make your selection from our lines you will choose a staple brand. We do not carry a single "made only for the holiday trade" brand.

Here is a list of some of the brands, with prices:

#### CHRISTMAS HINTS.—NO. 3.

The girl or woman who isn't always glad to receive a gift of perfumery is indeed rare. There isn't a daintier gift. If you are in doubt why not give one or two bottles of perfume? Come in and see just what we have to offer.

Prices range from — to —.

#### CHRISTMAS HINTS.—NO. 4.

Candy for a gift! Always appreciated, always acceptable, and doubly so when as popular a brand as Blank's.

Leave your order for a box now, and we will have it ready for you Christmas Eve. You will want some for Christmas dinner, too. Order it at the same time.

Here is a hint of the prices:

Chocolate nougats ..... 24 cents  
Bon bons, two kinds..... 20 and 40 cents  
Assorted chocolates, two kinds..... 20 and 40 cents  
Hard candies for the children.  
Stocking special, 5-pound box, for the large family... \$1.25  
Etc., etc.

### A Horse Show Window Display.

During the Horse Show week the Hegeman Corporation had a very timely and attractive window display in its lower Broadway store and also in the branch store at Lenox avenue and 125th street. In the window of the downtown store toilet articles were featured. Three large horseshoes covered with pale green and white cloth were suspended in the rear of the window as a background. Two of the horseshoes contained heads of horses bridled with black and yellow rope and wearing a prize blue ribbon. A young lady dressed in the height of fashion stood in the center of the window holding a whip in one hand. Various toilet articles, including soaps, perfumery, toilet waters, dentrifices, talcum powders, hair brushes etc., were profusely scattered throughout the window, interspersed with vases of beautiful large chrysanthemums. A sign in a conspicuous place said that the subject of first thought with the belle of the Horse Show was her apparel, but a question of equal importance was that of her toilet, and that a most complete line of toilet articles was carried by that store. The display in the uptown store was of a similar character and fully as elaborate. Last week the downtown Hegeman store featured bath towels in one window and Vinol in the other.

## THE LODER SUIT.

The Philadelphia Cutter Suing the P. A. R. D., N. A. R. D. and N. W. D. A.—Many Prominent Drug Men Testify—Five Thousand Pages of Testimony.

(From our Regular Correspondent.)

Philadelphia, November 22.—Some two weeks have been devoted to taking the testimony in the suit of C. G. A. Loder against the various drug interests, which are designated by the counsel for Mr. Loder and by the newspapers as "The Drug Trust." The case is being tried in the United States Circuit Court before a jury by Judge Holland. The suit is brought for the recovery of \$100,000 damages, under the Sherman anti-trust law, and is in the nature of a test case, as being the first in which cutters have resorted to the United States courts. The fact that the case is being tried before a jury makes the outcome of course problematical, but the defense are confident of winning ultimately even should the jury in the present suit give an adverse decision. The point at issue is whether or not the operations of the tripartite plan constitute an illegal restraint of trade and whether the co-ordinated action of the retailers, the wholesalers and the proprietors is really independent, or whether the relations are sufficiently intimate to constitute a drug trust. If the case were going to a Judge the defendants would have no feeling of doubt, as they have the law clearly on their side, but the jury introduces a factor which makes the outcome of the suit in this court problematical. It is possible that losing track of the purely legal points involved, the jury may render a decision in favor of the plaintiff, but this does not seem probable. If a verdict for the plaintiff is given, the case will be appealed and on the appeal the case will rest solely upon the points of law, and here the defense is strong.

The first few days of the hearing, which began on November 10, was devoted to the reading of a mass of depositions taken before United States Commissioners in Cincinnati, Indianapolis and Chicago last spring and embracing the testimony of various members and officials of the N. W. D. A. and the N. A. R. D., including that of Thos. V. Wooten, secretary of the N. A. R. D., and of John N. Carey and F. E. Holliday, chairman and vice-chairman respectively of the Committee on Proprietary Goods of the N. W. D. A.

The depositions related to resolutions adopted at the convention held by the National Wholesale Druggists' Association, the National Association of Retail Druggists and the Proprietors' Association of America. It was shown that each association adopted the tripartite plan intended to prevent the sale of goods to dealers who cut rates.

Testimony was also brought out to show that the three associations were closely associated, each seeking to keep prices up.

The case of the Smith, Kline & French Company, who were "disciplined" for selling to Loder, was touched upon, the purpose being to show that the concern had been warned not to sell to Loder. When it continued to sell, the "pink slip" was sent out. This cautioned members of the N. A. R. D. to cease dealing with the firm. This happened on January 20, 1903. Then, according to the evidence, the concern lost orders fast, and as a result hastened to make terms.

## REINSTATED.

A "yellow slip" was then issued—January 20, 1903—announcing to the trade that satisfactory assurance had been received from Smith, Kline & French Company that they would not again offend, and that they would pay all expenses to which the National Association had been put. They were then reinstated.

## TWO THOUSAND FIVE HUNDRED PAGES OF DEPOSITIONS.

More than twenty hundred pages of these depositions were read and placed in evidence, together with various excerpts from the published proceedings of the associations interested in the suit. It was shown by these depositions that Mr. Holliday had called on Loder in company with James C. Perry, secre-

tary, and Walter A. Rumsey, president of the Philadelphia Association of Retail Druggists, with a view to inducing him to join the local association.

## "NOTES" ATTRACTS ATTENTION.

Copies of N. A. R. D. Notes were also made part of the printed testimony, and the instructions printed in one of the issues as to the use of the word pharmacist as a price mark on prescriptions caught the fancy of the newspaper reporters with the result that the following excerpt was printed in many of the newspaper reports of the hearing, being made a feature:

When a man hands you a doctor's prescription, go behind your counter, size up your customer, judge for yourself how much he is able to pay and fix the price of the prescription accordingly. On the back of the prescription place your name and the price of the prescription in an inconspicuous place. Remember that you are not only fixing the price for yourself, but for all other druggists into whose hands the prescription may fall.

## ORAL TESTIMONY FROM PHILADELPHIANS.

After the presentation of the mass of depositions came the presentation of oral testimony, the witnesses including many prominent Philadelphia druggists.

Nathan Cozzens, recording secretary of the P. A. R. D.; E. C. Bottume, an organizer for the N. A. R. D., and William L. Cliffe, chairman of the Executive Committee of the P. A. R. D., testified as to the methods of work of the local organization.

## FAIRCHILD BROS. &amp; FOSTER LOYAL.

Elias W. Dusenberry, assistant secretary and assistant general manager of Fairchild Bros. & Foster, testified that: We manufacture many proprietary preparations and up to March, 1904, Mr. Loder was one of our customers. On March 8, Mr. Loder asked for some goods and he was informed that we were unable to make shipment because, as a result of strong pressure brought to bear against us, we had agreed not to sell to druggists listed by the National Association of Retail Druggists as aggressive cutters.

## AN AGGRESSIVE CUTTER DEFINED AS ONE WHO VIOLATES CONTRACTS.

A. T. Pollard, of Eleventh and Locust streets, admitted having gone to H. K. Wampole with J. F. Keyser, of the National Association, to ask him not to sell the firm's preparations to cut-rate druggists.

"What is an aggressive cutter?" asked J. G. Johnson, of counsel for the defense.

"We are all cutters, for that matter," replied Mr. Pollard. "A cutter is one who sells below the price agreed in the contract."

Charles W. Ellsperman, a druggist, of Eleventh street and Susquehanna avenue, who had been "listed," testified that when he agreed to maintain the schedule of prices suggested by the association his orders were filled. He signed a paper in which he agreed to maintain prices and not supply goods to cutters.

William B. Christine, of Seventh and Arch streets, testified that he was cut off the list, and that Smith, Kline & French Company declined to fill his orders, and that he finally agreed to maintain prices.

Palme H. Jadwin, of Orlando H. Jadwin, a wholesale druggist, of New York, testified that he had been cut off from supplies because he had sold to aggressive cutters. He testified that his firm had paid to a member of the Executive Committee of the N. A. R. D. \$165 in cash and signed an agreement not to sell to aggressive cutters in order to have his firm name removed from the black list.

Henry C. Blair, a member of the Executive Committee of the P. A. R. D., told of the disciplining of the Smith, Kline & French Company. A. T. Pollard, formerly chairman, and Charles Leedom, vice-chairman of the Executive Committee of the local association, both testified as to the methods pursued by the local organization. Mr. Leedom's memory was bad.

Charles W. Esperman, of Eleventh street and Susquehanna avenue, William B. Christine, of Seventh and Arch streets, Philadelphia, and George M. Beringer, of 501 Federal street, Camden, testified that having been cut off from supplies they were reinstated as soon as they had agreed to maintain the scheduled prices.

## MR. HANCE DEFENDS THE RETAILER.

Mr. Hance defended the principles upon which the tripartite plan was based and explained his views as follows:

Druggists, by reason of their education, by reason of the qualifications exacted from them before they are permitted to practice as pharmacists, by reason of their long hours and the great aid they render the public, are entitled to a fair living. Neighborhood druggists are of vast benefit to the people and a convenience which the people could not do without. A drug store is not like a saloon or a cigar store. It is an establishment constantly at the service of the people, at all hours of the day and night. Druggists must therefore be assured a living and a profit upon their investments, and that is why the wholesalers and manufacturers rally to their support, and that is why a scale of prices is fixed by the retail druggists' associations. And all those who cut these prices to the detriment of other retail dealers and cause a general demoralization of business are not entitled to a consideration.

## MAURER NOT AFRAID OF THE N. A. R. D.

C. D. Maurer, of 329 North Eighth street, testified among other things as follows:

One day about a year ago I observed a man standing opposite to my store, and I told him that if he was spying on me he should come right in and watch how I conducted my business. He told me that he was E. C. Bottume, organizer for the associations, and asked me if I had been supplying drugs to C. G. A. Loder and the St. Cloud Pharmacy.

I told the man that I had supplied Loder and the St. Cloud people and that I was going to continue to do so. He said that he then understood how the cut-rate druggists were managing to get their supplies and told me that I was on the black list of the association. He promised that if I would get Loder and the St. Cloud Pharmacy to enter the associations I would be restored to the good graces of the "trust" myself. But I didn't do it. I have continued to supply the cut-rate druggists, and in spite of the associations manage to get all the drugs and medicines that I need in my business.

They told me they would shut us up in three months and ruin us. But they didn't do it. I am still in business.

Dagobert R. Bransome, salesman for Johnson & Johnson, said that his firm had spent several million dollars in advertising and that the effect of this was being destroyed by the cut-rate druggists, who insisted on selling cabinets, plasters, etc., at a small profit. These cut-rate dealers sold so many articles at reduced rates that their aggregate profits more than equaled those of the regular dealers.

## MR. SHOEMAKER'S TESTIMONY.

Probably the two most important witnesses examined were Clayton F. Shoemaker and Mahlon N. Kline, both of whom have acted as chairman of the Committee on Proprietary Goods and as president of the National Wholesale Druggists' Association. Mr. Shoemaker was characteristically conservative in his testimony, and made an excellent witness for the defense. He stated his reasons for refusing to sell to aggressive cutters in the following words:

"In securing the agency for remedies such as are in question wholesalers are expected to sign a contract with the proprietor agreeing not to sell those goods to persons to whom the proprietor objected. I have not refused to sell any but tripartite goods to such retailers."

Mr. Shoemaker explained that frequently manufacturers agreed to allow retailers in large cities to cut prices to a certain extent, but he said there was always a minimum limit set and the proprietors promised the retailers they would do their best to keep prices from going still lower.

In the course of examination by Mr. Scott the witness said that he wished to deny that so far as handling nontripartite goods was concerned he would discriminate against cut-rate druggists as a matter of sentiment. In the case of tripartite goods he had no choice.

"Well," commented Mr. Scott, "you had so much feeling for the druggists, didn't you have any feeling for the consumer? There is in evidence here a list of statistics that shows that in the last six years, since your associations have maintained these minimum prices you speak of, the people of this country have paid \$96,000,000 more, or \$16,000,000 a year more for drugs than they did before. How about your sentiment there?"

## MR. SHOEMAKER DID NOT BELIEVE THE ATTORNEY'S FIGURES.

"In the first place," said Mr. Shoemaker emphatically, "I do not believe those figures. In the second place, I think the people are fortunate that they can get for 75 cents a bottle of drugs that they should pay \$1 for."

Mr. Johnson, attorney for the defense, asked the witness if he could tell how much difference in the prices of proprietary remedies the combination of druggists had made. Mr. Shoemaker replied that it had made practically no difference in country towns, but in large cities it had raised the prices on some articles about 10 per cent.

## M. N. KLINE TESTIFIES.

Mr. Kline's testimony attracted a great deal of attention in local circles on account of his recent campaign of political reform which placed Mayor Weaver firmly in command of the situation in local politics. The effort of the plaintiffs to show the close co-operation between the three branches of the trade through the testimony of Mr. Kline was not very successful.

Mr. Kline, under both direct and cross-examination, was emphatic in denying the implication that any of the four associations, as such, had ever undertaken to regulate the prices of commodities. The price of any drug, medicine or specialty, he said, is fixed in all cases by its proprietor and is not a matter within the purview of the association to which he may belong. He admitted that the wholesalers' body suggested and encouraged the formation of the retailers' body, but denied that the former ever prepared a plan of campaign against the cut-raters for the use of the retailers.

That the Smith, Kline & French Company had been dropped from the N. A. R. D. and afterward reinstated was part of Mr. Kline's testimony. The process of reinstatement cost the company \$217.04. Among the letters read was one from the secretary of the N. A. R. D. to Mr. Kline personally, in which the confidence of the association in his sympathy with its aims was warmly expressed. Mr. Kline said that the cutting off of "aggressives" like Loder was not a use of organized power, but a mere keeping of contracts with the proprietors and manufacturers of commodities held to be injured by the Loder methods. He added that his house flatly refused to do business with Loder, not only as to proprietary articles, but as to such staples as combs, brushes, etc.

Under John G. Johnson's cross-examination, Mr. Kline said that there was in no case an obligation not to sell to cut-raters beyond that assumed in the contracts with individual manufacturers. Also that the Proprietors' Association mainly devoted its energies to counteracting legislation against the interests of its members.

## CONDITIONS IN THE RETAIL TRADE.

Mr. Johnson brought out the facts that there are about 800 retail druggists in this city; that 500 of them take in between \$30 and \$50 in gross receipts 365 days in each year; that out of this must be paid the cost of goods, rent, clerk hire, fuel, light, etc.; that 50 per cent. of the sales is in proprietary articles.

Mr. Kline testified that one result of unlimited cutting would be the complete elimination of the local retail druggist, which would work a hardship to the public, as the local druggist is an institution of great convenience and value.

Asked why his firm had contributed \$25 to the N. A. R. D.'s "bureau of information," Mr. Kline said that it was by way of payment for the bureau's work in protecting the firm's specialties against "substitution." He explained "substitution" as the theoretical and practical asset of the cut-rater, saying:

The cut-rate man advertises a well-known article far below its scheduled retail price. That attracts folk to his store. To them he explains the cut as due to its inferiority to "something else"—generally something else of his own make. His clerks and salesmen are instructed to force the sale of the something else whenever possible. The "something else"—the substitute, that is—represents a greater profit than would the sale of the imitated article even at schedule price. In brief, prices are cut to attract; substitution is made for revenue.

The witness said that Loder had been cut off by the Smith, Kline & French Company for selling "tripartite" goods—that

is, goods wholesaled under the agreement among the defendant associations—in violation of contracts against cutting the retail price.

There are, Mr. Kline explained, six cut-raters in this city, ten in New York, two in Chicago; none in Boston, although the last named is listed as among the principal cut-rate cities by the trade.

#### MR. LODER TESTIFIES.

On Tuesday Mr. Loder himself took the stand, and in order to prove his losses submitted voluminous records as to the amount of goods purchased by him and the cost. The amounts purchased were as follows: 1898, \$56,376; 1899, \$58,745; 1900, \$61,154; 1901, \$62,226; 1902, \$66,046; 1903, \$71,202; January 1 to July 31, 1904, inclusive, \$38,829. He stated that these goods cost him about 8 per cent. more on account of the working of the tripartite plan, making a total increase in cost to him of about \$7,680 annually.

Mr. Loder also went into some detail as to the methods pursued in evading the regulations laid down by proprietors. He also testified that he had been threatened with ruin by the defendants unless he would agree to join the local association and abide by its decisions.

Walter V. Smith, of Valentine H. Smith & Co., and Frank M. Ramsey, manager for William R. Warner & Co., both testified that they had declined to sell goods to Loder because he was an aggressive cutter. The case is expected to be closed on Friday and to go to the jury on Saturday.

#### BIG DRUG MERGER IN CANADA.

**Six-Million-Dollar Company Floated—Nearly All the Big Firms Join—Options Held on Others.**

*(From our Regular Correspondent.)*

Toronto, November 20.—The merger of a number of the leading wholesale drug establishments of Canada, which has been in progress for several months, has taken practical form by the issue of a Dominion charter of incorporation to the National Drug & Chemical Company of Canada, with a capital of \$6,000,000, with headquarters at Montreal.

The incorporators are Alfred B. Evans, Charles Lyman, James W. Knox, Frederick G. Lyman, William S. Kenny and Theophilus H. Wardleworth, of Montreal; John J. Evans, Liverpool; Francis L. C. Simpson and James B. Hattie, Halifax; James Mattinson, London, Ont.; Charles W. Turpling, George Rutherford and William C. Nisbett, Hamilton; Henry W. Barber and Charles T. Nevins, St. John, N. B.; Thomas M. Henderson and William Henderson, Vancouver, B. C.; Peter Lamont, Nelson, B. C.; David W. Bole and William W. Bole, Winnipeg, and William S. Elliott and George H. Clarkson, Toronto.

#### OPTIONS ON THE BIG STORES.

The company holds options on the great majority of the wholesale drug businesses in Canada which it proposes to take over as going concerns, operating them under a central management at Montreal. Of the six million capital stock \$2,750,000 is 7 per cent. preference stock and \$3,250,000 common stock. It is proposed to leave in the treasury for the present half a million of the preferred and a block of the common stock, the balance having been taken up by members of the respective companies absorbed, partly in exchange for the assets thrown into the business. In addition to this, they contribute \$250,000 in cash. The objects in view in accomplishing this amalgamation are stated to be to prevent overlapping, waste of energy and excessive running expenses. The cost of distribution has rendered it impossible to manufacture chemicals profitably. The large reduction in unnecessary expenses claimed as likely to result from the merger, with the increased purchasing power of the capital secured will, it is anticipated, enable large factories and laboratories for manufacturing chemicals to be established. The company also hopes to regulate the credit system and prevent firms of no commercial stability from obtaining goods for which they are often unable to pay.

#### CANADIAN NEWS NOTES.

Robert W. Elliot, head of the firm of Elliot & Co., Limited, wholesale druggists, died at his residence, Toronto, on the 12th inst., at the age of 71 years. He had been in ill health for about a year before his death. Mr. Elliot, who when quite a young man succeeded to the drug business established by his father, William Elliot, took an active part in commercial and public affairs. In 1879 he was chosen president of the Toronto Board of Trade and in that capacity gave much attention to the tariff question and the opening up of new railroads. He retained his membership in the board until his death and took a prominent part in its affairs as long as his health permitted. Mr. Elliott leaves a widow, two daughters and one son, William S. Elliot, vice-president of the company.

The Veteran's Sure Cure Medicine Company, Limited, has been incorporated under the laws of Ontario with \$50,000 capital and head office at Chatham. The provisional directors are George A. Witherspoon, George W. Sulman, Tancrede J. Doyle, Charles H. Gunn and Robert L. Brackin.

J. F. Kellock, druggist, of Perth, Ont., has sold out his business to W. S. Robertson.

The Austin-Murdoch Company, druggists, of Winnipeg, have dissolved, F. L. Murdoch retiring.

Thomas J. Durick, of St. John, N. B., has opened a branch drug store at Newcastle, N. B.

T. J. Cochrane, druggist, of St. John, N. B., has been succeeded in business by A. G. Hughes.

W. M. McKay, of Port Colborne, Ont., has assigned to G. S. Macdonald.

#### PHARMACY IN PHILADELPHIA.

**The Pharmacopoeia from the Physician's Standpoint—Protection for the Pharmacist.**

The regular monthly pharmaceutical meeting of the Philadelphia College of Pharmacy was held on Tuesday afternoon, November 21, with Joseph Crawford, a well known Philadelphia druggist and botanist, in the chair.

The first paper on the programme was one by Dr. M. Clayton Thrush, of the Medico-Chirurgical College, on "The Eighth Decennial U. S. Pharmacopoeia from a Physician's Standpoint." The speaker commented on all the various classes of medicaments in the new Pharmacopoeia, and said that so far as his knowledge went very few physicians are following the new Pharmacopoeia as yet and that druggists should familiarize themselves with it and distribute samples of the new preparations to physicians and also furnish them with lists of the important changes.

C. P. Gabell, a manufacturing pharmacist of Philadelphia, presented a paper on "The Protection That Should be Afforded the Pharmacist by the Law." He said: "Pharmacists should be the dispensers of all poisons and products containing poisons to the laity. This carries considerable breadth in the statement and may be construed to be very radical, but when we go back to the inception of the poison law we find it was not made to favor a few men in a chosen business or profession, but was intended to safeguard the general community from doing itself harm or causing others harm. We find that conditions existing to-day are the same as in the past; we find also that instead of poisons and allied products passing through qualified and experienced hands they are being dispensed indiscriminately by photo supply houses, grocers, department stores, seed stores, hardware stores and others, to the detriment of the class of men who have qualified themselves to handle these articles intelligently." He further said that "the druggists of the country to-day need to make *poison* their watchword," and that druggists should be the sellers and dispensers of poisons to the laity; nobody else should be allowed to handle them.

M. I. Wilbert, apothecary of the German Hospital, Philadelphia, called attention to Some of the Recent Advances in Pharmacy.

# **PRESCRIPTION TALK AT THE KINGS COUNTY MEETING.**

**Doctor Muir Comes Out Against Tax Free Alcohol—Discussion on the Subject—A Successful Year for the Brooklyn College of Pharmacy.**

The November meeting of the Kings County Pharmaceutical Society, which was held on the 14th inst., was made interesting by the exhibition of six prescriptions out of the twenty presented by W. F. Kaemmerer at the Atlantic City meeting of the American Pharmaceutical Association. The prescriptions were exhibited by the associate editor of the *AMERICAN DRUGGIST*, who invited the comment of the members, and after each member had had his say Mr. Keenan gave the results of several interrogatories addressed to different pharmacists throughout the country. The "prescription talk" proved a very entertaining and valuable feature of the afternoon's sitting and the introducer of the prescriptions was awarded a hearty vote of thanks, the motion being proposed and seconded by several members. The paper which formed the basis of Mr. Keenan's talk is printed elsewhere.

## **WOULD RETAILERS BE BENEFITED?**

Another interesting feature of the meeting which attracted considerable attention outside the walls of the college was the declaration by Dr. William Muir that retail druggists would not be benefited by the removal of the Internal Revenue tax on alcohol and his advice to the members to refrain from further participation in the movement for tax reduction or removal. Dr. Muir believes that if the tax were lifted from alcohol an equal tax would be levied on something else where it might work greater hardship.

The proceedings were opened at 3.10 o'clock p.m. with the reading of the minutes of the preceding meeting, after which Frank J. Morrissey, Jr., who was proposed for election at the previous meeting, was balloted for and unanimously elected to membership. Before proceeding with the ballot Dr. William Muir called attention to a provision of the by-laws which made it obligatory to place the ballot box in front of the presiding officer's desk and for every member voting to advance to the desk and there deposit his ballot. Dr. Muir said that of late this by-law had been "more honored in the breach than in the observance," and while the departure had not been questioned heretofore or now it might be at some future time, and it would be well to return to first principles.

Treasurer P. W. Ray reported a balance of \$449.02 in the treasury of the society and \$7,631.62 in that of the college.

## **BROOKLYN COLLEGE IS PROSPERING.**

The Supervision Committee of the college reported through Dr. Muir that November 15 was the last date on which students could matriculate. The largest number of students in the history of the college was now in attendance, there being 80 junior, 128 senior and 7 postgraduate students. He reported satisfactory returns on the sale of the booklets issued by the society to acquaint pharmacists and physicians with the changes in the new United States Pharmacopœia. One order for 40 copies had been received from a firm in Raleigh, N. C. The financial affairs of the college were reported in excellent condition; the trustees expected to be able to pay an additional \$10,000 on the mortgage this year, which would only leave \$7,000 and, as the committee expressed it, "put the college on 'easy street' in a short time." A letter from J. G. Wischerth, chairman of the National Formulary Committee, expressing regret at his inability to be present was read. After adopting a resolution providing for the appointment of a committee of fifteen to represent the society in the N. A. R. D. movement as a Committee on Complaint, an amendment to the constitution was proposed to make provision for the establishment of free scholarships in the college under the auspices of the society. Under the rules this went over until the next meeting.

As chairman of the Procter Memorial Fund Dr. Muir announced results from the issuance of 600 circulars to the pharmacists of Brooklyn asking for contributions of \$1, which had

been unsatisfactory. Only three answers had been received, two from Italian pharmacists and one from a German.

Dr. Muir had hardly taken his seat before a number of members came forward with contributions to the fund, which was increased by \$12 at this meeting.

Two students who had passed successful examinations at the last session of the Brooklyn College of Pharmacy were awarded their diplomas at this meeting, Dean Anderson explaining that while it had been customary heretofore to award the diplomas at the commencement exercises the passage of the new prerequisite law made this somewhat of a hardship, as the young men who had fulfilled all the requirements would be obliged, unless they got their diplomas now, to wait until next May before they could secure registration as pharmacists. The students receiving diplomas were Theodore H. Bohlk and Raymond D. Cullen.

## **THE TAX ON ALCOHOL.**

The agitation for the removal of the Internal Revenue tax on alcohol was then discussed. Dr. Muir said that while he regarded the tax as an unjust one, he did not see how retail pharmacists would be benefited if it were removed. "The alcohol tax," he said, "puts between \$40,000,000 and \$50,000,000 into Uncle Sam's treasure chest every year and if it were lifted from alcohol the duty would have to be levied on something else, where it might work a real hardship. If we urge the repeal of the duty we will be but acting as tools in the hands of certain big manufacturers and varnish makers."

Mr. Keenan said he thought Dr. Muir took a somewhat narrow view of the matter. Admitting that the retail drug trade would not be greatly benefited by the repeal of the tax, he was convinced that even a partial reduction of the tax would be a great boon to American chemical manufacturers. He instanced the great advantage which had accrued to the manufacturers of chemicals in Germany through the privilege they enjoyed of using tax free alcohol.

Dr. Muir retorted that if the removal of the tax was to benefit manufacturers it was up to the manufacturers to pull their own chestnuts out of the fire.

## **HAS THE HEALTH DEPARTMENT AN ADVISORY BOARD?**

A letter from the Manhattan Association asking for the appointment of a committee of three from the Kings County Society to meet representatives of the Manhattan and other associations in Greater New York for the purpose of agitating the appointment of a pharmacist on the Board of Health was freely discussed before the society decided to appoint a committee composed of Dr. Muir, Dean Anderson and J. H. Rehfus.

Dr. Muir thought it would be a good idea to learn definitely first of all if the Health Department had an advisory board. He was inclined to doubt its existence. It was explained by one of the members that the advisory board was one of former Mayor Seth Low's creations and it was doubtful if Mayor McClellan had continued it.

## **SHORT IN HIS ACCOUNTS.**

**Treasurer of Connecticut Pharmacy Commission Said to Owe State \$1,380.**

New Haven, November 24.—An official statement issued by the State Controller and Attorney-General King is that George L. Ellsbree, of Meriden, treasurer of the State Pharmacy Commission, is short in his accounts. Commissioner Ellsbree owes the State \$1,380, it is said, but is fully bonded. As to the shortage, Deputy State Controller Bissell says:

The commissioners did not make their semiannual accounting in June. Upon their attention being called to this matter by the Controller they stated that this was owing to the delinquency of their treasurer, Mr. Ellsbree, whom they had deputed to take charge of the financial affairs of the board. The members of the board are fully bonded and are all liable to the State. The matter is now in the hands of the Attorney-General.

## WORK OF THE MANHATTAN ASSOCIATION.

**Lecturers Engaged for Future Meetings—The Association's Booklet Giving Synopsis of Changes in the Pharmacopœia—An Early Dispensatory Exhibited.**

An interesting feature of the regular monthly meeting of the Manhattan Pharmaceutical Association last Monday night at the New York College of Pharmacy was an address by President Alpers on an old pharmacopœia written by Nicholas Culpepper. The book had been brought to the attention of Mr. Alpers by Ewen McIntyre, and the selections read from it by Mr. Alpers and his comments on the same proved instructive and highly entertaining. One formula in particular that called for some 200 ingredients proved very amusing.

Comparatively little business was transacted at the meeting. Treasurer Hitchcock's report on the condition of the association's finances showed a balance in the treasury of \$153.85. Jacob Diner, chairman of the Special Committee appointed to draft a circular to be issued by the association on the new United States Pharmacopœia, read the circular which had been prepared by the committee. The report was accepted as read and the committee authorized to go ahead with the printing. It will be quite a comprehensive pamphlet, giving a brief outline of the work done by the Revision Committee and calling physicians' attention to the more important phases of the work and changes made in the revised edition. The pamphlet will contain the names and addresses of the members of the Manhattan association.

Secretary Swann read communications from the Kings County Society and the New York Retail Druggists' Association announcing the members of committees appointed by those associations for a joint conference to take up the matter of having pharmacists represented on the Advisory Board of the New York Board of Health. President Alpers said he would call a meeting of the various committees in the near future.

The following, it was announced by President Alpers, would address future meetings of the association: December, Prof. Henry Kraemer, of Philadelphia; January, Harry B. Mason, of Detroit; February, Prof. H. P. Hynson, of Philadelphia; March, Prof. W. F. Scoville, of Boston; April, Dr. A. R. L. Dohme, of Baltimore.

Mr. Hitchcock exhibited two bottles of a certain proprietary article that is manufactured by a concern composed mostly of physicians who, whenever possible, prescribe the preparations made by this firm. The price of the article shown, Mr. Hitchcock said, was exorbitant, and he thought it well to call the matter to the attention of the members of the association. Jacob Diner told of another concern that was in the same kind of business and that had physicians for its principal stockholders. No action was taken on the matter.

Fifteen dollars was appropriated for expenses incurred by the Entertainment Committee, and on motion of Mr. Diner the committee was authorized to provide refreshments at every meeting.

Dr. F. E. Stewart was a guest at the meeting. On being introduced by President Alpers he made a few remarks on the importance of the circular about to be issued on the new U. S. P. by the association, adding that he would bring it to the attention of the County Medical Society. He spoke also of the American Pharmacological Society which he helped to organize; it is expected that the details of the society's "bulletin system" will soon be announced.

The venerable Ewen McIntyre was also a guest of the association at the meeting last Monday night. In a brief speech he expressed his pleasure at being able to be present and thanked the association for the cordial greeting extended to him. He said he hoped to be able to attend the meeting when Dr. Dohme addressed the association, for Dr. Dohme, he said, had always been a generous friend of the college.

## PERUNA CASE HEARING.

**Argument in Suit Brought by New York State Excise Department**

Syracuse, November 24.—The test case brought by the State Excise Department against Peruna came up before Justice Andrews in special term of the Supreme Court on a motion made by attorneys for P. W. Cullinan, State Excise Commissioner, to have stricken out certain portions of the answer filed by the defendant. The action is brought for the purpose of compelling Henry D. Dwight and Frederick J. Nye, known as H. D. Dwight & Co., to forfeit their license to sell liquor as registered pharmacists because they sold one Stephen Pollard a quantity of "a liquor known as Peruna."

The claim of the State is that if the character of the substance is such that it is mostly liquor it is in violation of the excise law regardless of what drugs it may contain. The answer alleges that Peruna has been sold as a medicine for 40 years and that it is prepared according to a medical formula. The defendants also declare that they never knew that it was intoxicating. Just why the local druggists were selected as the victims of the test case, inasmuch as Peruna is sold by every druggist in the country, no one seems to know.

Attorney Edwin Wells in making the motion emphasized the importance of the case to the druggists of the United States. He contended that if Peruna is sold in violation of the law, then the same is true of almost every proprietary medicine sold, for almost every one of them contains more or less liquor. The Court took the papers.

## PROPRIETARIES CLASSED AS LIQUORS.

**Commissioner Yerkes Names a Partial List.**

The Internal Revenue Department at Washington on Friday made public the following partial list of articles which will come under the Federal liquor tax ruling—to wit:

Atwood's La Grippe Specific, Cuban Gingeric, Dewitt's Stomach Bitters, Dr. Bouvier's Buchu Gin, Dr. Fowler's Meat and Malt, Duffy's Malt Whiskey, Gilbert's Rejuvenating Iron and Herb Juice, Hostetter's Stomach Bitters, Kudros, Peruna and Rock Candy Cough Cure.

The concluding paragraph of the commissioner's circular letter is as follows:

"Until public notice is given as to other preparations than those named above, manufacturers of same, druggists and others handling these preparations will not be held liable for special tax for other articles than those set forth herein, provided that the compounds are sold in good faith as medicines."

The order of September 12 was to become effective on December 1 of this year, but protests were received from a large number of manufacturers and dealers, declaring that they had on hand large stocks of the so-called medicines, that they acquired them in good faith, and that the imposition of the Government tax would cause them to suffer great loss. Accordingly, Commissioner Yerkes directed on Friday that the rule be not applied to manufacturers until January 1, 1906, and not to druggists and other dealers until April 1, 1906.

**The Allen R. Fellows Company to Market an N. A. R. D. Line of Pharmaceuticals.**

On December 1 a full line of pharmaceutical preparations will be placed on the market by the Allen R. Fellows Company in strict conformity with the N. A. R. D. plans. The goods will be numbered and their sale restricted to the legitimate trade.

The Allen R. Fellows Company has leased commodious quarters at 237 and 239 Market street, Chicago, and its force is actively at work preparing a full line of goods.

Mr. Fellows is well known through his active work as general manager of the Searle & Hereth Company and before that as a manufacturer of plasters under his own name. Mr. Fellows' aggressive methods, keen business insight and untiring energy will no doubt win the success in this field which he has won in other ventures.

## Greater New York News.

N. C. Polson, Jr., of Kingston, Ont., was a recent visitor to the local drug trade.

Manager O. W. Smith, of the Baltimore office of Parke, Davis & Co., paid a visit to the local offices of the firm recently.

A meeting of the General Committee of the M. A. R. D. has been called for Monday, December 4. The General Committee consists of the Executive Committee and representatives from all the various districts of the city.

Owing to lack of a quorum there was no meeting of the Drug Trade Section of the New York Board of Trade and Transportation on the day set for same. It is not likely that a meeting will be held this month.

P. C. Magnus, of Magnus & Lauer, this city, is vice-president and general manager of the National Essential Oil & Distilling Company, which is erecting a large witch hazel plant in Chester, Conn., to be completed in December. The plant when finished will be operated day and night.

A young man who gave his name as Albert Byrnes was arrested recently in the drug store of Oscar F. Jones, of 120 Myrtle avenue, Brooklyn, charged with robbing automatic telephone boxes. The young man was caught in the act by Druggist Jones, who turned him over to the police.

A petition in bankruptcy has been filed by F. H. Plate, a drug clerk of 192 Montauk avenue, Brooklyn; the unsecured claims are given as \$3,310 and no assets. The largest claim against him is for \$3,300, part purchase price of a store which he bought and tried to run.

A. E. Kent, who has represented the J. Elwood Lee Company, Conshohocken, Pa., in Michigan for the past five years, resigned November 1 to accept a position with Seabury & Johnson, New York. Mr. Kent will continue the same territory, making headquarters at the Wayne Hotel, Detroit, Mich.

G. S. Mariager, who for several years has been cashier of the local branch of Parke, Davis & Co., has resigned. His resignation is to take effect on January 1. He will be succeeded by C. N. Bruun, who has been with the firm for ten or twelve years, and has been rewarded with steady promotion for his faithful services.

An informal dinner party was given on November 9 by Jesse L. Hopkins, head of the firm of J. L. Hopkins & Co., the well-known drug importers and millers of this city, in celebration of his twenty-fifth wedding anniversary. The affair proved most enjoyable, and Mr. Hopkins was the recipient of many congratulations.

A special meeting of the Executive Committee of the Proprietary Association of America is to be held in this city on Monday, December 4. It is understood that one of the principal matters to be discussed is the Internal Revenue Department's ruling on patent medicines containing alcohol. It is also probable that the situation in this city as regards the direct contract and serial number movement will be discussed.

Henry W. Koch, a druggist, at Third avenue and Seventy-fourth street, Brooklyn, sent his 14-year-old errand boy, William Bamburger, to the bank to deposit \$144.65, and has neither seen nor heard anything more of the boy or the money since. There was \$111 in cash and \$33.65 in checks, which were to have gone to the branch of the Mechanics' Bank at Ninth street and Fifth avenue. It is believed the lad has gone to Newfoundland; another theory advanced is that he was kidnapped.

The employees of the wholesale drug firm of Henry Klein & Co. on November 10 commemorated the twenty-fifth year of service of Manager Charles H. Wackerberg by presenting him with an elaborate inkstand of cut glass and solid silver; the firm presented him with a solid silver loving cup of handsome design. Presentation speeches were made by Theodore E. Welch and P. H. Brickelmaier. Mr. Wackerberg feelingly expressed his thanks for the gifts from the firm and his associates.

The Alumni Association of the New York College of Pharmacy will hold its annual dinner at the Hotel Cadillac, Broadway and Forty-third street, in the banquet hall of the new annex, on Saturday evening, December 6. Last year's banquet was held there. There will be musical and vocal entertainment during the dinner. E. P. Wendler is chairman of the Dinner Committee. The annual ball of the Alumni Association will be held at the Grand Central Palace the first Wednesday in February.

The grand masquerade and civic ball given by students of the New York College of Pharmacy at the Palace Garden, Fifty-eighth street and Lexington avenue, on Friday evening, November 10, proved a very successful and highly enjoyable affair. There was a very good attendance. An interesting feature of the evening was furnished by members of the Phi Chi fraternity, who, dressed in long black robes, with hoods and masks, and their society emblem on their breasts, solemnly paraded around the hall in lockstep. The following had charge of the dance: Floor manager, Rudolph Gies; assistants, Roy M. Holmes and Herman Kaiser; floor committee, Arthur L. Lahey, Charles W. Flint, Edward A. Grogan and William J. Mahoney; reception, Harry B. Ferguson, Oakley A. Morhous, William Morton, Wallace G. Sabine, Eugene D. Driscoll and Raymond W. Fish; arrangements, Frederick A. Leslie, Joseph F. Armstrong, Henry W. Lemkule and Charles K. Brown; press, Charles W. Bock, John M. Williams and L. E. Hammond.

### Plans Chain of Drug Stores.

The organization of a stock company with \$100,000 capital to operate department drug stores throughout Nassau County has been commenced by W. A. Dawson, of Freeport, Long Island. The plan of the promoter is to have a central warehouse from which goods will be distributed to the various branches and laboratories and work rooms for manufacturing medicines and other goods to be sold in the stores, which are to be located in all the prominent villages. Mr. Dawson expects to have associated with him in the enterprise several parties who have been identified with the drug trade in Brooklyn and Manhattan for a number of years. He expects to have the united stores in operation within a year. Mr. Dawson is well known to AMERICAN DRUGGIST readers as the former editor of the Department of Business Building.

### Brooklyn Pharmacy Alumni Celebrate.

The Alumni Association of the Brooklyn College of Pharmacy held a reception and dance on Thursday evening, November 16, at the college building, Nostrand avenue. At 10 o'clock, after the members of the alumni had enjoyed a social chat, an interesting entertainment was given, Dr. Edward Kleine, president of the association, having charge. An orchestra led by Charles Kleine gave an excellent programme. Miss A. Kunkel sang a soprano solo and Dr. Charles Nathan sang a baritone solo. W. H. Weygandt, one of the officers of the organization, made an address and was applauded. Mrs. William Ross, of Manhattan, an accomplished pianist, gave a piano selection. Dancing followed the entertainment. A collation was served during the evening.

Those present included Miss Lella Scharg, Mrs. M. Dawson, Miss E. Maloney, Miss C. McCormack, Dr. and Mrs. E. Kleine, Miss L. Schroeder, Miss M. Treibus, Miss Marie Muller, Miss Martha Roheffs, Mrs. William Roheffs, Miss Charlotte Muller, Miss Zerken, Mrs. Zerken, Mr. Schmerz, Miss Schmerz, Miss J. Kunkel, Dr. Wm. Muir, Miss Muir, Mr. and Mrs. Wm. Harloe, Miss Hermans, Mrs. A. Flynn, Dr. and Mrs. W. C. Anderson, Miss Cobel, Miss Margaret Smyth, Dr. and Mrs. J. B. Adatte, Miss Hattie Macflinis, Miss J. C. Kloker, Dr. and Mrs. William Ross, of New York: Dr. and Mrs. C. A. Kunkel, Miss K. Hohnbaum, Miss Hoase, Miss Moherson, Mr. and Mrs. C. L. Gesell, Mr. and Mrs. H. J. Dawson, Miss M. Rhodes, Mrs. Frank Bourne, Miss Elsie Bensin, Isidore Sander, Dr. George Dunn, Dr. Joseph Farrell, Mr. Boardman, H. T. Sturz, Charles Minarcik, jr., J. Kunkel, George Kleine, A. L. Palmer, Frank Bourne, Mortimer Keating, W. H. Weygandt, W. G. Meister, C. A. Liv-

ington, G. A. Knobloch, jr., L. Hellwig, Percy McCoy, Dr. Charles Nathan, J. Oakley Kellogg, Edward Mielike, Libera-  
than Klein.

Mrs. C. L. Gesell, a prominent member of the association, who is actively engaged in the drug business in Manhattan avenue with her husband, is working earnestly for the success of the organization. She is chairman of a committee which has arranged for a series of lectures to be given at the College under the auspices of the Alumni Association. Her associates are Dr. F. P. Tuthill and I. V. S. Stanislaus. At the December meeting of the Kings County Pharmaceutical Society the alumni will present the college with a life size bust portrait of the late Dr. Walter Bryan.

#### THANKS FROM THE AMERICAN PHARMACEUTICAL ASSOCIATION.

At the meeting of the American Pharmaceutical Association, held at Atlantic City, N. J., September, 1905, the Council of the American Pharmaceutical Association recommended that the treasurer be directed to repay to the publishers of *THE AMERICAN DRUGGIST*, *The Druggists' Circular*, the *Bulletin of Pharmacy* and *Merck's Report* each the sum of \$325, together with a vote of thanks from the association for the kind aid extended in advancing this money for the publication of the *General Index of the Proceedings*. This recommendation was subsequently approved by the association at large in general session assembled. Thus runs an announcement by Charles Caspari, Jr., general secretary of the American Pharmaceutical Association, which accompanied the subjoined communication from Treasurer S. A. D. Sheppard.

Boston, November 13, 1905.

*Publishers of the American Druggist:*

Gentlemen,—Please find inclosed check for three hundred and twenty-five dollars (\$325) to reimburse you for your generous loan to the American Pharmaceutical Association, which I am forwarding immediately on receipt of official order from president and secretary. Also inclosed find copy of the vote passed at our annual meeting last September as forwarded to me by the general secretary.

Allow me to add the personal thanks of the treasurer to those of the association at large for your co-operation and valuable assistance in enabling us to edit the *Semi-Centennial Index* without unnecessary delay.

Such practical aid is most gratifying and I feel sure that it was incited by feelings of true loyalty and friendship to our grand association.

Yours very truly,

S. A. D. SHEPPARD.

#### Our Richly Merited Success.

The following is a copy of a letter received from Prof. J. H. Beal, dean of the School of Pharmacy of Scio College, Scio, Ohio, former president of the American Pharmaceutical Association, and now chairman of the Council of that body and vice-chairman of the Board of Trustees of the American Pharmaceutical Association:

*To the Editor:*

Sir,—*THE AMERICAN DRUGGIST* for November 13, just at hand, is an issue of such very great interest and importance that I should like to secure an extra copy or two of the same.

The Notes on New Remedies are of special value, and I wish to express my appreciation of the journal as a bright, new, up-to-date publication which is always eagerly read, and contains so much of value to the pharmacist and to the profession at large.

Wishing it a continuation of the success which has been already achieved and is so richly merited, and with kind regards to its worthy editors, I remain,

Sincerely yours, J. H. BEAL.

Scio, Ohio, November 13, 1905.

## Obituary.

Charles W. Donahoe, of South Boston, died on November 10 of pneumonia. The deceased was born in Boston in 1854 and received his education in the schools of this city. Later he was with the wholesale firms of Cutter Bros. & Gilman Bros. Afterward he engaged in the retail business at 163 D street and at 582 Dorchester avenue. He was interested in public affairs, serving in the Common Council and also in the Legislature. He belonged to the M. S. P. A. and also to the B. A. R. D. His South Boston associates sent a floral offering at the time of the funeral and many of them were present in person.

RACHEL A. CAMERON.

Rachel A. Cameron, who died on September 8, after a long and severe illness, at the home of her sister, Mrs. Edward M. Woodruff, 79 New York avenue, Brooklyn, was the widow of Donald L. Cameron, a well-known pharmacist, who died August 11, 1900. For several years Mr. Cameron was president of the Kings County Board of Pharmacy, and he was prominently identified with the Kings County Pharmaceutical Society and the New York State Pharmaceutical Association, having been a charter member of each association. Mrs. Cameron was well known to the pharmacists of this State, as she always accompanied Mr. Cameron when he attended the various pharmaceutical meetings.

JOSEPH C. HANCE.

Joseph C. Hance died at his country home, Weldon, Montgomery County, Pa., on November 13. Ten days prior he was stricken with paralysis from which he never regained consciousness. Mr. Hance was a member of the firm of Hance Brothers & White, pharmaceutical chemists, of Philadelphia. He joined his brother in the business in early manhood and always commanded the esteem of the correspondents of the house. He was a man of retiring disposition, whose general condition of health prevented him from taking part in public affairs, although earnestly interested in all that promised for the good of the community. For years he had been a director in the Consolidation National Bank, and was a member of the Art Club, Pennsylvania Historical Society, Franklin Institute, Manufacturers' Club and Huntingdon Valley Country Club. He is survived by a widow and one daughter, wife of Professor Blake, of Lehigh University.

#### DIED.

BEEDLE.—In Lawrence, Mass., on Thursday, November 2, Charles Homer Beedle, in the fifty-second year of his age.

CAMPION.—In Philadelphia on Tuesday, November 14, Henry C. Campion, in the sixty-sixth year of his age.

DEWEY.—In Gouverneur, N. Y., on Tuesday, October 31, Albert W. Dewey, in the forty-first year of his age.

ELLIOT.—In Toronto, Canada, on November 12, Robert Wall Elliot, in the seventy-second year of his age.

HANCE.—In Philadelphia, on Monday, November 13, Joseph C. Hance, in the sixty-ninth year of his age.

KLUTZ.—In Wilmington, N. C., on Wednesday, November 8, Felix Hoyle Klutz, in the twenty-eighth year of his age.

MAGINNESS.—In Louisville, Ky., on Wednesday, November 8, Colonel Edmund A. Maginness, in the seventy-fourth year of his age.

PORTER.—In Dubuque, Iowa, on Monday, October 30, Edwin C. Porter, in the fifty-third year of his age.

SAUTER.—In New York, on Tuesday, October 24, William Sauter, of Albany, N. Y., in the forty-sixth year of his age.

SELF.—In St. Joseph, Mo., on Thursday, November 9, James S. Self, in the twenty-third year of his age.

SNYDER.—In Mahanoy City, Pa., on Tuesday, November 7, Frank H. Snyder, in the thirty-second year of his age.

## A WOMEN'S AUXILIARY FOR THE N. A. R. D.

**Movement for Organization in Boston—Temporary Officers Chosen—Plan and Scope of the Organization.**

(From our Regular Correspondent.)

Boston, November 21.—During the recent N. A. R. D. convention the subject of a women's auxiliary was favorably considered, and now the prospect of bringing the matter to a successful issue is made bright by assurances of support from other sections of the country.

Meetings have been held here in Boston, at which Mrs. L. O. Wallace served as temporary president and Mrs. E. H. La Pierre as acting secretary. The Committee on Plan of Organization consists of Mrs. J. G. Godding, Mrs. L. O. Wallace, Mrs. G. W. Cobb, Mrs. Reeves and Mrs. Kelsner.

Secretaries of organizations affiliated with the N. A. R. D. will soon receive an announcement of the proposed plan and a request to bring the subject to the attention of women who would likely be interested and participate in the movement. A convention in the near future is a possibility, to which delegates would be invited from all over the country. Some of the proposed objects are the uniting more closely and socially the families of retail druggists, progress in reformatory and educational lines, dissemination of useful information, exposure of fraud and adulteration of foodstuffs, furthering of the interests of the N. A. R. D. and kindred associations, uniting of representatives of associations of women into a central body for the betterment of social and business conditions of the retail trade and co-operation with organizations having similar aims and encouraging mutual improvement.

# PHARMACOPOEIAL STANDARDS AND PROPRIETARY PREPARATIONS.

**Western Branch of the New York Board of Pharmacy Solicit and Receive a Legal Opinion—Its Text.**

Secretary Geo. C. Reimann, of the Western Branch of the New York State Board of Pharmacy, has favored us with the subjoined opinion by the attorney of the board. The opinion is the subject of comment in our editorial columns:

BUFFALO, October 3, 1905.

State Board of Pharmacy, Western Branch, Buffalo, N. Y.

Gentlemen,—You asked an opinion as to whether a dealer would be protected in the sale of drugs, chemicals and medicine mentioned in the United States Pharmacopœia, by marking the same in the possessive, as—Dr. Green's Tincture of Arnica," when the drug, chemical or medicine sold were of an inferior strength, quality and purity from that established for it in the latest edition of the U. S. Pharmacopœia.

We answer that if arnica, or any other drug, or pharmaceutical preparation is specified and prescribed for a customer, the arnica or pharmaceutical preparation ordered must be of the standard of strength quality and purity established by the latest edition of the United States Pharmacopœia.

The putting on the label of the proprietor's name in the possessive case would have no effect to take the article sold from under the prohibition of the Public Health Act, Clause 197.

You asked whether the putting of an adjective, as "Special" "Extra", "Compound", would make any difference in the liability of the person selling the drug, chemical, medicine or pharmaceutical preparation, if it should be of an inferior quality.

We answer, emphatically, No.

All pharmaceutical preparations sold or dispensed in a pharmacy, store, dispensary or place, must be of the standard quality, strength and purity established by the latest edition of the United States Pharmacopœia, unless otherwise prescribed for or specified by the customer.

The placing of the vendor's name in the possessive case upon the label does not change the drug, medicine or chemical into a proprietary article so as to avoid the provisions of the act. The use of the possessive, the use of the adjective, or the use of the name, are all powerless to take a drug, chemical or medicine from under the provisions of the Act, requiring that the same shall be of the standard laid down in the latest edition of the United States Pharmacopœia, unless otherwise prescribed for or specified by the customer.

Yours truly,

ARTHUR W. HICKMAN,  
HICKMAN AND PALMER.

## WESTERN NEW YORK.

**Price Protection Produces Improvement—Number of Applicants for Registration Decline—Illegal Cocaine Sales—Weak Laudanum.**

(From our Regular Correspondent.)

Buffalo, November 21.—Trade improved is the report of the Buffalo retailers. Everybody is finding that the prescription department is very active and the price of proprietaries is better than it was. There is some cutting, but it is not anything like what it was, and if the present hold on the trade is kept it will not break out again as it did last year in a long time. The trade has had its experience and sees the difference now. Such wars usually steal in on any trade and they last a long time after everybody is sorry, though it is hard to find a way of stopping them so that there is not some one who is afraid he has yielded more than he should. So they go on till the whole trade is flat. That was the case in Buffalo, anyhow.

REGISTERED BY THE WESTERN BRANCH.

The Western Branch of the State Board of Pharmacy finds the candidates for license very few now that the bars have been put up, just as was expected. The applicants were few at the November examination, and only the following five passed: Pharmacists—John D. Hulse, Benjamin F. Miles, Gertrude F. Keenan. Druggists—John C. Harry, Thomas H. Meredith. Mr. Hulse is in a pharmacy at Sodus Point, Mr. Miles is at Ithaca, coming not long ago from Hartford, Conn.; Miss Keenan is at the Palmer Pharmacy in Olean, Mr. Harry is with Keller & Deuchler, Buffalo, and Mr. Meredith, of Jamestown, is in the Buffalo College of Pharmacy.

FINED FOR ILLEGAL COCAINE SALES.

The board is looking carefully after the lawless element of the drug trade and finds cases of peculiar interest, though it is confessed that some of them are nearly hopeless. For instance, there has been of late a descent on the cocaine traffic and \$400 collected in fines on account of no labeling or no registry of sales, or both. The delinquents are now keeping the law, but it is found that there are about three stores in the city that are selling all they can to cocaine fiends, sometimes to 50 such in a day. What can be done to stop such a nefarious trade in a respectable business and carried on at present at least within the law?

LAUDANUM DEFICIENT IN STRENGTH.

Again it is the laudanum trade that has to be pulled up. Going over it the board found considerable unlawful goods, so it took a course about as fair as could be conceived. A sample was given to a chemist for assay, then he was given a second sample, then another chemist was given a sample, and some was left in the druggist's hands to be assayed on his account if he so desired. When the three samples tested were all found to be bad the seller was prosecuted.

NIAGARA FALLS DRUGGISTS ORGANIZED.

J. D. Bellaire, of the N. A. R. D., who lately made Buffalo his headquarters as a convenient point for operating in western New York, has succeeded in organizing the druggists of Niagara Falls and declares the new Niagara Falls Retail Druggists' Association to be a strong, healthy body. The president is Eugene Laurier; vice-president, C. J. Cole; secretary, E. J. Cole; treasurer, W. M. Bowen; trustees—T. H. Wallace, A. Vorwerk, J. F. Kobler. Regular meetings will be held on the second Tuesday of each month. There has been no great amount of price cutting there, so the organization was effected for the purpose of holding up the hands of the N. A. R. D. There are 15 druggists in the city, of whom two are grocers. Practically all have joined the association.

The effort to bring Lockport into the fold did not succeed on account of a difference of opinion as to the terms on which an association should be received.

Mr. Bellaire has now gone to Fillmore, Allegany County, which is under a county association but has been cutting prices to ribbons lately.

## THE BUFFALO DRUGGISTS' BOWLING CLUB

is a trifle more than a howling success now that cool weather prevails. At the last Friday meeting so many members attended that it was impossible to find room for them all, unless they were given the monopoly of the whole four alleys in the rooms near the College of Pharmacy, where they meet. Some special arrangement will have to be made to accommodate them all.

Capt. John P. Diehl, jr., of the club, is just back from a hunting trip to Canada, where he shot two deer.

Herbert M. Groves, of the Western Branch of the State Board of Pharmacy, is ill of typhoid fever at the hospital in Batavia.

The Buffalo Drug Merchants' Exchange has reached its city limit of 100 members and has about 25 members out of the city. A large business is done and there is prospect of much further expansion.

Ex-President Thomas Stoddard, of the State Pharmaceutical Association, expresses himself as well satisfied over his defeat for re-election as City Councilman of Buffalo, especially as he went down before a local tidal wave of Democracy that swept everything before it. Business now.

The financial difficulties of Dr. Peter R. Croy, of Niagara Falls, have been settled by one of his drug stores being sold to Faxon, the Buffalo grocer, who has one combined store in Niagara Falls, and placing the other store in the hands of a company.

Buffalo druggists are much grieved over the death of Dr. D. W. Harrington, who had practiced in the Cold Spring district for many years and was a sort of patron saint of the pharmacists in the city.

Dr. Ernest Wende, professor of toxicology and microscopy of the Buffalo College of Pharmacy, and formerly health physician of the city, has been reappointed to the latter position by Mayor-elect Adam.

It is expected that the New York State Board of Pharmacy will join the Association of Boards of Pharmacy next year.

## THE SHERIFF GOT THE GOODS.

The story comes from a central Pennsylvania town of a well-known Buffalo druggist and an equally well-known traveling salesman in the same trade who lately made an oft-repeated fishing trip to the Maine lakes. They did not omit the time-honored custom of sending on a case of moist goods to join them as they went into retirement, but a sharp-nosed deputy sheriff confiscated the stuff on the way and the Nimrods came back dry. Their friends declare that they always used to report the fish they caught as at least two feet long, but this time they didn't find one that would measure more than ten inches over all!

## NOTES OF THE TRAVELING MEN.

F. C. Moore is still on the list for this territory as the favorite representative of the New York house of R. Hillier's Sons Company, and his visits are as welcome as ever.

L. D. Worden knows the November needs of the druggists of this vicinity, and accordingly brings his list along with him for a further distribution of the specialties of Schieffelin & Co.

The Muhlen & Kropff cologne and toilet soaps took another step forward on the last call on the drug and general trade that R. S. Arcularius has worked up in Buffalo.

It is a long list of things of interest to the druggist that J. A. Cockman brings this way in the interest of the Baltimore house of McCormick & Co., manufacturing chemists.

W. D. Brenn is still in the list of accepted traveling salesmen who make Buffalo one of their stopping places, coming in the interest of the specialties of the Tyler & Finch Company.

The United Brush Company sends us its representative for this territory, E. Schlacht, who canvassed the city thoroughly and went away with a good lot of satisfactory orders.

George H. Macy comes up from New York as usual with a big list of the essential oils and fine drugs prepared by George Lueders & Co. for the general trade.

The Buffalo retail druggist still welcomes Edgar P. Reynolds in his weekly rounds, selling the specialties of the Syracuse house of Charles Hubbard & Son, in which business he has been a long time.

L. E. Treat, who knows Buffalo also as a former resident, returned to his old customers not long ago with all of his full list of specialties for the well-known house of Johnson & Johnson.

W. D. Shattuck still looks in on the city druggist with a fellow feeling, which is fully returned by everybody, and the result is a good lot of sales of the rubber goods of Parker, Stearns & Sutton.

"The earth contributes and J. L. Hopkins & Co. distribute" is the song of Justin Keith, who still calls regularly on his old customers in the Buffalo district and keeps on distributing.

E. C. Stanley was with us about the middle of last month with a full line of the extracts, essences and kindred goods of the New York house of D. R. James & Brother, all of which he well knows how to sell.

Frank J. Roe, special salesman in this territory for David E. Green & Co., went the Buffalo round late in October, selling his ordinary line of gums, vanilla beans and the like, with his usual success.

The jujube man was again with us last month, looking exactly like Frank C. Davis, who is the personator always of the New York house of Wallace & Co., and he represents them well.

Lehn & Fink send us as usual their trustworthy and trusted salesman of long standing, Edwin H. Powell, with a complete line of their specialties, all of which find ready sale in this market.

## The Territorial Board of Pharmacy of Oklahoma.

The regular quarterly meeting of the Oklahoma Board of Pharmacy was held at Anadarka on October 10. A class of twenty-six candidates was present and took the examination. The following passed the required grade and will receive certificates of registration:

Alden J. Brace, Fletcher; Karl Douglas, Anadarka; D. C. Gamble, Jr., Alva; George W. Moss, Stroud; Ulysses E. McDermott, Pond Creek; M. E. Park, Manchester; William P. Robinson, Pawhuska; C. M. Sewell, Altus, and James Whittet, Carnegie.

## The following were registered on diplomas from colleges

Alonso D. McDonell, Montpelier, Ind., Purdue School of Pharmacy; Marvin M. McCord, Washington, Ind., Northern Indiana School of Pharmacy; Frank A. Paybyski, Chicago, Northern Indiana School of Pharmacy; Chester C. Pegg, Ponca City, Highland Park College of Pharmacy; William M. Perry, Brame, Okla., University of North Carolina, Department of Pharmacy; Arthur J. Price, Elizabethtown, Ill., Northwestern University, School of Pharmacy; Roy E. Rankin, Lincoln, Wash., Drake University, Des Moines, Iowa; H. D. Reynolds, Shawnee, Ohio Normal School of Pharmacy, Ada, Ohio; Alfred P. Ruediger, Snyder, Okla., University of Kansas; Thomas C. Sturm, Newkirk, Okla., Northern Indiana School of Pharmacy; Fred C. Sheets, Chicago, Northern Indiana School of Pharmacy; Clyde W. Townsend, Shawnee, Chicago College of Pharmacy; Otis M. Wolgamot, Richwood, Ohio, Ohio Northern University; Mary B. Walker, Beaver, Okla., Northwestern University School of Pharmacy.

The next regular meeting of the board will be held at Guthrie on January 9, 1906.

At that meeting a special examination will be prepared and presented for assistant certificates. All parties who have had the two years of practical experience and are dispensing in drug stores in the Territory will be expected to appear and take this examination. Application should be made for blanks to the secretary, F. B. Lillie, Guthrie.

The board has decided that all persons in the Territory who are dispensing without being properly registered as required by law must proceed to qualify at once. Special applications will be prepared for this purpose and furnished to all parties desiring to make application.

The board has decided to award at each meeting a prize in the registered pharmacists class of a membership in the American Pharmaceutical Association to the person receiving the highest average grade. At the meeting at Anadarka this prize was awarded to James Whittet, of Carnegie, Okla. His general average was 85 per cent, the highest of any in the class.

## NEW ENGLAND.

**The Drug Trade Fares Well in the Distribution of Political Honors—Several Candidates for the Lower House Defeated—Practical Examinations by the Board of Pharmacy.**

(From our Regular Correspondent.)

Boston, November 22.—Much pharmaceutical interest centered in the recent State election in Massachusetts, as some of the candidates were either present or past druggists. The three Senators who represented the trade last year on Beacon Hill were returned, and each received a handsome vote. As usual, Hon. William J. Bullock, of New Bedford, headed the list as prize vote getter, and closely behind him were Hon. Harrie C. Hunter, Ph.G., of Marlboro, and Hon. Charles L. Dean, of Malden, Ward 12. Boston had an interesting contest. This district is entitled to two representatives, and one of the Republican candidates was Frank E. Gaylord, Washington, corner of Union Park streets. One of his Democratic opponents was Fred Ewell, 1433 Washington street. Both are druggists, and this contest developed the fact that it is difficult to keep the pill rollers down, for these two druggists polled the most votes. Gaylord received 1,503 votes; Ewell, 1,236. Edward A. Bower, of Methuen, was re-elected representative. A number of druggists' candidates for the House were defeated. Among these were: F. W. Lord, Athol; H. M. Maxwell, Lynn; Rolfe Bradbury, Lowell, and E. C. McIntire, Gloucester.

## BOARD EXAMINATIONS HELD IN COLLEGE LABORATORIES.

The Board of Pharmacy has adopted a new idea, as a trial, in the examination of candidates. Prior to last week all of the examinations had been held at the board's quarters in the State House. Recently, however, there has been a deluge of applications, and as the accommodations on Beacon Hill were inadequate application was made to the trustees of the Massachusetts College of Pharmacy for the use of some of the rooms at the college. This request met with ready response and the plan was inaugurated last Tuesday. Early in the day the practical work was done in the pharmaceutical laboratory and in the afternoon the written and oral portions of the examinations and identification of samples took place in the various rooms on the first floor. Further examinations will be held this month.

## OUR NEW REMEDIES COMPENDIUM.

"VERY CAREFULLY WORKED OUT."

Your Compendium of New Remedies is very carefully worked out and doubtless of great value to the pharmacist.

SCHERING & GLATZ.

NEW YORK, November 17, 1905.

## DR. WAINWRIGHT WILL COLLABORATE.

I assure you that I am in hearty sympathy with the work that you have undertaken, and I shall be glad to render you any assistance in my power, not only in reference to the products handled by the firm of Victor Koechl & Co., but on similar products that are offered by other firms.

J. W. WAINWRIGHT.

NEW YORK, November 16, 1905.

## A SUGGESTION FROM A SUBSCRIBER.

I am very glad to see you publish a Compendium of New Remedies. Allow me to suggest that you ask your subscribers to notify you of omissions, so that in the course of time you may have a complete list. I for one will start the ball rolling by sending you a hastily compiled list of substances not enumerated in your list.

OTTO RAUBENHEIMER, Ph.G.

BROOKLYN N. Y., November 18, 1905.

## COMPREHENSIVE, YET CONCISE.

We wish to commend your new department (New Remedies Compendium and Prices Current). The material you afford the dispenser is comprehensive in its scope, yet concise in form, and we are quite sure will be appreciated by your readers.

THE HOFFMANN-LAROCHE CHEMICAL WORKS.

NEW YORK, November 20, 1905.

## PENNSYLVANIA.

**The Town Agog Over the Loder Suit—Author of the Campion Plan Killed—Minor News of the Trade.**

(From our Regular Correspondent.)

Philadelphia, November 22.—The whole drug trade in this city is taking an interest in the suit which is now going on between Loder and the Philadelphia Retail Drug Association. Each day many retail druggists are at the hearing and few of them can be seen at their stores during the hours between 9 and 5 o'clock.

All the drug news is concentrated in the Loder suit. The case which is now on has somewhat retarded the drug business, as many druggists are holding off their orders until the suit is settled. The general belief in the drug trade is that the case will be nonsuited.

## PERSONAL MENTION.

Aschenbach & Miller have incorporated their firm. It is now a stock corporation. It is understood that a number of changes are to be made. This is one of the old wholesale drug houses in this city.

Allan Shryock, for many years a druggist at Broad and Parrish streets, died suddenly last week. Mr. Shryock was one of the old school druggists. He had a good location and did a lucrative business.

## THE DEATH OF MR. CAMPION.

On November 15 Harry C. Campion, head of the firm of J. W. Campion & Co., wholesale druggists, at 916 Filbert street, died at the University Hospital. Mr. Campion was on his way home the previous evening. He was riding on a Chester avenue car, which runs south on Forty-second street, directly past his home, 505 South Forty-second street. When Baltimore avenue was reached Mr. Campion, who was sitting in the front of the car, opened the door and stepped out upon the front platform. His house is on the east side of Forty-second street, three doors south of Baltimore avenue. It is supposed Mr. Campion attempted to alight and slipped, for the next thing the motorman and the passengers knew he was under the wheels of the car. According to witnesses, when Mr. Campion, who was 65 years old, and heavily built, landed on the ground, his feet slipped from under him and the car passed directly over his legs. His left leg was horribly mangled.

Patrick McIntyre, the motorman of the car, who saw Mr. Campion fall, applied the air brakes and tried his best to stop the car. As he did so several passengers ran to the injured man's assistance. When the first person reached his side Mr. Campion was lapsing into unconsciousness from loss of blood. Quickly as possible the trolley crew and passengers extricated the injured man from beneath the car and sent him to the University Hospital in a patrol wagon.

Though the accident occurred directly in front of his home, Mrs. Campion, her son and the servants in the house were not aware of the tragedy until a message was brought from the hospital summoning them there. Mr. Campion held a high place in the drug trade in this city. He was one of the first to favor closer union among the manufacturers, and his plan, which is called the Campion plan, was among the first to be brought out.

## Nashville Druggists Elect Officers.

Nashville, Tenn., November 24.—The Nashville and Davidson County Retail Druggists' Association has signified its intention of making the coming year of the association the greatest in its history. At the annual meeting President S. C. Davis was elected president for the third time. Other officers elected were: Max Bloomstein, first vice-president; M. E. Hutton, second vice-president; Hardy Neal, third vice-president; Ira B. Clark, treasurer; David J. Kuhn, secretary, and Joseph W. Byrns, attorney. It was proposed that a committee from the association be appointed to confer with the drug committees of the Chamber of Commerce and the Retail Merchants' Association on the State Fair project. Another matter considered was the organization of a druggists' bowling league.

## OHIO NEWS.

**Business Brisk in Northern Ohio—Many Fail to Pass the Board Examination—Soda Water Legislation Proposed—Malt Whiskies Classified as Whisky, Not Medicine—Illegal Sale of Narcotic Drugs to Be Stopped.**

(From our Regular Correspondent.)

Cleveland, November 21.—Wholesale druggists report that the sale of holiday goods continues satisfactory and that they will have a good fall season. Novelties and other goods of the kind have had an excellent sale as well as standard goods. The retailers likewise are all doing well and expect their holiday business to be the best they have enjoyed for some time. Cleveland and northern Ohio are in an exceptionally prosperous state and there is plenty of money in circulation. This always insures a good business among merchants in all lines.

President Lucien B. Hall, of the National Wholesale Druggists' Association, is working on the various committees of the organization and hopes to be ready to announce them within the next two weeks. He has been held close by business matters for some time and has given this work all the attention possible. Among the appointments so far made is that of the chairmanship of the Committee on Passenger Rates and Routes, Romaine Pierson, of Chicago, having been reappointed.

ONLY THIRTEEN PASS OUT OF A CLASS OF ONE HUNDRED AND TEN.

Out of a class of 110 applicants before the State Board of Pharmacy at its last meeting but 13 succeeded in passing the examination for pharmacists and two for assistants. They are as follows: E. P. Stevenson, Dayton; Milo Miller, Spencerville; Carl C. Portner, Painesville; Edward J. Windisch, Sandusky; Huber Serodino, Cincinnati; Elmer O. Jolley, Dayton; Otto E. Muhlhan, Cleveland; Ralph M. Reahard, Dayton; Walter S. Metzler, Coshocton; B. E. Hurt, Cleveland; Albert Trachsel, Canton; Harry F. Plum, Bellefontaine; Theo. P. Babbitt, Cleveland.

Assistants—Henry C. Fehr, Toledo; Charles A. Stammel, Jr., Cincinnati.

Assistants on pharmacal examination (certificates will be granted if desired)—Lee W. Funk, Columbus; Walter A. Braulin, Portsmouth; J. C. Inman, Bradner; L. G. Cutza, Lorain; D. B. Kubat, Cleveland; Carl E. Schmidt, Canton.

## A PURE SODA WATER LAW BEING PREPARED.

City Chemist Pate, of Cleveland, is preparing a bill, which will be introduced into the coming Legislature by Senator P. W. Ward, who has been a member of the Board of Health in that city. Mr. Pate has been experimenting with adulterants used in foods, soda waters and other things of the kind the past summer and finds that he cannot make a case against persons using them because they are not specially mentioned in the statutes. The proposed law will name a number of ingredients that are harmful and thus bring them under the ban. The health authorities of Cleveland have been taking active steps for some time in the hope of reducing the mortality rate and for this reason are endeavoring to surround themselves with all the weapons possible.

State Dairy and Food Commissioner Horace Ankeny has begun a fight against certain patent medicines that he considers should be considered by another name and the following notice has been sent to general stores and druggists handling them: "After January 1 Duffy's malt whisky, Shaw's malt whisky and Sheehan's Canadian malt whisky will be treated by this department as whiskies and not medicines, and all parties selling these so-called malt whiskies will be held to be under the same liability for the payment of the Dow tax as for the sale of other whiskies and will be so certified to the Auditor of State when evidence is obtained of illegal sales." The Dow law requires that persons selling whiskies shall pay a tax of \$300 a year.

Saloonists who were hit pretty hard by a decision of the Common Pleas Court at Washington Court House some time ago threaten to open drug stores in retaliation, as they seem to believe that the druggists had something to do with their misfortunes. They say they see no way of obtaining relief in the higher courts, and many of them have closed and will

sell only soft drinks. Their idea is to put in a stock of drugs and then have their own physicians to prescribe for friends. This of course would give them leeway to sell a great deal of liquor.

## WARNING CONCERNING COCAINE SALES.

The State Board of Pharmacy is sending warning letters to druggists all over the State calling attention to the statutes relating to the sale of cocaine and other drugs of this nature. They are thus giving them an opportunity to understand the position they are placing themselves in if they violate the law. Further, the board asserts that the law will be enforced without fear or favor, as the ravages wrought through the indiscriminate use of such drugs must be stopped. The police departments in the various cities have been asked to co-operate with the board in seeing that the laws are obeyed and in bringing those who violate them to punishment.

## STEALS LETTERS FROM DRUG SIGNS.

A new type of the petty thief has been developed in Columbus, and has caused the druggists on Fourth street considerable expense. His manner of operation is to take the letter D or U out of the sign "drugs," which most druggists have on their windows in raised letters; after taking them from several windows he will, in the course of a few weeks, return to the scene of his operation and asking for the proprietor, tell him that he noticed there was a letter missing from his sign and ask if he did not wish one put on in its stead. One druggist has noticed that the same man has been coming around to replace the missing letter just a little while after it has been taken, and from this his suspicions were aroused that this was the "letter-snatcher," or else a confederate, and now plans have been laid among the men who have thus suffered to capture the culprit.

## CLEVELAND NOTES.

J. A. Deming has moved his store from St. Clair street to the corner of Hough avenue and Amesbury street.

Dr. C. D. Chapell is arranging to open a drug store in a building recently erected at the corner of Euclid avenue and Mayfield road.

In a fire that destroyed the Carlsbad American Sanitarium at Magnetic Springs, on October 27, the drug store owned by Dr. Harrison McFadden and operated by Dr. J. C. Conrad was wiped out. The loss on the building was \$3,500, with \$1,200 insurance. The goods were insured for only \$800. The blaze originated in the engine room of the sanitarium.

George Laubach, member of the drug firm of Laubach & Boyd, of Wooster, died suddenly on the morning of November 15. Mr. Laubach had been in his usual health but complained of sickness on arising in the morning. Within a short time he was dead. He was one of the most prominent druggists in that section of the State.

## OHIO NOTES.

Blue & Shields, of Forest, have been succeeded by the City Drug Store, Dale Shields, proprietor.

Mike Donohue has been arrested on the charge of robbing Latimer's drug store at Columbus.

W. W. Young, formerly in the drug business at Wadsworth, has purchased the George H. Chapman store at Zanesville.

C. Bert Miller has opened a new store in the old G. M. Martin stand at the corner of Washington and Cincinnati streets, Dayton.

The Day Drug Company, of Akron, has been incorporated with a capital stock of \$15,000 by W. L. Shoemaker, Sallie B. Shoemaker, J. H. Sellwood, Mark Gair and Clarence L. Phillips.

Dr. I. I. St. John, of Tiffin, is claimed by his friends to be the oldest active business man in the State. His age is 102 years, according to the claims made. Dr. St. John is a druggist and has been in business at Tiffin for 50 years. He has no known heirs and is partially blind.

D. W. Baker, druggist at Elyria, has been convicted of criminal assault upon Lottie Rieger under the second clause of the indictment, which specifies that consent was given. Mr. Baker was renominated for City Councilman on the day the indictment was found and was elected. A motion for a new trial has been made and will be argued shortly.

## THE WEST.

**License Revoked for Sale of Narcotic Drugs—Clerks Liable as Well as Principals—Joint Conference on Higher Educational Requirements—Board Cannot Demand Graduation Before Examination.**

(From our Regular Correspondent.)

CHICAGO, November 20.—The Illinois State Board of Pharmacy has revoked the license of Paul Vito, owner of drug stores at Oreber and Ormon avenues and State and Twentieth streets because of continued violations of the law forbidding sales of cocaine. The board is empowered to take such action after a druggist has been convicted of making two illegal sales. Attorney J. P. Dudley, who represents the State board, says that Vito has been convicted of two illegal sales and that his license is therefore forfeited. In this connection a member of the board has pointed out that clerks ought to be warned to be cautious in making cocaine sales, for the clerks are punished in the same manner. If a clerk loses his certificate his career is cut short.

## RAISING THE GRADE.

The Illinois Pharmaceutical Association's Executive Committee and the State board had a joint meeting recently. Teachers from the various colleges were present to discuss the meaning of the I. Ph. A. resolution regarding the raising of the requirements for admission to examinations. A resolution had been passed calling upon the board to bring the Illinois requirements up to the New York standard. When the druggists realized that they had urged the board to demand a college diploma they changed their opinions. The teachers raised the point that the new U. S. P. makes more scientific demands on the pharmacist and that therefore the examinations should be of higher grade. Some druggists claimed that the assistant pharmacist should have more rights and should be allowed to manage a store. This view was combated. The matter was left where it stood before. Under the present law it is said the board cannot demand a college diploma before registration.

## A DRUGGIST'S PLAINT.

One of the local dailies has opened a column in which the public tells its troubles. One of the letters was signed "Druggist." It reads as follows:

"Why should drug stores keep open on Sunday? Why should they not close like other business places? What more right have they to keep open all day long than the saloons? The bulk of their sales are cigars, tobacco, soda water, candy, chewing gum, whiskey, wine, brandy and merchandise in general. The minor part of their sales is medicine. So far as supplying remedies for the sick is concerned we may answer that the physicians are supplied with them.

"The public would soon adjust itself to the new condition and get along just as well without a drug store on Sunday as without a grocery. And this gives the poor druggist a little chance for his life. Think of it! Seven days in the week, from 7 in the morning until 11 at night. Life is hardly worth the living.

"I do not think there is a druggist in Chicago who would not approve of such a move. If some one would only start it the druggists would all be glad to have a day of rest like other human beings. While one keeps open all the rest must."

## CHICAGO NEWS NOTES.

W. A. Harper, at Seventieth street and Stony Island avenue, recently buried his eighteen months old son.

Charles W. Baker has sold his store at 3483 Archer avenue to C. N. Friesnecker, for many years its manager.

The Social Drug Club had a lively stag party recently. The annual meeting occurs on the second Monday in December.

The new Bank of America, which will have drug trade connections, will be opened for business December 4 in the Ashland block.

Frank W. Welch, of Wallace and Forty-seventh streets, has

opened a new store at the northeast corner of Fifty-fifth street and Ashland avenue.

Thieves broke into the store of S. C. Yeomans at Thirty-fourth and State streets recently but failed to get much property of value.

Fraser & Co. have given up their store on Washington street between Wabash avenue and State street and have moved to 92 Lake street.

Richard Johnston, of the house of Merck & Co., has just returned from one of his quarterly trips to the Pacific Coast. Mr. Johnston only calls on the jobbing trade.

The Executive Committee of the C. R. D. A. discussed numerous routine matters at its recent meeting. The plan of the Consumers' Co operative Commission Company was recommended to the favorable consideration of druggists.

T. B. Glazebrook, vice-president of the Tilden Company and manager of the St. Louis house, was in Chicago on the 17th and 18th shaking hands with his old friends and incidentally booking some carload orders for pharmaceuticals bearing the Tilden label:

Frank I. Ellis is to open at the corner of Forty-eighth avenue and West Madison street a new pharmacy about December 1. It will be strictly up to date and one of the most modern on the West Side. The quartered oak fixtures which comprise wall cases and glass counters are furnished by A. H. Revell & Co., and the fountain by the Liquid Carbonic Mfg. Company.

The building at 200 and 202 Madison street that has been occupied continuously by Humiston, Keeling & Co., wholesale druggists, for many years, has been sold to others. The date of the occupancy of Humiston, Keeling & Co. goes back almost to the time of the Chicago fire, which took place in 1871. The new owner is James D. Murphy, who paid \$160,000. He will use the site for the home of his own business.

B. T. Van Allen, Chicago, manager for C. F. Boehringer & Soehne, has just returned from one of his circular trips, taking in Cleveland, Pittsburgh, Cincinnati, Memphis and the West. Mr. Van Allen is one of the most successful commercial men on the road and was selected by the president of the National Wholesale Druggists' Association to present a report before that body at its last convention, held in New York in October, as chairman of the Committee of Commercial Travelers.

## Registered in Illinois.

At the meeting of the Illinois State Board of Pharmacy in Chicago, November 13 to 16, 23 of the 55 applicants for registered pharmacist, 15 of the 28 applicants for assistant pharmacist and 8 out of a class of 12 applicants for locality registration were successful. Their names follow:

Registered Pharmacists.—Lee E. Ennis, Samuel M. Farrar, Ray Porter Kile, Cornelius F. Koehler, Arthur F. Kohn, Henry J. Krueger, Chas. F. Lenz, Michael J. Markowski, Clarence S. Norton, John G. Roeding, Geo. L. Scharringhausen, Hugo J. Schumm, Julius H. Schmidt, Fred. L. Shelby, August Sundine, John A. Thomas, Isaac Leslie Walton, Wallis B. White and David Zamentowsky, of Chicago, and Ethelyn Belle Arnold, Watseka; Bertram L. Brethaupt, Peoria; Edwin V. McAllister, Geneva, and Adolph A. Puhl, of Fairbury.

Assistant Pharmacists.—Frank H. Cavanagh, Edward De Stefano, Henry L. Eberhardt, Thomas M. Glenn, George F. Hafner, Wm. M. E. Hawk, Geo. N. Huard, John D. Lyons, Herbert A. Petry, Will C. Quinn, Frederic G. Ruggles, Harvey A. Watson and Rufus E. G. Zaleski, of Chicago; John A. Klingstedt, Rockford, and Thomas J. Mulligan, Braceville.

Locality Certificates.—Corydon De Kalb Bundy, Broadlands; J. Ottis Hart, Carrier Mills and Carl E. Gragardh, Rockford; Frank C. Cooper, Solomon Epstein, Fred. L. Fannaff, Peter P. Jirka and Carl A. Strom, all of Chicago.

The next meeting of the board for the examination of applicants for registration will be held in Springfield on Tuesday, January 16, 1906. On Tuesday, February 20, 1906, the board will hold a meeting in Chicago for the examination of applicants who have not heretofore passed the preliminary test required by the board. On the following day, Wednesday, February 21, an examination will be conducted for those who have passed the preliminary examination required by the board.

The board has revoked the certificate of Paul Zito, of Chicago. Zito has been convicted twice for the illegal sale of cocaine. The board has not only revoked Zito's certificate for 1905 but it will decline to renew his certificate for 1906.

The board has also suspended the registered pharmacist certificate of John S. Roach. Roach passed a successful examination before the board, but it later developed that he had filed fraudulent affidavits in support of his application for registration.

### MARYLAND.

#### Price Schedule Abandoned in Baltimore—Only D. C. S. N. Goods Restricted—Everybody Cutting—The College Meeting.

(From our Regular Correspondent.)

Baltimore, November 25.—This city is a wide open town as far as the sale of patent medicines is concerned. At a meeting of the Baltimore Retail Druggists' Association, held on November 15 in Sonnenburg's Hall, Baltimore and Greene streets, it was decided to suspend all price-lists, giving every member the right to sell patents at any figure he chooses until further notice. This action was the result of the failure of efforts to get one of the known aggressive cutters in line. All other dealers in the city had signified their intention to abide by the association schedule with this one exception, and this tended to negative the whole plan, the other cutters contending that they could not well be expected to adhere to the prices agreed upon when by so doing they would give the single outsider an undue advantage and enable him to build up his business at the expense of the trade generally. To continue as of old would have meant inviting price demoralization and the continuance of all the evils which the retailers have endeavored to fight. A decision was therefore reached to apply a drastic remedy and fight the one stubborn cutter with his own weapon.

#### STATUS OF CONTRACT GOODS NOT AFFECTED.

At the meeting in question addresses upholding the position of the retailers were made by David R. Millard, Dr. A. J. Corning, John B. Thomas, Moses S. Kahn, R. E. Lee Williamson and others, and at the conclusion of the speech making a resolution declaring the city wide open was adopted. Dr. Corning presided. Goods under the serial numbering plan are of course not affected.

The immediate result of the action taken was the flooding of various localities with circulars and the appearance of advertisements in the papers offering patent medicines at cut rates. Reports received later by the officers of the Retail Druggists' Association were to the effect that members in different sections were holding their business and that the situation was satisfactory.

#### PHILANTHROPIC DRUGGISTS.

The Baltimore Free Summer Excursion Society, a local charity which provides trips by boat to Chesterwood, about eight miles down the Patapsco River, for the city's poor, had an oyster roast on Saturday, November 11, at the association's place, and a large number of persons went down. Among those in attendance were a strong representation of prominent druggists, the list including Dr. A. J. Corning, Prof. H. P. Hynson, J. Edwin Hengst, J. Emory Bond, of Parke, Davis & Co.; J. H. Stagmer, W. Woolford and Dr. John F. Hancock.

#### MARYLAND COLLEGE MEETS.

The Maryland College of Pharmacy, which maintained its organization in a slightly modified form after the college proper had been amalgamated with the Maryland University, held its bimonthly meeting on November 16 at the Hotel Raleigh, Fayette and Holliday streets, it being an informal conversational gathering, at which supper à la carte was partaken of and the United States Pharmacopœia was discussed. Prof. Charles Caspari, Jr., Joseph Hall, J. Fuller Frames, H. P. Hynson and others spoke, and a resolution was afterward adopted urging the use of the new Pharmacopœia unless otherwise specified. Dr. John F. Hancock, the second vice-president, occupied the chair, and the arrangements were made by the Amusement Committee, which consists of Dr. Hancock, Charles H. Ware, the secretary of the college, and J. Edwin Hengst. It was announced that at the meeting to be held on the third Thursday in January a fine luncheon would be served and that some prominent druggist would be invited to make an address. The

attendance at the Raleigh Hotel meeting was swelled by the members of the Pharmaceutical Journal Club, who joined forces with the college association.

#### REGISTERED IN MARYLAND.

The Maryland Board of Pharmacy has announced the names of the candidates for registration as competent pharmacists and assistants who passed at the examination held in October. They are as follows:

Pharmacists—John Howard Cassell, James Aitken Black, Frank Linton Black, Clay C. Chidester, L. Vernon Johnson, Frederick William Koenig, J. H. von Dreele, Jr., Fuller Nance, R. Simonton McElwee, Oscar B. Thomas, Springer Claybaugh, James Carlton Wolf, John A. Riggs, Julian M. Gillespie, Matthew John Beistle, Elmer Spittle, William H. Clarke and Sister Agatha Barrett.

Assistants—Benjamin A. Green and Harry Lewisson.

Sister Agatha Barrett is a sister of charity who devotes her energies to the relief of the sick at one of the local hospitals and is said to be a most competent pharmacist. Another of the candidates was a colored man, who also passed a creditable examination. The members of the board are: William C. Powell, Snow Hill, president; Ephraim Bacon, Baltimore County, secretary and treasurer; H. Lionel Meredith, Hagerstown, and J. Webb Foster and John A. Davis, Baltimore.

#### BALTIMORE NEWS NOTES.

The Valhalla Company for dealing in druggists' and grocers' specialties has been incorporated by Jesse H. Graham, Oscar J. Burton, Robert H. Blackburn, Arthur M. Ross and G. Ridgely Sappington. The authorized capital stock is \$100,000, divided into \$10 shares.

Another recent incorporation is that of the Sanitary Chemical Company, which will deal in drugs, chemicals and toilet preparations. The incorporators are John C. Lewis, George N. Rogers, Thomas G. Spicer, George K. Hutchins and Delaware C. Andre. The capital stock is \$2,500, divided into \$5 shares.

Charles Noelle, who for over 30 years conducted a drug store at Ann street and Canton avenue, Baltimore, was notified recently that he would receive back pension for 42 years, he having served during the Civil War as surgeon-pharmacist on the sloop of war Essex. The arrearage amounts to something like \$7,000. He succeeded his father in business here after the war, the elder Mr. Noelle having established a store as far back as 1816.

Walter N. Smith, a member of the retail drug firm of Roe & Smith, which conducts several stores in Baltimore, died suddenly at the pharmacy on the corner of Columbia avenue and Scott street on November 13 while compounding a prescription. A physician was promptly called, but the sick man had expired before aid could reach him. Coroner Jones gave a certificate of death from apoplexy. Mr. Smith was 46 years old and entered the drug business about 20 years ago with Mr. Roe. He was a graduate of the Maryland College of Pharmacy and leaves a widow and one son.

#### Registered by the Manufacturing Chemists' Registration Bureau.

The following names have been presented for registration in the Manufacturing Chemists' Registration Bureau by Hance Brothers & White, of Philadelphia, Pa.:

Violette Benzoin and Barley Cream, Violette Cocoa Butter, Violette Depilatory Powder, Violette Face Bleach, Violette Face Powder, Violette Face Tint, Violette Hair Stain, Violette Nail Bleach, Violette Enamel, Violette Polish, Violette Nail Tint, Violette Odorine, Violette Oreats, Violette Skin Tone, Violette Tooth Powder and Violette Witch Hazel.

Eli Lilly & Co. have presented for registration the title "Kreseptol," to be applied to a pharmaceutical preparation.

#### Silver-Tongued Duble.

Col. Jesse B. Duble, formerly general manager of the N. A. R. D., Department of the East, was the guest of honor at the November meeting of the Western Pennsylvania Retail Druggists' Association in Pittsburgh. He made one of his ringing and convincing talks, being introduced by the chairman as "the silver-tongued exponent of true N. A. R. D. principles."

## THE PACIFIC COAST.

## University of California Pharmacy Alumni to Hold Meeting at Alma Mater—Licentiatees of the California Board.

San Francisco, November 18.—The Alumni Association of the California College of Pharmacy will hold their semiannual gathering on the night of December 18. The feature of the meeting will be the reading and discussion of the following papers on pharmaceutical and scientific topics: Some Advantages of the New U. S. Pharmacopoeia, by J. H. Guedet, Ph.G.; The Pharmacist in the U. S. Navy, by J. J. O'Grady, Ph.G., and The Nonmetallic and Metallic Minerals of the Pacific Slope in Relation to the Manufacture of Salts of Pharmaceutical and Technical Interest, by Prof. F. T. Green and F. W. Nish, Ph.G. An informal luncheon in Alumni Hall will bring the evening to a close. The undergraduates will be the guests of the Alumni Association.

## REGISTERED BY THE CALIFORNIA STATE BOARD.

The last examinations to be given by the outgoing members of the California State Board of Pharmacy resulted in the registration of the following successful applicants, who appeared for certificates at San Francisco and Los Angeles: Licentiatees.—W. E. Bechtelheimer, E. A. Burford, O. P. Brady, J. H. Collins, F. E. Carter, C. L. Foutz, Katherine Gardner, A. P. Goodwin, H. Gltzendorfer, F. C. Kruehl, P. Lowson, R. W. Monkman, C. H. Noyes, G. C. Pearson, W. J. Robertson, J. B. Starkey, A. W. Sim, G. H. Shaw, M. S. Tague, W. Tornoe, G. A. Taylor, C. A. Wright, O. R. Wood, B. C. Thomas, Rose E. Shapira, M. S. Morris, F. I. Lackenbach, J. R. Ingraham, E. H. Hale, J. B. Hegeman, J. A. Haubrich, Geo. Franklin, F. W. Diesthorst, F. De Belli, P. H. Dentoni, Phineas Danzig, O. A. Comper, O. T. Clough and J. J. Atkinson. Assistants.—E. O. Bailey, J. T. Ball, C. F. Buchanan, J. O. Erickson, Grace L. Hedges, Harriet E. Montgomery, C. E. Parker, M. A. Simon, H. J. Shay, F. L. Shimmin, R. L. Skinner, H. F. Wiggins, F. D. Campbell, L. A. Gillim, J. B. Kelley, G. H. Smith, M. P. Kaufman, L. Zembasch, J. R. Young, P. Tholl, and H. T. Jackson.

## NEW BOARD APPOINTED.

Governor Pardee on November 5 announced the following appointments to the State Board of Pharmacy: P. O. Buker, of Fresno, to succeed C. H. Rowley, of San Francisco; E. J. Molony, reappointed; R. S. Oakford, of Long Beach, to succeed H. J. Finger; G. M. Sutherland, of San Francisco, to succeed John Calvert; E. T. Off, of Los Angeles, to succeed F. D. Owen; A. L. Leber, of Oakland, to succeed E. A. Baer, and J. O. McKeown, of Livermore, to succeed J. J. Crowley.

## COAST BREVITIES.

At a meeting of the State Board of Health at Sacramento on October 10 the methods by which the present laxity in the sale of poisons could be eliminated were discussed. The large number of suicides was attributed to the ease with which deadly drugs could be obtained.

The Woodbridge Chemical Works, southeast of San Bernardino, Cal., were completely destroyed by fire on the afternoon of October 7, involving a loss of \$10,000.

James Moore, a young drug clerk from San Francisco, died at Pomona, Cal., on November 11, from epilepsy.

## 'FRISCO NEWS ITEMS.

William Pleasant, the young drug clerk of Howe's Dispensary, in the Press Building, died on October 17 as a result of having dispensed morphine instead of quinine in his own prescription. In all he swallowed four capsules, with 5 grains of morphine in each. In spite of all that was done for him he died 30 hours after taking the last capsule.

George Dahlbender, formerly a successful druggist of this city, was made the defendant in an attachment suit on November 3. The attachment for the \$2,183 sued for was placed on Dahlbender's stock of drugs at 1199 Valencia street.

The Western Drug Company, defendant in a suit for \$2,000 damages, mentioned in these columns before, has been found guilty of having given Mrs. Meta Schivo a bottle of phenol with a label for chloroform liniment. The plaintiff claimed

that she called for the latter article. She was awarded \$100 damages.

E. L. Hind, prescription clerk of the California Drug Company, at Stockton, Cal., was arrested in this city on a charge of obtaining money under false pretenses.

O. C. Beale, of Sydney, New South Wales, arrived here on October 2 to investigate the question of deleterious and poisonous drugs sold under secret formulæ in this country and Europe, as well as the question of restrictive legislation affecting the manufacture and sale of all such patent medicines. He says that the unrestricted sale of so-called patent remedies in Australia is attended by much damage to life and health, as many such medicines contain narcotic poisons and no remedial agents.

According to advices received from Washington, the Vacuum Medicine Company, of this city, is under the ban of the postal authorities and is not to be permitted the use of the mails.

It has been decided that the next meeting of the Pacific Coast Pharmaceutical Association will be held at San Francisco in 1907, and the committee in charge is composed of Dr. Albert Schneider, Prof. W. M. Searby, G. T. Ketcheson, W. P. Bonney and J. M. Laue.

## THE SOUTH.

## Business Dull in New Orleans—Many Changes in the Local Drug Trade—The 'Frisco System Depot to Have a Drug Store.

(From our Regular Correspondent.)

New Orleans, La., November 20, 1905.—Trade in New Orleans at the present time is somewhat depressed and has been for the last fifteen or twenty days. The wholesalers here are working hard to improve conditions and are getting along fairly well. There is, however, a depression which they have been unable to get around. Prospects for the near future are somewhat brighter and it is hoped that within the next fortnight there will be a noticeable improvement in trade conditions.

## NEW YORK'S HOSPITALITY APPRECIATED.

Arthur D. Parker, of the Parker-Blake Company, returned last week from a flying trip to New York. He attended the convention of the N. W. D. A. there in October. He spoke highly of the reception accorded the visiting druggists by the drug interests of the big metropolis and says he had an altogether delightful trip. The session of the association, he says, was one of the most interesting he has ever attended.

## CHANGES IN THE DRUG TRADE.

It would seem that an epidemic of change has struck New Orleans. The American Drug Store, Dr. Savage's reliable establishment, is being moved from Canal and Basin streets to the big building on the uptown side of Canal street, next to the Pickwick Club. This change has been made necessary by the fact that the 'Frisco interests have purchased the present site of the American Drug Store and all the surrounding property and will there erect one of the handsomest passenger stations in the South. It is not definitely known how long Dr. Savage's establishment will occupy its present location. That depends entirely upon the progress made in the building of the 'Frisco system's big depot. A corner of that depot has been set aside for Dr. Savage, and as soon as the depot is completed he will move into it.

## PHARMACIST RECEIVES HIGH HONOR.

Pharmacist Samuel W. Richardson, United States Public Health and Marine Hospital Service, who has been here since the Marine Hospital surgeons arrived, received a letter yesterday signed by David R. Francis, president of the Louisiana Purchase Exposition, and Walter B. Stevens, secretary, to the effect that the Exposition Company had awarded him a commemorative diploma and a commemorative medal in special recognition of his co-operation with the St. Louis Exposition. During the St. Louis Fair Mr. Richardson was in charge of the exhibit of the Marine Hospital Service and it was through his work that such an excellent exhibit of their work was presented to the public.

## The Drug and Chemical Market

The prices quoted in this report are those current in the wholesale market, and higher prices are paid for retail lots  
The quality of goods frequently necessitates a wide range of prices,

### Condition of Trade.

New York, November 25, 1905.

Trade in the wholesale and chemical market during the interval since our last report has not been of a very extensive character, though the jobbing demand continues brisk and the distribution of seasonable commodities is up to the average of the corresponding period of previous years. There is a good consumptive inquiry for the various staple articles, but business is somewhat restricted, buyers and sellers being considerably apart in their views as regards prices. As to values, the feeling is a shade less steady and we have a number of important price fluctuations to report. Castor oil prices are higher, refiners having advanced the range a fraction of a cent on all grades. The expected drop in quinine materialized early last week when the leading domestic manufacturers reduced prices one cent. The foreign manufacturers followed suit the next day and all are now quoting on a uniform basis, while outside holders are able to shade manufacturers' quotations by one half cent. Opium retains its lifeless appearance and values have further declined, holders evincing more disposition to tempt buyers without, however, appreciably stimulating the demand; indications favor a further reduction in quotations. Menthol has yielded to bear influences and prices have again broken. It is generally felt that the statistical position of the article favors higher instead of lower quotations. Anise oil and other Chinese and Russian products show an advancing tendency under the influence of increased demand and conditions at primary sources. The changes during the interval are shown in the following table and succeeding paragraphs:

| HIGHER.               | LOWER.                 |
|-----------------------|------------------------|
| Castor oil,           | Quinine,               |
| Thymol,               | Opium,                 |
| Silver nitrate,       | Menthol,               |
| Anise oil,            | Ipecac root,           |
| Lemongrass oil,       | Valerian root,         |
| Gum benzoin, Sumatra, | Lycopodium,            |
| Saffron flowers,      | Spirit of turpentine,  |
| Guarana,              | Ergot,                 |
| Haarlem oil,          | Japan wax,             |
| Juniper berries,      | Sarsaparilla, Mexican. |
| Mandrake root,        | Linseed oil,           |
| Pink root,            |                        |
| Bayberry wax,         |                        |
| Camphor monobrom,     |                        |
| Naphthalin,           |                        |
| Cassia oil,           |                        |
| Cantharides, Russian, |                        |
| Cuttlefish bone.      |                        |

### Drugs.

Alcohol is without new feature of interest. There is a good, steady outlet into consuming channels, and values are well sustained at the prices fixed by the combination of distillers—namely, \$2.49 to \$2.51 for grain as to terms. Wood is held and selling at 70c to 75c for 95 and 97 per cent., respectively.

Balsam copalba continues in demand, and values are steadily maintained at the former range of 36c to 40c for Para; Central American continues to offer at 28½c to 30c, and a moderate demand is experienced at this range.

Balsam fir, Canada, is in fair demand and firm at our quotations, or, say, \$3.10 to \$3.20; Oregon is dull and featureless at 70c to 80c.

Balsam Peru is meeting with about the usual jobbing inquiry at nominally unchanged quotations; recent sales were at \$1.00 to \$1.05.

Balsam tolu has sold more freely in the interval, but prices are no firmer, the sales being at the previous range of 20c to 22c.

Barks.—Bayberry continues to offer at 18c to 14c, though

no sales of any consequence are reported. Blackhaw is firm, the market being well maintained at 16c to 18c. Buckthorn is coming forward more freely, and holders are less firm in their views, at 5c to 5½c. Cascara sagrada is offered more freely, but values do not change from 5½c to 9c. Cramp is held with confidence, and we hear of no sales under 7c to 8c. Cottonroot is finding a steady sale and the market is firmly maintained at 8½c to 10c. Elm, select, in bundles, is coming forward more freely, and values are fractionally easier, 18c to 19c being named. Sassafras is in light supply and wanted, with 12c to 15c now named. Wahoo, bark of root, continues scarce and wanted, and holders of the limited available stock, which is closely concentrated, name 60c as an inside price.

Camphor, monobromated, has advanced in sympathy with the gum, and the revised quotations of manufacturers are \$1.30 to \$1.35 as to quality.

Cannabis indica has continued in demand and sales have been made at \$1 to \$1.05.

Cantharides has improved in position and increased demand has been experienced for the Chinese files, which are steady at 5c. to 52c for whole; powdered offers in a limited way at 52c and upwards. Russian files are firmer at \$1.25 to \$1.30, as to quality and quantity.

Castor oil is fractionally higher, the manufacturers having announced an advance on all grades to the range of 10½c to 11½c for No. 1 in barrels; 11c to 12c for cases; 9½c to 10½c and 10½c to 11½c for No. 3 in barrels and cases respectively.

Cocaine has sold in fair volume during the interval and the market has developed increased firmness, owing to the stronger tendency of advices from abroad. Reports are to the effect that the crude cocaine in Peru is now under the control of a monopoly, and improved conditions are expected to result.

Codliver oil is meeting with a fair seasonable demand, and the tone of the market is steady at \$26 to \$30 for Norwegian as to brand, and \$24 to \$25 for Newfoundland.

Colocynth apples have sold more freely during the interval, but prices are quotably unchanged, Trieste being held at 33c to 37c, and Spanish at 26c to 27c, as to quality and quantity.

Cubeb berries are in light supply, and holders are firmer in their views, not being inclined to quote at anything under 8½c to 9c for ordinary, and 9½c to 10c for sifted.

Cuttlefish bone, French, has moved into firmer position owing to reduced supplies, and spot quotations are now 12c to 12½; Trieste is steady at 14c to 15c, while jewelers' is held at 40c to 70c for small and large, respectively.

Ergot has developed an easier tendency, and sales at the close were making at 42c to 45c, though some holders insist on 50c for Spanish.

Formaldehyde is held with more confidence, and recent sales of 40 per cent. in carboys were at 9c to 9½c, as to quantity.

Grindelia robusta is quoted at 8c to 8½c, as to quality. A small lot of new crop has been received and placed at the inside figure.

Guarana is in reduced stock and wanted, which contribute to a firmer market, with quotations 60c to 65c, as to holder.

Juniper berries are in upward tendency, advices from primary sources indicating some scarcity there. At the close 4½c was a general inside quotation.

Lycopodium is not inquired for to any extent, but the disturbed condition of affairs in Russia has given rise to speculation regarding the future course of the market for this article. Meanwhile sales on spot are few and inconsequent at the previous range of 56c to 58c.

Manna, small flake, is moving into firmer position, recent reports from primary sources advising a partial crop failure.

Such transactions as have come to the surface since our last report were at 35c to 37c, an advance over previous quotations.

Menthol is weaker under the influence of a lessened demand and lower quotations from Japan. We quote the range at \$2.50 to \$2.65. Further reference to the market position of this article is made in our review of the market elsewhere.

Opium, under the influence of a lessened inquiry, coupled with competition among holders, has again declined, and at the close the general inside asking price for cases was \$3.12½, while broken lots were obtainable at \$3.15. Powdered was quoted nominally at \$3.55 to \$3.60.

Quinine remains in a very quiet condition, the demand not being appreciably stimulated by the recent reduction in manufacturers' quotations. There is a moderate jobbing demand experienced for German and Java, but buyers and sellers are somewhat apart in their views and the business going forward is of limited volume. While manufacturers' agents name 19c for bulk in 100-oz. lots, holders of outside German and Java quote 18¼c.

Saffron, American, continues its upward tendency and up to \$1.00 has been paid, while the quotation of the principal holder at the close of the market yesterday was \$1.10.

Sugar of milk is well sustained and numerous sales are making at the range of 15c to 16c for powdered in barrels and boxes respectively. Some interest is extended to prices on next year's deliveries and such offerings as have come to our notice were fractionally lower than our quotations.

Thymol is in less abundant supply on spot and holders show more reserve in their offerings, on the basis of a higher range of values, \$1.90 to \$2.00 being now named—an advance of 20c.

#### Chemicals.

Aqua ammonia is fractionally lower, manufacturers now naming 5¼c to 6c for carboys; drums are unchanged at 4¼c to 5c for 26 degrees.

Arsenic, white, is in light supply and wanted, and, while 3¼c might buy, 4c is a more general asking price.

Barium chloride is passing out actively into channels of consumption and holders are firmer in their views, with quotations standing at \$35.00 to \$38.00 per ton.

Bleaching powder is in moderately active jobbing demand and the market is well maintained in the face of a slight scarcity; quoted 1¼c to 1½c, as to brand and quantity.

Blue vitriol is held with increased firmness and the market is steady on the basis of 5.30c for car lots.

Brimstone, crude, continues in small stock upon spot and held at \$22.25.

Carbolic acid is meeting with fair, steady sales, and quotations are nominally unchanged at 13½c to 14c for bulk in drums and 20c to 22c for pound bottles.

Chlorate of potash is more firmly held under light spot supplies, with jobbing sales at second hand at 9½c for crystals and 10c for powdered.

Cream of tartar is meeting with the usual demand experienced at this season, and crystals and powdered are held and selling at 23¼c to 23½c, respectively.

Nitrate of silver is higher in sympathy with the price of the metal and the revised range from manufacturers is 40¼c to 40½c, an advance of ¼c per oz. The inside figure is named for lots of 1,000 oz. or more.

Oxalic acid is in good demand, and values are well sustained at the range of 4¼c to 5¼c, as to quantity and brand.

#### Essential Oils.

Anise continues in demand and firm at the recently established price of \$1.35 to \$1.37½ for the better grades.

Bergamot and other Messina essences are held with more firmness, owing to improved conditions in the primary markets. Bergamot was quoted at \$2.10 to \$2.25, lemon at 57¼c to 60c, and sweet orange at \$1.90 to \$2.05, as to quality and quantity.

Cassia has moved into firmer position, both here and abroad, and spot quotations have been advanced to 80c to 82½c for 75 to 80 per cent., and 85c to 87½c for 80 to 85 per cent. oil.

Citronella continues quiet, but the quotation remains at the previous range of 40c to 45c, as to quantity.

Peppermint has been in demand and values are firmly maintained at the previous range of \$2.40 to \$2.50 for bulk and \$3.10 to \$3.25 for HGH.

Sassafras, artificial, is held with more confidence and quotations are firmly maintained at 24c to 26c.

#### Gums.

The market for mucilaginous and other druggists' gums has continued quiet with little new or interesting to report, either as regards price or demand. Camphor is maintained firmly at the recent advance to 82c to 82½c for barrels and cases, and Curacao aloes is maintained firmly at 6¼c to 6½c. Sumatra benzoin is well held and it is doubtful if better than 35c could be done. Kino is steady at 25c to 27c.

#### Roots.

Only a moderate demand is experienced for the different varieties of medicinal roots and we have few price changes of consequence to report. Burdock is scarce and held at 12c to 13c. Mandrake shows an advancing tendency and nothing offers at under 4¼c, with up to 5¼c named. Russia musk has been advanced to 14c to 15c on account of scarcity. Squill continues well held and 4½c is still an inside figure. Belgian valerian is scarce and the small available supply is held at an advance to 8½c to 9c. Ipecac is firmer and quoted at \$1.75 to \$1.90.

#### Seeds.

The general market for druggists' seeds is not characterized by any activity and developments during the interval have been few and inconsequent. Russian hemp continues scarce, and prices are higher to the extent that nothing offers at under 4¼c. Caraway has developed an easier tendency, and sales are making at 7¼c to 8c. Sunflower is held with increased firmness in view of light spot supplies and quotations are steadily maintained at 4½c to 5c.

#### New Customs Decisions.

According to advices from Washington imported cocoanut oil is to be allowed entry free of duty. Some time ago the United States Circuit Court for the district of Oregon decided that this product was entitled to free entry, but in promulgating this decision the Treasury Department announced that the Attorney-General would appeal the case to the United States Circuit Court of Appeals. Collectors of customs therefore thought the case was still pending and duty has been assessed at several ports. The Treasury Department, however, has been informed that no appeal has been or will be taken by the Attorney-General, and instructions, it is understood, will be given to all collectors to admit importations of cocoanut oil free.

The Board of United States General Appraisers has sustained the protest of Bielenberg & Co. against the assessment of duty on merchandise invoiced as "Sichel glue." The merchandise was returned by the appraiser of the port as glue valued at not over 10 cents a pound and was assessed at 2½ cents a pound. The importers claimed it should have been assessed at the rate of 25 per cent. ad valorem as a chemical compound, or at 20 per cent. ad valorem as an unenumerated manufactured article. The board decided it was not in any sense a chemical compound and was dutiable at 20 per cent. ad valorem as claimed by the protestants.

It is possible that the Treasury Department may reopen the old controversy over the dutiable classification of certain mineral products, such as ferrochrome, ferromanganese, ferromolybdenum, etc. The question arose in the case of the Roessler & Hasselacher Chemical Company vs. the United States. The United States general appraisers and the courts decided that these articles were properly dutiable by similitude to ferromanganese at the rate of \$4 a ton. The government held they should be dutiable at 20 per cent. ad valorem. In the new case which may be started the Government will seek to show that the products named are the results of expensive electrochemical processes, and that they are used as chemicals and perhaps as chemical compounds.

### EDITORIAL COMMENT.

THE N. W. D. A. TO MEET IN WASHINGTON. The selection of Washington as the next place of meeting of the National Wholesale Druggists' Association, which has just been announced, will assure a large attendance. The meeting is to convene on October 8, and Washington in the autumn holds many charms for the discriminating visitor. Apart, however, from the charms of locality the national capital as a place of meeting will have a strong appeal for many of the older members of the association, who will recall with pleasurable memories the last occasion on which they met there. Those

were the halcyon days of the association before the vexed question of cut rates had interjected the element of discord which has of recent years disrupted the friendly relations between the three branches of the trade—the days of William A. Gellatly, Daniel Stewart, Peter Van Schaack and Christian F. G. Meyer, not to mention many others who are still to be found active and influential in the ranks of the association.

THE INTELLIGENCE OF THE sudden death of LUTHER F. STEVENS. of Luther F. Stevens, which occurred at his home in Brooklyn on Friday, December 1, will come as a shock to many of his professional associates in the Kings County Pharmaceutical Society. The deceased was one of the old school of pharmacists, who was thoroughly versed in the technics of pharmacy, being an adept manipulator, skillful in the formulation of galenical compounds and able to describe the results of his work in an interesting manner. Filled with the pride of his calling, he was jealous to resent any attempt to discredit or cast odium upon it, and a few years ago, when he was more active in association work, he could always be depended upon to champion the cause of the retailer. With all his ardor and enthusiasm for the best interests of his profession, he was withal a man of judgment and discretion who could preserve the amenities. He was reserved and somewhat taciturn in his manner, but beneath an exterior which betokened these qualities he yet preserved a mild and gentle spirit, and those who enjoyed the intimacy of his personal acquaintance will best bear testimony to this. Peace to his ashes!

WE print elsewhere an account of a meeting of the PROPRIETARY ASSOCIATION. Association of America, which was held last week in this city.

The resolutions adopted by that association condemning the sale of alcoholic beverages under the guise of proprietary medicines is an important step toward the rehabilitation of the association in the public esteem, and the support offered to legislation restricting the sale of narcotics is even more important. The warning to the members of the association to be more guarded in their published claims is unfortunately not so valuable now as it would have been a year or even six months ago. The attacks on proprietary medicines, which have furnished such delectably sensational reading in the *Ladies' Home Journal*, *Collier's* and similar journals, have already warned proprietors that they will be held responsible for their published utterances. These sensational attacks have grown in virulence and volume, so that now even the most valuable and deserving of the household remedies are made to suffer for the sins of the humbugs which have brought the whole patent medicine business under the lash of public discipline. There is a legitimate place for the tried popular household remedies and this place will be retained by those which have real merit and whose merits are sanely and conservatively set before the people. The association is to be congratulated upon the wisdom of the counselors who have brought about this specific and satisfactory declaration of principles.

IT is unfortunate at this particular time, when the Direct Contract Serial SUSPEND JUDGMENT. Numbering Plan is in a fair way to succeed better than any other plan yet tried in this city that any differences should arise between retailers and jobbers. Developments at last Monday's meeting of the General Committee of the Metropolitan Association of Retail Druggists leave no doubt of the fact that there is

considerable dissatisfaction among the members of that organization over the recent action of jobbers in the matter of discounts to their customers. As told in our news columns, the wholesalers are being severely censured for the policy they are pursuing, and the matter has been referred by the M. A. R. D. Committee to the Executive Committee of the N. A. R. D. Conservative M. A. R. D. authorities declare that the situation is serious, and that the fate of the local branch of the N. A. R. D. rests largely with the National Executive Committee. Meanwhile retail interests here should not take snap judgment or act hastily. They should have confidence in the Executive Committee in charge of the M. A. R. D.'s affairs, and may rest assured that their interests will be faithfully protected in any event. There is no reason why they should lose faith in the Direct Contract Plan. They have had ample proof that that plan can be and is being enforced, and that the proprietors who have adopted that plan are sincere. There is reason to believe that the present difficulties will be amicably adjusted and that the splendid work so far accomplished in Greater New York will not have been in vain.

#### Preparations Pharmacopœial and Otherwise.

Lest it should appear that our reference in a preceding issue to the opinion given by the attorney of the Western Branch of the New York State Board of Pharmacy was in the nature of a justification of those pharmacists or druggists who fail to maintain the standards of strength and purity set by the United States Pharmacopœia, we deem it advisable to enlarge upon what was said there anent the sale of preparations of the druggist's own manufacture which are represented by preparations of a similar character in the United States Pharmacopœia. When a preparation or substance that is official in the Pharmacopœia is asked for, without any qualifying adjective, the druggist is morally and legally obliged to supply the article demanded of the pharmacopœial strength and purity. It is only on the rarest occasions that the necessity for supplying extra-pharmacopœial preparations will arise, and that pharmacist who keeps only one line of preparations that are official in the Pharmacopœia will never find himself the subject of investigation by any board of pharmacy in respect to the strength or quality of the preparations he sells or dispenses.

There are isolated cases in which it is necessary to supply varying strengths of pharmacopœial articles, but such preparations should never be sold unless on the specific demand of the consumer. In the vicinity of race tracks, for instance, there is usually a demand for different strengths of tincture of iodine, and the pharmacist who is asked for quarter or half strength iodine, or a tincture of iodine of double strength is legitimately within his rights in selling such preparations; but the pharmacist who, on being asked for tincture of iodine, spirit of camphor, camphorated oil, etc., demands of the customer which strength or kind of preparation he wants, lays himself open to the charge of violating the law by so doing and supplying a weaker preparation than the standard.

We had thought that our position in this matter was perfectly understood, but it appears that some of our readers have chosen to interpret our remarks on a *A Queer Obiter Dictum* in the preceding issue as a justification for those pharmacists who are so careless of their professional honor as to compound different strengths of pharmacopœial preparations for the sake of a little extra gain. When preparations of the Pharmacopœia are called for by their ordinary names, without qualification or a previous understanding with the sel-

ler, none but pharmacopœial preparations should be dispensed and the pharmacist who does otherwise is clearly open to the charge of selling adulterated or sophisticated goods.

#### The Effect of the Loder Verdict.

It is almost too soon after the rendition of the verdict in the Loder suit to fully determine the scope and effect of the decision which has been reached. Furthermore, a lively hope is felt by all three branches of the drug trade that the verdict rendered by the jury will not be upheld. We publish in another column the main points of Judge Holland's charge to the jury in the case and also print several notes concerning the effect of the decision on the matter of supplies for cutters. The instructions by Judge Holland to the jury laid down very clearly the fact that each proprietor has an unqualified right to name a minimum price upon any goods of his make, to designate certain agents to whom alone his goods can be sold, and to restrict the resale of his goods to persons designated by him. His right is conceded to refuse to sell his goods to any individual with or without reason, or from mere caprice. The learned Judge, however, rules that this action must be taken individually and not as a result of concerted action with others. He further states that the proprietor may not place an individual on the cutter's list and thus prevent him from purchasing goods from other wholesalers or proprietors, nor is the proprietor permitted to refuse to sell his goods as a result of an infringement of a schedule of prices established by a consensus of opinion of local druggists.

In reviewing the case the Judge denies point No. 1 made by the attorneys for defense, which point practically covers the operations of the tripartite plan as defined by the resolutions adopted by the National Wholesale Druggists' Association in 1901, and specifically limits the operations of the tripartite plan in such a way as to make it classically valueless. The Direct Contract Serial Numbering Plan seems not to have been subjected to review at all, except in so far as its terms are covered in the reference to the relations between individual proprietors and their agents, which is mentioned in the preceding paragraph of this note. Each proprietor, the Judge holds, has a right to exact a contract from each individual buyer and to publish a list of wholesale and retail distributors and to remove any name from that list for a violation of his own contracts. But under the interpretation put on this by the Judge, no proprietor would have any right to remove a name from his own list because the individual in question had failed to live up to the contract with some other proprietor. This would make the direct contract plan difficult of enforcement, though the general principle upon which the plan is based is recognized by the Judge as being sound. While the ultimate effects of this suit can of course not be determined until the results of the appeal are known, the moral effect of the verdict is a severe blow to the hopes of the retail trade.

#### Cresol, U. S. P.

Referring to the inquiry of H. T. Eberle, Watertown, Wis., published in the *AMERICAN DRUGGIST* for November 27, as to whether Cresol, U. S. P., was commercially obtainable, Schering & Glatz, of New York, advise us that their trikresol complies with the requirements for cresol of the Pharmacopœia. Trikresol, the firm says, has been marketed by the Schering Chemical Works, Berlin, for many years and was adopted by the United States Army after the favorable report of the late Major Walter Reed.

(Written for the American Druggist.)

## EXTRACT OF MALT, UNITED STATES PHARMACOPOEIA.

By E. C. WOODCOCK, Ph.G.,

Brooklyn, N. Y.

*Extractum Malti* of the eighth decennial revision of the United States Pharmacopœia, like Rip Van Winkle, has slept for twenty years, and is, as our friend Rip found himself, rather antique. What advancement has been made in this preparation since it was last official in the Pharmacopœia of 1880? None whatever! The formula and process are practically the same. In fact, the product is still in the slough of thick honey. The pharmacopœia directs it to be evaporated to the consistency of thick honey, ignores the existence of degrees in specific gravity as obtained by the use of a hydrometer, a Westphal balance or any other scientific instrument for the measurement of weight.

What is this pharmacopœial standard, "thick honey?" The pharmacopœia gives us a definite standard for honey—i. e., honey should have a specific gravity of 1.37, but I am unable to find any information relative to "thick honey." The only conclusion is that thick honey should have a higher specific gravity than 1.37; it might be as heavy as lead, but that does not apparently matter. In any case, what has honey to do with malt extract? Why should malt extract be evaporated to the consistency of honey? Is it to make it more palatable or to render it more elegant in appearance? Is it easier to administer it in this form in exact doses? Try a spoonful of it. You have to almost chew it out of the spoon, and at the end you do not get much more than half the dose (not to mention the tanglefoot appearance of the bottle's neck). Should a physician prescribe *Extractum Malti* as a vehicle and incorporate in it his active ingredients? What dose would the patient receive? Who can tell?

*Extractum Malti* of the present pharmacopœia is certainly twenty years behind the times. Twenty years ago it was deemed necessary to evaporate the malt extract to a thick consistency in order to increase its diastatic strength, and yet, as far as diastase was concerned, there was none present, for the prolonged application of heat necessary, unless carefully conducted in vacuum pans of the most improved type, will destroy rather than preserve the diastase. And diastase is not even mentioned in connection with the official extract of malt, though it is the most important constituent and one whose power is easily estimated. As almost every batch of malt differs in its diastatic strength, there should be an official standard for it, if we ever expect to have any uniformity in the product as obtained from different sources.

Now it is possible to make a malt extract with a goodly proportion of diastase and yet produce a preparation of elegant appearance, which can be filtered bright from the insoluble particles of the malt, which must necessarily be present in the crude extract. Such an extract would have the consistency, not of thick honey, but of a thin syrup; or, to speak more accurately, a preparation with a specific gravity of, say, 1.28, and standardized to contain enough diastase to produce by its action on starch paste six times its weight of maltose, or more if necessary.

The medical profession, the public and pharmacists as well would, I am sure, have preferred a preparation such as this in preference to the extract of malt of the latest pharmacopœia.

**Soluroi.**—Soluroi is a solvent for uric acid which has recently been introduced. According to the *Répertoire de pharmacie* (November 10, 1905), soluroi is a nucleitinic-phosphoric acid or thyminic acid, which is the result of the decomposition of nucleic acid. It occurs as a yellowish brown amorphous powder, devoid of taste, soluble in water, with an acid reaction, and without any odor. It is said to dissolve its own weight of uric acid at 20 degrees C., and a still larger amount at body temperature. The dose is stated as 0.25 Gm., repeated several times daily.

## LAC AND SHELLAC.

## "A Stick of Sealing Wax."

At a meeting of the Pharmaceutical Society of Great Britain, held Tuesday, November 7, Sir George Watt, who is an honorary member of the society, communicated a paper on the history and production of shellac which was received with unusual marks of appreciation. He submitted a large number of lac decorated ornaments and utensils from India which proved an interesting feature of his address. Our contemporary, the *Chemist and Druggist*, gives a very readable account of the lecture, from which we abstract the following:

Holding up a stick of red sealing wax, Sir George commenced his lecture by saying that that was his prosaic text—what it is made of, how it is prepared in India, and what is done with it in that great country. Shellac is its chief component. Glancing at its history we find that the word "lac," now used to designate 10,000, as in a lac of rupees, appears to have its origin in the swarming of lac insects, which naturally suggests multitude. Originally, therefore, the word "lac" was the specific name of an animal resin of very ancient utility. It appears not to have been known to the Greeks, for their lacca was a red dye wood or kermes. Sir George dwelt much upon the historical aspect of the matter, mentioning that Garcil, a Portuguese of the sixteenth century, was the first to accurately describe the preparation of lac resin, and his description was so good that it would stand for how the process is carried out at the present day. Even at that time the product was adulterated with common resin. The article was exported from Pegu to Sumatra and thence to Europe, so for many years it was not considered to be of Indian origin. For centuries it has been used in India for the preparation of varnish and polish, being colored as desired, and used as paint, oil paints being of comparatively recent introduction. The East India Company did a large export trade in lac resin, in round golden yellow cakes about 8 inches in diameter and 2 inches thick, which were really the residues from the manufacture of shellac. The center of export then was Agra, now Calcutta and Mirzapore are the seat of the trade.

## NATURE OF THE SECRETION.

The secretion which the lac insect produces on tree twigs consists of a dye and a resin. It was formerly worked solely for the dye, soldiers' coats being dyed with it, but the industry in this respect was practically killed by the introduction of cochineal. In this connection Sir George mentioned that in Warren Hastings' time an attempt was made to cultivate cochineal in India, and that noted statesman was one of those who started a plantation. The decline of the lac dye industry gave an impetus to the manufacture of lac resin, previously a mere by-product. The introduction of synthetic dyes killed lac dye. The first mention of shellac was by James Kerr in the "Philosophical Transactions" for 1718.

## THE ORIGIN OF LAC.

Sir George Watt proceeded to speak about the lac insect. Twice a year it swarms, and the larvæ settling on the twigs of trees puncture the bark, and the incrustation begins to form. In this process the larvæ lose legs and head, the thorax and abdomen become a globular body round which is the incrustation of lac. By and by an insect male, with a pair of large wings, escapes, seeks the females, fertilizes them, and dies. The females grow to a comparatively large size, giving birth each to a thousand young, die, and their body forms the pupa. It is this that is full of the lac coloring matter, which is really the food of the young. As the dye is now useless, Sir George suggests that the lac should be collected before the swarming, when the percentage of dye is at its lowest, and later he mentioned that there is a white or albino variety of the insect to whose propagation greater attention might be given, as it would produce an almost colorless resin. The insects are cultivated. The farmers do this by taking an incrustated twig of an infected tree and placing it just before the swarming on one which is not infected and the

swarm settles on it. Fifty or sixty kinds of trees grow lac and the quality varies with the tree. An insect which grows on one tree may not thrive on another species. Besides it has recently been discovered that there are many species of insects, but this subject has not been worked out, and Sir George emphasized the fact by stating that he had tried to get a specimen of the insect at the British Museum, but they have none.

#### THE PRODUCTION OF LAC.

The lac is removed from the twigs by placing them in a trough of water in which the workers tramp with their feet, when the woody matter floats, the dye is dissolved by the water and the resin keeps at the bottom. The latter, collected and dried, is seedlac. The dye (or lake) is no longer a commercial product and the last shipment to London was thrown into the Thames as worthless. Proceeding Sir George described the process of bleaching and purification. It is exposed to the air, and if this does not take out as much color as desired it is treated with sodium carbonate, alum or borax, the last being the favorite. Sir George thinks there is room for chemical investigation here. Next it is dried, melted and mixed with a certain proportion of common resin from Canada. In every factory he has visited he found that powdered orpiment is added to give opacity and color to the shellac, but not to garnet lac or button lac. The mixed resin is then put into a 30 to 40 feet long bag (like a stocking bandage) and carried by two men before a charcoal fire, one man twisting it one way and the other in the opposite direction. The resin thus drops out as it melts, and is returned to the bag. Sir George thinks that this dropping of buttons on the wet stone floor has some beneficial effect on the resin. When the stuff is sufficiently treated in this manner a piece of it in a hot molten state is spread with a palm leaf over a surface, then (it is hot enough to burn an ordinary individual) a man takes hold of it with his teeth at the top, with the toes of both feet at the bottom, and with the hands at each side, and stretches himself out, thus forming a big sheet of the resin, which thus becomes shellac.

#### THE LAC ART OF ORNAMENTATION.

The graphic manner in which Sir George described this method brought him a brisk round of applause. Then he took his audience into entirely new territory when he told them how the lac art of ornamentation is done. Absolutely pure shellac is the basis of the coloring. It is melted and pulled out as cobblers make their resin and confectioners their crisp, white, sweet cakes, coloring being added in the process. Sulphur makes yellow, sulphur and indigo green, lac dye crimson, and so on. Some colors are first mixed with oil, others with water, both furnishing distinct sets. The finished material is formed into blades about 9 inches long and 1½ inches wide. These and the turner's wheel, with appropriate carving, produce the finely ornamented Indian work which is so great a mystery to most people, but to those who heard Sir George Watt describe it it is ridiculously simple. The way that the oil colors and water colors are used alternately to produce different ornaments also turned out to be utilization of elementary knowledge. Lastly, Sir George dealt with the trade in shellac, showing how values fluctuate, to the great sorrow of the shellac makers. Of late years the export trade has changed, Continental ports and the United States being the most important consumers. "All the rubbish comes to England, and the best goes to America," were his concluding words, and although he had spoken for an hour and a quarter the interest never flagged.

#### THE COMMERCIAL GRADES OF LAC AND THEIR VALUATION.

At the same meeting John C. Umney, of London, reviewed the grades of lac met with in London commerce, indicating their relative values and the methods of determining their purity, degree of admixture, etc. Mr. Umney's paper is printed in full in the *Pharmaceutical Journal*, as follows:

The interesting history of shellac has been traced through various ages and its source, collection and manipulation described by Sir George Watt, and I therefore do not propose to do more than review the grades of lac met with in London com-

merce, indicating their relative values and the methods of determining their purity, degree of admixture, etc. Nearly the whole of the shellac of commerce may be said to be manufactured principally by hand in the neighborhood of Mirzapore and Calcutta, though certain shellacs—principally adulterated—are machine made in this country, and also on the Continent; indeed, this adulteration had become at the end of last year (1904), when prices were 50 per cent. higher than at present, practically a fine art.

I have placed upon the table samples of the principal grades of lac, as met with in commerce, with brief descriptions, but fully explained in the paper of Sir G. Watt. I have placed against these the proportionate values at the present time, taking as 100 the Consols of the shellac market, viz., T. N. brand. These ratios in price are not, of course, constant, but they are those existing to-day and are approximately those which are maintained, influenced, of course, to some extent by special circumstances.

No. 1. Inferior seed lac—this type is used in the making of the so-called inferior button lac. Relative value to T. N. at 100, 80 shillings on spot.

No. 2. Good seed lac, which is the crushed and washed lac. Relative value to T. N. at 100, 115 shillings.

No. 3. The stick lac shown is that known commercially as free from stick and dust. It is exported very largely to the Continent for the dye, as it is more useful than that prepared from the seed lac. Relative value to T. N. at 100, 70 shillings on spot.

No. 4. Button lac, known in India as "Bagoo" tongue lac. Relative value to T. N. at 100, 98 shillings on spot.

No. 5. Button lac—impure and somewhat out of condition. Would appear to have suffered largely from heat. Relative value to T. N. at 100, 96 shillings on spot.

No. 6. Standard T. N. This is practically the Consols of the shellac market, and upon this guide all speculation takes place, and upon the price of this the majority may be said to depend. Relative value to T. N. at 100, 100 shillings on spot.

No. 7. This is a specially selected so-called T. N. shellac, prepared for the market by Messrs. Ralli Bros., which is much esteemed also in America, and as a rule sold at about 2 to 3 per cent. above the price of the ordinary T. N. Relative value to T. N. at 100, 102 shillings on spot.

No. 8. Another type of the very finest native lac made, which is principally exported to America, but small quantities are used in the United Kingdom and on the Continent. Relative value to T. N. at 100, 117 shillings on spot.

No. 9. Of European manufacture—stated to be as fine as any lac that is produced, and of this particular brand practically the whole production goes to America. (The sample shown, however, is some years old, and may not represent the best bulk of to-day of the same manufacture.) Relative value to T. N. at 100, 120 shillings on spot.

No. 10. Very finest native lac. A very large price is paid for this lac. It is the kind very largely used in France, and I understand the favorite mark in America. The principal importers tell me it is too dear for the London market—a curious reflection. Relative value to T. N. at 100, 120 shillings on spot.

No. 11. Machine-made garnet shellac. Garnet shellac is sold at the present time practically with the guarantee of admixture of a quantity not exceeding 10 per cent. of resin. Relative value to T. N. at 100, 95 shillings on spot.

It has been stated that an experienced dealer will recognize the odor of resin in shellac by breaking it in the palm of the hand. I am scarcely able to confirm this myself, but I do notice that there is a far brighter fracture in the case of resin-sophisticated samples than in natural shellacs. This fracture dulls as exposure to the air is lengthened.

It is not necessary in a paper of this kind to deal with the recorded observations on the subject of the chemistry of shellac, except as they may bear on the analytical processes for determination of purity. Suffice it to say that the recent researches of Tschirch are most complete, and one cannot do better than refer to his elaborate publications on the subject. The principal constituents as at present known may be summarized as under:

Wax, about 6 per cent.

Laccin (pigment), present in varying proportions up to 6 per cent. Laccinic acid, a body closely allied to the coloring matter of cochineal.

Resinous matter, from 70 to 85 per cent., consisting of 65 per cent. about insoluble in ether, probably a rosinotannol ester of aleuritic acid, and 35 per cent. soluble in ether, including a yellow coloring matter called erythrolaccin.

It has been generally stated that many of the dull yellowish livery shellacs contain orpiment. I am barely able to confirm this, though in samples marked respectively 6 and 10 it is present to the extent of about 20 parts per million. It must not be forgotten that in any of the iodine absorption processes utilized for analytical purposes the presence or absence of orpiment must be in the first instance determined, and if an appreciable quantity be present an allowance must be made.

The examination of shellac for sophistication, especially in times of scarcity and speculation, as we have recently experi-

enced, is a subject deserving attention, and as now almost all market sales are made upon actual analysis (either as indicating purity or definite percentage of adulterant), the object of securing uniformity in the methods used by analysts engaged in the work is of paramount importance. Mr. E. J. Parry has published during the last few years several articles dealing with the analysis of shellac, giving the principal characters of a very large number of samples that he has examined.

Having also had the opportunity of examining a considerable number of samples, I think the results may be of interest and are certainly of confirmatory value.

#### QUALITATIVE DETECTION OF RESIN.

For detection of common resin in shellac several reactions have been suggested, the most useful being that known as the Storch Morawske test, and will reveal the presence of resin down to about 7 per cent. This test depends on the fact that resin dissolved in acetic anhydride gives a fugitive blue or violet color on addition of a drop of strong sulphuric acid. But for the presence of smaller quantities than this the test that has been found most satisfactory is an ingenious modification of the acetate of copper test as suggested by Parry. This consists of dissolving the sample in alcohol, pouring the solution into water, collecting and drying the powder on filter paper, and then rubbing it with petroleum ether. The filtered liquid, shaken with a small quantity of water containing a trace of copper acetate, will show in the petroleum ether layer an emerald green color if resin be present, but in its absence no coloration whatever.

Some workers have suggested the utilization of specific gravity as a means of determination of purity, and even a rough indication of the amount of resin present, shellac sinking and resin floating in a liquid of 1.08 to 1.09 specific gravity. I have found, however, that this is not possible, as the specific gravity of the two resins is variable and too close to be of actual value.

The solubility of shellac in various solvents has been suggested as a means of determination of purity. The only solvent, according to my observations, that is of any service is petroleum ether, which should not dissolve more than 5 to 6 per cent., and this of course forms a very rough means of differentiation between common resin and shellac. It is obvious, however, that varying proportions present in a mixture of the two substances would affect the solubility by the one carrying the other into solution.

I have made a great number of determinations of the acid and ester values of shellac, and it would appear from these results that, working upon pure shellac, the ester numbers are from 155 to 175, that for resin being usually about 5, while the average acid number for pure shellac I find to be about 60, and that for resin is rarely less than 160. In my experience these figures cannot be utilized alone for the calculation of the proportion of sophistication present, but taking them together with the iodine number a useful confirmation may be obtained. The average figures for shellac and resin respectively may be taken as:

|               | Acid. | Ester. |
|---------------|-------|--------|
| Shellac ..... | 60    | 160    |
| Resin .....   | 165   | 5      |

A great number of experiments have been made in order to determine the relative reliability and comparative constancy of the processes suggested for the determination of iodine numbers. Parry's iodine values were obtained by using Hubl's solution and allowing absorption for 18 hours, while Langmuir's results (see *Journ. Soc. Chem. Ind.*, January 16, 1905) were obtained by using Wij's solution, which gives considerably higher figures. I had expected that an advantage might rest with the latter, as owing to the greater rapidity of absorption (one hour being sufficient) it would probably make it a more convenient method of testing than the Hubl method. From comparative experiments made with the use of these two solutions, and also the Hanus solution, on many substances, it would appear that there is very little difference in the figures indicated in the cases of fixed oils, but in the case of resins generally and shellac and the numbers vary considerably.

I find that the most constant figures have unquestionably been those furnished by the Hubl method.

As the result of these analyses I would submit that the figure of 10 as a standard iodine value upon which the calculation for resin percentage should be based is a very fair one. It certainly is not an exacting requirement and the average iodine absorption figure of resin may be taken as 125. Utilizing the Hubl method, it is interesting to record how the iodine number of the samples of which descriptions have been given accord with knowledge of their composition, and also their market valuation.

#### A WRINKLE IN THE MANUFACTURE OF SYRUP OF LICORICE.<sup>1</sup>

BY LEONARD A. SELTZER.

Syrup of licorice is a syrup that is constantly prescribed, and is, moreover, a preparation of great importance, for aside from its therapeutic properties it heads the list of all the preparations we have for disguising the bitter or saline taste in medicine. Unfortunately the National Formulary fails to give any suggestion whereby the preparation can be made either stable or elegant in appearance.

The whole difficulty lies in the first step in the process. After dissolving the mass licorice in the water, an insoluble residue remains which cannot be separated by filtration in the ordinary way. If attempt at filtration be made the first portion that passes through is not clear, and as soon as it seems to be coming clear it ceases to come at all, the finely divided residue having massed itself against the paper so as to render the latter almost impervious. If the operator be willing to omit the filtration and put up with an unsightly preparation he is confronted with the fact that the inert matter immediately starts to ferment and spoil the syrup.

To overcome this difficulty I use the following method: After disintegrating the mass licorice on a water bath, with the full amount of water required to prepare the syrup and adding from time to time sufficient ammonia water to keep the glycyrrhizin in solution, but carefully avoiding excess, I remove the solution from the water bath and allow to cool. I then add the white of an egg, mix thoroughly and again heat on the water bath until all the albumen is coagulated. In this way much of the insoluble matter is surrounded by the coagulated albumen, though enough still remains to make filtration difficult. The method I use at this point is this: I take some clean excelsior and place it in the bottom of a percolator, making the surface as uneven as possible. Next I beat up some filter paper in a mortar with the solution until it is reduced to a pulp after which it and the remainder of the solution are transferred to the percolator, returning the filtrate until it passes clear. The whole solution will then pass through in a reasonable time. The sugar may now be added and dissolved either in the cold or by the aid of heat. If heat is used it will be necessary to replace from time to time the ammonia that is driven off.

Syrup made in this way is strictly in accord with the official formula, is elegant in appearance and will keep as long as the most stable syrups.

#### Soda Foam.

The very best and most wholesome thing for soda syrups to hold a foam is white of egg, using the white of four eggs to a two-gallon lot of syrup. T. D. McElhenie has for many years shaken the whites in a bottle with a little water until disintegrated before straining into the syrup, but the transparent masses of albumen are hard to break up. He recently had a tinner carry out for me an idea that shortens the task. Taking two of the square, screw-capped, half-pound tins used for Huyler's cocoa, he had the top cut off one and the bottom off the other and the second one soldered on the top of the first with a diaphragm of wire cloth between, so that by putting in two or three ounces of water, dropping in the whites and replacing the cap, a slight shaking up and down breaks up the albumen.

## Cream of Current Literature

A summary of the leading articles in contemporary pharmaceutical periodicals.

**To Detect the Presence of Acetanilid in Phenacetin.**—Fulmer (*Annales der Chemie Analytique*, 1905) gives the following test for acetanilid in phenacetin: One decigramme of the suspected substance is boiled for one minute with 1 Cc. of concentrated hydrochloric acid. The mixture is diluted with 10 Cc. of water and filtered. To the filtrate are added three drops of a 3 per cent. solution of chromic acid. If the phenacetin is pure the solution assumes a ruby red color, which is permanent. If it contains acetanilid the solution assumes a dark green tint and later a deposit is observed.

**The Cultivation of Pharmaceutical Plants on Soils Containing Radium.**—Von Poehl (*St. Petersburg Farmatsefticheski Journal*, June 28, 1905) experimented with the cultivation of various pharmaceutical plants upon soil containing radium and obtained such brilliant results that he communicated them to the Pharmaceutical Society of St. Petersburg. These experiments were conducted at Tsarskoleselo, where the soil contains layers of radium-bearing minerals. Radium was found in these plants, but it was present only in the roots and in the stems, never in the flowers.

**Leucrol.**—According to the *Apotheker Zeitung* (June 7, 1905), leucrol is a remedy put up in tablets, which is recommended for use in the internal treatment of leucorrhœa not due to gonorrhœal infection. The composition of the tablets is said to be as follows: Leucrol, 14 parts; cane sugar, 12 parts; cocoa, without oil, 3 parts; citric acid, 1 part. Leucrol is said to be derived from the extract of Jubahar, an Indian plant belonging to the natural order of Ranunculaceæ, which is still unknown to botanists. It is employed by the native women in the treatment of anæmia, and especially in the treatment of leucorrhœa.

**Disinfectant Solutions of Cresol.**—Adam (*Journal de pharmacie et de chimie*, August 16 1905) investigated the best methods of preparing solutions with cresol which should be inexpensive, sufficiently concentrated, soluble in water and should not destroy fabrics or other materials with which they come in contact. After a number of experiments with soap and alkali carbonates he abandoned these substances as additions to cresol in preparing the solution. He found that the best proportions were one part by weight of cresol and one part of a 30 per cent. solution of soda. This solution should be diluted with 100, 200 or 300 parts of water, according to need. Adam found that the mixture of "black soap" and cresol could not be prepared except with the aid of heat, and that from 30 to 100 parts of cresol had to be added to the soap. The mixture thus obtained did not give a satisfactory solution with water, as it formed white flakes which soiled the surfaces to be disinfected. If one wishes to avoid this inconvenience more soap must be added and then the process becomes too expensive. On the other hand, if the ordinary soap maker's lye, containing 30 per cent. of caustic soda, be added to cresol, a solution is formed which mixes readily with water, making a clear fluid which does not give any sediment. This fluid is not any more caustic than cresol itself. It does not attack paint or varnish, and although it does injure certain delicate surfaces it can be easily neutralized by the addition of some acid.

**The Sweet Taste of Dulcin.**—Sternberg (*Riedel's Berichte*, 1905, page 54) examined a variety of substances having a composition similar to dulcin, in order to find out whether they also had a sweet taste. We know that some substances can be prepared synthetically that have a far sweeter taste than sugar. Saccharin and dulcin are examples of this kind. The latter is a mono-para phenetol-carbamide which has an extremely intense sweet taste. On the other hand, the dipara-phenetol-carbamide does not possess any taste whatever.

Another combination of phenol-carbamide—namely, the methyl-ic ether, or para-anisol-carbamide—has a very slight sweet taste. It's rather curious to note such a difference between such similar compounds and the question naturally arises, What is the cause of the sweet taste? In order to determine this Sternberg tested a large number of allied compounds, but has not been able to find a single one with a sweet taste. Some were very bitter, while others had no taste whatever. It is said that the discoverer of dulcin obtained an amide derivative of this substance which had a characteristic sweet taste. Sternberg remarks that the substitution products added to the phenol radical possess the sweet taste characteristic of dulcin, just as is the case with saccharin. Also, just as is the case with the last mentioned synthetic, when the amide group is substituted by other radicals, the sweet taste disappears.

**The Detection of Biliary Pigments in the Urine.**—Grimbert (*L'union pharmaceutique*, November 15, 1905) finds the various tests now employed for the detection of biliary pigments inaccurate in some respects, and recommends the following method, which is simpler and at the same time more delicate than any other: To 10 Cc. of urine he adds 5 Cc. of a solution containing 10 per cent. of barium chloride. He shakes and centrifuges the mixture. The precipitate which is formed consists of the sulphate, the phosphate, and bilirubinate of barium. It is diluted with 4 Cc. of 90 per cent. alcohol, to which 5 per cent. by volume of hydrochloric acid has been added. The mixture is placed on a water bath and kept there for one minute at boiling temperature. The precipitate is allowed to deposit at the bottom of the tube and the liquid in the tube is examined. If it is found colorless biliary pigments are absent. If it is a greenish-blue or dark-green biliary pigments are present. If it is brown or brownish in color the hydrochloric acid added to the alcohol did not suffice to oxidize all the barium bilirubinate, and then two drops of 10 per cent. hydrogen dioxide are added to the contents of the tube, which is again heated on the water bath. The green color then appears distinctly. If the brown tint persists the biliary pigments are altered, owing to the fact that the urine has stood for some time. If traces of biliary pigments are looked for, 100 Cc. of the urine can be used for this test instead of 10 Cc. This method is said to be much more delicate than those of Jolles and Hammarsten.

**Direct Quantitative Estimation of Glycerin.**—Schukow and Schestakoff (*Zeitschrift für angewandte Chemie*, 1905, page 294) overcame the difficulty attending the direct determination of glycerin in aqueous solutions. This difficulty is due to the fact that when watery solutions of glycerin are shaken with appropriate solvents the water retains a certain amount of glycerin. The method suggested by the author consists in treating the solution of glycerin with anhydrous sodium sulphate and by exhausting this mixture with anhydrous acetone. If the solution is alkaline in reaction it should be neutralized with sulphuric acid and should be filtered. It is then rendered very feebly alkaline with the addition of potassa. If the solution is acid, it must be neutralized with potassa, and then concentrated to the consistency of a syrup without heating it above 60 degrees C. If salts are contained in the solution it should be evaporated to a semisolid mass. Of this residue such a quantity is taken as contains not more than 1 Gm. of glycerin. It is then mixed with powdered anhydrous sodium sulphate, wrapped in filter paper and exhausted in a Soxhlet apparatus with acetone freed from water by previous distillation over dried potassium carbonate. After the exhaustion, which should last four hours, the acetone is driven off, and if a few drops of oil are then found upon the surface of the glycerin they should be removed with the aid of petroleum ether. The glycerin is then dried at a temperature of 80 degrees C., until

the weight becomes constant. Solutions which contain more than 40 per cent. of glycerin need not be concentrated, as they can be treated directly with the dried sodium sulphate.

**The Reactions of Amorphous Aconitine.**—Reichard (*Pharmazeutische Zentralhalle*, 1905, page 479) has investigated the reactions of amorphous aconitine, which, as we know, is entirely different from the crystalline aconitine, official in the United States Pharmacopœia. Amorphous aconitine, so-called, is in reality a mixture of amorphous bases derived from aconite, and is a yellowish-white powder soluble in alcohol, ether and chloroform, and slightly soluble in water. It is less poisonous than the crystalline product and is given in larger doses. Thus, while the United States Pharmacopœia gives one four-hundred of a grain as the dose of the crystalline alkaloid, the dose of the amorphous product, made by Merck, is given as one-sixty-fourth of a grain. The most characteristic reaction of amorphous aconitine has usually been thought to be its behavior with phosphoric acid. Reichard recommends that this reaction be performed under the following conditions: A small amount of the alkaloid is placed in a porcelain capsule. A fragment of phosphoric acid is added, then a trace of water. If no heat be employed no reaction will take place. But if the mixture be cautiously heated some streaks of deep violet color will form at its margin, while the center changes to a color which looks like a mixture of black, brown and violet. This color fades when the capsule is cooled, while it reappears under the influence of heat. Other reactions have been described in considerable number. If antimony trichloride in a concentrated solution in hydrochloric acid be added to some amorphous aconitine a dark color results which turns to black. If powdered aconitine be mixed with a fragment of sodium orthoarsenate, and then with some sulphuric acid, and if the mixture be heated gently, a thick mass is formed, like Canada balsam in appearance, but having the color of tannin. If to this mixture be added a small crystal of yellow prussiate the crystal turns blue within 10 or 15 minutes. This reaction is due to the aconitine, but the presence of the arsenic is also necessary.

**The Solubility of Scammony Resin in Ether.**—Guigues (*Répertoire de pharmacie*, November 10, 1905) has collected some interesting data as to the solubility of the resins of scammony. In a number of treatises on pharmacy the statement is made that scammony resin is soluble in ether, while the eighth revision of the United States Pharmacopœia requires that not less than 75 per cent. of the resin shall be soluble in ether. The author has found, however, that two distinct varieties of scammony resin are found on the market, one of which is soluble in ether, while the other is insoluble in this fluid. This insoluble resin, however, is soluble in a solution of the soluble resin in ether, while an excess of ether added to such a solution produces a new precipitate. The author admits that there are resins of scammony which are soluble in ether, and he has in his possession old samples which are completely soluble. It is possible that a soluble resin is still obtainable, and the author hopes to discover the source of such a resin. Formerly the resin was obtained from a certain limited region, but unfortunately the process used by the natives in extracting the resin of scammony has caused the complete disappearance of the plant from its original habitat, so that for the past five or six years the root comes from other sources. It is this change in the climatic conditions under which the root is grown that has caused a diminution in solubility of the resin. A large amount of scammony from America is sold in England, and some resins are sold in France which are derived neither from Syria or Asia Minor. The substitutes for scammony which are commonly offered are the resins of fusiform jalap (*Ipomœa orizabensis*) or of Tampico jalap (*Ipomœa stimulans*). According to Welgel, a so-called Mexican scammony is sold which is probably derived from the fusiform jalap. Some brown resins are found in commerce which contain as much as 50 per cent. of constituents insoluble in ether. The white resins contain as much as 25 per cent. of insoluble constituents. The

author concludes that ether should no longer be employed in testing resin of scammony. This test does not distinguish the adulterations commonly practiced—namely, the addition of mastic, colophony and other resins, nor does it serve to discover the presence of jalap resin. The price of jalap resin is, indeed, much higher than that of scammony, and it would be more profitable to sell resins partly insoluble in ether under the name of jalap. The change in the solubility of the resin, according to the author, is not the result of the process of extraction, for the only heat that is employed is used in the form of steam, so that the action of a ferment is excluded.

### Explosions of Oxygen.

Druggists who handle oxygen, which is so often used nowadays for medicinal purposes, should know something about the accidents that occur as the result of the explosion of this gas. In an article in the *Pharmazeutische Zeitung* (October, 1905, page 910) are summarized several accidents of this kind that have occurred during the past year.

According to the writer of this article, explosions of oxygen form a constant item in the statistics of accidents. During the present year two explosions of oxygen have been recorded that deserve mention. One of these occurred in the Physical Institute at Winterthur, and resulted in the death of one man and in considerable material damage. A second case was reported by the Italian newspapers from Genoa. It became necessary to fill some oxygen into a receptacle from one of the ordinary steel cylinders. The cylinder was kept in the back room of the drug store, and when the druggist wanted to set the pressure gauge and read it a terrible explosion occurred, which severely injured the druggist as well as four persons who happened to be in the store, and also caused a great deal of damage to his stock and fixtures. The force of the pressure can be guessed from the fact that pieces of the burst steel cylinder were projected through the ceiling of the storage room into the upper floors of the house and that doors and windows were broken throughout the neighborhood. The store and its adjoining storerooms presented a picture of terrible devastation.

The causes of these two explosions have not been accurately determined. In both cases it seems that the accident occurred upon the opening of the valve of the manometer. It appears, therefore, that the explosions were not due to defects of the metals of the cylinder or to the strength of the same, but to defects in the construction of the outlet of the apparatus or in the properties of the oxygen itself. The case which occurred in Germany was studied by two chemists, Bosshardt and Häuttil, who found that the "oxygen" which was contained in another cylinder furnished by the same factory contained 77.57 volumes of oxygen, 20.10 of hydrogen and 2.33 of nitrogen. The authors named found that this mixture was exceedingly explosive. Another circumstance which they noted was that the valve screws of the test manometer of the cylinder furnished by this factory were provided with washers consisting of cellulose and a mineral substance that could not be ignited. They also contained a small amount of oil. These washers were slightly burned and had an odor of incompletely burnt oil. When the valve was opened the gas escaped from the manometer with a rush, the air in the connecting tube between the cylinder and the manometer was suddenly compressed, and in that instant was heated to such a temperature as was sufficient to ignite the oil lubricating the washers. Possibly particles of iron or rust, etc., which were driven out of the cylinder with a stream of air, and which came into violent contact with the washers, could also ignite the latter.

If the cylinder had contained pure oxygen the ignition of the washers could not have produced an explosion, but inasmuch as the cylinder contained an explosive gas an explosion could not be prevented. The lesson, therefore, is that the safest oxygen is that which is absolutely pure, and another lesson is that tanks with oxygen should never be kept in rooms immediately adjoining the store or the living quarters.

## Queries and Answers

We shall be glad, in this department, to respond to calls for information on all pharmaceutical matters.

**Tinnevelly Leaves.**—J. F.—For extended information regarding the variety of senna leaf called Tinnevelly you should consult a work on vegetable materia medica. This leaf comes from India and is regarded as an inferior article to the preferred Alexandria senna. The India senna leaf is nearly twice as long as the Alexandria leaf, but contains a smaller percentage of emodin, the active principle.

**Address of the Makers of "The Akouphone."**—C. S. asks for the address of the makers of an instrument known as "the akouphone," which is used to strengthen the hearing of deaf people.

Perhaps some of our readers will be able to supply the desired information.

**Self-Heating Hot Water Bottles.**—G. A. R. asks if we can give him particulars of the method of constructing a hot water bag which develops its own heat after shaking and compression.

We can only indicate in a general way the construction of such a bag or bottle as is described by our correspondent. Bags of this kind are understood to be made by filling them with a mixture of 9 parts of sodium thiosulphate and 1 part of sodium acetate. The bag is placed in hot water and kept there until the mixture melts. The heat generated in the melting process is said to be retained for several hours, and all that is necessary to renew the heat is to shake the container vigorously.

**Emulsion of Codliver Oil with Iron.**—H. G.—The form of iron preferably used in the preparation of a ferrated codliver oil emulsion is iron benzoate, one part of the salt being used for every hundred parts of oil. The iron benzoate is first triturated with the oil and the mixture warmed gently until the iron salt is dissolved. An emulsion may then be made from the product after the customary process.

An Italian formula provides for the use of saponin as an emulsifier and glycerophosphate of iron is the ferruginous ingredient, combined with calcium glycerophosphate in the following combination:

|                                | Parts. |
|--------------------------------|--------|
| Calcium glycerophosphate ..... | 20     |
| Iron glycerophosphate .....    | 20     |
| Glycerin, pure .....           | 100    |
| Alcohol .....                  | 100    |
| Saponin .....                  | 121    |
| Lime water .....               | 200    |
| Codliver oil .....             | 1600   |

Mix the water and alcohol and in it dissolve the saponin. Put the glycerin in a mortar of sufficient size, and, under constant rubbing, add the solution of saponin, drop by drop, continuing the agitation until a white, consistent, creamy emulsion is obtained. Now add the oil, little by little, under constant rubbing, after having first mingled the glycerophosphates with it by triturating together in a mortar.

**Porto Rico Pharmacy Regulations.**—G. R. A.—We regret our inability to give any definite information regarding the regulations prescribed by the Government of Porto Rico for the practice of pharmacy. A circular issued some time ago by the military governor announced that the practice of pharmacy was under the supervision of the Superior Board of Health, a body which replaced the subdelegations of medicine, surgery, pharmacy, etc., of Porto Rico. An examining board, acting under the authority of the Superior Board of Health, consisting of three graduates in medicine and surgery, two graduates in pharmacy and one graduate in dentistry, conducts the examinations and issues certificates. Meetings are held in the city of San Juan at regular intervals. The examining board does not recognize diplomas from colleges of pharmacy, although applicants for registration possessing diplomas from medical or dental colleges, and who have been licensed by State

boards after examination, may, upon the payment of a fee of \$25, be licensed by the Superior Board of Health without examination, in the discretion of the board. The fee for examination as a pharmacist is the same as that charged for physicians and dentists—namely, \$25. Five dollars additional is charged for the issue and registration of a license.

**Apiol.**—From J. Oudig, president of the Association Amicale des Etudiants en Pharmacie de France, 85 Boulevard Saint-Michel, Paris, we have received an inquiry of which the following is a translation:

(1) What is the annual consumption of apiol in the United States? (2) Is it manufactured there? If not, where can it be procured? (3) What is its commercial value and its retail price? (4) What are the methods of estimating it? (5) What is its specific gravity according to the U. S. Pharmacopœia? (6) What does the U. S. Pharmacopœia say regarding its manufacture?

Apiol is not official in the United States Pharmacopœia and we are unable, therefore, to answer that part of our correspondent's inquiry relating to the mention of apiol in that work. We have no figures at hand to indicate the annual consumption of apiol in the United States, but from our knowledge of the uses of apiol in medicine we should not put it at any high figure. The consumption has increased of late years, owing to the exploitation of the substance by proprietary manufacturers, and most of the apiol consumed is, we think, imported from France and Germany. As regards the nature of the substance known commercially as apiol some confusion seems to exist. True apiol, or parsley camphor, as it is also called, is a crystallizable compound first obtained in 1823 from the volatile oil of parsley seed by Stange, of Basel, Switzerland, (Nat. Disp.). The name apiol is, however, generally applied to an oily liquid consisting of an alcoholic extract of parsley seed, and consisting of a volatile oil holding a soft resin and true apiol in solution. It is usually a transparent green fluid, but, according to "The Extra Pharmacopœia" of Martindale and Westcott, it is also met with as a dark, oily liquid with a peculiar odor and a pungent taste, like parsley. As noted above, the true apiol is a stearoptene or camphor-like body which occurs in colorless acicular crystals, and the authors of "The National Standard Dispensatory" are of the opinion that the name apiol should be applied only to the stearoptene and not to the liquid mixture.

**Lubricating Soap.**—L. D. C.—If by a "soft soap used by machinists and printers" you mean a lubricating soap, the following is a formula:

|  |           |
|--|-----------|
| Tallow .....                               | 1½ parts. |
| Crude palm oil .....                       | 8 parts.  |
| Solution of sodium carbonate, 15 deg., B., | 1½ parts. |

Melt.

**A New Reaction for Acetone in the Urine.**—Frommer (*Berliner Klinische Wochenschrift*, 1905, No. 32) describes the following test for acetone in the urine, which can be used without resort to distillation. The test consists in adding 1 gramme of caustic potash to 10 Cc. of urine in a test tube, and then adding from 10 to 15 drops of a 10 per cent. alcoholic solution of salicylic aldehyde (salicylic acid) and heating to 70 degrees. If the urine contains acetone a reddish-purple ring appears at the point of contact of the two fluids. If the salicylic aldehyde is added after the caustic potash is completely dissolved the fluid is colored yellow, then reddish-purple, and finally crimson-red. This reaction is very delicate and does not occur with any other substances likely to be present in the urine. The reaction described also appears in cases in which Lieben's and Legal's tests give positive results.

## Book Reviews.

**YEARBOOK OF LEGISLATION, 1904.** Edited by Robert H. Whitten, Sociology Librarian. Albany, N. Y., New York State Education Department, 1905.

The "Yearbook of Legislation" contains the three annual legislation bulletins issued by the New York State Library. The first is a digest of governors' messages, including related topics in the President's message. Important recommendations are briefly digested and topically arranged so that the trend of executive recommendation on current problems may be easily ascertained.

The second bulletin is the index of legislation, indexing or summarizing 2190 laws and constitutional amendments. This and the preceding bulletin are classified in the same way so that reference from one to the other is facilitated.

The third bulletin is a review of legislation made up of the contributions of 40 specialists from all parts of the country, each reviewing the year's progress in his particular field. Notable articles are those of Dr. C. E. Merriam, professor of political science at Chicago University, who reviews legislation relating to State government, law making and elections; of Dr. Charles V. Chapin, Superintendent of Public Health, Providence, R. I., who discusses public health and safety regulations; of E. Dana Durand, of the U. S. Bureau of Corporations, who writes on corporation laws; of Dr. John A. Fairlie, professor of administrative law at the University of Michigan, and Dr. Delos F. Wilcox, secretary of the Civic Club of Grand Rapids, who write on municipal government; of Prof. Frank A. Fetter, of Cornell University, on taxation; of Dr. Adna F. Weber, chief statistician of the New York State Department of Labor, on labor legislation, and of Dr. W. D. Bigelow, of the U. S. Bureau of Chemistry, on food adulteration.

The yearbook thus furnishes a complete and practical guide to American legislation most useful to publicists, legislators, executives and others interested in any specific movement or in the general trend of legislation.

**A MANUAL OF ACUTE POISONING** giving classification, varieties and individual substances usually met with in emergency poisoning, with special symptoms, simple tests, chemical antidotes, physiologic antagonists and treatment, together with methods for use in first aid to the injured. By John W. Wainwright, M.D., member of the American and New York State Medical Associations, the American Chemical Society, etc. New York: E. R. Pelton, 1905. Pp. 5 to 96. Flexible cloth. 75 cents.

If the value of a manual on the treatment of poisoning could be judged by the character of any single chapter that on the symptoms and treatment of poisoning from carbolic acid would, in our opinion, afford the best criterion. In this handy sized manual of Dr. Wainwright's the descriptions of the symptoms of poisoning from and tests for detecting carbolic acid are in an unusual degree satisfactory. The author chooses his terms with care and succeeds in imparting conciseness without losing in completeness of description. In carbolic acid poisoning he places little confidence in the use of the soluble sulphates which are commonly believed to be effective, and depends more on alcohol diluted two-thirds with water, the stomach having been previously emptied of its contents by means of a stomach tube. Though the manual was not written for pharmacists and is not likely to be recommended as a text book for colleges of pharmacy it should prove extremely useful to pharmacists, who are frequently called upon to assist in emergency cases.

We do not like the author's spelling where he deviates from the pharmacopoeial standard by omitting the final e from the names of alkaloids and changing chloride to chlorid. There are other peculiarities of spelling in the manual which are disturbing. In one sentence the term "chemical antidote" occurs, and in the sentence immediately following we find "physiologic antagonists." If "chemical," why not "physiological"? But these variants in spelling do not detract from the value of the little work, which we cordially commend as a useful addition to the pharmacist's library.

*Under this head will appear suggestions and plans for increasing trade, advertising experiences, information, and notes of interest useful to the pharmacist in the preparation of his advertising matter. Specimens of current advertising will be reproduced, with suggestive analysis and criticism, and queries relative to advertising matters will be answered. To avoid delay address communications to the Department of Business Building, AMERICAN DRUGGIST, 66 West Broadway, N. Y.*

## VALUELESS ADVERTISING SCHEMES.

By W. T. O'CONNOR.

The druggist who would make a success of advertising must know what not to do as well as what to do. There are golden rules of omission in the gentle art of advertising as well as shining rules of things necessary.

If it were possible for every druggist to go into an advertising campaign with an exact knowledge of what he must do to come out at the long end of the game there would be no necessity for this warning. But, unfortunately, the druggist, and especially the druggist who elects to take care of every detail of his own advertising, usually knows as little about the advertising proposition as the average citizen knows of the mysteries of the prescription counter.

If this article by pointing out a few of the opportunities to make mistakes saves only one druggist from financial loss it will certainly have been worth while.

You may give the profoundest thought to every other detail of your advertising, but if the mediums you intend to utilize are wrong failure is writ large for your attempt. Discrimination is an asset in this end of an advertising campaign.

### THE PROGRAMME FAKE.

The druggist who has not been importuned to take space in a programme for some kind of an amateur affair many times in his business career is a very rare bird. If, however, you have succeeded in resisting the argument of the energetic solicitor you have saved money. As an advertising medium an amateur entertainment programme is as valueless as a last year's tax bill. The sole and entire object of the Programme Committee is to raise at least enough money to pay for the printing of the programme and as much in excess of this as they possibly can.

Programmes have no advertising value for these reasons. Only a limited number are printed, usually from 500 to 1,000. Very few people take the trouble to read them. The average announcement in them is nothing more than an ordinary business card, and they are promptly discarded as soon as their use as a programme is over. If you are ever persuaded to take space in a programme charge the cost up to friendship or charity and calculate upon getting your reward hereafter, for you certainly will not get it here.

Another variation of the programme scheme is the dramatic hanger. This is a nice genteel way of getting free advertising by making the other fellow pay for it.

The dramatic society decides that it needs some publicity, but it lacks the wherewithal to purchase it. About the easiest plan that will suggest itself is to go around to various business men and request or demand that they buy some space on a card or hanger at so much per space. The society gets as much as it can, usually more than enough to pay for the very few cards printed. Then it takes for itself the largest and choicest space right in the center of the card. The philanthropic merchant whose beneficence has helped pay for the card is in consideration of his kindness allowed to hang one in his window so that the dramatic society will get in its advertising.

Put your money in a poker game in preference to the above; you will have a chance for it at least.

Next to these is

#### THE CARD DIRECTORY OF LEADING BUSINESS MEN.

This is one of the rankest grafts that ever separated a man from his money. The usual method of working the game runs about like this: Some impecunious gentleman with a congenital aversion to anything even slightly resembling work hits upon the scheme as a sort of first aid to a low tide pocket-book. The first move is to obtain a large sheet of nice, clean paper. The ingenious gentleman then proceeds to rule it off into spaces of various size, marking the spaces with a numeral meant to indicate the price. The prices of the spaces vary with their size. The amount tacked onto them is governed largely by the pecuniary needs or the unbounded fancy of the gentlemanly promoter.

When the dummy is prepared the labor saving grafter works up his line of argument. As he is usually a person who lives upon pure nerve and his wits he has no great trouble in evolving a first-class line of persuasion.

When all is ready he sallies forth prepared to interview the "leading business men" regarding the need for advertising in the directory. Bolled down the interview is something like this: He shows the dummy to his listener and tells him what it is, laying particular stress upon the "leading business men" part. He expatiates upon the value, even the necessity of the gentleman in front of him being represented upon the directory. He grows eloquent when he speaks of the tremendous effects of a five-inch advertisement. He is impressive when he details the number of directories to be printed and distributed. One is to go to every railroad station, hotel and public building, one to every business house in the city and one to every professional man in the community. Then he will ask you how much space you will take. Perhaps you will not take any. If you won't you will get the same verbiage all over again accompanied by an offer of a reduced price for anything on the card.

#### HE COLLECTS IN ADVANCE.

If you buy a space the bland promoter will try to collect the whole amount in advance. If you will not give it to him he will be satisfied with half, and if the half is not forthcoming he will accept anything as a compromise. He needs the money.

This process goes on until the card is filled. Then if the man behind finds that he has not collected all the money that he thinks he will need he will really have the card printed. Not, however, because of any feeling of obligation to the benevolent individuals who have subscribed to his scheme, but just to get the rest of the money. If the printer is an astute person he gets a good-sized deposit in advance and does not deliver the cards until all the rest of the money due him is handed over.

When the promoter gets the cards he ambles around to his patrons, leaves a card with each one, collects whatever is coming to him, and says that he and his assistants have made arrangements to distribute the remainder as soon as they are received from the printer.

Then he fades quietly and permanently from view.

The cards that are distributed to the space buyers are, you may be sure, all that are ever printed. For your money you get a more or less valuable piece of printing, an excellent study in one form of criminology and a generous slice of the "once bit, twice shy" quality. An advertisement on the inside of the moon would be considerably better than space in a card directory.

#### THE CHURCH SOCIETY.

Another money getting, nonresult-giving scheme is the church society cook book. The Ladies' Sewing Society or the Mortgage Reducing Association of the church in a laudable endeavor to do something worthy in the financial line get busy and collect recipes from everywhere. They then go after the business men of their vicinity for advertising, and if any think of it they write to national advertisers. Sometimes the arguments used to persuade a person to take space are not very Christian.

The cook book is also in the no-good class as an advertising medium. If you take any space in it charge it up to charity also.

The magic lantern man is another who gets something for very nearly nothing. He usually promises an unlimited number of displays for you and will guarantee a crowd of any size that you would like to have. Leave him severely alone.

For the retail druggist the newspapers and inclosure slips are the best. Useful novelties and those having a permanent value are also good. In a future number we will give a list of some of these.

#### WINDOW DRESSING IDEAS.

If your store is wired for electricity the following will attract a crowd at almost any time.

Get a number of white, blue, red and green rubber balloons. If you have an average sized window about thirty will be enough.

In order that the scheme may be a success the window should be long and moderately narrow, but not so narrow that a jam will result when the balloons get busy. In order to make it work you may have to close in the back of the window.

Put the balloons into one end of the window. At the other set one or two electric fans. Turn the current on and it will promptly force the balloons into the air and keep them going up and down constantly. It has a decidedly novel effect, and when balloons of different colors are used a very pretty one.

You will find it economical to see that there are no sharp pointed objects in the window, as they are apt to prove fatal to the balloons.

You can introduce a direct advertising note by exploiting at the same time some remedy that you prepare for what is commonly known as the "tired feeling." Put some bottles into the window, and with them a sign saying that "Blank will make you feel as light as air."

#### CIGAR ADVERTISING.

Another window idea that is both novel and attractive can be used in connection with your cigar line. Or if you put up preparations of your own it can be used to show where the constituent ingredients come from.

Have an outline map of the world drawn on bristol board; or draw it yourself, if you are a good enough draftsman. Color the inside of the various coast lines. Next secure a number of different colored narrow ribbons and a quantity of white cards about 3 x 5 inches.

If you intend to use the scheme to call attention to your cigars find out where the stock in the brands is grown and print the name of each place on the card.

Take one of the ribbons, and, with the aid of a geography, locate the locality on the map. Then fasten the ribbon to the exact spot with a thumb tack, tying the other end around the proper cigar, and lay the cigar on the right card.

A man who glances into your window in passing will usually become interested enough to take a good look at the display. And it is very likely to occur to him that a cigar would do very nicely at the moment and you will sell the cigar.

The following scheme was used by a tobacco dealer in Brooklyn a few years ago with pronounced success. He had in stock a brand of cigars that he was very anxious to build up a large sale for. It sold for 5 cents, and was an excellent value—in shape a panatella, and in addition a little longer than the average smoke of its kind for the price. He tried several window displays, but most cigars bear a fairly close resemblance to each other and the brand did not move very rapidly.

This is the suggestion given him that finally started it going. He took a piece of white paper about 3 feet long and 8 inches wide, put it in the front part of the window and left a space clear all around it. He then laid six of the cigars end to end, and back of them stood a nicely painted sign with this message: "30 inches of smoke for 10 cents."

Before the dealer took the sign and cigars out of the window the brand was pretty well established.

#### ADVERTISING APOTHEGMS.

A clean store indicates a careful proprietor.

When you cannot tell the truth about an article say nothing.

Keep to one line of talk in your advertisement. There is no one quite so hard to follow as the verbose gentleman who talks a little about all things and says nothing about any.

An advertisement should be a plain statement of facts. At the current rates for newspaper space you cannot afford to indulge in tinselled generalities, poetical eruptions, anecdotes, historical sketches or anything that will not sell your goods.

Facts are stubborn things and do not admit of denial. And you will not have to explain them away. A half fact or a whole untruth can be contradicted, but in spite of explanations will leave a bad odor. Therefore make certain that everything that is said to the public from your store, whether verbal or printed, be built upon an unshakable foundation of fact.

#### How to Make an Illuminated Electric Fountain.

One of the prettiest and most attractive displays for a show window is an electric illuminated fountain. The *Keystone* tells how such a fountain may be constructed.

Have a tinsmith make the center bowl (marked A in the accompanying diagram) of tin, of any size desired, according to the size of the window. This center bowl should be shaped like a large cake tin, hollow in the center. Cut a hole in the center of the window floor and place the tin bowl over it. Put a large

Details of Illuminated Fountain for Windows.

rubber band around the center tin cone. Secure a circular glass shelf B, having a hole in the center, and rest it upon the cone.

Have the tinsmith make a fancy stem C, enamel it white, punch fine holes in it at the top and bottom and solder it to the water pipe, which passes through the hole in the center of the glass shelf and which is attached to the main pipe in the basement. Put a rubber washer on the glass shelf to make it water tight. The water flow is regulated by the water stop and the surplus is carried off through the waste pipe.

Make a skeleton pulley D with a piece of colored glass in each of its openings. Use red, green, yellow and blue glass and fasten it in position with tacks. Arrange this pulley so that half of it is in the center of the fountain.

Place a strong electric light with a reflector in the position shown at F, so that it sends its rays upward through the col-

ored glass and through the center cone on the water. The effect will be most beautiful. The changing of the colors can be reduced to speed by means of the reducer E. In the lower bowl lay three electric bulbs colored green, with wires made water proof, well insulated and enameled. Pond lilies and gold fish may be added and a magnificent display created.

#### METROPOLITAN WINDOW DISPLAYS.

With the advent of cold weather, druggists' show windows have in many instances been devoted to displays of cough remedies, chamols vests, chest protectors, lotions for chapped hands and face—in short, all things that appeal to sufferers from cold weather. During the past week or so there has also been the usual number of special exhibits and "drives" on special articles.

One of the large windows of Riker's Twenty-third street store was given up to a display of chamols vests and chest protectors of various styles. The background was of dark green velvet drapery thrown over a support at the rear of the window and then brought forward so as to cover the floor of the window. This formed a very pleasing color effect with the buff chamols. In the center of the window was a wax figure wearing one of the vests. The latter, however, while they had small cards containing apparently the firm's price mark, lettering or numbering, did not give to the passer-by any idea of the retail price. In the Sixth avenue window of the same store attention was called to the firm's special department on the third floor, devoted to massage, chiropody, hair dressing, manicuring, scalp and electric treatment. A placard read: "The manners of the home are found in this department." The display consisted of wax figures or heads with the hair dressed in pompadour style. The firm's charge for pompadour hair dressing was announced as about one-half the usual price charged elsewhere. The display was evidently intended to attract the notice of the numerous women shoppers in that district.

A very handsome color scheme was that seen in a window of the same store. The article featured was Tokay wine. Purple was the predominating color. The window was filled with bottles of the wine, the purple color of the wine showing through the bottles and being heightened by bunches of artificial grapes neatly arranged. The bottles were capped with purple tin foil. The center of the window contained a wooden wine keg, on top of which were bunches of grapes. The background of the window was a mirror tastefully draped with white satin against which were more clusters of grapes. The floor covering of the window was of green velvet, which harmonized well with the purple and white. A card said: "Very fine medicinal Tokay wine, 20 years old; while they last, \$1.00." The other windows of this store displayed lotions, toilet preparations, perfumery, Rexall goods, etc.

One of Kallish's windows in the store at Madison avenue and Twenty-third street contained an exhibit of "De Miracle," a preparation used for removing superfluous hair. The window conveyed the idea of a lady's boudoir. In one corner was a handsome dressing table of bird's eye maple, with the usual manicure utensils, hair brush, comb, etc., while in the opposite corner was a full size wax figure of a lady in a dressing gown in the act of applying the preparation. On the floor of the window were arranged bottles of the article, with numerous placards giving the price plainly and setting forth the meritorious qualities of the preparation. One of the Twenty-third street windows had a display of white pine syrup and white pine and tar cough remedies, the color effect being red and green wrappers. The center of the window was given up to a patent changeable advertising sign, automatic, which called attention to these and other remedies sold by Kallish.

A new health brace was the feature of the window display in Wilson's pharmacy on upper Broadway. The brace is made like a vest, with a network of lace in the back which permits the vest to be adjusted properly so as to pull the shoulders back, and at the same time allow free breathing. It is claimed to be valuable for use in cases of pulmonary affections and all troubles arising from improper breathing, narrow chest, etc.

### PROPRIETARY ASSOCIATION TAKES ACTION.

**Special Meeting Held in New York Behind Closed Doors—Members Urged to Cultivate More Friendly Relations with Retailers.**

A special call for a meeting of the Proprietary Association of America was sent out week before last and in response a goodly number of the members assembled at the Hotel Astor, New York, on Monday, December 4. Conspicuous among the fifty or sixty members who attended the first day's sitting were the representatives of firms which have been of late the target of attacks by special writers in magazines and newspapers, and this gave rise to the impression that attention was to be paid chiefly to means of offence, defence and rehabilitation. There was talk of disciplining members who had brought odium upon the association in consequence of exposures of their manufacturing methods, or of the fact that their products had been branded as whiskies by the Internal Revenue Department of the Federal Government, but little came of this, beyond a lecture by Attorney Douglass, of the association, who counselled the members to be more conservative in their advertising utterances and to see to it that the proportion of alcohol in their manufactures be lowered. He insisted, too, upon the necessity of manufacturers establishing closer and more friendly relations with the retail druggists of the country, whose local influence seemed to him to be of extreme importance to the well being of proprietary interests.

The gravity of the situation was reflected in the attitude of the principal members, who showed a hesitancy about discussing the business of the meeting with the representatives of the pharmaceutical press which looked like real fear. The meeting was held behind closed doors and reporters or members of the trade connected with the pharmaceutical press were rigidly excluded.

No programme of the meeting was available, and although the notice of the meeting, issued in the form of a call for a special meeting, stated as its object the discussion of matters of vital importance to the members, the association had not sat long before S. R. Beardsley, the Chairman of the Press Committee, took pains to remove the impression from the minds of the reporters that it was a "specially called meeting." He explained that it was the regular semi-annual gathering at which routine business only would be transacted.

#### THE FIRST DAY'S SITTING

was devoted principally to the drafting of resolutions bearing upon the attitude of the association toward questions connected with the manufacture and sale of the proprietary medicines which had been the subject of attack in the newspaper and magazine press. George L. Douglass, counsel to the association, made a long address to the members in which he endeavored to impress upon them the necessity of action in view of what he characterized as the present critical condition of affairs in the proprietary world. He reviewed some newspaper statistics regarding cases of death due to the misuse of proprietary medicines, particularly with regard to preparations containing narcotics, cocaine, etc., by which it was demonstrated that the deaths from carbolic acid poisoning far outnumbered those from any other poison. It was pointed out that out of the large number of proprietary medicines which are represented by the enemies of such compounds to be poisonous in their nature only six cases were reported, of which only five terminated fatally.

#### AT THE SECOND DAY'S SITTING

the resolutions drafted at the previous day's sitting were presented for adoption and passed. A. R. Beardsley, Chairman of the Press Committee, made several ineffectual efforts to get the association to authorize him to draw up for the use of the pharmaceutical press an official account of the transactions. Notwithstanding the fact that he was supported by several influential members who pointed out the wisdom of making the retail trade acquainted with the action taken by the association at this meeting, every time Mr. Beardsley pressed his motion it was sidetracked, and seeing that he was in danger

of getting himself generally disliked by persistency in pressing an unwelcome motion, he desisted.

#### RESOLUTIONS ADOPTED.

Through the courtesy of J. W. Kennedy, Chairman of the Committee on Legislation, we are enabled to print below the resolutions adopted:

*Resolved*, That this association thoroughly disapproves of any effort on the part of any person or firms, members of this association or not, to market as medicines any articles which are intended to be used as alcoholic beverages or in which the medication is insufficient to bring the preparation properly within the category of legitimate medicines.

*Resolved*, That the Legislative Committee be and is hereby instructed to earnestly advocate legislation which shall prevent the use of alcohol in proprietary medicines for internal use in excess of the amount necessary as a solvent and preservative.

*Resolved*, That the Legislative Committee be also instructed to continue its efforts in behalf of legislation for the strictest regulation of the sale of cocaine and other narcotics and poisons or medicinal preparations containing the same.

*Resolved*, That this association urges upon its members the most careful scrutiny of the character of their advertising and of claims for the efficacy of their various prescriptions, avoiding all over statements.

It was learned that two firms occupying a high position in the proprietary manufacturing field who had become dissatisfied with the policy of the association in the recent past had tendered their resignations, and one firm in membership, a Western concern, which had been denied the use of the mails by the postal authorities, had been asked to resign. The firms which resigned voluntarily are understood to be Fairchild Bros. & Foster, New York, and the Mellen's Food Company, Boston.

### LODER WINS HIS SUIT.

**Damages Awarded of \$20,738—Motion for a New Trial Made Promptly—Exceptions Taken to the Rulings by Both Sides—Appeal Will Be Taken to the Higher Court.**

(From our Regular Correspondent.)

Philadelphia, December 4.—On November 25 the jury in the case of C. G. A. Loder against the Philadelphia Retail Druggists' Association *et al* returned a verdict in favor of the plaintiff for \$20,738. If this verdict stands it means that Mr. Loder will ultimately recover under the Sherman act \$62,214, or three times the actual damages awarded by the jury.

The case was tried before Judge James B. Holland, in the United States Circuit Court of the Eastern District of Pennsylvania.

Following is the list of defendants against whom the verdict was rendered.

Ashenbach & Miller, Shoemaker & Bush, Robert Shoemaker & Co., the Smith, Kline & French Company, Valentine H. Smith & Co., Henry K. Wampole & Co., Hance Brothers & White, the H. K. Mulford Company, W. R. Warner & Co., Thomas H. Potts, William L. Cliffe, William E. Lee, David J. Reese, George W. Fehr, Carl W. Shull, Nathan A. Cozens, Augustus T. Pollard, Henry C. Blair, William H. Gano, Alexander H. Frankeberger, Charles Leedom, Richard H. Lackey, Henry A. Nolte, Walter A. Rumsey, James C. Perry, E. C. Bottume, Warren H. Poley, Henry A. Borell and Charles A. Eckels.

In the case of D. W. Jayne & Co. and J. W. Campion & Co., Judge Holland instructed the jury that they were not to be considered as defendants, inasmuch as no evidence had been presented connecting either firm with any combination that there might have been.

#### A MOTION FOR A NEW TRIAL.

On December 1 twelve reasons in support of a new trial were filed in the United States Circuit Court by John G. Johnson, counsel for the defendants.

#### THE CHARGE OF THE COURT.

Judge Holland, in charging the jury, reviewed the history

of the case, which is already familiar to our readers, a full summary of the testimony having appeared in our last issue. The suit was brought under the Sherman act, which became a law on July 2, 1890. The provisions of the act which are concerned in this case are as follows:

Section 1. Every contract, combination in the form of trust or otherwise, or conspiracy in restraint of trade, or commerce among the several States or with foreign nations, is hereby declared to be illegal. Every person who shall make any such contract or engage in such combination or conspiracy shall be deemed guilty of a misdemeanor, and on conviction thereof shall be punished by fine not exceeding \$5,000 or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the court.

Section 2. Every person who shall monopolize or attempt to monopolize or combine or conspire with any other person or persons, to monopolize any part of the trade or commerce among the several States or with foreign nations shall be deemed guilty of a misdemeanor, and on conviction thereof shall be punished by fine not exceeding one year, or by both said punishments, in the discretion of the court.

Section 7. Any person who shall be injured in his business or property by any other person or corporation by reason of anything forbidden or declared to be unlawful by this act may sue therefor in any Circuit Court of the United States in the district in which the defendant resides or is found, without respect to the amount in controversy, and shall recover threefold the damages by him sustained and the costs of suit, including a reasonable attorney's fee.

The judge pointed out that the first question for the jury to consider in this case was whether or not the defendants, or any of them, were at the time of the institution of this suit, and prior thereto, engaged or took part in a contract, combination or conspiracy for the purpose of monopolizing, or attempting to monopolize, trade or commerce among the several States, or in restraint of such trade or commerce.

The second question was, if these defendants, or any of them, were so engaged, did it result to the injury of the plaintiff in this case, and if so to what extent?

It was claimed by the plaintiff that the three associations, parties to the suit—namely, the National Wholesale Druggists' Association, the National Association of Retail Druggists and the Proprietary Association of America—had unlawfully combined to arbitrarily fix and regulate the price of proprietary remedies. It is claimed and evidence was offered to prove that retailers who failed to adhere to certain schedules of prices were disciplined and that manufacturers and wholesalers who dealt with such retailers were in their turn disciplined by the combined action of the three associations.

#### THE RIGHTS OF PROPRIETORS.

In reference to the rights of proprietors to fix prices on their products Judge Holland said:

It is true, as claimed by the defendants, that any proprietor of a patent medicine, or goods such as those involved in this suit, has a right to sell his goods or refuse to sell them to whomsoever he may see fit, and he may lawfully say who shall handle his goods at wholesale, and upon what conditions the wholesaler may dispose of them to the retailer, and prescribe the conditions upon which the retailer shall sell them to the consumer, and in case of any violation of his agreement by either the wholesaler or retailer the proprietor has a lawful right to refuse to sell his goods in the future to either. And so the wholesaler has the lawful right to purchase, or refuse to purchase, goods from a proprietor, or to sell, or refuse to sell to a retailer, and the wholesaler or proprietor has a lawful right to refuse to sell to a retailer who he finds is cutting the prices below what either of them contracted with the retailer to sell the goods at. So also has the retailer the right to fix for himself a schedule of minimum prices, as high as he may choose, at which he will sell his drugs at retail, and he may lawfully refuse to sell the same for any less. He may also lawfully refuse to purchase any goods, proprietary or otherwise, from a proprietor or wholesaler who offends him in their manner of dealing with his competitors, or for any other reason that concerns himself. Any or all of these dealers in this class of goods throughout the United States have a right to join and belong to the various associations to which they belong in order to raise the standard of efficiency and honesty in the transaction of this kind of commerce. But while the members of these associations have a right to transact their business as they may deem best for the promotion of their own interests, and join such an association as will aid them in that business legitimately conducted, they have no right, either by express written agreement or by concerted action to say to any other person engaged in the retail drug business that you must sell to the consumer at a certain figure agreed upon by a consensus of opinion by the druggists of your locality, and if you do not you will be placed upon the aggressive cutters' list, and so far as able we will prevent you from purchasing goods from the wholesalers and proprietors throughout the United States; and to say to a wholesaler or proprietor that unless you cease selling to an aggressive cutter, who has refused to comply with our demands to sell his goods to the consumer at a minimum price list fixed by the consensus of opinion in the locality in which he sells, we will refuse in the future to purchase any goods from you until you comply with our demands. In other words, any individual engaged in the drug business may buy from and sell to whom he pleases, and to refuse to buy or sell or in any manner have commercial intercourse with any other dealer in the drug trade that he may refuse to deal with. He may join one or all of the associations mentioned in this suit, and he may himself reason with his customers as to the best method of doing a profitable business, and act as he may see fit after such discussion, but he cannot combine with others in the drug trade for the purpose of adopting a plan by which other members engaged in this business are coerced and compelled to conduct their business on principles contrary to their free and untrammelled selection.

#### THE CHARGE PROPOSED BY THE DEFENSE.

The defendants asked the Judge to instruct the jury as follows:

(1) It is your duty to find the facts, and you must give a verdict in favor of the defendants if you find that there was no agreement or combination between them other than what is embodied in the following statement: "If there were three organizations, one, unincorporated, known as the Proprietary Association of America, composed principally of persons who manufactured medicine and other articles, under secret prescriptions, or who sold products manufactured by them respectively under respective trade names and trademarks; another, also unincorporated, known as the National Wholesale Druggists' Association, composed of wholesale dealers of such articles, who bought from the manufacturers thereof and who sold at retail; and the third, a corporation known as the National Association of Retail Druggists, composed of local organizations of retail druggists, some incorporated, and others unincorporated. If the Proprietary Association, neither under its charter or by-law or by virtue of any agreement or arrangement, undertook to fix or did fix, maintain or regulate the prices of goods manufactured by its different members or the terms of their contracts, or obliged them to fix, maintain or regulate prices or terms of contract, and if each member, despite the Association, was at liberty without violating any agreement or understanding, to fix and regulate his own prices, terms of sale and contracts. If each member of the Proprietary Association did fix his own prices and terms of sale and contracts without any agreement with or compulsion by his associates or his association. If members of said Proprietary Association, each acting for himself, sold his manufactured product under what is known as the tripartite plan or contract, which contract provided that no wholesale dealer should sell his goods to an aggressive cutter, or at less than the price designated in such contract. If there had been a resolution of the National Association of Retail Druggists requesting the manufacturers of pharmaceutical and other preparations, other than proprietary preparations, not to sell any of their manufactured products to aggressive cutters without any action thereon by the Proprietary Association and without any other action thereon by the National Wholesale Druggists' Association, saving that embodied in the resolution alleged to have been passed to that effect on September 10, 1908, at Boston.

If there was thereafter an agreement, each acting for himself, by some of the manufacturers of such pharmaceutical preparations not to sell to aggressive cutters, which agreement was made at the request of the National Retail and of the National Wholesale Druggists' Associations. If there was an individual expression by each wholesaler, given at the request of the National Association of Retail Druggists, and of their local associations, to the effect that his policy would be not to sell any of his goods to such aggressive cutters. If after such agreement by manufacturers of pharmaceutical preparations and such expression of opinion by wholesalers the manufacturers so agreeing and the wholesaler so expressing himself, refused to sell, in the one case, his manufactured product, and in the other, goods, to such aggressive cutter. If neither this agreement nor this expression of opinion was the result of any resolution, agreement or arrangement by either the Proprietary Association of America or by the National Wholesale Druggists' Association. If the action of the wholesaler resulted from his desire to secure the custom and business goodwill of said retailers' association and retailers, and if the purpose of the retail association and of the retailers was to prevent their competitor, the aggressive cutter, from obtaining his goods and underselling them. If the Wholesale Druggists' Association, the National Association of Retail Druggists, and the Philadelphia Association of Retail Druggists, one or all acting upon the desire and with the intent to further their respective business interests, requested each of the various manufacturers of proprietary medicines manufactured under trade secrets to enter into a contract in the form of that known as the tripartite contract for the sale of his manufactured products, and because of his business judgment, and if each proprietor acceded to the request individually, not as a member of the association, and individually adopted such form of contract. If the National Wholesale Druggists' Association, the National Association of Retail Druggists and the local associations give information to each proprietor from time to time of violations of said tripartite contract, and if plaintiff was put upon the aggressive cutters' lists because he was an aggressive cutter, as the result of information received by the National Wholesale Druggists' Association, or the National Association of Retail Druggists, or the Philadelphia Association of Retail Druggists, and if thereafter he was refused sales by the proprietors who had entered into such tripartite contract because of his being on said list, and he was refused sales of their respective manufactured products by the various manufacturers of pharmaceutical preparations, acting individually, because he was on such list, and if he was refused sales by wholesalers of goods not sold under the tripartite plan, only for the reasons above set forth—if you find the facts as thus stated, you must find in favor of the defendants."

The Judge declined to instruct the jury as proposed above, saying: "This point is denied." It will be observed that the point in question covers the essential elements of the tripartite plan, though in affirming point No. 7 as proposed by the defense the Judge apparently contradicts himself, as will be seen by comparing the two "points." Point No. 7 as proposed by the defense follows:

(7) Your verdict must be for the defendants if you find that there was no combination or agreement between the members of the Proprietary Association of America as to the prices at which their goods were to be sold, or as to the terms upon which sales were to be made, but that each proprietor fixed his own prices and terms of sale without any agreement or combination with the other members of his association, even though you find that by schedules prepared by local associations of retail druggists minimum prices were fixed in their respective localities, less than the ordinary retail prices of each proprietor, and even though you find each proprietor was willing his medicines should be sold as low as said minimum prices, without subjecting the person selling to be considered an aggressive cutter under this tripartite contract.

As stated above this point was assented to by the Judge, though in apparent contradiction, to some portions at least, of point No. 1.

## EMASCULATION OF THE TRIPARTITE PLAN.

Point No. 8 as proposed by the defense specifically defines the tripartite plan and its method of operation. This point follows:

## DEFINITION OF THE TRIPARTITE PLAN.

If you find that all that was done by the National Wholesale Druggists' Association, and its members, in the way of an agreement not to sell to aggressive cutters, was embodied in tripartite contracts, such as those referred to hereinbefore, under which they were selling goods, and that all that was done by the wholesalers, who are defendants, was in the way of the expression by each individually of his policy, not to sell the aggressive cutters, given to retail dealers, or retail associations, and if you find that such promise was made in each case by the individual, not as a member of an association, but because the persons to whom he promised were competitors of such aggressive cutters, and because of his desire to secure their trade, which he feared might otherwise be prejudiced, your verdict must be in favor of said wholesale dealer defendant.

"This, gentlemen of the jury," said the Judge, "is true, if the tripartite contract referred to therein does not involve the requirements of the tripartite contract set forth in the Resolution of the N. W. D. A., held at Chicago, 1900. That tripartite plan is as follows":

This is the designation given to the plan that is earnestly urged and supported by both the National Wholesale Druggists' Association of the National Association of Retail Druggists. It has also been recommended to its members by the Proprietary Association of America. On pages 5, 6 and 7 is given a complete list of all the proprietors who have adopted this plan up to date. An asterisk is also placed opposite the names of such proprietors where their schedules are printed. Each of said proprietors has individually stated he will confine his sales at best prices strictly to a uniform list of jobbers, whom he has selected as his distributing agents, and that his wholesale agents must not sell his goods at any price to aggressive cutters or brokers, either directly or indirectly. The penalty prescribed by each proprietor for the violation of his terms in this or any respect is his refusal to longer supply his goods to any jobber who may be found guilty of such violation. These conditions of the proprietors make it absolutely necessary for each jobber to consult the list of cutters before filling orders, and to decline to sell tripartite goods to any party on said list, to any broker or to any one who may supply such cutters or brokers. The following are the conditions required of jobbers and retailers by the tripartite proprietors, in return for the restriction of their sales at best prices to the recognized list of jobbers:

(1) Jobbers, through their salesmen, to refrain from running down proprietary goods, and to give instructions to sell what is called for, without reference to any particular article which may happen to pay a higher profit.

(2) Jobbers to refrain from asking any further discounts than those at present allowed.

(3) Each jobber, for himself, to discontinue his nonsecret department.

(4) Jobbers to refrain from selling proprietary preparations at any price, either directly or indirectly, to aggressive cutters and brokers or to any parties supplying aggressive cutters and brokers.

(5) Retailers not to substitute when standard proprietary articles are called for, but in each case to give the customer what is asked for without argument. The aggressive cutter is defined as the dealer who is designated as such by not less than seventy-five per cent. of the local retail druggists, and the definition of the term nonsecret is a preparation made for or by a dealer to be offered when a proprietary article of like nature is called for. The list of aggressive cutters, etc., is sent to jobbers and proprietors for their information by Thomas V. Wooten, Secretary of the N. A. R. D., whose office is located at 153 La Salle Street, Chicago, Ill. The recognized list of jobbers is furnished to proprietors for their information by the chairman of the Proprietary Committee of the N. W. D. A.

"It appears," said the Judge, "that was the tripartite plan that was recommended and adopted in 1900. If that is the tripartite plan referred to in this point, it is not affirmed. If, however, the tripartite plan involves only what was later set out as to that plan and did not include the requirements that certain actions should be taken by the association and members by which information could be furnished to others, by which they could coerce others in the trade to act contrary to their own free will and accord, it [point No. 8] would be true."

## THE RIGHT OF PROPRIETORS UNEQUIVOCALLY CONCEDED.

The Judge gave his assent to the following point (No. 10) setting forth the rights of proprietors:

(10) The manufacturer of a proprietary medicine or food, manufactured under a trade secret or trademark, to which such manufacturer has given value by advertisement and personal efforts, has a right to prescribe a price of his product and to bind purchasers from him not to sell the same at a less price, or to resell to such persons as shall be by him designated. It is the duty of all purchasers of goods from such manufacturer under such circumstances to carry out his contract. The manufacturer subjects himself to no liability to persons to whom he refuses to sell, whether his reasons therefore be good or purely capricious.

In the next point (No. 11) to which the Judge assented, the statement is set forth that the manufacturer is entitled to prescribe as one of the terms of the sale to others, of his manufactured produce, that they shall not resell the goods purchased from him to persons who have aggressively cut prices of such, or similar goods, or who sell to such aggressive cut-

ters. He exposes himself to no liability for damages by reason of his thus not selling or refusing to sell to such aggressive cutters, or to such persons dealing with them. The Judge concurred in the ruling that if the wholesale dealer, believing that by selling goods to an aggressive cutter he will diminish his trade with competitors of such aggressive cutter, or that such competitors will not be interested in favoring and promoting his interests, refused to sell to aggressive cutters because thus actuated, he does not expose himself by reason thereof to any liability for damages. He also agreed to the following point:

(15) Though you find that each one of the various wholesale dealers, defendants in this case, individually because of an appeal to each, made by retail dealers, that he would agree not to sell to aggressive cutters competing with them and underselling them, did manifest his unwillingness to sell to such aggressive cutters and did so to refuse because of his desire to promote his business interest and to prevent a loss of trade, he did not, by virtue of such conduct, do anything violative of the laws of the United States or expose himself to liability to pay damages.

This is true.

The rulings made by the Judge as to the tripartite plan differentiate between the plan as laid down in 1901 and a tripartite plan as defined by the defense, consisting simply of a plan which was simply entered into by the proprietor fixing his prices, saying to whom his goods shall be sold and at what prices, and does not involve the performance of any other duty, or connect him with any other plan for the purpose of coercing others. It was left to the jury to decide which was really the plan operated under.

Mr. Johnson, the attorney for the defense, took exception to the charge of the court generally and also in several specific details. Mr. Scott, the attorney for the prosecution, made note of an exception to the ruling of the court in striking *Campion & Co.* from the list of defendants and also some other details in the charge. In conclusion, the Judge instructed the jury to find what actual damages, if any, had been suffered by the plaintiff. The counsel for the H. K. Mulford Company took exception to the ruling of the court in refusing to instruct the jury to render a verdict for the H. K. Mulford Company.

The case then went to the jury and after two hours' deliberation a verdict was rendered awarding damages in the amount of \$20,738, as above stated.

## LOCAL RESULTS OF THE LODER SUIT.

A Wide Open Market—A Cut to a Finish—Retailers Present Their Side to the Public.

(From our Regular Correspondent.)

Philadelphia, December 5.—The Loder suit has stirred up a hornet's nest in retail drug circles in this city. Previous to the jury giving Mr. Loder a verdict of \$20,738 there were only about two retail drug cutters in this city. George B. Evans, who is the father of cut rate druggists in Philadelphia, had for some time past been working in harmony with the local retail association, but now there is a change, and it is likely that there will be cutters all over the city. It is understood that a determined effort is to be made to give Mr. Loder a dose of his own medicine, and this is to be done through the house of George B. Evans & Co. This house is going back to its old system of selling proprietary medicines at a less price than any other drug store in the city. It is well known that Mr. Evans has the financial backing as well as the facilities to undersell any other druggist in this city. It is estimated that Mr. Evans can sell patent medicines at 25 per cent. below their cost and be a big winner at the end.

## MORE SUITS MAY FOLLOW.

It is said that more suits are to follow this of Mr. Loder's, and he will bring another suit claiming damages from the time the former suit was brought until the verdict was rendered. There is also a rumor that Jacob Brothers, who have a drug store on Chestnut street above Tenth, will take similar steps to those adopted by Mr. Loder.

## ALL RESTRICTIONS REMOVED.

There is no trouble experienced by the retailers at this time in getting all the drugs and proprietary articles they desire. The leading wholesale drug houses have united in a circular announcing that they are now ready to sell such goods as the druggists desire. These circulars have been sent broadcast and it is thought that it will not be long before there will be cutters all over the city. The officers of the Philadelphia Retail Drug Association have been given instructions how to go about their work without infringing the law. Many of the wholesale druggists, as well as some of the leading retailers, censure the officers of the association for the manner in which they conducted the boycott against such houses as would not agree to live up to the prices set by the association.

## MR. LODER'S GOLD IS GOOD.

Shortly after the rendering of the verdict in the Loder suit Mr. Loder, accompanied by his attorney and a large bag containing gold five and ten dollar pieces, visited several of the wholesale houses and gave orders for goods. In all cases he met with no opposition, and such articles as the druggists had he was supplied with, he paying for the same in gold. Mr. Loder stated that he had letters from the manufacturers of proprietary articles stating that they were willing to supply him with goods. The head of one large wholesale house said: "You bring those letters and then we will write to the manufacturers and find out what their views are in regard to selling their goods to you. Then we will act accordingly."

## THE RETAILERS' POINT OF VIEW.

Thomas H. Potts, president of the Philadelphia Retail Drug Association, denies that his association pursued trust methods in bringing about an agreement between the retail druggists for a change in prices of proprietary medicines. He issued a statement under authority from the association which was submitted at the regular monthly meeting of the association on December 1. There was much indignation expressed over the fact that the Philadelphia retailers were represented as being parties to the drug trust. It is in denial of such assertion that President Potts was authorized to issue an open letter, which reads as follows:

The Philadelphia retail druggists have been grossly misrepresented in the reports of the Loder case. Our Retail Druggists' Association is no trust. If there is a trust, it is a trust of the aggressive cutters, who are endeavoring to monopolize the drug business of the city by driving members of the retailers' association out of business. The fact is that the city is saved from a monopolistic cutters' trust only by the united stand of independent retailers.

## TO FIGHT SUBSTITUTION.

The true relative merits of our business methods and of the methods of the aggressive cutters can best be shown by the way in which each handles the proprietary remedies around which the Loder case was built. The expenses of a retail druggist are 20 per cent of his gross receipts. With less than 20 per cent profit a retailer can carry no goods without loss unless he resorts to substitution. One of the main objects of our retailers' association is to eliminate trade abuses, and one of the main trade abuses we fight is substitution. Substitution can only be fought by maintaining business principles based on honest, equitable profits. Therefore members of our retailers' association, pledged to a square deal without substitution, are carrying the proprietary remedies at prices meeting their expenses, and they continue this profitless part of their business only for the accommodation of the public in the same way as they carry stamps and telephone calls.

## THE ROLE OF THE CUTTER.

The aggressive cutter, on the other hand, carries proprietary remedies at a loss only for advertisement. But when a customer calls for the advertised article the cutter invariably persuades the customer to take a substitute at 50 cents instead of the proprietary article selling cut rate at 60 cents, and therein lies the art of cutting, because the cutter makes a greater profit on his substitute at 50 cents than he would if he sold the proprietary article at 75 cents instead of 60 cents as he advertises it. And here, too, lies the injustice of the matter, because the proprietary article is widely advertised by the

proprietor at no expense to the cutter, who, through the popularity of the proprietary article, attracts customers for his own substitute.

Mr. Loder has used demoralizing cut prices as an advertisement for his own products.

All cutters thereby increase their business unjustly at the expense of the remedy proprietors, at the expense of the public and at the expense of other retailers, who are unjustly represented as robbers because they maintain prices that enable them to avoid the abuse of substitution and barely save them from actual loss in accommodating the public.

## NEW YORK RETAILERS IN AN ANGRY MOOD.

## N. A. R. D. Movement at a Standstill Here—Jobbers Blamed and Proprietors Warned—Review of the Situation.

What is admitted to be a very critical situation has developed in connection with the movement for price regulation inaugurated by the Metropolitan Association of Retail Druggists, under the auspices of the N. A. R. D., in this city, and it is no exaggeration to say that the movement is practically at a standstill, with no likelihood of further progress until the present difficulties are adjusted. Responsibility for this unwelcome and unexpected state of affairs is openly laid at the door of the jobbers, and the primary cause of the trouble is the so-called jobbers' agreement which took effect on November 1, whereby discounts to retailers were abolished or reduced. When that agreement or understanding was announced it was made to appear as a move on the part of wholesalers to stop irregularities in the matter of discounts, excessive rebates, etc., and to put all retail interests on an equal footing in this respect. It is now charged that the agreement is nothing more or less than an attempt by jobbers to check, if not upset, the Direct Contract Serial Numbering Plan, and to revive the old tripartite plan, which was abandoned by the N. A. R. D. some time ago, but which, it is claimed, still appeals more favorably to wholesale interests than does the direct contract plan, notwithstanding their formal and professed allegiance to the latter, to say nothing of the decision in the Loder suit, which it is admitted bears heavily on the tripartite agreement. Furthermore, M. A. R. D. interests assert that the real policy of the N. A. R. D. has been misrepresented by certain interests representing the National Wholesale Druggists' Association for the purpose of winning proprietors' support to the obsolete tripartite agreement. The old controversy over the status of co-operative buying clubs among retailers, which was supposed to have been settled, has again come to life, and to down such clubs or curb their operations is declared to be one of the motives back of the jobbers' movement.

## DISCUSSED AT THE METROPOLITAN MEETING.

This whole situation was freely discussed at a rather stormy session of the General Committee of the M. A. R. D., held last Monday afternoon at Allaire's, Third avenue and Eighteenth street. The meeting was well attended and the Peruna, Piso and Bromo-Laxative Quinine representatives were in attendance. The meeting was held in executive session, but enough has been learned from reliable sources to warrant the statement that great dissatisfaction exists in the ranks of the M. A. R. D. and that only prompt and decisive action by the Executive Committee of the National Association of Retail Druggists will relieve the situation here. The whole movement in this city and section, according to prominent representatives of the M. A. R. D., has suffered greatly because of this trouble. Within the past week or so the two organizers employed by the local association have been able to collect but a trifling sum. As a result of the disclosures made at last Monday's meeting the secretary was instructed to place the whole situation clearly before the National Executive Committee of the N. A. R. D., with the request that that body immediately and in a way that cannot be misunderstood define the attitude of the National Association in this matter and the policy that it intends to pursue.

The issue is thus sharply defined between the jobbers on the one hand and the N. A. R. D. on the other. The National

Executive Committee's reply is most anxiously awaited by officials and other members of the M. A. R. D., for upon that reply depends in a very large measure the future of the local branch of the national organization.

#### DEMORALIZATION CAUSED BY JOBBERS.

A well-known representative of the M. A. R. D., who attended Monday's meeting and took part in its deliberations, discussed the situation freely with a representative of the AMERICAN DRUGGIST. It is quite evident that the session was a lively one and that those who are responsible for present conditions were dealt with unsparingly. He said: "Owing to the nature of the matters we were obliged unfortunately to consider, there was a very free and somewhat heated discussion. The reports from the chairmen of the various districts were not satisfactory; the progress made recently has been slow, due probably to the fact that considerable old stock is still in the hands of the large dealers. Violations, however, are gradually being run down and the agents who have been caught violating their contracts have had their contracts canceled by the manufacturers who have been co-operating with us. The Peruna Company now has several cases pending against cutters, principally department stores, and the Piso and Bromo-Laxative people are also active. It takes time to run down all violations, but we were making progress along lines that would have brought us to success ultimately, when the jobbers, by their agreement of November 1, utterly demoralized the situation here and seriously impaired the strength of the M. A. R. D. to the extent of causing much dissatisfaction among retailers who have joined the direct contract movement and of weakening their faith and confidence in the same.

"Retailers who joined the M. A. R. D. and paid their money to help bring about better conditions on proprietary medicines did so in the belief and on representations that better prices would be secured by the adoption and enforcement of the Direct Contract Serial Numbering Plan. Just as this system was getting a good foothold here in New York the jobbers got together and abolished the discounts that retailers had been receiving. The increased profits resulting from the direct contract system do not offset the loss in discounts. Furthermore, the jobbers, while squeezing the average retailer on rebate goods, at the same time are granting concessions to the big cutters.

#### AGAIN THE QUESTION OF BUYING CLUBS.

"The retailers' buying clubs are still a thorn in the side of the wholesalers, and it is a part of their movement to prevail upon proprietors not to recognize such concerns or to sell to them direct—in other words, the jobbers are assuming the right to dictate whether any other interests besides themselves shall carry on a wholesale business. Such a position is obviously untenable.

#### RESTIVE RETAILERS.

"Under present conditions retail druggists in this city who are supporting the M. A. R. D. movement are practically paying for the privilege of not only being 'done' by the jobbers, but of seeing the big cutters enjoy concessions that they themselves cannot get. So far as the proprietors are concerned, I believe it behooves them to look after the interests of retailers. They ought to know by this time that the Direct Contract Serial Numbering Plan is the only plan that will bring about the results desired, and that it is the only plan that has stood the tests of the courts. The proprietors should also bear in mind these facts: It has been fully demonstrated that the direct contract system is practicable; it can be and is being enforced. Retailers are prepared to co-operate with the proprietors in this plan and have proven that they are ready for it by the large number of contracts they have signed. They believe thoroughly in the efficacy of that plan, and even the big cutters who are prominently identified with the newly formed American Druggists' Syndicate have formally indorsed it, for all the goods of that syndicate will be marketed under a form of the direct contract and serial numbering system. These goods will be similar to 'patents' now on the market, and if the proprietors do not do the square thing with retailers in standing by them in this crisis it would not be surprising to

see retailers take hold of the new remedies at the expense of the old line patents. It would be well for proprietors to give this phase of the situation serious thought.

"Just what the outcome of this crisis will be is hard to predict. Certainly some action must be taken at once by the National Executive Committee to correct the misrepresentations made by a representative of the N. W. D. A. with regard to the old tripartite agreement."

#### ONE BUYING CLUB ON THE CUT-OFF LIST AND OTHERS TO JOIN IT.

It developed at the meeting that the Brooklyn Consolidated Drug Company has been put on the cut-off list on some goods, and that similar efforts are being made against the Philadelphia and Washington buying clubs.

#### STATEMENTS BY MANUFACTURERS.

Communications from the Peruna, Piso and Paris medicine companies were read by Secretary Swann, which, in substance, showed that violations were gradually but successfully being run down.

Lee M. Evans, the Peruna representative, said in speaking of department stores that this company now refuses to sell to any but signers of the contract; the company's early policy toward department stores was admitted to be a mistake, which the company was now trying to rectify; the Peruna company now has five or six suits pending against department stores. Both W. A. Talbott, president of the Piso Company, and Mr. Clarke, of the Paris Medicine Company, gave assurance of their firm's sincerity and determination to prosecute all violations of their contracts.

#### CANADIAN NEWS NOTES.

(From our Regular Correspondent.)

Toronto, December 5.—The semiannual meeting of the Ontario College of Pharmacy opened yesterday at the college in this city. The principal question under discussion is the proposal to enlarge the present college building or to sell the site and erect a new building in or near the Queen's Park. It is altogether likely that the proposition will be negatived, as the special committee to whom the question was referred at the last meeting have reported against any action at present, on the ground that the necessity for increased accommodation on account of overcrowding no longer exists. There has been a considerable falling off in the number of pharmacy students, owing to the raising of the matriculation standard.

The Canadian Government is considering the advisability of taking action in regard to patent medicines containing a large proportion of alcohol similar to that adopted by the Internal Revenue Department of the United States. It is probable that some steps will be adopted so as to impose a tax on such medicines such as is now levied on spirits.

A meeting of the members of the new wholesale drug merger will be held at Montreal on the 7th inst., when they will elect officials and settle many details of their policy. Another large wholesale drug company has applied for a charter of incorporation, in connection with which the names of several prominent Montreal men are mentioned.

R. T. Shillington & Co., druggists, Ottawa, have sold out to Allen & Cochrane.

W. H. French, of Wolsely, Sask., has disposed of his drug business to H. H. Mitchell.

Damase Jolicœur, druggist, of Quebec, died recently.

#### Druggists as Bankers.

The Bank of America, which was opened for business December 4, is distinguished by numbering a strong drug delegation among its directors. Among the members of the board are: J. V. Pierce, who for the past 20 years was in the credit department of Fuller & Fuller; C. F. Sorrow, who in former years conducted a retail drug store; L. A. Becker, founder and head of the L. A. Becker Company, maker of the Twentieth Century soda fountains, and Alex. Harris, who has been long identified with the firm of Johnson & Johnson.

The new bank is launched under the most favorable auspices and will no doubt soon take rank among the leading moneyed institutions of the Windy City by the inland sea.

### Obituary.

Charles C. Goodwin, of the Eastern Drug Company, died at his home in Lexington, Mass., November 27. He had been ill for some time, but the end came unexpectedly. Mr. Goodwin was born in Lowell in 1839. At the age of ten he moved to Charlestown and shortly after to Lexington. His father was George C. Goodwin, the founder of the firm of George C. Goodwin & Co., for many years located in Hanover street.

Charles C. Goodwin was graduated at the Lexington High School and entered his father's store when 18 years old. He became the head of the firm upon the death of his father in 1869, and continued to carry on the business until the formation of the Eastern Drug Company in 1900, of which his house was a constituent part. He was made president of the new concern and held that office at the time of his death. He was also vice-president of the N. W. D. A. He was a member of the Boston Druggists' Association and at one time its treasurer. Resolutions upon his death were adopted at the November meeting of this organization. Mr. Goodwin was a member of Simon W. Robinson Lodge, F. and A. M., Menotomy Royal Arch Chapter, and De Molay Commandery, Knights Templar. He was also a member of the Ancient and Honorable Artillery Company. He was interested in musical matters, being a member of the Old Boylston Singing Club and of the Beethoven Orchestra, of Lexington. He was very prominently identified with the work of the Hancock Congregational Church, of Lexington, from its organization. He sang in the choir. Mr. Goodwin married, October, 1862, Alice Dodge Phelps, of Lex-

CHARLES C. GOODWIN.

ington, who survives him, together with three children. The funeral was held at Lexington on November 29 and was largely attended by druggists from Boston.

LUTHER F. STEVENS, PH.G.

Luther Fuller Stevens, who died at his home in Brooklyn, N. Y., on Friday, December 1, was born on July 12, 1846, in Elbridge, Onondaga County, N. Y., and was thus in his fifty-ninth year. He commenced drug store life when 20 years old with the late F. T. Whiting, of Great Barrington, Mass., in 1866, having taken the academy course then given by the State of New York in technics, chemistry and engineering, with two winters at Cooper Union night classes. For years Mr. Stevens had been a prominent figure in the pharmaceutical affairs of the metropolitan district, maintaining his residence in Brooklyn. He was one of the active workers on the original committee for the drafting of the National Formulary, having represented the New York State Pharmaceutical Association for two years in that body. He was one of those who assisted Professor Bedford in organizing the State Pharmaceutical Association, and was one of the organizers of the preliminary work by the Kings County Pharmaceutical Society in its yearly lectures, which led to the establishment of the Brooklyn College of Pharmacy. He was the author of many excellent contributions to pharmaceutical literature. The deceased possessed a good knowledge of mining engineering and was, perhaps, the first white discoverer of the Venezuelan gold mines which have caused so many international difficulties. In 1868 he went to Venezuela with his father and followed up the Indians who brought nuggets of gold from the secret mines in the mountains, and in that way located them. Notwithstanding his important discovery, Mr. Stevens did not realize a fortune on it. He returned to Brooklyn and engaged in business at Court street and Atlantic avenue. Mr. Stevens was unmarried. Services were held at 195 Halsey street, Brooklyn, on Sunday, December 3, and were attended by a representative of the Kings County Pharmaceutical Society, which sent a floral wreath.

JOHN T. FRENCH.

John T. French, M.D., died at Winchester, Massachusetts, on November 18. He was born in Lowell 44 years ago. For many years he represented Gilman Bros. on the road and he had a wide circle of acquaintances in the drug trade. He was a lecturer in the medical school of Tufts College. About seven years ago Dr. French located in Winchester, where he later became a member of the Board of Health. He is survived by a widow.

#### DIED.

BOND.—In Denver, Col., last month, Stephen Bond.

CORCORAN.—In Fort Wayne, Ind., on Sunday, November 26, Owen Corcoran, in the fifty-first year of his age.

EDGAR.—In Hot Springs, Ark., on Sunday, November 26, William H. Edgar, in the forty-first year of his age.

**EICHRODT.**—In New York City, on Monday, November 20, Charles Eichrodt.

**GOODWIN.**—In Lexington, Mass., on Tuesday, November 28, Charles Clinton Goodwin, in the sixty-eighth year of his age.

**HUBBARD.**—In Syracuse, N. Y., on Wednesday, November 22, Charles Hubbard, in the sixty-seventh year of his age.

**PRISON.**—In Lock Haven, Pa., on Saturday, December 2, Adolph Prieson, in the seventy-fourth year of his age.

**STEVENS.**—In Brooklyn, N. Y., on Friday, December 1, Luther Fuller Stevens, in the fifty-ninth year of his age.

**WATT.**—In Chicago, Ill., last month, Edward G. Watt.

**ZEIGLER.**—In Chester, Pa., on Wednesday, November 28, Henry Zeigler, in the forty-fifth year of his age.

### Greater New York News.

The seventy-sixth session of the New York College of Pharmacy will open on October 3.

R. S. Johnston, Western representative of Merck & Co., sailed with Mrs. Johnston for Naples on the Fuerst Bismarck on December 5.

About the first of the new year the Powers-Weightman-Rosengarten Company expects to move into its new quarters on Front street, near Maiden Lane.

Richard Hillier has again become identified with the local drug trade, having opened offices at 165 Pearl street. He will make a specialty of domestic crude drugs.

J. S. Schnelder, of Fitzsimmons, Gleeson & Co., of this city, has gone on a month's pleasure trip through the West. He expects to visit the Coast before returning.

President S. A. Goldschmidt, of the Columbia Chemical Works, sailed recently on the Kaiser Wilhelm der Grosse for Europe. He expects to return about January 1.

William H. Nichols, president of the General Chemical Company, is one of the directors of the Columbia Trust Company, which has just been organized in this city with a capital of \$1,000,000.

Among recent visitors to the local drug trade were W. H. Bradford, of Washington, D. C.; Henry Taylor, of Toledo, Ohio; W. H. Zottman, of W. H. Zottman & Co., Burlington, Vt., and J. W. Robertson, of Galetton, Pa.

After a few weeks' stay in this city, Mr. Spurway, of Spurway & Co., Cannes, France, sailed for Europe recently. While here he made his headquarters with Magnus & Lauer, the American representatives of Spurway & Co.

An open meeting was held last Wednesday evening by the Greater New York Drug Clerks' Association at 67 St. Mark's place, Manhattan. An interesting feature of the meeting was an address on "Organization," by William C. Anderson, of Brooklyn.

At the series played on Monday evening, November 20, the Parke, Davis & Co. bowlers won both games, as did also the Dodge & Olcott team. The Whittall-Tatum and Colgate teams each won and lost a game. The Merck and Lanman & Kemp bowlers sustained double defeats. The highest score of the evening, 241, was made by Mr. Carr, of Parke, Davis & Co.

Charles E. Sholes, of the Charles E. Sholes Company, was in Georgetown, S. C., last week superintending final arrangements for the opening of the works of the Georgetown Chemical Company. The company will make turpentine, rosin, pine oils and solvents, etc., and its entire output will be sold by the Sholes Company, of this city.

The headquarters of the Faulhaber Chemical Company, manufacturer of a metal polish at 203 West Broadway, has been closed by the Sheriff on an execution in favor of G. W. Curtis for \$875 on two notes and services rendered by an employee. The company was incorporated on May 28, 1903, with a capital stock of \$10,000.

Brent Good, the proprietor of Carter's Little Liver Pills, underwent an operation for cataract on the right eye at the New

York Eye and Ear Hospital last week, and his many friends in the trade will be glad to know that the operation was a success, though it will be some time after Christmas before Mr. Good will be able to put in an appearance at his office.

The meeting of the New York Drug Clerks' Association at Terrace Garden, Wednesday night, September 13, was well attended. The time was entirely devoted to listening to speeches by labor leaders who urged the drug clerks to form a union. Chairman Nisselson presided. Among the speakers were Charles Oberwager, ex-president of the Central Federated Union; Michael Eastman and William Karlin.

The warehouse of the Mallinckrodt Chemical Works in this city was looted recently of some \$2,500 worth of chemicals, consisting principally of iodide of potassium, iodoform, cocaine, powdered opium and codeine. Joseph A. Hogan, elevator man at the warehouse, was charged with having committed the thefts. He was arrested, and admitted that he was prompted to the acts by two men who offered to pay him a good price for the goods, which they claimed they could easily dispose of. Some of the stolen merchandise was recovered. A quantity of goods bearing the labels of Lehn & Fink, Charles Pfizer & Co. and the Powers-Weightman-Rosengarten Company, it is said, was found among the Mallinckrodt goods.

Most of the time at the last meeting of the New York Retail Druggists' Association was taken up with criticism of the work of organizing the local retail drug trade. Much dissatisfaction was expressed. The Executive Committee reported plans for the administration of the relief fund recently provided by the association, and a final report on the matter is expected soon. The committee, it was announced, will make further efforts to stop the giving away of souvenirs, which is still practiced by some druggists. Peter Diamond was made chairman of a committee of three to solicit contributions from local druggists for the Russian relief fund. It was announced by A. Babst, of the Entertainment Committee, that the annual ball will be held in Terrace Garden on March 16.

In the United States Circuit Court, Manhattan, the Keasby & Mattison Company, of Ambler, Pa., has brought suit against six prominent merchants to recover \$600,000 damages, alleging conspiracy on the part of the defendants and claiming that the latter infringed the magnesia covering patent. A suit at law charging conspiracy to infringe a patent is new to patent litigation, for usually infringements are tried in the equity side of the Circuit Court. The defendants are Jacob F. Schoellkopf, jr., of Buffalo; William S. Gray, of New York; William T. Mayer, of Albany; C. P. H. Schoellkopf, of Buffalo, and H. J. Pierce and T. Keerey, of Hancock, N. Y. Jacob Schoellkopf, jr., is a member of the Schoellkopf, Hartford & Hanna Company, of 100 William street. Lawyer E. K. Jones, of 49 Wall street, represents the complainant.

#### THE GREATER NEW YORK DRUG CLERKS' ASSOCIATION.

At the last meeting of this association the following officers were elected: President, J. Kramer; vice-president, E. Sander; treasurer, E. Sherman; financial secretary, R. Rogan; corresponding secretary, J. Elysowitz; recording secretary, D. Cohen; sergeant-at-arms, E. V. Bookstaver. The association has undertaken the establishment of a labor bureau for drug clerks, of which H. Nisselson and J. Kramer will act as agents.

#### Drug Clerks' Annual Ball December 30.

At a meeting of the Drug Clerks' Circle held Wednesday, November 22, the various committees reported that they had completed all arrangements for the grand annual ball, to be held Saturday, December 30, at Terrace Garden. The elaborate arrangements for the ball, together with the general interest it has aroused, promise to make the affair a greater success than ever before. Many men well known in the pharmaceutical profession will attend. The Drug Clerks' Journal, which is published once a year and given away at the ball as a souvenir, will this year contain numerous articles written by the members on many subjects interesting to the pharmacist and general public. The journal is being compiled by Ph. Halprin, Dr. Joseph Kahn and Wm. Karlin.

The officers of the Drug Clerks' Circle are: President, Ph. Halprin; vice-president, Wm. Karlin; treasurer, H. Harkavy; corresponding secretary, Dr. Joseph Kahn; financial secretary, S. Norman; recording secretary, D. A. Lutz; sergeant-at-arms, A. J. Kramer; trustees, J. A. Klein and M. Mishkin.

#### To Change the Name of the Drug Club.

Believing that the failure to adopt the proposed change in the name of the Drug Club of New York last year was due to some misunderstanding on the part of the members, the Board of Governors has issued a notice of a special meeting of the club, to be held in the club rooms on Tuesday, December 12, at 1.30 p.m., when the following resolution will be presented:

*Resolved*, That Article I, Section 1, of the Constitution be amended to read as follows:

This Association shall be known as  
"The Drug and Chemical Club."

*Resolved*, That the officers and directors of the club be and are hereby instructed to take the legal steps necessary to change the name of the club to "The Drug and Chemical Club."

It is the desire of the board that there shall be a full expression of the sentiment of the members regarding this question, so that whatever decision is reached will be in accord with the wishes of the majority.

#### Unlicensed Jersey Druggist Fined.

Franklyn M. Murphy, a druggist of Upper Montclair, N. J., was arraigned recently before Recorder Yost in Montclair and fined \$100 and costs on a charge of selling poisons in violation of the State Pharmacy act. Josiah Stryker, an assistant in the office of Robert N. McCarter, State Attorney-General, prosecuted the case. The State Inspector of Pharmacy produced a bottle of laudanum and a package of sugar of lead which he said were purchased in Murphy's store October 7 last. The secretary of the State Board of Pharmacy, Dr. Henry A. Jordan, testified that the defendant was not a licensed pharmacist. Murphy, through his counsel, M. J. Murphy, of Paterson, before the trial began, asked for an adjournment on the ground that important witnesses for the defence could not be present. Recorder Yost refused to grant the adjournment. Murphy put in no defence.

#### Notice of Re-registration in Illinois.

The Illinois Board of Pharmacy has issued the following circular calling attention to the fact that every druggist in the State of Illinois is required to register annually:

##### To the Registered Pharmacists of Illinois:

The Registered Pharmacist Certificate you now hold for 1905 will expire December 31, 1905, and the fee for the renewal of it for 1906 is \$1.50. It will greatly facilitate the work of issuing certificates if payment is made by January 1, 1906. Will you send in your fee early and aid us in this work? Please forward the enclosed card with your remittance and see that it is properly filled out. Give the number of your certificate. Write your name plainly. State whether you are a proprietor or an employee. If neither, please so state. If you are a proprietor, or the manager of a drug store, the proprietor of which is not a registered pharmacist, fill out the blanks on the back of the card, giving the names of your registered employees and their certificate numbers, and also the names of any unregistered employees. If you are an employee, state on the face of the card by whom you are employed, and do not write anything on the back of the card. If you do not understand how to fill out your card, write to the undersigned for further instructions.

Please do not send in your remittance without a card. If you do, it will be necessary for us to send you another card, which will delay the receipt of your certificate.

We are depending upon you to follow the above instructions.

Very truly yours,

F. C. DODDS, Secretary.

SPRINGFIELD, December 1, 1905.

Quite an interesting device was seen last week in a number of retail drug store windows in this city, notably in the Peoples' Drug Store at Ninth avenue and Twenty-third street and in the Nassau street store of Reid, Youmans & Cubit. It consisted of a pendulum clock; the hands, however, instead of revolving in the usual way went around the reverse way. A sign read: "Turn time backwards." The face of the clock bore the name of the article advertised, the letters taking the place of the familiar Roman numerals. In the center of the clock's face were two portraits, one of an old man and the other of the same man much younger. The tablets were advertised to make people "feel younger."

#### WESTERN NEW YORK.

#### Satisfactory Progress on Cut Rate Regulations—Dispensing Doctors—The Annual Meeting of the Board.

(From our Regular Correspondent.)

Buffalo, December 5.—It appears that the woman who lives in the back streets of Buffalo has not yet heard of the advance of prices down town of the preparations that have so long been sold at a cut price, for druggists still report that they get calls for articles that the customer is sure she can buy for considerably less on Main street, because she could when she bought last time. She is permitted to go her way, as it would be useless to tell her that the downtown sellers of cut-price goods have seen a light and have come to an understanding on the matter till it is now possible to make a profit on druggists' specialties in Buffalo.

#### SCHEDULE ADVANCED.

It appears that the retailers in Buffalo are quite well satisfied with the progress made so far in the matter of uniform prices. A meeting of the city Druggists' Association was held lately and a sort of horizontal advance was made in prices that had been cut down too far. It appears that everybody agreed to the higher price and is maintaining it. This is a great improvement over anything that was known to the business for the year or so past and it is very encouraging.

#### A DIFFERENTIAL RATE IN FAVOR OF THE DOWNTOWN STORES.

This does not mean that the price of everything is the same all over the city. The outside dealers are getting 2 or 3 cents more for most proprietary articles than they are sold for down town and there seems to be no complaint on account of it, for there is an advantage in each case. The outsider gets a better profit and the big store is still able to profit a little by the use of the same advertising matter, which is usually made the excuse for cutting the prices down so far. Of course there is no desire to drive the poor retail druggist, who must live on the drug trade if at all, out of business.

#### DISPENSING DOCTORS.

There is again some complaint of poor trade, though some who are dissatisfied say that they are doing better than they were a year ago, so there is some consolation in the outlook. The city is very healthy. Occasionally there is reference to the growing practice of doctors in filling their own prescriptions, but the prescription trade is pretty good for all that.

#### A PLAINT FROM BOARD MEMBERS.

Members of the State Board of Pharmacy are complaining of the law which obliges them to go to Albany on the first Monday in January for the annual meeting, even if it does happen to be New Year's Day.

#### HOW CAN THE SALE OF NARCOTICS BE STOPPED?

There is complaint over the city still of the few druggists who are catering to cocaine fiends and manufacturing new ones by selling under the law, of course, to all who ask for this poison, which seems to have taken the place of other narcotics to a considerable extent. The question has been asked if such disregard of the proprieties of an honorable business cannot be reached in some way, even if the law stops short of punishing them as it should. Would newspaper notoriety reach them? The reply seems to be that it would not, even if the newspapers could be enlisted in the cause, which might not be an easy matter. The problem will have to be allowed to work itself out.

#### THE INTERNAL REVENUE RULING.

The druggists the country over are taking a long breath on account of the decision of the Government to allow till April for the enforcement of the new ruling on alcohol preparations. A Buffalo druggist is of the opinion that when the list appears it will not include many preparations, quite likely only a few bitters and the like. As to the delay, that is plainly because the inspection for the purpose of making out the list is still to be made, as the druggists are just as ready to conform to the ruling as they will be. They will simply throw out the preparations named in the list, as it is understood that the

State is waiting for it and will impose a license wherever the Government tax is paid.

#### A CANE RUSH CAUSES A SCOLDING.

The young men at the University of Buffalo have been aping the manners of the wise young men at other colleges and lately indulged in a rush and other demonstrations of that sort, even if they are only incipient doctors, druggists and dentists. Dr. Roswell Park, of the council of the university, has written a letter to the fraternity secretaries of the university declaring that he is "mortified and disgusted" over the affair, and further speaking of hazing as "a species of idiotic performance" which ought to be beneath the dignity of men about to engage in such responsible callings. He asks that the fraternities do what they can to save the university from the "publicity and disgrace which unthinking and foolish young men bring upon it."

#### NEW ENGLAND.

**Railway Legislation Discussed by Boston Druggists' Association—  
Three-quarters of a Ton of Turkey for Mellin's Food Employees—  
A Druggist a Good Guesser—A Guessing Contest as a Means of  
Advertising—N. A. R. D. Women's Auxiliary Organized.**

(From our Regular Correspondent.)

Boston, December 6.—Last month's meeting of the Boston Druggists' Association was held at the Parker House on the 28th inst. President Flynn occupied the chair. The guest of the evening was Representative Robert Luce. His subject was "The revolt of the people against corporate, financial and political control." This lecture had special reference to the railway legislation which will be considered at the next session of the General Court. The subject and method of handling was a rare treat. Those who were absent missed an enjoyable evening. A report of the last annual meeting of the Massachusetts State Board of Trade was considered. The next meeting will be held at Young's Hotel on the 26th of this month.

#### HIGH STANDARDS OF DRUGS AND CHEMICALS.

The last monthly report of the State Board of Health shows the analysis of 71 drugs, of which number only ten varied from the legal standard. The adulterated drugs were lemon and olive oils and tincture of iodine. A specimen of olive oil consisted largely of cotton seed oil.

#### MELLIN'S FOOD FURNISHES THANKSGIVING TURKEY.

Thomas Dolliber, Ph.G., president of the Mellin's Food Company, gave to each employee of the concern on November 29 a large, fat turkey, with the best wishes of the company. It took about three-quarters of a ton to go around. This custom is as old as the company itself, and the distribution is annually enjoyed by all of the participants. Mr. Dolliber before giving out the birds read the Thanksgiving proclamations of the President of the United States and the Governor of Massachusetts.

#### THE LADY WON.

Charles A. Curtis, of South Boston, has just engineered a very successful and, to him, profitable guessing contest. The prize was an upright piano and the conditions were to guess the length of twine contained in a 5-gallon jar which was prominently displayed in a window of Mr. Curtis' place. This twine, or rope, was a miscellaneous and vari-colored collection of different lengths. About 18,000 coupons were distributed to purchasers and there were over 10,000 guesses, ranging from 10 to 300,000 feet. At the close of the contest it was found that two of the participants were tied, both having guessed 2,150 feet. The exact length was 2,148 feet and 6 inches. These two, a lady and a gentleman, finally agreed to decide the matter by drawing cards from a pack, the lowest to win. This plan was carried out and as a result the lady won. Mr. Curtis is much gratified over the result of this scheme.

#### TALKED ABOUT.

Hon. Gorham D. Gilman has been appointed chairman of the Postal Committee of the Massachusetts State Board of Trade.

#### The Chicago Drug Club Elects Officers.

(By Telegraph from our Regular Correspondent.)

Chicago, December 7.—After a very interesting campaign the so-called "members' ticket" was chosen at the annual election of officers held to-day. The ticket is as follows: President, L. A. Becker, president of the L. A. Becker Soda Foun-

L. H. BECKER,

President of the Chicago Drug Club.

tain Company; first vice-president, E. D. Kenfield; second vice-president, Frank L. E. Gauss, Western sales manager of the Eli Lilly Company; treasurer, O. T. Eastman, president and general manager of the Searle & Hereth Company; secretary, James E. Bartlett, manager of the Chicago Branch of Parke, Davis & Co.

#### Officers for the Philadelphia Association of Retail Druggists.

On December 1 the nominations for officers for the ensuing year of the Philadelphia Retail Drug Association were

JAMES E. BARTLETT,

Secretary of the Chicago Drug Club.

held. H. C. Blair was nominated as president. It is understood that Mr. Blair will not accept the position and has declined to run. The following nominations were made: Presi-

dent, Henry C. Blair; first vice-president, Thomas H. Potts; second vice-president, William E. Lee; third vice-president, Augustus T. Pollard; recording secretary, Nathan A. Cozens; financial secretary, Carl W. Shull; treasurer, George W. Fehr; member Executive Committee at large and to be chairman thereof, Charles Leedom; nominations made by the auxiliary districts for members of the Executive Committee were as follows: 1, S. B. Davis; 2, J. H. Bailey; 3, J. Eppstein, H. C. Blair; 4, L. S. Sorber, Charles Cameron; 5, O. W. Osterlund; 6, S. E. Betts; 7, E. R. Gatchel; 8, G. R. Weldemann, Otto Kraus; 9, W. L. Cliffe; 10, H. J. Siegfried; 11, Christopher Koch; 12, F. W. Fluck.

#### THE PHILADELPHIA WHOLESALE DRUG COMPANY.

Some time next week there is to be a meeting of the newly elected managers of the Philadelphia Wholesale Drug Company, Limited, at which it is said there will be chosen a new president to succeed the present incumbent. There are several names mentioned, but the most likely one to be chosen is that of Manager Rohrman, of the Drug Company. It is through the efforts of Mr. Rohrman that the drug company has been so successful. It is doing a greater business than ever before, and although three times the amount of the present quarters has been secured, there is not enough room to handle the greatly increasing business. Mr. Rohrman is well liked by the trade, he is a competent manager, graduate of the School of Pharmacy, and thoroughly understands the conducting of such a business. He has many friends in the company.

#### THE WEST.

#### A Drastic Ordinance Governing the Sale of Narcotics—Details of the Bill—Police Can Testify.

(From our Regular Correspondent.)

Chicago, December 7.—A new drastic ordinance affecting the traffic in cocaine, morphine and chloral hydrate has been passed by the City Council. The ordinance reads as follows:

**SECTION I.**—No druggist or other person shall sell or give away any morphine, cocaine hydrochloride, or any salts of any compound of the same, or any preparation containing morphine,

O. T. EASTMAN,

Treasurer of the Chicago Drug Club.

cocaine hydrochloride, or any salts or any compound thereof, except on the written prescription of a licensed physician, or a licensed dentist licensed under the laws of the State of Illinois, which prescription shall be filled only once and shall have written upon it the name and address of the patient; provided

that the provisions of this section shall not apply to the sale at wholesale by any manufacturer or wholesale druggist to retail druggists, physicians, dentists or chemists of such cocaine hydrochloride, morphine, or any salts or any compound of the same, in original packages only, with such packages having affixed thereto a label specifically setting forth the preparation of cocaine hydrochloride or morphine contained therein.

Any person who shall violate any of the provisions of this section shall be fined not less than \$50 nor more than \$200 for each offense.

**SECTION II.**—This ordinance shall take effect and be in force from and after its passage and publication.

This ordinance, it said, can be enforced by the police. Officers can be set to watch a store, and if any one looking like a

FRANK L. E. GAUSS,

Second Vice-President of the Chicago Drug Club.

cocaine fiend leaves the place he can be searched in order to find if he has purchased any of the drug. There may be some developments that will not be agreeable to the general trade, but it looks as if the illicit traffic would be summarily throttled at any rate. No druggist would like the prospect of having police watching his place. It is said that the C. R. D. A. was notified last spring, when the anti-narcotic law was thrashed out, that something must be done, and that it would be better for druggists to do it than to leave it to hostile legislators. The ordinance was pushed by the Hull House reformers, who have been fighting the cocaine traffic, but who found it practically impossible to obtain convictions under the old plan. As things used to be the testimony of the "fiend" was necessary in obtaining convictions and this proved most unreliable.

#### CHICAGO NOTES.

A drug clerks' auxiliary to the C. R. D. A. is being formed. The movement is in charge of President Avery, of the C. R. D. A., Otto E. Bruder and L. E. Moore. Both of the latter are clerks.

Owing to the confusion due to changing the name of the phenol in place of carbolic acid, it has been suggested that druggists here ought to use both names for several years at least until the public becomes familiar with the scientific term.

More complaints are being printed in newspapers continually from druggists who like to tell their troubles in public. Among the abuses discussed are late hours, Sunday closing, postage stamps, trouble over change for telephones and for big bills.

The members of the Chicago Veteran Druggists' Association at their last regular meeting listened to an account by H. Sherman, an old time druggist, of some of his early experiences. A biography of C. W. Grassly and some other interesting matter from his pen was also read.

## THE SOUTH.

## Trade Dull in New Orleans—New Stores on Canal Street—Many Local Changes—Drug Clerks Dance.

(From our Regular Correspondent.)

New Orleans, La., December 4, 1905.—Katz & Besthoff's handsome new store in Canal street near Carondelet was thrown open to the public to-day and another handsome drug establishment was added to the already large number which at present occupy sites on that thoroughfare. Without doubt, however, the store opened yesterday is one of the handsomest of the lot. Excellent taste and judgment were exhibited in fitting it out, and few stores in the South can compare with it for beauty and attractiveness. The soda fountain is one of the handsomest in the South and a great deal of care and patience figured in the fitting out of the drug and medicine departments. The big show window which faces Canal street offers excellent advantages for display purposes and is being used to advantage by the progressive young druggists.

## THE WHOLESALE TRADE DULL.

Trade in this section continues somewhat depressed. The city trade has picked up somewhat in the last fortnight but the same cannot be said for the country. Sales have fallen off considerably and there is no evidence or indication of an early change for the better. The only explanation offered for the existing conditions is that the yellow fever has left in its wake undesirable complications which are hurting the trade a good deal. However, as is usually the case, the druggists here are looking at the thing optimistically and are waiting anxiously for the change for the better which they believe will come before very long.

## THE NEW ORPHEUM PHARMACY.

"The Orpheum" will be the name of the new drug store which Dr. George K. Pratt will open in one side of the Rathskellar building in St. Charles street, near the Orpheum Theatre. Dr. Pratt has selected an excellent location and is stocking the place with the finest lines of drugs and medicines to be secured. The establishment will be conducted by Overton Pratt, a son of the Doctor, who has secured the services of M. Brown, a well-known young druggist, as his manager. "The Orpheum" will be opened within a short time.

Lopez's pharmacy, at Broad and St. Philip streets, has been taken charge of by a Mr. Magner, who is now successfully conducting its affairs. Mr. Magner has a good location and is making the best of it.

Within the next few days Crouere & Sauvinet will move into their handsome new store at Canal and Villere streets. The place has been fitted out in an attractive manner and is a model drug establishment in every respect.

D. A. Capdau has bought the store of John T. Delaney at Ursuline and Dorgenois streets and has established himself there. Mr. Delaney, after disposing of his property, moved across the river to Algiers, and there bought the prosperous drug store known as Daniels' Central Drug Store. Both men are said to be doing well in their respective locations.

I. L. Lyons & Co. are installing two handsome show windows on the Camp street side of their big establishment at Camp and Gravier streets. These two windows are now under construction and will offer the big Camp street house better opportunities for display than it has ever before had. There were formerly two windows on Camp street, but they were found to be inadequate for the needs of the big establishment. Hence the newer and larger ones.

## LOCAL NEWS NOTES.

The American Drug Store, which has for many years occupied the site at Canal and Basin streets, will be in its new quarters in Canal near Rampart street within the next two weeks. At the present writing the American Drug Store people are occupying both establishments, half of their stock being in one building and half in the other. However, before

many days have passed they expect to have all their stock in the new building and to be ready for the opening. The old site of this store is to be occupied by part of the great depot which the Frisco people are going to build.

THE ANNUAL BALL OF THE RETAIL DRUG CLERKS' ASSOCIATION took place at Odd Fellows Hall, Friday, November 24, and was a pronounced success. A large crowd attended and as hosts the drug clerks ably acquitted themselves. These are the various committees which were in charge:

Arrangements—A. J. Ferry, chairman; Eugene H. Daste, Arnold Troxler, F. T. Mouton, Hugh A. Brown, M. J. Clark, C. C. Hebert, P. L. Bacas, John Paquette, W. H. Voelker, John S. Dunn, V. Palomo, Henry Welsch, A. D. Heinemann, E. Koeckert, George Paquette, Harry Code and J. H. Bernard.

Floor—Thomas Richardson, chairman; E. P. Volzin, J. O. Weilbacher, Harold Weick, F. J. Dantin, M. J. Paul, George D'Antry, Joseph H. Dunn, Owen Lynch and P. J. Bertrand.

Reception—W. M. Avery, chairman; Jos. Fuerstenberg, W. M. Mayo, J. J. Grasser, H. H. Sample, D. M. Bunbury, F. J. Guillot, L. J. Hubert, P. F. Murphy, Van Woods, L. Goldsmith, Louis Gonaux, M. S. Harris, A. Stumpf and D. M. Tomb.

These are the officers of the Clerks' Association: Eugene H. Daste, president; A. D. Heinemann, first vice-president; F. T. Mouton, second vice-president; Arnold Troxler, secretary; E. Koeckert, treasurer; George Paquette, grand marshal; Hugh A. Brown, sergeant-at-arms.

## MARYLAND.

## The Schedule Abandoned—A Free-for-All Fight for Trade.

(From our Regular Correspondent.)

Baltimore, December 7.—The wide open policy inaugurated by the Baltimore Retail Druggists' Association at a recent meeting in so far as the sale of patent medicines not included in the serial numbering plan is concerned, continues with apparently little damage to the one cutter against whom the movement is especially directed, but with considerable loss to the druggists generally. Not a few of them are appreciably affected by the decision of the association to let every one charge what he pleases by the suspension of the schedule, and more or less complaint of loss of revenue is being heard. The action taken was the outcome of a feeling that more could be accomplished to stop the evil of aggressive cutting by removing all restrictions than by endeavors to maintain the full list prices, which gave the cutter who refused to accept the arrangement an exceptional opportunity to build up his business at the expense of others. The experiment of putting down the bars, however, does not seem to be in all respects successful, for in addition to having the recalcitrant cutter to contend with the retailers must now also deal with the competition of the department stores, which have again gone into the business of selling patents and are doing a considerable business. Some of the prices are away down, Lyon's Tooth Powder being offered as low as 10 cents, when the cost price is somewhere around 14. There are a number of other articles on which the druggists are actually losing money, and it remains to be seen how long the pace can be kept up.

The last session this year of the Wedgewood Club took place on Thursday evening, December 7, at the Hotel Caswell, Baltimore and Hanover streets. Albert H. Thompson, of Thomas & Thompson, retail druggists, presided, and the occasion turned out to be very enjoyable. It was well attended.

H. P. Gilpin has awarded a contract for the erection of a five story building in the rear of 304 West Lombard street, which will be of concrete construction and will be occupied in part by Gilpin, Langdon & Co. and the H. B. Gilpin Company. The former company is engaged in the milling of drugs and spices, and its goods are known all over the country. The H. B. Gilpin Company is in the wholesale drug business, the relations of the two corporations being very close. The projected edifice will have a front of 33 feet and will extend back 66 feet. It will be connected with the other buildings used jointly by the companies and will constitute a most desirable addition to the excellent facilities already available.

## The Drug and Chemical Market

The prices quoted in this report are those current in the wholesale market, and higher prices are paid for retail lots  
The quality of goods frequently necessitates a wide range of prices,

### Condition of Trade.

NEW YORK, December 9, 1905.

Wholesalers and retailers have either covered their requirements up to the end of the year or are concentrating their attention on holiday novelties, for the trade in staple drugs and chemicals has ruled rather quiet in the interval since our last report. While the volume of current city business is not large, orders are in good receipt from interior points and it is confidently believed that the trade record of the month will be generally satisfactory, the demand for the various fancy lines incident to this season of the year being unusually good, despite the great divergence of this class of trade from drug store to department stores which has been noticed during the past few years. Notwithstanding the present limited demand prices are generally well maintained and firm conditions prevail. Exceptions are to be found in the cases of the two leading staples, opium and quinine, which are given little support. Prices are lower on the first named and the holders of quinine are not encouraged by the decline in the price of bark at the Amsterdam auction last Thursday, which presages a further weakening in quinine values. A sharp decline in the price of metallic blamuth in the London market led dealers here to look for a reduced schedule, but nothing has as yet developed. The position of iodine is attracting some attention, the market being unsettled in sympathy with corresponding conditions in Europe, and there is some talk in the trade of lower prices on iodides, though quotations showed no change at the close of the market. Only a limited number of price changes have come to the surface during the interval and the more important of these are tabulated below and receive comment in succeeding paragraphs.

#### HIGHER.

Permanganate of potash,  
Serpentaria root,  
Nitrate of silver,  
Elecampane root,  
Poke berries,  
Saffron, American,  
Juniper berries,  
Cassia oil,  
Orange oil, sweet,  
Anise oil,  
Unicorn root.

#### LOWER.

Opium,  
Quinine,  
Cantharides,  
Cassia buds,  
Senega root,  
Menthol,  
Balm of Gilead buds,  
Foenugreek seed,  
Citronella oil.

### Drugs.

Alcohol continues well held and supplies are passing out to the trade in seasonable quantity, at the range of \$2.49 to \$2.51 for grain and 70c to 75c for wood, the outside price of the last named being for 97 per cent.

Balsam copalba continues in demand and stocks of Para being light quotations are well sustained at the previous range of 36c to 40c. Central American is somewhat unsettled by competition, and while 30c is generally quoted, it is intimated in some quarters that 29c will buy.

Balsam fir has remained quiet since our last, and values are unchanged at \$3.10 to \$3.20 for Canada, and 70c to 80c for Oregon.

Balsam Peru is given very little consideration, sales being slow at unchanged values, or, say, \$1.00 to \$1.10.

Balsam tolu is not meeting with the demand ordinarily experienced at this season, for which the prevailing mild weather may be accountable; sales at 20c to 22c.

Barks.—Bayberry continues firmly held at 12c to 14c, with little obtainable at the inside price. Cascara sagrada offers a shade more freely, owing to the absence of demand, and 5½c to 9c is generally quoted, as to age and quantity. Cramp is held a shade more firmly, but we hear of sales of small lots at 7c. Cotton root is inquired for to some extent and values are well sustained at 9c to 10c. Blackhaw is scarce and firm at

10c to 18c. Sassafras is steady, recent sales being at 12c to 15c. Wahoo is scarce and firm at 60c.

Buchu leaves are well sustained at the range of 14c to 17c for short, as to quality, the outside figure being for prime green and the inside figure for yellowish stock.

Burgundy pitch is meeting with more attention, and holders are firmer in their views in sympathy with conditions abroad; small sales at 4c to 4½c.

Cacao butter is in good seasonable demand and values are well maintained at 28c to 29½c for bulk.

Cantharides are held about as before, Russian and Chinese being quoted respectively at \$1.25 to \$1.30 and 50c to 52c, but the tendency of late is upward, and higher prices may be looked for.

Cassia buds show a slightly downward tendency and values have eased off a trifle, the revised range being 18½c to 19c, as to quality and quantity.

Chamomile flowers are lower at primary sources of supply, but local holders show no disposition to urge sales at price concessions, and 18c to 22c is yet named for new crop and 16c to 17c for old.

Cocaine is held with increased firmness in sympathy with advices from abroad, but quotations continue on the former basis of \$3.25 to \$3.45 for bulk.

Codliver oil is finding a moderate jobbing outlet, but nothing in keeping with the usual seasonable requirements, and little interest is extended to round lots. For jobbing parcels of Norwegian \$25.00 to \$28.00 is asked, according to brand and quantity.

Cubeb berries continue firmly held and a fair demand is experienced at the range of 8c to 9c for ordinary, and 10c for XX; powdered is held at 11c to 13c.

Cuttlefish bone is maintained steadily at the previous range, recent arrivals having failed to affect the market. The sales of Trieste were at 16c and French at 12c to 13c, while jewelers' is held at 40c for small and 70c for large.

Ergot is finding sale in small quantities only, the market being quiet and dealers showing no urgency to realize at the present range of values or, say 40c to 43c for Russian, and 43c to 45c for Spanish.

Haarlem oil is not coming forward in any quantity, and holders of the limited available supply of capped stock have advanced their limit to \$3.00.

Manna is in reduced supply and holders are firmer in their views, with 50c quoted as inside for large flake, 35c to 37c for small flake and 25c to 26c for sorts.

Menthol continues weak and depressed, with sales at \$2.40 to \$2.50, as to quantity, though stock is generally held at \$2.60 to \$3.00. Late cable advices are that stock is selling in London at 8s. 1d., which is equivalent to a lay down cost of \$2.50.

Opium continues inactive, with the tendency of the market favoring buyers. During the interval sales have been made of cases in bulk at \$3.10, while broken packages offer at \$3.12½ to \$3.15, in which the bulk of the business is passing. Powdered is jobbing at \$3.55 to \$3.60, with occasional sales at a fraction under this, or say \$3.52½.

Quinine is easier as a result of the bark sale at Amsterdam on the 7th inst., when a decline was recorded of between 5 and 10 per cent. and only one-half of the quantity offered was sold. The average price paid was 4¼ Dutch cents as against 5.20 Dutch cents at the preceding sale. The spot market for quinine is further depressed in consequence, but up to the hour of going to press no price changes were announced, manufacturers' prices being maintained at 19c in 100 oz. lots.

Saffron, American, continues in good steady demand and values are well sustained at the recent advance to \$1.15 to \$1.20 as to quantity. Valencia and Alicante are held and selling at \$8.00 to \$8.50 and \$5.00 to \$6.00 respectively.

Saw palmetto berries are in increased demand and higher, owing to scarcity. The limited available supply is small and closely concentrated and quotations are steadily maintained at 15c to 20c, the outside figure being for prime.

Thymol is without change of consequence, either as regards price or demand, but holders continue firm in their views at \$1.35 to \$2.00.

#### Chemicals.

About the usual demand has been experienced for the general line of chemicals, but we have few price changes of interest to report. Nitrate of silver has been irregular and unsettled since our last, the price of the salt fluctuating with that of the metal; early in the period an advance of  $\frac{1}{4}$ c was noted, but values declined again last week and quotations are now  $30\frac{1}{4}$ c to  $44\frac{1}{4}$ c, as to quantity. Reference is made in our review of the Condition of Trade to the position of iodine and the likelihood of a decline in the price of iodides, but manufacturers are booking contracts for potassium iodide on the basis of \$3.15 to \$3.20. Blue vitriol is held with increased firmness, but car lots offer at the previous quotation of 5.55c. Citric acid is held with strength and firmness at 38c to  $38\frac{1}{2}$ c for barrels and kegs, respectively. Permanganate of potash has been advanced by the manufacturers  $\frac{1}{2}$ c per pound for future delivery, prices for prompt delivery being unchanged. The range for futures is now  $9\frac{1}{2}$ c to 10c for barrels and kegs, respectively. Oxalic acid is in reduced supply and firmer, with recent sales at 5c to  $5\frac{1}{4}$ c.

#### Essential Oils.

Anise has improved in position since our last and holders of high test oil are firm in their views at an advance to \$1.35.

Bergamot and other Messina essences are held more firmly, \$2.10 to \$2.25 being quoted for the oil named, while lemon is maintained at 55c to 66c, as to quality and quantity. The quotations for orange are given below.

Camphor is attracting increased attention, owing to expected scarcity, there being little coming forward from primary sources. The limited spot supply is under good control and offers at the somewhat wide range of 10c to 25c, the outside figure being for natural white.

Cassia is in moderately active demand and firm at a fractional advance over previous quotations, 80c to 85c being now named for 75 to 80 per cent, according to holder.

Citronella is fractionally easier, recent sales being at 35c to 38c, though the demand at the moment is limited.

Orange, sweet, is firmer in sympathy with conditions at primary sources, and prices have been advanced 5c per lb. to the range of \$1.95 to \$2.10. Bitter shares in the advance and is 10c higher.

Peppermint continues in moderate demand, but holders maintain their firmness, hence important business is lacking. Quotations for bulk stand at \$2.40 to \$2.50, while HGH is held and selling at \$3.10 to \$3.25.

Petit grain, South America, is scarce on spot and commanding higher prices.

#### Gums.

Aloes, Barbadoes, is in light supply and wanted with 15c to 16c named for gourds. Curacao are not inquired for to any extent, but values are well sustained at the range of  $6\frac{1}{4}$ c to  $6\frac{1}{2}$ c.

Asafoetida is meeting with only a limited jobbing demand, but former quotations of 14c to 18c for good to prime are still current.

Benzoin, Sumatra, is in demand, but the available supply is small and prices are maintained firmly at 32c to 35c.

Camphor is well maintained at the recent advance to 82c to  $82\frac{1}{2}$ c for American refined, in barrels and cases, respect-

ively, and it is not expected that prices will go lower, while crude retains its present high level.

Kino, Mastic, myrrh and oilbanum are selling in moderate quantities at about previous prices.

#### Roots.

Aletris has been more freely inquired for, and holders are firmer in their views at 38c to 40c.

Burdock is scarce, and for the little available supply 12c is named.

Golden seal has developed an easier tendency owing to slackened demand, and \$1.35 to \$1.40 is now named.

Ipecac has developed no action of consequence since our last, supplies being still offered and taken in a limited way at \$1.75 to \$1.85 for either variety.

Jalap is held with increased firmness, there being little available below 10c to 11c.

Kava kava is held with firmness at the recent advance to  $11\frac{1}{2}$  to 12c, and sales are reported at the inside figure.

Manaca is scarce and wanted, and holders now name 22c to 25c.

Mandrake is unchanged; small sales at  $4\frac{1}{4}$ c to  $4\frac{1}{2}$ c.

Musk, Russian (Sumbul), continues to advance, the quotation at the close standing at 14c to 15c.

Senega is slow of sale and offers more freely at 55c to 60c.

Serpentaria continues to show an upward tendency and quotations have further advanced to 40c to 42c.

Valerian, Belgium, continues in limited spot supply, and while a few parcels might be picked up at 8c, the general inside asking price is from  $\frac{1}{4}$ c to  $\frac{1}{2}$ c higher.

#### Seeds.

A moderate demand is experienced for the general line of druggists' seeds and prices generally are well maintained, with few fluctuations to report. Fenugreek is weak and lower, owing to pressure to realize on the part of outside holders, and quotations have been reduced to 2c to  $2\frac{1}{4}$ c. German anise is well held at  $6\frac{1}{4}$ c to  $6\frac{1}{2}$ c. Decorticated cardamons continue in upward tendency and sales are reported at 30c to 31c.

#### Effect of the New Pharmacopœia on the State Laws.

State Dairy and Food Commissioner Ankeny of Ohio made an investigation of the claim that the revision of the United States Pharmacopœia has operated to repeal certain portions of the State laws. One section refers to the seventh revision of this work and in the last, or eighth, revision it seems that a number of articles are omitted. The standard strength and quality of these articles is fixed by this reference. One of them is bay rum. Mr. Ankeny has been fighting the use of wood alcohol in bay rum, claiming it is dangerous. Several prosecutions now pending would perhaps have turned on this omission. However, it is claimed that a decision of the Supreme Court to the effect that the revises of the book cannot by raising the standard change the penal laws of the State will settle the matter for all time. The court says it is error to admit in evidence the last edition without proof that its lists are the same as in former editions.

#### U. S. Authorities Looking After Alcoholic Beverages.

Reports that certain drug stores in Philadelphia make a practice on Sundays of selling raw alcohol and patent medicines which have a high percentage of alcohol in them to various kinds of "fiends" have aroused the Federal authorities. Internal Revenue Collector McCoach and detectives under Captain Donaghy have begun an investigation to ascertain how many dealers are breaking the law. During the investigation it will be ascertained what kinds of alleged medicines contain an overwhelming percentage of alcohol. It has been reported that many druggists in the Thirteenth and Fourteenth Wards have been violating the law, and the Federal officers and the police will work in harmony in securing evidence against them.

## Opportunities for Export Trade

(Written for the American Druggist.)

### EXPENSES AND INCIDENTS OF FOREIGN TRAVEL.

BY A COMMERCIAL AMERICAN.

Many of our large American firms who desire foreign trade have only most vague conception of their traveling salesman's field and the difficulties he must surmount to secure successful and clean business results.

In the first place, firms sometimes undertake to secure foreign trade without having any appreciation of how thoroughly they must enter the work and co-operate with their travelers in order to obtain the results desired. If their goods are to be introduced into Spanish America they should, first of all, secure a person who is familiar with Spanish to take

ple trunks must be watched and charges paid for their carriage from the boat to the ship. They are then placed in the ship's sling and checks procured for them to Guayaquil. It is only after they are placed on board that the ship is responsible for them.

Even then the traveler's trouble is not at an end, because the "cargador" with whom he bargained called two assistants to help swing the trunks aboard, for which there is an additional charge of 20 cents for each piece of baggage. On reaching Guayaquil the charge is \$1 for each piece, large or small, and it is only by much arguing that this can be reduced to a reasonable amount. The next item of expense is the customs duties and when, at last, the agent starts for

The Harbor of Valparaiso, Chile, Showing Boatmen in the Foreground.—Courtesy of G. H. Tafel.

charge of the correspondence, because in many cases where the head of the export department is unfamiliar with that language the translations made by the stenographer or outside translator are extremely bad and discreditable to a good house and tend to lower it in the estimation of their clients.

#### THE EXPENSES OF FOREIGN TRAVEL.

Ignorance as to the expenses of the foreign traveler justifies a paper on that subject alone. All along the South American coasts the steamships never approach nearer than  $\frac{1}{2}$  to 1 mile from shore; then it is necessary to bargain with the boatmen, who swarm like vultures over the ship's sides. This trouble begins at Panama. The traveler wishes, for example, to reach Guayaquil, Ecuador, which is a three days' voyage from Panama, with no steamship competition. The fare is \$84.50, gold. Think of it—for three days! On arriving at Guayaquil a "cargador" must be found to take the trunks to the station. Tickets are then purchased for La Boca, the point from which the boat sails. During this time the sam-

the hotel he has encountered and paid three sets of men for handling his baggage.

If through lack of foresight the salesman carries large trunks his expenses are far more than those of the man with small trunks. The weight of each should not be over 50 kilos (110 lbs.), as they are carried by Indians or on mule back and where the baggage is large and unwieldy much difficulty is experienced.

Journeying inland from Barranquilla to Bogota, Colombia, for instance, requires two weeks' time each way; hence, in addition to the expense, one month's working time is lost.

In going from Guayaquil to Quito, Ecuador, the journey is made by rail one day and by stage two or three days, and the passenger is allowed 40 pounds of baggage. The charges for baggage in excess of this weight are heavy.

#### QUARANTINE TROUBLES.

At the present time the bubonic plague has disarranged all boat schedules, and on leaving Guayaquil the traveler is

informed by the steamship office that there will be no landing at Paíta, Peru, because of quarantine against the yellow fever in Guayaquil. When, as my experience, yellow fever breaks out on board, the steamer is not allowed to make any landing. On the trip to which I refer we were refused entrance at each port until landing at Callao, Peru, we were quarantined for four days, making a total loss of time en voyage of ten days. For the four days which we were compelled to remain on board the ship's charges were \$2.50 gold, per day.

On reaching shore the "cargador" places the baggage on the customs wharf, where it is passed upon by the customs officer and bond is given for its safe return. We arrived at the custom house at 4 p.m., and the office was closed. The

by a well-known New York house and has served ever since to retard and hurt American interests to a great degree, and we are beginning now to regain the confidence of these merchants.

For the benefit of those who have an article worthy of attention which they desire placed upon the foreign market, it should be stated that advertising matter and journals are carefully guarded and much appreciated by these people, who become later on good customers.

#### FRENCH INDO-CHINA.

In *Daily Consular and Trade Reports* for November 9 Consul-General Schuyler, of Bangkok, presents an interesting picture of French Indo-China, pointing out the past, the possibil-

Bird's-Eye View of Lima, Peru, Showing the Plaza.—Courtesy of G. H. Tafel.

following day being a "Feast Day" all business was at a standstill. We went again the next day (Saturday), but the inspector failed to come and examine our baggage, so it was not "mañana," but "pasada mañana" (the day after tomorrow), when we were able finally to obtain our samples, which was 16 days after our departure from Guayaquil.

This article is written simply to show some of the obstacles which a traveler encounters, and in order that the exporter in the United States may understand and view matters accordingly. What is written above covers but a short part of a South American voyage, but it will serve as an illustration.

#### DO NOT TRY UNSALABLE STOCK.

A fact that cannot be too well impressed on the American exporter is that he should not send to foreign countries his old, unsalable stock. This was practiced several years ago

ties of the future, with a word about the classes of American goods that might find a market or fairly successful sales. He writes:

The French possessions in the Far East, collectively known as Indo-China, are perhaps to most people the least known part of Asia. Very little attention has been given to them by explorers and travelers and still less by students of commercial affairs. The reason for this is difficult to find. Saigon, the chief port, lies less than three days from Hongkong and about the same from Singapore by the large steamships of the Messageries Maritimes Company, the subsidized French line from Marseilles. There is a steamer every two weeks to Bangkok, Siam (four days), by the Messageries Fluviales de l'Indo-Chine, which also maintains regular service with the other ports of the colony, and there are many vessels at irregular intervals to Java and the Philippines. Indo-China is therefore accessible both to the tourist and the commercial traveler, and it would

seem that when the resources and needs of the country are considered and understood a much greater and closer intercourse with the United States would result.

#### GEOGRAPHICAL SITUATION AND POPULATION.

The French possessions in the Far East, comprising Cochín China, Cambodia, Annam, Tonkin and Laos, known collectively as French Indo-China, lie between 8° 30' and 23° 23' north latitude and 97° 40' and 107° east longitude (Paris), and cover an area (270,000 square miles) twice as large as France, or one-tenth the area of the United States, and have a population of some 25,233,000, most of whom are Annamites. The Chinese are supposed to number about 150,000, but there are probably more. There are some 7,000 Europeans, chiefly French fonctionnaires and soldiers. The chief races of natives are the Annamites, Tonkinese, Cambodians, Laos, Moïs, Muongs, Nuns and Thos. Ethnologically the different peoples are most interesting, and the study of their languages, habits and history is being carried on by the archaeological mission known as the

Old Spanish Cathedral, Lima, Peru.—Courtesy of G. H. Tafel.

"Ecole Française d'Extrême Orient." This school was established in 1898 and has done excellent work in its own lines.

Cochín China and Tonkin are for the most part fertile deltas. Between them is Annam, a long mountainous tract of country with a narrow littoral on one side and a wild, thinly populated hill district extending to the great River Mekong on the other. The coast line is abrupt and mountainous, with large bays and excellent harbors. The climate in general and especially in the plains is extremely hot and humid. There are two seasons, wet and dry. The chief rivers are the Mekong (1,900 miles), which has been navigated as far as Chinese territory, although rapids and other obstructions are a hindrance to commerce; the Songkoi, or Red River, which is ascended by small steamers as far as Larkai in Yunnan, and the Black River. These three flow into the South China Sea. There are also many small rivers which afford almost the only means of travel in the interior, where the luxuriance of the tropical vegetation makes travel by land an impossibility.

#### HISTORICAL AND POLITICAL.

Cochín-China was acquired by the French Government in 1864; the first settlement at Saigon, however, dates from 1858. The French protectorate over Cambodia was recognized in 1863 and that over Annam in 1874, but their present status dates from the two conventions of 1884. Tonkin became French territory after the peace with China in 1885. The Laos country was added to the French dominions in 1893, and in 1896 the Mekong was declared to be the boundary between French and British territory. In 1898-1899 the port of Kwang-Chow-Wan on the Lien Chow Peninsula was leased from China for 99 years. At the present time a Franco-Siamese commission is engaged in determining the exact boundary between Siam and the French possessions.

For administrative purposes Cochín-China is directly under French officials; Annam and Cambodia are ruled by their kings with the aid of French residents. The financial and political unity of Indo-China and its period of prosperity date from the arrival of M. Doumer as Governor-General in 1897. The present capital of the whole territory is Hanoi, in Tonkin. Financially the colony was considered a loss to France for many years, but its condition is now satisfactory. The estimated expenditure, according to the budget for 1904, was about \$17,000,000. The colony has been self-supporting since 1899. The chief sources of revenue are customs and excise. In 1898 a loan of \$40,000,000 for railroads was raised in France.

#### GENERAL ADMINISTRATION.

The general administration of the colony is under a Governor-General with almost sovereign powers, who is responsible solely to the Minister for the Colonies at Paris, assisted by a Council of State. The French army in Indo-China consists of 17 regiments of Europeans and 17 of natives; 18 batteries of French artillery; altogether some 8,000 Frenchmen and 12,000 natives.

The recent war between Japan and Russia and the preservation of the integrity of the Chinese Empire gives to all the present colonies of western Powers an importance which they did not possess while each Power considered that in the near future it was most probable that some part of the dismembered empire would come under its control and ultimately become a new colonial possession.

Now, however, the nations are realizing that what they have at present is all the territory they are likely to have for some time and that it is now of greatly increased importance both commercially and politically.

#### COMMUNICATION.

By far the most important means of communication in Indo-China is by water. The almost impenetrable jungle renders land travel, except by a few routes, impossible. The great desire of the French explorers of the country was to find a practicable water route by the Mekong and Red rivers from the coast of Cochín-China to the populous districts and the markets of Yunnan and the adjoining Chinese territory. Unfortunately the falls and rapids of the upper stretches of those rivers rendered the route of less importance than was supposed. Nevertheless, the Mekong is the seventh largest river of the world. The chief harbors of Indo-China are Saigon, Haiphong (Hanoi), Tourane, and the recently acquired port of Krat, which gives Cambodia a seaport. Haiphong is 48 hours and Saigon about 60 hours by steamer from Hongkong. The Tonle Sap, or Great Lake, the largest body of fresh water in Asia, is 120 miles long and in some parts 20 miles wide. Its outlet flows into the Mekong.

#### RAILROADS AND STEAMSHIPS.

The railroads of Indo-China comprise lines from Haiphong to Hanoi, and thence to Langson, on the borders of the Chinese province of Kwang Si (160 miles), from Saigon to Mytho (44 miles), and to Khanhao (44 miles finished), and Hanoi to Ninh-Binh. Lines soon to be completed are Thanh Ba to Laokai (140 miles), thence to Yunnan fu (220 miles). There is a line under construction from Hué to Tourane and one from Saigon to Tanlinh in Annam is projected. Besides these there are also tramways in operation.

# AMERICAN DRUGGIST

## and PHARMACEUTICAL RECORD

PHILADELPHIA.

NEW YORK, DECEMBER 25, 1905.

CHICAGO

ISSUED SEMI-MONTHLY BY  
**AMERICAN DRUGGIST PUBLISHING CO.**

62-68 WEST BROADWAY, NEW YORK.

CHICAGO, 221 Randolph St. PHILADELPHIA, 8713 Walnut St.

A. R. ELLIOTT, President.

### EDITORIAL COMMENT.

THE TWO IPECAC ROOTS.

Why were the two ipecac roots of commerce included under one official title in the latest revision of the United States Pharmacopœia? This is a question which is being asked by both pharmacists and physicians, and the response of the revisers of the Pharmacopœia who were responsible for the change will be awaited with much interest. Pharmaceutical chemists have been aware for some time past of the difference in alkaloidal constituents which distinguishes the Rio root from

the Carthagena variety, and many physicians are also alive to the knowledge that when they order preparations of ipecac of the new Pharmacopœia they may or may not get a preparation made from the root containing the greater proportion of the more purely expectorant principle, emetine, and a comparatively lesser amount of cephaeline, the true emetic constituent of ipecac, notwithstanding the fact that any therapeutic standing possessed by the root was based on results obtained with the Rio root (the root of *Cephaelis Ipecacuanha*). Elsewhere in this issue will be found an instructive comment on the subject by the editor of the *New York Medical Journal*, which goes to show that the matter is likely to be taken up in earnest by medical men.

Whenever anything goes wrong the people of the United States rise up and demand that a law be passed to right it. Then they sink back into

the absorbing pursuit of the necessary dollar and seem surprised to find that the wrong has not righted itself as provided by law. Nowadays Federal control is the shibboleth of salvation from all the ills that flesh is heir to. Do we have trouble with railroad rates? "Put them under Federal control" is the remedy proposed. Do we want a canal? "Put it under Federal control" is the cry. Is there theft in life insurance companies? "Put them under Federal control." Do we have an outcry against proprietary remedies? "Put them under Federal control." But who is to control the Federal officers? Are they all honest? Does appointment to a Federal office purge men from all temptation to abuse authority, to extort money, to prostitute power to personal ends? No! Look at the post-office crimes and the scandals in the Department of Agriculture. Even so recent a thing as the Panama canal bath "a very ancient and fish-like smell," and there is an uneasy feeling of uncertainty in the public mind as to what has been really done with that \$10,000,000. As to the subject of Federal control of proprietary medicines retail druggists are aware that many of the advertised compounds have a basis of real efficacy in the treatment of simple complaints and they feel that this would insure their continued use, even if placed under Federal control and with the full publication of their formulas. In fact one or two of the best selling patent medicines of the day have their formulas, giving both quantities and ingredients, published on the label. While we oppose the proposed Federal control we realize that it would not prove disastrous to the retailer.

### The U. S. P. in Spanish.

The decision of the trustees of the United States Pharmacopœal Convention to translate the United States Pharmacopœia into Spanish for the use of pharmacists in the Spanish speaking countries annexed to the United States will be hailed with great gratification, not alone by the pharmacists of those countries over which the Federal Government extends its ægis, but by the pharmacists of Mexico and South and Central America as well. As told in our news columns efforts were made for a long time to induce the Federal authorities to publish an edition of the United States Pharmacopœia in Spanish for the benefit of the Spanish speaking pharmacists in our new island possessions, but so much red tape was encountered that it was found necessary to abandon the effort to obtain the support of the Government.

Everybody who knows anything at all about the development of American commerce in Latin American countries is

aware of the increasing interest in American pharmaceutical matters which is being taken by the pharmacists of the lands lying to the south of us. In the majority of pharmacies in Central and South America the official medicine book which appeals to the proprietors in their native language is the official Pharmacopœia of Spain, though the French Codex holds a high place in their esteem, and in Brazil the Portuguese Pharmacopœia is occasionally used.

A feature of the new Pharmacopœia, issued by the Spanish authorities—the work was revised almost simultaneously with the United States Pharmacopœia, but issued a few months earlier this year—is references to the therapeutic action and uses of drugs and compounds, information which immediately precedes the statement of dose. As might be expected the revisers of our Spanish contemporary exercised greater conservatism in dismissing and adding articles than characterized their American *confrères*. Such preparations of animal origin as castor, the dried preputial follicles of the beaver; coral, deer horn scrapings, snails, isinglass and calcined bones are retained in the new Spanish Pharmacopœia, though diphtheria antitoxin, wool fat and Hayem's artificial serum figure among the additions.

In translating the American book into the language of the Spaniards the committee would do well not to adhere too rigidly to the style of typography which characterizes the United States Pharmacopœia. The serried lines of type which enable the American revisers to crowd a good deal of matter within a relatively small compass would be objectionable to the Spaniard, accustomed as he is to large type and comfortably wide spacings between the lines. The matter of our Pharmacopœia should, however, make a favorable impression on educated Spanish speaking pharmacists, and incidentally do much to foster higher pharmaceutical education in the countries where the Spanish edition will be circulated.

#### Wasted Experience.

It is singular that in all the reorganizations and reforms which have been proposed from time to time for the army of the United States by the various officials charged with the conduct of our military establishment no radical reform has ever been proposed in the medical supply service. The natural inference is that the medical supply service is on so satisfactory a basis as to leave no room for improvement. This inference is, however, wholly unwarranted by the real facts as known to all who have paid even superficial attention to the subject.

When our volunteers were placed under arms at the outbreak of the Spanish War defects were found in almost every department of the military organization and in none were the defects more pronounced than in the medical supply service. The troops at Tampa and at Jacksonville, on our own soil and without the proximity of any hostile army, were unable to obtain adequate medical supplies. When the comparatively small detachment of troops sent to Cuba were landed near Santiago there was still a lack of medical supplies.

When at the close of the war the troops were brought back to Montauk Point, Long Island, for recuperation a scarcity of medical supplies was again evident, though the Government had known for months that 25,000 men, mostly invalids, would be sent there. And when the men did arrive they perished like flies. From 1,500 to 2,200 patients lay in the general hospital for weeks, notwithstanding the fact that shipload after shipload of invalids was distributed to civilian hospitals in New York, New Haven and Boston so as to relieve the pressure. It is true that the lack of medical supplies was soon made good under the lash

of public censure from the so-called yellow journals, but the fact remained that there was a scarcity, notwithstanding the ample notice which the authorities had of the expected return of the invalids.

The organization of our medical supply service is on practically the same basis now as it was at the outbreak of the Civil War 45 years ago. During that time both medicine and pharmacy have been almost wholly revolutionized and the marked characteristic of the change in medicine has been a tendency toward a high degree of specialization. Fifty years or more ago, when the present method of organization of our medical supply service was adopted, the physician knew more of drugs and less of medicine than he does now. Then it was not unreasonable for the authorities to intrust the surgeons with the purchase, preparation and distribution of medical supplies. Now since pathology, bacteriology and other special branches form part of the medical curriculum practical elimination of the intimate study of drugs save in their purely therapeutic relation has resulted. In pharmaceutical education during the same period there has been as complete a revolution and as great an improvement as there has been in medical education. At that time we had only three or four schools of pharmacy turning out annually a total of probably 50 graduates, with only the most meager technical instruction and with no preliminary educational requirements. Now we have something like 60 recognized schools of pharmacy graduating probably 5,000 students annually and giving them from two to four years of competent, highly specialized, technical instruction based upon a sound preliminary education. The total time of study required of students of pharmacy now is far greater than that which was then required of students of medicine.

The need for even greater specialization in military medicine has been recognized by the establishment of that excellent institution, the Army Medical School at Washington, but the advantages which would accrue from a recognition of specialization in pharmacy have not been obtained and physicians are still compelled to do pharmacists' work or leave it undone.

The proper method of recognizing this specialization is by relieving the surgeons of the army of the task of providing medical supplies and turning it over to a corps of highly trained, well-educated and intelligent pharmacists, men who are university graduates, skilled microscopists and analysts and who would by reason of their intellectual attainments be a credit to the service.

This corps should be headed by a colonel with the title of Pharmacist-General and for an army of 100,000 should embrace a total of about 148 officers ranging from colonel down to second lieutenant.

The hospital steward as at present provided for has a well defined and legitimate sphere of usefulness and should not be disturbed. His functions would not be trenched on by the members of the proposed corps, who would in reality release for other duties more than an equal number of medical officers. The Surgeon-General of the army admits the numerical inadequacy of his force and is urging Congress to enlarge it. If he will adopt the plan outlined in the paper on this subject in another column we believe that he will have but little difficulty in securing its adoption and in thus adding to the efficiency of the department in an economical manner by securing pharmaceutical officers of a lower grade to discharge duties now performed by medical officers of a higher grade.

THE APPLICATION OF THE PRINCIPLES OF BACTERIOLOGY IN PHARMACEUTICAL PRACTICE.<sup>1</sup>

BY HENRY KRAEMER, PH.D.

The studies on the physiology and morphology of micro-organisms have been applied not only for the amelioration of diseases but also extensively in the development of industrial processes. By no means are all forms of micro-organisms detrimental to health. In fact, very few of them are pathogenic—that is, disease producing—while the majority of them are to be looked upon as constituting scavengers of the earth, clearing the surface of refuse matters of various kinds. If you go out into the woods and look carefully over the rotting trunk of a tree it will be observed that there are hundreds of organisms at work, many of them being microscopic in size, each doing its part toward rendering to earth the things that are earthy, and at the same time preparing food, in the production of humus, for the plants of succeeding generations. In the decaying carcass of an animal a similar process goes on. It is, in fact, through the activities of the micro-organisms that the cycle of organic life is maintained and we have a continuance of life in a material sense.

While the study of micro-organisms in relation to disease has been practically developed within the last 25 or 30 years, we find by reference to literature that as far back as the time of Leeuwenhoek, in the latter part of the seventeenth century, some knowledge of the effects due to micro-organisms already existed. The motile organisms which Leeuwenhoek saw in infusions of decomposing substances were called by him *infusoria*. Later Pleuciz (1762) showed that wherever putrefaction occurred *infusoria* developed and multiplied. No attempt was made to determine whether the organisms were of animal or vegetable origin. Because of their microscopic size the term *microbe* was suggested by the French surgeon Sedillot. This designation was accepted by Pasteur, and on this account has been used quite generally, particularly by the French, the term now being understood to include all microscopic forms of life, whether animal or vegetable. By some the name *germ* is used synonymously with *microbe*. In a biological sense it has a more special signification and applies to embryonic forms of life in both animals and plants—that is, in the seed, spore or egg. According to Harvey, "a germ is a portion of matter potentially vital and having within itself a tendency to assume a definite living form." We thus see that the term *microbe* should be applied to micro-organisms when in an active condition, whereas the word *germ* should be applied to them when in the resting stage.

Frequently the term *bacteria* is also applied in a general way to micro-organisms, but it should be understood that the *bacteria* constitute but one of the classes or subdivisions of micro-organisms.

## A CLASSIFICATION OF MICRO-ORGANISMS.

We can obtain a very good idea of the different classes of micro-organisms by a study of those forms occurring in water and the atmosphere. These belong to both the plant and animal kingdom and may be subdivided as follows:

## I. Plants, including—

A. *Fungi*, the principal groups of which are—

- (a) *Schizomycetes*, including bacteria;
- (b) *Saccharomycetes*, including the yeasts;
- (c) *Phycomycetes*, including the common black mold, *Mucor mucedo*;
- (d) *Mycomycetes*, including the blue-green mold, *Penicillium glaucum*.

B. *Algae*, the principal groups of which are—

- (a) *Bacillariaceae*, including diatoms;
- (b) *Schizophyceae*, including a number of forms which give a disagreeable odor and taste to drinking waters.

## II. Animals, including a number of protozoa, which are present in drinking water.

## Biological Principles.

While we have to admit that life on the earth must have had a beginning, still the theory of spontaneous generation in a

special sense has been discarded. In discussing the origin of life on the earth de Bary says that at some time organisms must have originated from unorganized but potentially organized substances, and to these intermediate forms of matter Nagell has given the name *proteim*. Of course the question arises as to why the transformation of these "potentially organized substances" does not still go on. But this is a problem which belongs to philosophical inquiry, and I will not pursue it further.

As a result of experimentation certain biological principles may be formulated which it is essential to understand and apply in the study of micro-organisms.

1. Life manifestations are only revealed through living protoplasm—that is, life is not manifested in any other form of matter.
2. The life of all organisms is transmitted through protoplasm from parent to offspring, and there is no life save as transmitted through previously existing protoplasm. *Omne vivum ex ovo*.
3. The conditions affecting protoplasm, or the growth of the individual organism, are food, temperature, air and light and moisture, and their influence varies with the individual or class.

The acceptance of the first two propositions were necessary for the overthrow of the theory of spontaneous generation in a special sense. That is, according to the observed facts, organisms do not arise *de novo*, and the establishment of the law or principle has proved of the greatest utility in bacteriological work. It is to the thorough appreciation of the conditions affecting growth of the individual organism that the excellent work of Pasteur, Koch and others in combatting disease was mainly due.

## PASTEUR'S DISCOVERY OF VACCINATION AGAINST RABIES.

Pasteur early recognized that each kind of organism had its own particular food, and he resolutely set about in all cases to ascertain the food required. When, for instance, he was working out the nature of hydrophobia or rabies in man, he found that the organisms causing this disease lived on the highly organized food of the nerve centers. He communicated the disease to different animals by taking the nerve tissue of animals having died of rabies (as from the brain of a mad dog) and bringing it in direct contact with the animal to be infected (as the brain of the rabbit). In experimenting with various animals he found that they responded differently; for instance, with rabbits he found that the virulence was more intense than in dogs, whereas in the case of monkeys the virulence was much attenuated. As a result of his experiments along this line he found that by injecting into dogs the attenuated virus of the monkey he was able to render them immune to rabies. Pasteur also found that it was also possible to vaccinate man against the disease.

## INFLUENCE OF TEMPERATURE.

That each organism has a certain optimum temperature at which it develops best was also shown by Pasteur. While studying the organism causing anthrax he found that birds were immune to the disease because of their high body temperature, which is about 42 degrees C. But by reducing the temperature of certain fowls to about 38 degrees C. by placing them in water at 25 degrees C., they contracted the disease. But when they were allowed to move about and regain their normal temperature they recovered. On the other hand, he found that frogs were immune to this disease because of their low body temperature, but that they also became susceptible to the disease when their temperature was raised.

## AEROBIC AND ANAEROBIC ORGANISMS.

The influence which the presence or absence of air has on micro-organisms is also well known, and depending upon this two classes of these organisms are distinguished—namely, aerobic, or those requiring oxygen for their growth or development, and anaerobic, those which do not require air or oxygen for their development. These distinctions are, however, only true within certain limits, for there are certain organisms, like diphtheria and tubercle bacilli, which, while classed with the

<sup>1</sup> Read at a meeting of the Manhattan Pharmaceutical Association, New York, December 18, 1905.

aerobic organisms, still may grow to a certain extent where there is very little or no oxygen, and under these conditions are spoken of as *facultative anaerobes*. In the same way there are also facultative aerobes, although these occur more seldom. Organisms which absolutely require oxygen for their development, as the bacillus of influenza, are termed *obligative aerobes*, whereas those which cannot survive in the presence of oxygen are known as *obligative anaerobes*.

#### INFLUENCE OF LIGHT AND MOISTURE.

That light has a decided influence upon the development of micro-organisms is also well recognized. Certain organisms, as the chromogenic bacteria, thrive best when exposed to sunlight, whereas most other micro-organisms are killed by exposure to the direct rays of the sun. These latter include most of the pathogenic forms which are harmful to man, as tubercle and typhoid bacilli.

Another factor to be considered in the life history of these organisms is moisture. While, perhaps, the majority of these organisms require moisture for their development at certain stages, still it is known that the spores of certain micro-organisms may be dried and still retain their vitality for months and even years. What is even of greater interest to the pharmacist is that certain bacteria, yeasts, the spores of some of the common fungi, as mucor and aspergillus, and the seeds of certain higher plants, as flaxseed, will retain their vitality even after having been immersed in absolute alcohol for several weeks or even months.

#### BACTERIOLOGICAL TECHNIQS.

Principally because of the minuteness in size of micro-organisms different technics is required in their study from that required in the study of the higher plants. In the first place it is difficult to isolate them so as to be able to study individual forms. Another difficulty is to prevent contamination after they are isolated. And even though a pure culture is obtained it is difficult on purely morphological grounds to differentiate the various forms, as they are all so much alike.

While it is comparatively easy to prepare a sterile solution—i. e., one in which all life is destroyed—it is very difficult to prevent contamination under ordinary conditions. Even when a cork or glass stoppered bottle is used for keeping liquids it is difficult to prevent the entrance into and development of micro-organisms in the liquids. The use of stoppers consisting of plugs of absorbent cotton was first suggested by Schroeder and von Dusch in 1854. They found that if flasks containing decomposed liquids were stoppered with absorbent cotton and the liquid boiled for some time that the liquid would keep indefinitely.

#### STAGES OF DEVELOPMENT OF MICRO-ORGANISMS.

It remained for Koch and Pasteur to show what took place in the boiling of the liquid, and at the same time develop the principles of sterilization in bacteriological work. They discovered that micro-organisms have two stages of development, one of which is active and the other resting, the latter being known as the egg, or spore, condition. They found that the organisms in the active condition were completely destroyed on heating the solution containing them for 30 minutes at 100 degrees C. If this solution was allowed to stand for 24 hours or longer there would be evidences of decomposition, which was due to the fact that the spores representing the resting stage of the organism were unaffected by the first heating and developed into the active stage. They found that if the solution was heated on the second day for 30 minutes at a temperature of 100 degrees C., the second crop of organisms was destroyed, but it was found that the solution might still undergo decomposition in the course of time, owing to the later development of a few remaining spores. They found that heating on the third day was sufficient to kill all of the spores as well as the organisms in the active stage. By repeating these experiments they confirmed their observations and established the process known as *discontinuous sterilization*, which simply means that if a solution of a decomposing substance is heated on three consecutive days for 30 minutes at a temperature of 100 degrees C., the flask or bottle being stoppered with absorbent cotton, it will keep indefinitely. Instead of using a

plug of absorbent cotton the neck of the flask can be drawn out into a narrow tube and directed downwards. This is practicable for the reason that the micro-organisms in the air are drawn downward with particles of dust rather than upward. In the case of absorbent cotton they are simply held in the meshes of the cotton. The time required for producing a sterile solution—that is, one free from micro-organisms—can, however, be much reduced by increasing the temperature or pressure, or both. By use of the autoclave, in which the pressure can be increased from 10 to 20 pounds, sterilization can be accomplished in 30 minutes by using a temperature of 110 degrees C.

#### THE DIFFICULTY OF ISOLATING THE ORGANISMS.

As already indicated, one of the greatest difficulties is to isolate the organisms. In a cubic centimeter of water there may be a million organisms. In trying to solve this problem it occurred to Koch that if he could secure a medium which was solid at the ordinary temperature and liquid at a slightly higher temperature, he could mix a certain quantity of liquid containing microorganisms with the medium in a sterile condition, and then by solidifying the mixture the organisms would be fixed, and thus from each organism a colony would be developed which could be isolated and further studied. We are indebted to Koch for the solid culture media, like nutrient gelatin and agar, without which we would be practically helpless so far as the study of these organisms is concerned.

#### Practical Application.

Not only are many diseases due to micro-organisms, as already indicated, but as is well known to the scientist the decomposition and spoiling of many articles of daily use are also due to them, as in the decaying of fruits and vegetables, the souring of milk, the putrefaction of meats, the spoiling and deterioration of solutions of chemicals and pharmaceutical preparations. It is thus seen that these organisms are really a source of great loss to us in a material or commercial sense, and besides our lives may be endangered by reason of the toxic principles which are produced by some of them. On the other hand, micro-organisms play an important part in some of our large industries, as in the fermentation and brewing industries, so that on the one hand we endeavor to combat and destroy them, and on the other to foster their growth.

#### CONDITION OF CRUDE DRUGS IN THE MARKET.

An examination of crude drugs shows that they are literally infested with micro-organisms, these being derived from the soil, water, air and from the handling of them. While it is true that many of the micro-organisms which we would naturally expect to be present in crude drugs are destroyed by drying and exposure to light, still we have seen how resistant the spores of some of these organisms are, and though comparatively harmless in this resting stage they may afterward develop and propagate under more favorable conditions, as when preparations are made from the drugs contaminated with them.

Most roots and rhizomes hold in the fissures and clefts an appreciable or considerable amount of soil. In a few pounds of spigella we found a piece of soil weighing about 50 grammes. And recently a bundle of Mexican sarsaparilla weighing a little less than two kilos contained over 500 grammes of soil, which curiously was inclosed in the center of the bundle.

A microscopic examination of most drugs will show upon the surface a greater or less number of particles of dirt, and we have shown that this partly accounts for the higher percentage of ash in finely powdered drugs.

In some cases it is true that the drugs are prepared for the market by washing them, or even the periderm may be removed, but even here there is a certain amount of contamination, due to the water used and to the handling of them. Again, drugs which are dried in the open are more likely to be contaminated than those dried under cover.

In the process of curing of certain drugs, as gentian, the solanaceous leaves, vanilla, etc., fermentation changes take place, which, like those in the curing of tobacco, may be induced by micro-organisms. Each drug has a flora of micro-organisms more or less peculiar to itself, just as the insects infesting drugs are peculiar to certain of them. This can be very

easily demonstrated by taking the drug and placing it in sterilized water, when after about 24 hours it will be seen by placing a drop of water under the microscope to be alive with organisms, and also show signs of fermentation. I have even taken drug material, soaked it up with sterile water, decanted the liquid, placed the drug in 60 per cent. alcohol, and found after a year or two, as the alcohol evaporated, that the surface of the drug would be covered with micro-organisms. I have here some specimens which are eight years old and still show the presence of these organisms.

#### STERILIZATION.

Every pharmacist knows that a great many vegetable drugs are liable to be infested with insects, in even those drugs where we would hardly expect their presence, as belladonna, aconite, capsicum, etc.

Furthermore, the pharmacist is well aware how prone many preparations are to spoil, and here but little guidance or help is afforded by the Pharmacopœia. In those cases where glycerin is directed it is not entirely clear whether it is intended as a solvent only or as a preservative, but in general pharmaceutical practice it is probably used mostly as a preservative.

When one considers that the best potable water obtainable is practically diluted sewage, the definition of water as given in the Pharmacopœia is, to say the least, inadequate. According to the Pharmacopœia (1900), water is defined as "potable water in its purest obtainable state." True, a number of chemical tests are given, but none providing for purity so far as micro-organisms are concerned, and these are the chief cause of the spoiling and deterioration of pharmaceutical preparations.

We have seen that if we heat a solution to 110 degrees C. for 30 minutes the organisms are all destroyed both in the active and in the spore or germ stage. Heat under these conditions is a *germicide*. We have also seen that if we heat a solution at 100 degrees C. for 30 minutes only the organisms in the active stage are destroyed, the spores being later able to develop. Heat applied in this way is an *antiseptic* or *disinfectant*. We will further find that if a solution is kept at a temperature of between 25 and 45 degrees C. that the growth of most organisms will be accelerated, but if the solution is cooled to zero growth of the organisms is practically at a standstill, but the organisms are not destroyed and will continue to grow if the temperature be raised again.

In the same way we have four classes or degrees of effects due to chemicals, depending upon the strength in which they are used. For instance, corrosive sublimate solution of a strength of 1 to 500 acts as a germicide; in a strength of about 1 part to 1,000, as an antiseptic, while in a weaker strength of, say, 1 part in 10,000, it may even accelerate or stimulate growth, and in a still weaker strength it has no effect. Probably the best illustration of this point is afforded by the effects of alcohol on man, where in large doses it acts as a poison and in small doses as a stimulant or even a food under certain conditions.

#### THE BEST PRESERVATIVE.

The sterilization of pharmaceutical preparations, whether by means of heat or chemicals, requires considerable amount of thought and skill. Not infrequently one runs across the question as to the best preservative to be employed in keeping preparations which do not contain alcohol, and the usual answer is to add 5 per cent. of glycerin. Here the matter rests, without pains being taken to know whether the added glycerin really acts as a preservative, and so it is with many other preservatives. As a matter of fact the addition of preservatives, as of glycerin in the proportion given above, accelerates the growth of the micro-organisms present, and thus contributes to the decomposition of the preparation. The experiments of Rosenau on the antiseptic and germicidal properties of glycerin throws considerable light on this subject. He found that, as a matter of fact, glycerin has but feeble germicidal properties, but in 50 per cent. solutions it acted as an antiseptic, while in solutions having a strength of less than 10 per cent. the growth of a number of forms of micro-organisms was accelerated. These observations are borne out by every worker who uses dilute solutions of glycerin in microscopical work.

Then too many chemicals which are considered to be efficient preservatives or germicides are only partly so, as certain organisms will grow in their solutions. I have frequently noticed strong growths of molds in saturated solutions of boric acid.

The saying that cleanliness is next to godliness has acquired an added significance in these days. Cleanliness is not only desirable from an æsthetic point of view but is of great moment from an economical point of view. In the first place, it is highly desirable for the pharmacist to keep his store as clean as possible. One of the main points to be established is that all dust should be removed by wiping and washing, and the dust brush should be entirely discarded. Probably the best way to prevent dust arising in sweeping is by the use of moist sawdust.

Another important item, especially when making preparations, is that the hands should be well cleansed. For all practical purposes the hands can be cleaned very simply as follows: They should first be washed, using a good brush and soap; then a little chlorinated lime and a little sodium carbonate are made into a paste with water, and the hands thoroughly rubbed with this for a minute or two and afterward washed and rinsed with sterile water, the supply of which can be kept in a suitable container over the sink.

While it would make one almost frantic to try to keep all utensils and apparatus in a sterile or absolutely clean, from a bacteriological point of view, still the more this is done the better, and like in many other cases the greatest cost is in the beginning. Very many stock bottles can be sterilized by the use of a few drops of chloroform. This would apply especially to bottles which could not be heated on account of the manner of attachment of the labels or for other reasons.

#### THE CHEAPEST AND EASIEST WAY OF STERILIZING BOTTLES

is as follows: They should first be cleaned in the usual way, using tap water, then rinsed once or twice with sterile water, then allowed to drain, and when dry stoppered with a plug of absorbent cotton, and then heated in a drying oven at a temperature of 125 to 130 degrees C. for 30 to 40 minutes. It is very desirable to have on hand bottles of this kind for dispensing solutions of the alkaloids, eye waters, citrate of magnesia and other preparations.

While there are a number of chemical germicides and antiseptics which can be used by the pharmacist, still these should not be used for various reasons. In almost all cases galenicals can be sterilized by the use of heat, discontinuous sterilization being the safest procedure in this instance. Care should be taken not to prolong the heat beyond 30 minutes, and the flame should not be any higher than is absolutely necessary to maintain the proper temperature, for the reason that there may be a varying number of heat units in steam as well as in boiling water.

It is quite easy to render sterile most preparations which under ordinary conditions would spoil sooner or later, and keep them so indefinitely providing they are not disturbed.

Very often pharmacists make preparations under sterile conditions without probably realizing it in all instances. I have here an interesting specimen of syrup of acacia which was prepared by Mr. Haussmann, of Philadelphia, in 1898, and which notwithstanding the proneness of this syrup to decompose is still in good condition, the bottle probably not having been unstoppered since the syrup was prepared. The bottle was probably sterile, it being a listerine bottle. The syrup was prepared from distilled water, and was prepared by means of the heat of a water bath. But it is practically impossible to use the preparation without contaminating it, and it would be impracticable to sterilize the preparation each time that some of the preparation is used. Under similar circumstances the bacteriologist is compelled to sterilize nutrient media and materials which he handles.

#### A STERILE CONTAINER.

For some years I have been giving attention to this matter, with a view to devising a container for liquids which would keep the preparations in a sterile condition and at the same time do away with the necessity of sterilizing the preparation each time after using it. At first it occurred to me that a bot-

tie with a siphon might be used, the stopper being of absorbent cotton, but of course this did not answer the purpose. I then devised a bottle which was described at the recent meeting of the American Pharmaceutical Association. An ordinary bottle is fitted with a rubber stopper, perforated so as to allow of the introduction of two glass tubes. These tubes are bent at right angles and the free ends directed downward, this being in accordance with the tendency of microbes to fall downward rather than to rise, and thus their entrance into the free end of the exit tube is obviated. The tube through which the air is forced for expelling the liquid has inserted in it a small plug of absorbent cotton for filtering the air, and is connected with an atomizer bulb. The bulb can, of course, be detached and used on other bottles. [The bottle is described and illustrated on page 232.]

#### THE METHOD OF MAKING STERILE PREPARATIONS

and of using this bottle is as follows:

1. The bottle is washed in the usual way, then rinsed with sterilized water. It is then allowed to drain, and when dry is heated in a hot air oven at a temperature of 130 to 150 degrees C. for from 30 to 45 minutes.
2. The preparation is placed in the bottle so sterilized immediately after being prepared. The bottle is stoppered with a loose plug of sterilized cotton and a paper cap placed over the mouth. The bottle containing the preparation is then placed in a steam sterilizer and heated at a temperature of 100 degrees C. for 30 minutes on three consecutive days.
3. The rubber stopper and attached tubes are sterilized in a steam sterilizer at 100 degrees C. for from 30 to 45 minutes, or better in an autoclave at 110 degrees C. for 15 minutes.
4. Before sterilizing the preparation the third time, as given above, the absorbent cotton and paper cap are removed from the bottle, and the previously sterilized stopper and the attached tubes are introduced.
5. When cool the preparation can be used as needed by attaching the atomizer bulb and expelling the liquid in the ordinary way.

It is needless to state that while the majority of pharmaceutical preparations can be sterilized in the manner described there are others where heat may assist in hydrolysis, as of solutions of cocaine and some of the alkaloids, or because of decomposition of certain principles, as of lemon juice. Again, the mere solution of a salt, as of chloral, will cause certain changes. Substances of this kind should not be kept in solutions. But the solutions should be prepared when needed, and by using sterile bottles and sterile water the chances for deterioration are very much lessened.

An examination of certain syrups, as of acacia and tolu; of infusions, as of digitals, and even tinctures, as of kino, has shown that the cause of deterioration is due to microorganisms, and that this can be obviated by sterilization with heat. We have in some instances isolated the organisms in the spoiled preparations and by inoculating sterile preparations with the organisms have caused them to spoil almost immediately, while sterile preparations have kept for several years. In the case of tincture of kino we have inoculated tinctures containing respectively 25, 50, 75 and 100 per cent. of 95 per cent. alcohol, thus causing them to gelatinize. Specimens of the gelatinized tinctures and of the organisms causing the gelatinization I now show you.

#### THE CAUSE OF RANCIDITY IN OINTMENTS.

We are at present investigating the causes of rancidity in ointments, and unquestionably it is due to microorganisms. There is considerable difficulty in isolating these organisms, but I have here a specimen of suet which shows a growth of organisms which reminds one of the growth on certain cheese, this specimen having been kept in a closed vessel since 1901. The composition of the suet has been so changed that it is now covered with a leathery coating consisting of the mycelia of a mold, this resembling the papery growth which one sometimes finds in the marshes and which is due to a filamentous alga.

I perhaps do not need to enlarge upon the practical side of this subject further, particularly as it relates to pharmacy. Beginning with the investigations of Biasoletto, of Trieste, in

1882, and of Kutzling in 1884, there have been a series of papers bearing on this subject. Even within the past few days I learn through the *Botanische Zentralblatt* that an investigator of the Paris School of Pharmacy has isolated several new molds found in drugs.

In these days, when the standards require that preparations and drugs should be of fair quality, it is important that the pharmacist should have a knowledge of the factors causing deterioration and be able to utilize methods for preventing this. Permit me to give one more instance in this connection. A little more than a year ago one of my students said that he had noticed that a certain store advertised a quantity of mustard seed at 2¼ cents a pound. He furnished us with 5 pounds of the material, and we found that it was admixed with other seeds and that none of the seeds would germinate. There were white spots on the mustard seeds, which we found to contain relatively large starch grains. Bacteriological cultures were made from these seeds and we obtained an organism which when placed on good mustard seeds contained in a Petri dish with a little moistened absorbent cotton, thereby produced white spots on the seeds which contained similar starch grains. The formation of these starch grains was probably produced by the organisms from the mucilage contained in the mustard seed.

(Written for the American Druggist.)

#### ON CASTILE SOAP.

By J. B. MOORE,

Philadelphia.

White castile soap, which is nowadays about the only kind for which there is any demand—the mottled variety having fallen almost entirely into disuse excepting for veterinary purposes—is, when pure and properly made, a soda and olive oil soap, and is supposed to be practically neutral, and when fresh usually contains about 21 per cent. of water, but by the time the soap reaches the hands of the retail pharmacist its percentage of water will vary according to the conditions and circumstances under which it has been kept. When bought from the jobbers in unopened boxes the proportion of moisture calculated as water may not average more than from 15 to 18 per cent. Of course, the percentage can only be approximated as some lots may contain more and some less. After the package has been opened and the soap allowed to remain neglected, perhaps, for a time in a dry atmosphere, it will soon dry out, become hard and discolored, and the bars become warped, as every pharmacist knows. In this condition it maybe has lost 10 to 12 per cent., or more, of its water. Therefore, when the soap is sold in this condition, the pharmacist, when adjusting his price by the pound or bar, must not be unmindful of the loss sustained by exposure and desiccation.

The well-known "Conti" brand of castile soap is the purest and best soap made. I have tried many other brands of the market at different times, but none in my experience and judgment could bear comparison with "Conti" in quality. I have never found anything that pleased my customers so well, or gave such universal satisfaction. I have been selling it almost exclusively for many years, and cannot recall a single complaint, or even a hint of dissatisfaction concerning it. There has been a large and continuous demand for it. I have always found it constant and uniform in quality, and I believe it as neutral in its composition as it can be made, and being a pure olive oil soap it is emollient, healing, soothing and sanitary in its effects. It is really the most desirable soap for use in the nursery and toilet, and is the only unmedicated soap that ought to be used for washing sores, ulcers, wounds and for all diseased surfaces.

The legion of fancy soaps which burden the market of the present day has to a great extent superseded the castile soap, and especially among the fashionable set. But this popularity has not been acquired through intrinsic merit. The elegant form in which they are put upon the market, together with the sweet and fascinating perfume of the soaps, has given them a fictitious popularity and an *entrée* and ready welcome into the toilets, boudoirs, and even into the nurseries of not only the

*élite* but of nearly all classes of our people. I have, however, always had grave doubts as to the purity, healthfulness, and even the safety of these soaps, and especially as to their fitness for use in the nursery and toilet. The aggressive and fierce competition between the various manufacturers in their struggle for place and business and in their price-cutting encounters would naturally prompt them to cheapen the price of their products until quality might cease to have rating with some of them; consequently many of their soaps would be likely to be made in an indifferent manner, and some perhaps of an inferior quality of material, as this can be done with impunity, as their friend and protector, the strong perfume, would cover all these imperfections. The more expensive and higher grades of fancy soaps may have their redeeming features.

Notwithstanding the encroachments of the fancy soaps there is still and ever will be a steady and constant demand for castile soap and from all classes of people.

Now, in order to have the soap present a more elegant and attractive appearance, it has been my custom, after the soap has become sufficiently dried so as to be just firm enough to handle, to wash the bars in lukewarm water with a soft sponge to remove all adhering paper, dirt or other extraneous matter, and with a sharp knife cut or scrape off all dark spots or other unsightly disfigurements, and then rinse the bars quickly in cold water, wipe them, and stand them on end until they have thoroughly dried. It is astonishing how much the appearance of the soap will be improved by a little washing, cleaning and trimming of this kind. The trifling loss of soap during this treatment, if the operation is done quickly and with judgment, is hardly worth considering.

Bars of soap presented to customers in this white, clean and improved condition at once attract attention to the beauty of the soap and enhance its quality in the estimation of customers. Any commendatory remarks which an adroit and intelligent salesman is likely to make about the superiority of the soap will command respect and confidence, as its very appearance will tend to corroborate what he may have to say.

Castile soap is always kept on hand ready for sale by all pharmacists in 5 and 10 cent cakes; also by some in  $\frac{1}{4}$ ,  $\frac{1}{2}$  and 1 pound pieces, where there is a demand for larger cakes. The 5 and 10 cent cakes should be cut with care into regular and uniform sizes and shapes. Four or 5 ounces form a good, generous sized 10-cent cake. The 5-cent cakes should not be made too small or too thin. To form these 5-cent cakes I had for years adopted the plan of cutting the 10-cent cakes crosswise and as nearly through the center as possible. This forms a good, solid cake that will wear well. Then the rough and ragged edges of the cakes should be cut and smoothed off, as far as practicable, by running the sharp edge of a knife over them; otherwise, when the cakes become dry and hard their sharp edges in washing will continue to hurt the hand until they get worn off. In fact, all irregular surfaces which mar the uniform and shapely appearance of the cake should be carefully cut or shaved off. Of course, this trimming and dressing must be done with care and some judgment so as not to unnecessarily mutilate or waste the soap. When this preliminary treatment has been completed the soap should be quickly rinsed off, one cake at a time, with cold water, to smooth it and to remove all adhering particles. The cakes should be wiped and set aside immediately, each one resting on its edge in a dry atmosphere until it is well dried, after which they should be wrapped in waxed paper, with the following suggested label on it:

#### WHITE CASTILE SOAP (strictly pure).

This is the veritable "Conti" brand of imported castile soap. The finest soap in the world! Made of pure olive oil and soda. Neutral, and as bland and soothing as fresh cream. Its detergent properties are unequalled, and its perfect purity and blandness peculiarly qualifies it for the nursery, the bath, and for all purposes, either *lavatory* or *medicinal*. If you value a *soft, smooth* and *healthy* skin avoid all cheap and impure soaps.

This is a copy of the label I have always used. Its wording may be changed.

That portion of the soap wrapped and labeled which is not

required for immediate use should be carefully put away in a suitable box, can or drawer where it will keep in good condition.

I should advise every pharmacist to provide himself with a large, heavy tin container with a closely fitting hinged lid of sufficient capacity to comfortably hold an original box of castile soap. The bars should then be placed in the container so as to allow of each bar being stood on end. Placed in this position the bars will not stick together, and are always easily removed. The bars may be transferred to the container as soon as received and opened, but if they should be very moist, as some lots are, I have always first stood them upon end in a dry atmosphere until they dry out to a desirable condition to be cleaned and put away. I would here state that I always placed in the bottom of my container a board for the soap to rest upon, cut to fit loosely at the bottom of the container, which is much better than to allow it to rest upon the tin bottom of the container. Furthermore, the container should be thoroughly washed and well dried each time before refilling. The container will preserve the moisture of the soap and keep it clean and in good condition.

I think it would also be desirable for the particular pharmacist to have a suitable smaller tin box with a tight-fitting hinged lid made to hold the soap after it has been cut into 5 and 10 cent cakes and other sizes which are kept on hand for retailing. This box would preserve the soap clean and in good condition, prevent it from drying and becoming hard, and would also tend to prevent it from warping and growing discolored.

Soaps of all kinds, and especially the fancy soaps, after they have been exposed for sale for any length of time become soiled, dirty, faded, and often much discolored. All these soaps can frequently be renovated and very much improved in appearance by a quick, dexterous and gentle washing, one cake at a time, with cold water and a small, fine sponge, and then immediately and carefully wiping with a soft and absorbent rag. After the soap has become thoroughly dry, it may be lightly but quickly rubbed and polished by means of a fine piece of chamols or soft cloth. Those who have never tried it will be surprised at the improvement that can sometimes be made in the appearance of soaps that have gotten in bad condition by age and exposure. If the soap has become scratched or slightly broken, the injured parts may be smoothed and carefully dressed off by the dexterous use of a suitable knife. Only a little judgment and practice are necessary to produce the best results.

Many pharmacists may consider all this painstaking care in the handling of soaps as unnecessary, but they are mistaken. To the industrious and ambitious man this should be considered a labor of love, and especially when he appreciates the little touch of elegance which it gives to his business methods and the enhancement of his reputation which it promotes.

#### Noordyl Drops.

*L'Union pharmaceutique* gives the following as the composition of Noordyl's drops, the analysis being by Arends and Zernick:

|                                 |           |
|---------------------------------|-----------|
| Dilute alcohol.....             | Gm. 32.50 |
| Oil of tar (emphyreumatic)..... | Gm. 5     |
| Oil of birch tar.....           | Gm. 5     |
| Oil of peppermint.....          | Drops 2   |
| Oil of aniseed.....             | Drops 2   |
| Saccharin.....                  | Gm. 0.05  |
| Potassium sulphide.....         | Gm. 2     |
| Tincture of castor.....         | Gm. 2     |

**Cultivation of Opium in the German African Colonies.**—According to Braun (*Der Pflanzer*, 1905, No. 11-12), Hammerstein, in 1886, was the first to suggest the cultivation of opium in German East Africa. The first attempts in this direction were made at Kwai, the seeds having been imported for that purpose from Smyrna. As but few plants grew from these first attempts no accurate analyses could be made at that time. An examination of some later growths revealed that the dried opium derived from these plants contained 13.49 per cent. of morphine, and Braun calls attention to the fact that German East Africa is likely to be an important field for the cultivation of opium in the future.

## THE IPECAC ROOT OF THE PHARMACOPŒIA.

BY I. V. S. STANISLAUS, PHARM.D.

Demonstrator of Pharmacy, Brooklyn College of Pharmacy.

At the regular monthly meeting of the Kings County Pharmaceutical Society, held in the Brooklyn College of Pharmacy on December 12, Dr. I. V. S. Stanislaus presented a paper on Ipecac which gave rise to an interesting discussion. The paper included a formula for syrup of ipecac which the author considers an improvement on the official syrup, and this is given in the abstract presented below:

Dr. Stanislaus began by saying that ipecac, by reason of its wide and varied adaptation in medicine, would seem to deserve a more prominent place in practice than it occupies.

The first mention of ipecac in literature was contained in an account of Brazil written by a Portuguese friar, a resident of that country from 1570 to 1600, and published in London by Purchas in 1625, under the title, "His Pilgrimes." Here it is described as "Igecaya" or "Pigaya," "a remedy for the bloody flux." Its introduction into medicine is credited to Docteur Le Gras, a French physician, who was the first to recognize its properties and uses. He made his experiments public in 1672.

The plant itself was, however, already known in Europe between the years 1636 and 1641. The credit of describing the plant and the drug justly belongs to Marcgraf and Piso, who first identified ipecac during their travels in Brazil. Their "Natural History of Brazil," which is an account of their scientific exploration of that country, and published in 1648, recognized two varieties of ipecac: The brown, *Cephaelis Ipecacuanha*, and the white, *Ipecacuanha blanca*. This white variety was in reality the *Richardsonia scabra*, St. Hillaire, a root of pure whiteness when fresh but acquiring a brownish-black color by age. The dark variety is the preferred medicinal sort. In the time of Louis XIV of France ipecac appeared on the market as a secret nostrum, and it was lauded and praised so wonderfully that the King's attention was attracted, and he paid a Dr. Jean Adrien Helvetius the sum of one thousand louis (a very large sum in those days) to learn the secret of the drug's identity; besides, he granted the vendor the exclusive rights for its sale.

Dr. Leibnitz, a German physician, in his work, "*De Nova Antidysenterico Americano*," published in 1696, was one of the first that seriously called the attention of the profession to its use.

At the beginning of the eighteenth century the commerce in ipecac was exclusively in the hands of the Portuguese, who made use of the opportunity to charge outrageous prices for it. This condition of affairs lasted until English competition tended to lower the price to its present reasonable rate.

## THE ACTIVE CONSTITUENTS OF IPECAC.

Among the proximate principles found in ipecac are the alkaloids named respectively emetine ( $C_{12}H_{21}NO_2$ ), cephaeline ( $C_{14}H_{25}NO_2$ ) and psychotrine; the formula of the last named has not as yet been determined, and a fourth alkaloid announced by Paul and Cownley in 1895 which remains unnamed; the other constituents represent starch of about 40 per cent., some sugar, resin, wax, fat, a trace of a volatile oil and coloring matter. All modern pharmacologists are agreed that the root owes its activity to the presence of alkaloids, though it has been demonstrated that its antidyenteric action does not at all depend on the alkaloids. Recently it was announced that cephaelic acid, a glucoside, closely resembling caffeotannic and kinic acid, which likewise holds all the alkaloids in natural combination, is responsible for its antidyenteric properties. Which of these investigators is right only time and the ever-broadening field of pharmacological investigation will determine. This much is true, however, that the physiological action of the respective alkaloids is far from identical, emetine being expectorant and cephaeline emetic. In this regard the naming of the ipecac alkaloids is unfortunate, and the terms should be reversed. The alkaloid, emetine, was first isolated by Magendie in 1817, in a very crude state; others who worked on the alkaloid, and whose labors should be recorded, were

Lefort, Dumas, Podwysocki and Pelletier. Podwysocki's pure emetine was obtained by Kunze in 1887 and by Cownley in 1894. Podwysocki regarded the commercial emetine a mixture of cephaeline, choline and emetine.

Chemically, emetine belongs to the tertiary diamines, presenting in its pure state a colorless, amorphous powder, easily decomposed and soon acquiring a brownish color. Such brownish emetine is much inferior to the purer white alkaloid.

The Carthagena, Columbia or New Granada ipecac, which came into use during the last two decades, is a cheaper variety obtained from *Cephaelis acuminata* Karsten. The appearance of the root is not unlike the Rio variety, but it is about one-half thicker, and is of a dull-grayish color, whereas the Rio variety is distinguished by a ferruginous-brown or an occasional blackish-brown color. The very slight, peculiar odor and bitter, nauseous, somewhat acrid taste are uniformly the same in both varieties. While the Rio variety is usually preferred, the Carthagena root is now more common. The so-called "wiry" roots of the Rio variety are especially rich in the alkaloids peculiar to the drug.

The distribution of the alkaloids in the two varieties is interesting, while the Rio variety yields from 1 to 2 per cent. of emetine and from 0.25 to 1 per cent. of cephaeline, the Carthagena variety contains from 1.16 to 1.94 per cent. of emetine and from 0.59 to 1.3 per cent. of cephaeline. This shows that the ratio of alkaloids in the Rio variety is about 3 parts of emetine to 1 part of cephaeline, while the ratio in the Carthagena variety is of 0.8 parts of emetine to 1.25 parts of cephaeline. The eighth decennial revision of the United States Pharmacopœia recognizes both the Rio and the Carthagena varieties of ipecac, providing they fall within the alkaloidal assay requirement, which is set at 2 per cent. of total alkaloids.

The author of this paper read a paper before the Indiana Pharmaceutical Association in 1900 on The Comparative Value of the Various Assay Methods for Ipecac, in which the superiority of Keller's method was discussed. Good, average samples of Brazilian ipecac yielded 2.98 per cent. of the total alkaloids, when assayed by the Keller process. As early as 1874 Dragendorff in his work, "*Ueber die chemische Werthbestimmung einiger starkwirkender Drogen und der aus ihnen angefertigten Arzeneimischungen*," gave a method for assaying ipecac root which depended on the estimation of the emetine by titrating with Mayer's solution, an alcoholic solution of the root, acidulated with sulphuric acid. This method has many negative qualities, especially with reference to the end reaction and the precipitation of the choline and coloring matters.

In the powdered state ipecac is frequently adulterated with the spuries, cocillanna and asclepias, all of which possess similar properties. As said before, the alkaloid emetine is unstable. Owing to its instability then the powdered root and preparations of ipecac are preferred to the alkaloid. At the present time ipecac is used mostly as an emetic, but much more often in smaller doses as an expectorant and diaphoretic. In India, where it is employed as a specific for dysentery, and given in doses of 2 grammes, the mortality in the cases thus treated has greatly diminished. Its external behavior is peculiar. In the form of a 20 per cent. ointment with lard applied by innunction it not only irritates the skin, but also the membrane of the stomach, the bowels and the salivary glands; it causes a peculiar coughing and unpleasant sensation of burning in the chest. Lately R. Blouel recommended enemas of ipecac in chronic constipation. Of the galenic preparations of ipecac the syrup is most frequently employed. In several of the Continental Pharmacopœias it is prepared by diluting a freshly prepared hydro alcoholic tincture with simple syrup, or by the simple admixture of the fluid extract with syrup. The U. S. Pharmacopœia of 1870 directed 5 parts of the fluid extract mixed with 95 parts of the syrup. The last two revisions direct a 7 per cent. syrup with acetic acid and glycerin added. From the standpoint of keeping qualities a syrup thus prepared leaves room for improvement, for the acetic acid causes the inversion of cane sugar and consequent souring.

The following formula obviates the above objections and

furnishes a syrup of good keeping qualities, prompt in its physiological action and expeditious of preparation:

*Syrup of Ipecac.*

Fluid extract ipecac.....30 Cc. or 1 fl. oz.  
Alcohol.....45 Cc. or 1½ fl. ozs.  
Ammonia water, stronger.....2 Cc. or 30 m.  
Syrup, U. S. P.....525 Cc. or 17½ fl. ozs.

Mix, let stand 24 hours and filter. This is practically a 5 per cent. syrup.

A sample of it kept well for 11 months at ordinary temperature and it is well worth a trial.

In discussing the paper Thomas J. Keenan called attention to the fact that the ipecac of the eighth decennial revision of the Pharmacopœia was not the definite root that was formerly official. He instanced the different alkaloidal content of the two roots of Rio and Carthagera ipecac respectively, the Rio containing the larger proportion of emetine as compared with cephaeline and the Carthagera root less emetine and more cephaeline. The emetine, contrary to its name, is the real expectorant principle, while the cephaeline is more emetic in its action. It was only of late years, he said, that the Government authorities would allow the Carthagera ipecac to enter this country, and the physician who prescribes ipecac to-day does not get the article which he prescribed ten years ago. It was true that the Pharmacopœia prescribed a standard of alkaloidal strength, but it did not specify any definite alkaloid.

Dr. Stanislaus received a vote of thanks, and was instructed to bring the subject to the attention of the medical societies in Brooklyn. In this connection the following editorial reference to the subject of Dr. Stanislaus' paper contained in the current number of the *New York Medical Journal* will be read with interest:

THE IPECAC OF THE PHARMACOPŒIA.

At a meeting of the Kings County Pharmaceutical Society held in Brooklyn on December 12 an important matter was brought forward in a paper read by Dr. I. V. S. Stanislaus, demonstrator in pharmacy at the Brooklyn College of Pharmacy. It was that of the indiscriminate inclusion in the new Pharmacopœia of both the Rio and the Carthagera ipecac roots under the common title of *Ipecacuanha*. Until five or six years ago the so-called Carthagera ipecac root (the root of *Cephaelis Acuminata*) was denied admission at any of the ports of entry of the United States. Then the growing scarcity of the Rio root (the root of *Cephaelis Ipecacuanha*) led to a demand on the part of drug importers for the admission of the more plentiful and cheaper Carthagera variety.

Perhaps there would be no objection to pharmacopœial recognition of the two roots if distinct names were given to them and if the preparations to be made from each root were clearly designated. Our reason for saying that their distinction is highly important lies in the varying amounts of the active alkaloids present in the two roots. The active therapeutic constituents of both roots are the alkaloids emetine and cephaeline, the third alkaloid, psychotrine, being rated as of little value. The most recent investigations show that emetine is contained in the Rio root to the extent of about 2.026 per cent., and cephaeline in the proportion of 0.0842 per cent. The proportions are quite different in the case of the Carthagera root, which contains 1.544 per cent. of emetine and 1.389 per cent. of cephaeline.

Recent work in therapeutics indicates that the two alkaloids have been misnamed, for emetine is by no means so powerful an emetic as cephaeline is. Emetine is the more purely expectorant principle, and it is on results obtained with preparations of Rio ipecac (containing emetine in the larger amount) that our estimates of the therapeutical value of ipecac are based. With both roots official under the same name, as they are in the new Pharmacopœia, the physician has no means of knowing which of the alkaloids is likely to predominate in any preparation of ipecac that he may prescribe. With regard to the fluid extract, from which the syrup is directed to be made, the only pharmacopœial requirement is that it shall contain a specified amount of the mixed alkaloids—how much of emetine and how much of cephaeline, the book does not say.

THE MILITARY PHARMACIST IN THE CIVIL WAR.<sup>1</sup>

By CASWELL A. MAYO, PH.G.,  
New York.

Unfortunately for the purposes of the Section on Historical Pharmacy the major portion of the material elicited by the published appeal for information, which is referred to in the report of the secretary of the section, is of a fragmentary character. The men who have come forward as having been engaged in the pharmaceutical service during the war, while willing to talk of their experiences, were as a rule not accustomed to writing and declined to put down on paper their recollections. Whenever I have come in contact with veterans of either army I have always endeavored to learn something of the official and social status of the pharmacists engaged in the field, as well as something of their duties.

In the Federal army the spirit of discipline was much stronger than among the soldiers of the South, and the official regulations were therefore more closely followed in the former than in the latter army. In a general way it may be said that pharmacy was not recognized in the organization of the army. In the regular army then, as now, the appointees to the position of hospital steward were not trained pharmacists, and the majority of them had neither knowledge nor experience of pharmacy prior to enlisting in the army. If a quondam drug clerk happened to enlist he sometimes, but not always, drifted into the post of hospital steward, but those who were of an active and aspiring nature frequently preferred to remain in the line of that promotion which was denied to the hospital steward, who had the relative rank and the pay of a sergeant and could never rise higher.

DUTIES OF THE HOSPITAL STEWARD.

His duties varied with his assignment. If on detached service with a single regiment he acted as keeper of the records of the regimental hospital, did such dispensing as was required, which was usually of a routine character, as the surgeons generally fell into a rut in their methods of practice, supervised the work of the men detailed from the ranks to act as orderlies, dressed wounds needing attention, and attended to such cases of minor surgery as presented themselves for attention at any time other than the regular "sick call" immediately after breakfast. The limit to which the hospital steward went in the matter of prescribing for and operating in minor troubles depended partly upon his own willingness to assume duties really outside his legitimate sphere of activities and partly upon the attitude of his immediate superior, the regimental surgeon.

No galenical work was expected of the hospital steward, as his supplies were all furnished him ready made as far as was practicable. When serving with larger bodies of troops or in base hospitals each steward was assigned to some particular branch of duty by the surgeon in charge. No provision was made for the employment of pharmaceutical experts to see to the purchase and preparation of the medical supplies, these important functions being performed by the surgeons acting as medical purveyors.

MEDICAL STOREKEEPERS.

It was soon discovered, however, that the popularly accepted theory that a doctor knows everything that a druggist knows, and a great deal more besides, was a fallacy, and on May 20, 1862, an act was passed by Congress providing for the appointment of five medical storekeepers, who were required to be "skilled apothecaries or druggists." These medical storekeepers were given the pay of a lieutenant, but without any rank or uniform, and were required to give bond in the sum of \$40,000 each. Four of the five storekeepers appointed were also assigned to duty as acting medical purveyors without any increased pay or rank.

The duties of the medical storekeepers were very important, and their responsibility was out of all proportion to their pay and rank—or lack of rank. In addition to procuring and issuing medical supplies these storekeepers, who were acting medical purveyors, were also disbursing officers, being

<sup>1</sup> Read before the Section on Historical Pharmacy of the American Pharmaceutical Association at the Atlantic City meeting.

charged with the payment of accounts against the medical department and also of contract surgeons and of the civilian employees in hospitals, such as cooks and nurses. At the close of the war these "medical storekeepers" were retained until retired, but were not replaced.

#### THE GOVERNMENT LABORATORIES.

During the Civil War two Government laboratories were established by Surgeon-General Hammond, one of which was located at New York and the other at Philadelphia. The laboratory in Philadelphia was in charge of the late Prof. John M. Maisch. Each of these laboratories was connected with a depot through which supplies were purchased and issued. The other depots were divided into department and field depots, the former being located at the most central point of each military department, the latter being in close proximity to the scene of active operations.

#### MILLIONS SPENT FOR MEDICAL SUPPLIES.

The following figures from a "statement" issued by Surgeon R. S. Satterlee, medical purveyor, U. S. A., at New York, will give some idea of the amount of drugs and medicines supplied from a single depot to the army during four years and three-quarters. The moneys expended by Surgeon Satterlee in purchasing all the supplies and for services of contract surgeons, nurses, etc., during the period mentioned amount to the immense sum of \$18,086,569.31, of which \$753,184.91 were in 1861, \$2,779,635.21 in 1862, \$3,420,334.33 in 1863, \$6,472,498.41 in 1864 and \$4,680,916.45 in 1865.

#### IN THE CONFEDERATE ARMY

the general outlines of organization were very much the same as those followed in the Federal Army, save that the official known as "medical storekeeper" seems not to have been introduced. Owing to rather lax discipline, however, the regulations were not always rigidly adhered to. In at least one case that has come under my personal notice, that of my old preceptor, Sidney B. Street, of Columbus, Miss., a pharmacist demanded and obtained a commission while acting as medical purveyor for the division commanded by that General Jackson who was distinguished from his more renowned namesake by the sobriquet of "Mud Wall."

#### PROPOSED ORGANIZATION OF AN EXPERT PHARMACEUTICAL CORPS.

I have for a long time advocated the organization of a pharmaceutical corps within the medical department, having at its head a pharmacist-general with the rank of colonel, with officers of a suitably graded rank attached to the army corps, divisions and brigades. This suggestion was based upon a careful and independent study of the conditions in our service both in times of peace and war, and has met with the approbation of a number of officials in a position to judge of its practical value.

In 1898 I was agreeably surprised to have brought to my attention the fact that the organization of a corps along almost identically the same lines was proposed just after the close of the Civil War. I present below an excerpt from an article on this subject, which was printed in the *Army and Navy Journal* for August 5, 1865, and reprinted at the time in the *American Journal of Pharmacy*. This article was written in criticism of a communication from a previous correspondent of that journal, and is evidently the outcome of an intimate knowledge of the conditions of the service during the mighty conflict which had just been brought to a close.

What is needed to supply the wants of the Medical Department of the Army in this respect is a corps of thoroughly educated apothecaries—not drug clerks, whose whole knowledge consists in knowing how to "make a bundle." A thoroughly educated apothecary will know how to keep accounts, and experience will teach him how a hospital should be conducted. Constitute them as a separate corps under an apothecary-general, instead of purveyor-general, with two deputy apothecary-generals. The apothecary-general, with two deputy apothecary-generals, to be charged under the surgeon-general with the provision of supplies for the army. The apothecary-general and one deputy apothecary-general to be stationed in New York City. The other deputy apothecary-general to be stationed in San Francisco, Cal. Then appoint five apothecaries with the rank and pay of majors of cavalry, to be stationed at the headquarters of each military division, to take the place of the medical purveyors at the head of each military department, and two to be on duty in the office of the apothecary-general. Twenty assistant apothecaries, with the rank of first lieutenant of cavalry, to be in charge under the direction of the surgeons of the large hospitals, and 100 assistant apothecaries, with the rank of second lieutenant of cavalry, to be in charge of small

garrison hospitals, and 75 assistant apothecaries, with the rank of a cadet,\* to be stationed as assistants in large hospitals.

A board should meet, composed of such men as Dr. Squibb, to examine applicants for the corps of apothecaries, and appointments should be made according to the order of merit in which the candidates have passed. Afterwards promotions should be made by seniority, always subjecting the member next on the list for promotion to another thorough examination until he reaches the grade of apothecary, with the rank of major.

All new applicants should enter as assistant apothecaries with the rank of a cadet. They should serve at least six months before they can be admitted to another examination and promoted. In every grade above that of cadet they should be required to serve at least five years before they can again be examined and promoted.

The total number of commissioned officers of the corps of apothecaries would be 148, thus: One apothecary-general with the rank of colonel of cavalry, two deputy apothecary-generals with the rank of lieutenant colonel of cavalry, five apothecaries with the rank of major of cavalry, 20 apothecaries with the rank of captain of cavalry, 20 assistant apothecaries with the rank of first lieutenant of cavalry, 100 assistant apothecaries with the rank of second lieutenant of cavalry and 75 warrant officers or cadets.

*The corps would prove less expensive than the present system of assigning medical officers as purveyors, who are often very much dependent on their clerks in the discharge of their duties, living, naturally enough, ignorant of the drug business.*

It is a wrong impression most physicians have that a physician must *eo ipso* be an apothecary, and that all an apothecary needs to know is how to put up a prescription. Pharmacy is as much of a science and requires as much study and practice as medicine. The practice of medicine depends in no small measure on the advancement in pharmacy for its success, and pharmacy, again, looks to chemistry for new developments.

The signature of "M" attached to this communication has suggested the possibility that the article was written by Professor Maisch himself, though I can find no evidence to confirm this supposition. The close accord shown between the plan advocated by myself before I had any knowledge of the above article and that proposed in this communication is evidence that a careful and independent study of the subject can lead only to one conclusion—namely, a corps of expert pharmacists should be put in charge of the entire medical supply service of the army.

#### A PHARMACEUTICAL CORPS FOR AN ARMY OF 100,000.

My own plan for a pharmaceutical corps for an army of 100,000 men, as published in 1898, proposed a corps consisting of one pharmacist-general, with the rank of colonel; four assistant pharmacist-generals, with the rank of lieutenant-colonel; four corps pharmacists, with the rank of major; ten division pharmacists, with the rank of captain; twenty-five post pharmacists, with the rank of first lieutenant, and twelve staff pharmacists, with the rank of second lieutenant. This plan contemplated the location of the pharmacist-general, one assistant pharmacist-general, or preferably a deputy pharmacist-general, and two staff pharmacists at Washington, one deputy pharmacist-general and two staff pharmacists at New York, Chicago and San Francisco, one division pharmacist at the headquarters of each of the military divisions, assisted at Manila by a staff pharmacist, and one post pharmacist at each large hospital or important post.

Pharmacists generally and those physicians who have served at Bellevue Hospital will understand what this corps should be when I state that in discussing the subject in 1898 I proposed Dr. Charles Rice as an ideal man for the office of pharmacist-general.

#### ECONOMY EFFECTED BY THE ESTABLISHMENT OF SUCH A CORPS.

This corps would relieve an even larger number of medical officers from disagreeable details, leaving them free for the performance of their specific duties as physicians and surgeons at a very considerable economy of cost. Each of the members of this corps should be an expert pharmaceutical chemist, with a liberal education as a basis for his pharmaceutical training.

The organization of such a corps would no doubt lead to the establishment of a general laboratory somewhat similar to the laboratory established at Philadelphia during the Civil War. The duties and rank of the hospital steward as he now exists would not be affected by the establishment of the new corps, save that the hospital steward might be given an opportunity for promotion should he be able to pass the required general and technical examination.

I am convinced that had the efforts of the American Pharmaceutical Association toward the elevation of the status of the pharmacist in the army been directed toward the establishment of some such corps, rather than toward the promotion of the men now serving as hospital stewards, some tangible result would have been obtained.

\*Cadets were generally medical students who performed minor operations and assisted the surgeons. The office was abolished after the war.

## Cream of Current Literature

A summary of the leading articles in contemporary pharmaceutical periodicals.

**Check Tags for Prescription Bottles.**—A pharmacist in Rostock, Germany, has adopted a system of checking tags on his prescription bottles which has the advantage of great convenience. The appliance consists of a small metal frame provided with a clamp. Into this frame the check bearing a number can be inserted at will, while the clamp holds the tag around the neck of the bottle. The checks are made of celluloid and bear a number corresponding to a duplicate which is handed to the customer.

**Keyl's Suppository Press.**—A suppository press is manufactured by Hugo Keyl, of Dresden, which is arranged like a syringe and is filled with 2 or 2½ grammes of melted cacao butter. An attachment is then screwed on which contains the mould and which has been previously wiped with alcohol. By turning the handle the cacao butter mass is pressed into the mould and the latter is unscrewed and opened. In making a number of suppositories it is best to use several moulds, which can be attached one after the other. The moulds are made of an especial alloy of zinc and aluminum.

**A New Formaldehyde Test for Sugar in the Urine.**—Strykowski (*Therapeutische Monatshefte*, 1905, page 109) describes the following simple test for sugar in the urine. If 5 per cent. of the ordinary, 40 per cent., solution of formaldehyde be added to urine containing sugar a green fluorescence develops, which is the more intense the greater the amount of sugar. The reaction occurs more promptly at higher temperatures (50 to 60 degrees C.). The author does not know the reason for this reaction but its presence indicates an unfavorable course of the disease, as it does not occur in the milder forms of diabetes.

**Artificial Effervescent Codliver Oil.**—This form of codliver oil is prepared by a patented process in the chemical works of Helfenberg (formerly E. Dieterich), and is devoid of all the unpleasant features of ordinary codliver oil. It contains carbonic acid, which makes it effervescent and which preserves it for an indefinite time and also facilitates its absorption by the stomach. According to Brodzki (*Pharmazeutische Zentralhalle*, September 15, 1905), this form of codliver oil is of great value in all conditions in which codliver oil has been used, especially in children. Its taste is very much better than that of the ordinary codliver oil and its cost is not considerably greater than that of the old form.

**Chemical Apparatus Made of Magnesia.**—According to the *Chemiker Zeitung* (1905, No. 67) the Royal Porcelain Works at Berlin have been experimenting for some time with the manufacture of various utensils from pure magnesia. It was found that tubing of 80 Cm. in length, 7 Cm. in diameter and 7½ Mm. in thickness could be made from pure magnesia, and that crucibles of any diameter and any thickness up to a height of 50 Cm. could be manufactured from this material. It was found further that these utensils did not crack upon sudden heating, nor did they change their shape in any way. Tubes prepared from magnesia could be heated up to 1,750 degrees C. in the electric oven without showing any deterioration and without suffering any electrolytic changes. Apparatus prepared from pure magnesia looks like that made of baked porcelain clay.

**Ipecac in the German East African Colonies.**—K. Braun (*Der Pflanze*, 1905, No. 4) says that ipecac could no doubt be profitably cultivated in the German East African Colonies since favorable results have been obtained with the cultivation of this plant in England and Holland. The soil is excellent in German East Africa, and can still be improved by the addition of manure or wood ashes. The climate is uniform and moist. The best way to grow the plant is in small, narrow beds, which can be easily shaded from direct sunlight by

means of straw matting. Ipecac can also be grown successfully in the shade of coffee trees, but trees that shed the rain to a considerable extent are not to be recommended for this purpose. The best result can be obtained with pieces of root from 3 to 4 Cm. long, which should be covered with a layer of earth from 2 to 3 Cm. thick and planted at intervals of about 9 Cm.

**Poisoning with Potassium Bichromate.**—It is rather rare to see cases of poisoning with potassium bichromate reported, but the *British Journal of Photography* (quoted in *Pharmazeutische Zentralhalle*, September 14, 1905) reports a case of this kind. A man mistook a solution of potassium bichromate for beer and died after drinking it. Workmen who handle potassium bichromate quite frequently get skin diseases and Schleich has recommended an ointment which can be rubbed on the hands to prevent this skin irritation. This ointment can be used for the prevention of skin affections on the hands of persons handling other chemicals, and consists of 10 grammes of pure neutral soap which are dissolved on the water bath in 100 grammes of water and are mixed with 100 grammes of wax by constantly stirring. After the mass has cooled 170 drops of ammonia are added, drop by drop, 100 grammes of lanolin are mixed in, and the mass is diluted with water until it has a soft consistence.

**Estimation of Cinchona Alkaloids by Means of a Thiocyanate.**—Skey has pointed out that many alkaloids give precipitates with ammonium thiocyanate in the presence of a zinc or mercury salt. Many other metals act in a similar manner; zinc, however, forms the most insoluble precipitates. The alkaloids most sensitive to this reaction are, says P. W. Robertson in (*Proceedings of the Chemical Society*, p. 242), quinine and the cinchona alkaloids. Thus in the presence of excess of zinc sulphate and ammonium thiocyanate, one part of quinine gives a distinct turbidity in 50,000 parts of water. These precipitates prove to be double salts of considerable complexity. Thus cinchonine ammonium zinc thiocyanate has the following composition:

which corresponds closely with that of herapathite or iodoquinine sulphate,  $4C_{20}H_{21}O_2N_3 \cdot 3H_2SO_4 \cdot 2HI \cdot 4I_2 \cdot 3Ag$ . Notwithstanding the complexity of these double salts, the determination of the amount of thiocyanate removed from solution by the alkaloids forms an accurate and speedy volumetric method of estimating quinine in the commercial drugs and in the assay of the crude cinchona bark.

**The Tuba Root; An Indian Fish Poison.**—Pablich (*Pharmazeutische Zentralhalle*, September 7, 1905, page 697) gives an account of the tuba root (*Derris elliptica*, Benth) which is used as fish poison and as poison for arrows in India. Fish poisons are derived from a number of plants; chiefly, however, from the euphorbiaceæ, the leguminosæ and the sapindaceæ, which furnish about one-half of the fish poisons known. The leguminosæ are especially prolific in the number of fish poisons which they furnish. Tuba root is one of the most important articles of Javanese commerce, on account of the wide use which it finds for rendering fish unconscious. The plant is a native of the Indian Archipelago, Java, Borneo and Siam. In British India, Indo-China, etc., the natives employ it for fishing, especially on the Sunda Islands, Java and the Malay Peninsula. The roots are pressed in water and the paste thus produced is poured into a river which has been previously dammed, making the water look milky. In Borneo the plant is used for making the famous "siren arrow poison," and in some parts of Sumatra it is used for sprinkling on young tobacco plants to prevent the growth of insects. The arrow poison is prepared chiefly from the tuba root with the addition of a number of roots, barks and juices which are boiled very carefully in copper kettles.

## Queries and Answers

We shall be glad, in this department, to respond to calls for information on all pharmaceutic matters.

**This Correspondent Should Go to Night School.**—C. A. G. writes: "I am thinking some of taking up the study of Ophthalmia, and if I do would like to do it thoroughly and not become a fakir, and I would regard it as favor if you would give me the address of the N. Y. school, also the names of some of the standard authorities and text books on that line of work and the names and address of any papers or magazines published that are devoted to that profession."

**A Working Formula for Iodipin.**—B. S. H.—Iodipin is an iodized sesame oil analogous to bromipin. Both are the subjects of German patents, and our correspondent may expose himself to an action at law if he invades the patent. Merck & Co., of this city, are American agents for both bromipin and iodipin. According to "the Extra Pharmacopœia" of Martindale and Westcott bromipin is made as follows:

"The compound may be prepared by taking of sesame oil 400 Gm. contained in a stone jar surrounded by cold water and mixing with it a little ether. In another jar standing in cold water dissolve 250 Gm. bromine in 200 Cc. of ether, adding it gradually and cautiously. Add this ethereal bromine solution to the ethereal solution of sesame oil with caution. The whole operation should be conducted in a draft chamber. Distill off the ether, and wash the residue repeatedly with 90 per cent. alcohol in a separator at 45 degrees C. until the halogenized oil is no longer acid to litmus. Dry the oil to remove the alcohol incorporated with it during washing by heating in vacuo at 50 degrees C. The bromine in it is then estimated by a Carlus' analysis. Finally adjust the preparation by adding more sesame oil, so that it shall contain 33 1-3 per cent. bromine. It forms a thick yellow oil, odorless and of oily taste. Sp. gr. 1.0125."

Iodipin may be made in a similar manner, the Iodine monochloride being used in place of the element itself. The particular fat selected—it may be lard, sesame oil, cacao butter or any other nonvolatile fatty oil—is mixed with the requisite quantity of iodine monochloride dissolved in a large volume of alcohol and the whole thoroughly agitated until all the iodine and chlorine is taken up; the mixture is then refrigerated by means of a freezing mixture; placed in a separatory funnel and the alcohol separated off. After further treatment with alcohol the product is freed from the spirit by placing it in a vacuum distillation apparatus. According to G. Arends, from whose work on New Remedies the foregoing particulars are taken the iodized oil is not distinguishable either in color or taste from the fatty base from which it is prepared, and gives the reaction of the fat as well as of the halogen compound. If the preparation is well dried it is quite stable even at higher temperatures and in the light, and it may be considered as practically unalterable under ordinary conditions.

**Books on New Remedies.**—Dr. A.—The standard works on new remedies are of French and German authorship. Those which occur to mind are Crinon's "Revue des Médicaments Nouveaux," published by Rueff et cie, Paris; H. Bocquillon-Limousin's "Formulaire des Médicaments Nouveaux," published by J. B. Baillière et Fils, Paris; Bardet's "Formulaire des Nouveaux Remèdes," published by Octave Doin, Paris; G. Arends' "Neue Arzneimittel," published by Julius Springer, Berlin; Martindale and Westcott's "Extra Pharmacopœia," published by H. K. Lewis, London. The last-named work is a valuable book for either the pharmacist or physician. It is revised at frequent intervals and no remedy that has proved its usefulness is omitted.

**Improved Cold Cream.**—L. D. C. writes: "Would you please be good enough to print a formula for a cold cream that will keep well? We do not desire anything that appears in the Pharmacopœia or the general run of formularies."

An important thing to observe in the manufacture of cold cream is the choice of wax. Only a thoroughly selected pure

white wax should be used. There are refiners of wax who advertise their product as especially adapted for the preparation of a snow white cold cream, and their names will be found in the advertising pages of the AMERICAN DRUGGIST. Formulas of recent introduction are the following:

|                                   | Parts. |
|-----------------------------------|--------|
| White beeswax .....               | 150    |
| Liquid petrolatum (bleached)..... | 600    |
| Distilled water .....             | 240    |
| Borax .....                       | 9      |
| Geranium oil .....                | 1      |
| Rose oil .....                    | Q. s.  |

Dissolve the wax in the liquid petrolatum with the aid of a gentle heat; in another vessel dissolve the borax in the water; bring both solutions to the same temperature, not exceeding 140 degrees F., and pour the aqueous solution into the oil in a continuous stream. Stir gently for a minute or two, add the essential oils while stirring, and pour into jars before cold.

A modified form of the foregoing process has been proposed by a contributor to the AMERICAN DRUGGIST, as follows:

In a porcelain or enameled dish put

|                                    |          |
|------------------------------------|----------|
| White beeswax .....                | 3xliss.  |
| White oil (liquid petrolatum)..... | 3xlviij. |

Dissolve by means of a gentle heat, preferably on a water bath. To this add a solution (at the same temperature) of

|                       |        |
|-----------------------|--------|
| Borax .....           | 3v.    |
| Distilled water ..... | 3xliv. |

Stir constantly until nearly cold and then add while continually stirring:

|                        |     |
|------------------------|-----|
| Oil rose geranium..... | xl. |
|------------------------|-----|

The stirring is best done by means of an ordinary egg beater.

**Citric Acid Quotations.**—W. P. D. writes: "Can you give or quote me a figure for citric acid by the ton, or inform me where I can get some facts and figures regarding the demand, supply or price of same in market."

On an order for a ton lot of citric acid 37½ cents per pound would probably buy, though the inside quotation current is 38 cents. The largest refiners and dealers in citric acid are Charles Pfizer & Co., New York, and the Powers-Weightman-Rosengarten Company, Philadelphia, with New York office at 56 Maiden lane. As to obtaining "facts and figures regarding the demand, supply and price," we can hold out little encouragement, since dealers observe considerable reticence on these points. The crude product is imported in the form of calcium citrate.

**Pumice Soap.**—E. S.—There is rather a dearth of formulas for this soap, and such as are current cannot be enthusiastically recommended. The following is given in "The Scientific American Cyclopedia of Receipts":

|                                   |         |
|-----------------------------------|---------|
| Ceylon coconut oil.....           | 2 lbs.  |
| Soda lye of 40 degrees Baumé..... | 1 lb.   |
| Pulverized pumicestone .....      | 1¼ lbs. |
| Perfume with                      |         |
| Oil of thyme.....                 | ¼ oz.   |
| Oil of bergamot.....              | 1 drm.  |

The following formula from Hager's "Handbuch der Pharmazeutischen Praxis" is a much more sensible combination and is better adapted for manufacture by a pharmacist. The ingredients are:

|  | Parts. |
|--|--------|
| Common household soap, dried and rasped..... | 750    |
| Sodium carbonate, crystals.....              | 20     |
| Hot water .....                              | 120    |
| Powdered pumicestone.....                    | 200    |
| Powdered talc.....                           | 50     |
| Perfume .....                                | Q. s.  |

The first three ingredients are boiled together until solution is effected; the fourth and fifth ingredients are mixed together and the perfume incorporated. The whole is then mixed and when cold cut into pieces of the desired size and shape.

## Correspondence.

### The Telephone Situation in Berlin Compared with That in Chicago.

To the Editor:

Sir,—Frank H. Mason, the American Consul-General in Berlin, has made a very interesting report on telephone service in Europe. I make the following extract from the *Wochenblatt* and am sure it will be of interest:

Berlin has 25 per cent. of all telephones in Germany and, except London, the largest number in a European city. It is therefore natural to compare Chicago with Berlin.

Berlin has 66,744 and Chicago 101,000 telephones. A Chicago man can therefore reach 50 per cent. more people than the Berliner. The imperial regulations permit the Berlin exchange to embrace only those exchanges within five miles from the central exchange and that results in 22 square miles, versus 83 square miles in Chicago, in spite of the fact that Berlin is compactly built up—most messages in Berlin travel  $2\frac{1}{2}$  miles—from Edgewater to Auburn Park in Chicago it is 17 miles.

In Berlin all telephone service between 10 P.M. and 7 A.M. is subject to an extra charge amounting to 5 cents.

In Berlin the Government manages the telephone service and jumped up on the cost 25 per cent., and the subscriber who wants to have the measured service has to pay \$24.30 extra rental. The Berlin telephone operator earns \$2 a week, Chicago pays easily five times \$2. Berlin has the old time crank ringer, Chicago introduced the automatic ring 10 years ago—the first city to introduce this convenience. Berlin has the old station ring yet, central calling up an exchange and the subscriber has again to ring for his party. How would that suit the average Chicago-Roosevelt type of strenuousness? Yet Consul-General Mason says that Berlin is far ahead of other cities. Paris, for instance, has Government service, and each subscriber has his own instrument, one this kind, the other another style, just as he chooses; and a subscribers' association has petitioned the Chamber of Deputies to improve the service, or will boycott the Government. Municipal government of telephones don't seem to work. Mr. Mason concludes his report thus: Berlin is to be congratulated among Continental cities—but when comparison with Chicago is made even the most ardent admirer of Berlin has to acknowledge the telephone superiority of Chicago.

It may be of interest to add that the New York Merchants' Association Telephone Committee reported unanimously in favor of one company in a city, two companies increasing the expense and the inconvenience of the service markedly. Our New York drug journals should give their readers all over the United States the advantage of this committee's report, which was endorsed, or rather anticipated, by Brother Pritchard.

Respectfully,

CHICAGO, December 11.

W. BODEMANN.

## Book Reviews.

THE NATIONAL STANDARD DISPENSATORY, Containing the Natural History, Chemistry, Pharmacy, Actions and Uses of Medicines. Including those recognized in the Pharmacopœias of the United States, Great Britain and Germany, with Numerous References to Other Pharmacopœias. In accordance with the Eighth Decennial Revision of the United States Pharmacopœia, 1905. By Hobart Amory Hare, B.Sc., M.D.; Charles Caspari, Jr., Ph.G., Ph.D., and Henry H. Rusby, M.D. Philadelphia and New York: Lea Brothers & Co., 1905. Pp. viii-1860. (Price, cloth, \$7.25; sheep, \$8.00.)

The National Standard Dispensatory is a volume of about 2,000 pages, embracing a description of every article in the Eighth Decennial Revision of the United States Pharmacopœia and comments and comparisons with other pharmacopœias. It covers besides this a wide field of information concerning the origin, the methods of preparation and the uses of some thousands of unofficial drugs. The work of revising the National Dispensatory of Stillé and Maisch, which forms the basis of the present volume, has been completely and admirably carried out by the three principal editors, with the aid of three assistant editors, all of whom are admirably fitted for the stupendous task which they have performed in a manner which reflects credit on American medicine and American pharmacy. The therapeutical editor, Dr. Hobart Amory Hare, is well known as professor of therapeutics and materia medica of the Jefferson Medical College, of Philadelphia, and as the editor of the *Therapeutic Gazette*; Charles Caspari, Jr., the pharmaceutical editor, is professor of theoretical and applied pharmacy in the Maryland College of Pharmacy, and Dr. Henry H. Rusby,

who has edited that part of the work dealing with materia medica and pharmacognosy, in the College of Pharmacy of the City of New York. Dr. Daniel Base, professor of inorganic and analytical chemistry in the University of Maryland, has prepared the articles on inorganic chemistry, while Joseph F. Geisler, chemist of the New York State Department of Agriculture, has rendered valuable assistance in the sections on organic chemistry. In the preface the editors also acknowledge their indebtedness to Dr. E. M. Houghton, Dr. E. Russell Kennedy and Dr. Alfred Heineberg.

The general article on volatile oils is contributed by Dr. Edward Kremers, professor of chemistry in the University of Wisconsin, and is a masterly presentation of the subject in a concise, easily comprehended form. The tabular arrangement of the volatile oils will be most welcome to the student, bringing out, as it does, the points of likeness and difference.

The mass of matter contained in this work is so great that it is impossible to give any detailed review or to do more than indicate its general value. Its encyclopædic character makes it an invaluable work of reference. In fact, it has been aptly termed by an English contemporary an *Encyclopædia Pharmaceutica*, though, in fact, it is more than this, containing much therapeutical information which we do not find in such works as the "*Real-Encyklopædie der gesammten Pharmazie*," of Geissler & Moeller, which otherwise it resembles much in scope and in treatment. The dispensatory is, in fact, a peculiarly American institution, though the germ of it was found in the British Dispensatory of 1747, which consisted of a translation of the London and of the Edinburgh Pharmacopœias, with notes and annotations. The nearest approach which our English friends have to our dispensatories is the Companion to the Pharmacopœia which, as its name indicates, is restricted closely to the treatment of pharmacopœial drugs and chemicals. The National Dispensatory had a large following in pharmacy, and those who are familiar with its pages will recognize many of its better features in the new work which is not merely a revision but an essentially new production. The work has been ably and carefully prepared and should find a place in every pharmacy.

WALSH'S PHYSICIANS' COMBINED CALL BOOK AND TABLET. Compiled by Ralph Walsh, M.D., Washington, D. C. Published by the Author, 1905. (Price \$1.50.)

This is the twenty-ninth edition of Dr. Walsh's Call Book, which has been long and favorably known to the medical profession. This new edition contains a call list so arranged as to be available for any year. In addition to the space for the registration of calls blanks are provided for an obstetric record, vaccination engagements, the addresses of nurses, a summary of monthly receipts and expenditures, loans, cash received, etc., so that the physician is enabled to keep a complete record of his income and expenditures. The book also contains a dose table and several other valuable tables, such as are likely to prove of value for reference to the physician. Its interest to the pharmacist lies in its possible utilization as a gift.

THE DOCTOR'S DESK BOOK OF MODERN FORMULAS AND READY REFERENCE TABLE. A handy guide to writing and dispensing prescriptions. By Ralph Walsh, M.D., Washington, D. C. Published by the Author, 1905. Pp. 80. (Price \$1.00.)

This booklet opens with a collection of formulas for prescriptions arranged under the titles of the diseases in which their use is indicated. This is followed by a list of new remedies introduced in 1903 and 1904 and tables of doses, of solubilities, metric equivalents, etc. A table is also given of the changes in strength of important preparations made in last revision of the United States Pharmacopœia.

### From Pleased Subscribers.

Inclosed please find my subscription to your esteemed journal to January 1, 1907, and accept my best wishes for your continued and increased prosperity.

J. T. SPEEGER.

ORADELL, N. J.

### Vermont State Board of Pharmacy.

The next meeting of the board for examinations will be held at the State House, Montpelier, Tuesday, January 2, 1906, at 10 A.M. Applications for examination must be made to J. G. Bellrose, Secretary, Burlington.

*Under this head will appear suggestions and plans for increasing trade, advertising experiences, information, and notes of interest useful to the pharmacist in the preparation of his advertising matter. Specimens of current advertising will be reproduced, with suggestive analysis and criticism, and queries relative to advertising matters will be answered. To avoid delay address communications to the Department of Business Building, AMERICAN DRUGGIST, 66 West Broadway, N. Y.*

(Written for the American Druggist.)

### HOW TO INCREASE BUSINESS.

By S. M.

In this paper I venture to give the formulas of a few "money makers" for the retail druggist, which if prepared in presentable style and pushed will pay many times their cost and trouble. Where a druggist is located in a small country town it is necessary for him to look around and find some way in which to increase his business. I think it advisable to carry as many side lines as one can conveniently do, since this helps business. In a country town it is necessary to have some side lines like wall paper, garden seed, picture frames, stationery, school supplies, confectionery and notions of various kinds. These all pay well; such things as paints and oils the druggist must keep whether he makes anything on them or not.

One of the best paying investments known to me is a medicine wagon conducted in connection with the store. This will probably be new to the great majority of druggists in the country, but while it might not pay in every locality it would in many places.

Patent medicine wagons are sent out by manufacturing concerns to different parts of the country. These make regular trips, and a druggist might just as well profit by this business as the manufacturer, it being possible to get trade in this way that could not be got otherwise.

Do not stop at merely carrying a line of your own goods, but put up staple or household drugs, such as sulphur, borax, copperas, etc., as well as a few notions, anything that there might be a call for; once people are made aware that the druggist carries a little of everything his trade will grow and he will come near to selling something to most of the people every trip. Regular trips should be made once a month, and these should include a circuit of the country.

This method of conducting business pays best in the spring or summer time, when the farmers are too busy to come to town, a line of poultry and stock remedies being a good line to handle.

Remedies for all seasons of the year should be kept in stock—e. g., liniments, cough and cold cures for winter, spring tonics, blood purifiers and teas for spring, and diarrhoea and sunburn remedies for summer. It is also advisable to make a line of poultry and stock remedies, as they are good sellers where the druggist has a country trade; a line of everyday wants, such as baking powder, flavoring extracts, bluing, polishing powders, etc., always pays.

The following are good compounds which will be found to sell well if pushed:

#### *Snowball Liniment.*

|                         |          |
|-------------------------|----------|
| Oil origanum .....      | 3ij.     |
| Oil spike .....         | 3i.      |
| Oil sassafras .....     | 3i.      |
| Camphorated oil .....   | 3ij.     |
| Oil turpentine .....    | Oliss.   |
| Eggs .....              | No. xij. |
| Acetic acid .....       | 3x.      |
| Witch hazel water ..... | Oliss.   |

Mix; agitate frequently for a week or more, put up in ¼-

pint packing bottles, label and wrap in paraffin paper and put label on outside; sells for 50 cents.

#### *Barb Wire Liniment.*

|                          |       |
|--------------------------|-------|
| Carbolic acid .....      | 3ss.  |
| Spt. turpentine .....    | 3iss. |
| Oil spike .....          | 3i.   |
| Pine tar .....           | 3ij.  |
| Fish oil, q. s. ad. .... | Ol.   |

Put up in 1-pint packing bottles; label and cap; sells for \$1.

#### *Blue Grass Condition Powder.*

|                        |         |
|------------------------|---------|
| Foenugreek .....       | 2 lbs.  |
| Gentian .....          | 1 lb.   |
| Resin .....            | 1 lb.   |
| Ginger .....           | ½ lb.   |
| Iron sulphate .....    | ½ lb.   |
| Salt .....             | 1 lb.   |
| Linseed oil cake ..... | 10 lbs. |

The ingredients should be in the state of finest powder, and put up in 2-pound wooden pails with label; sells for 35 cents.

#### *Poultry Powder.*

|                      |         |
|----------------------|---------|
| Slaked lime .....    | 10 lbs. |
| Oyster shell .....   | 20 lbs. |
| Cayenne pepper ..... | 1 lb.   |
| Asafetida .....      | 1 lb.   |
| Venetian red .....   | 4 lbs.  |
| Black pepper .....   | 1 lb.   |

Put up same way as condition powders, and sell for 50 cents. The different ingredients should be used in a state of fine powder.

#### *Long Life Tonic.*

|                                   |         |
|-----------------------------------|---------|
| Fl. ext. gentian .....            | 10 lbs. |
| Fl. ext. cinchona .....           | 20 lbs. |
| Fl. ext. cascara sagrada aa. .... | 3ij.    |
| Sol. iron citrate .....           | 3iss.   |
| Spirit orange .....               | 3i.     |
| Syrup .....                       | Olj.    |
| Hot water .....                   | 3vij.   |
| Sherry wine, q. s. ad. ....       | Oviij.  |

Dissolve the iron in the hot water and add the other ingredients, then filter. Put up in 1-pint French square bottles; label and wrap bottle in Japanese napkin, and tie with silk string.

#### *Furniture Bright.*

|                          |       |
|--------------------------|-------|
| Gum shellac .....        | 3iv.  |
| Wood alcohol .....       | Olj.  |
| Boiled linseed oil ..... | Olj.  |
| Turpentine oil .....     | 3vij. |

Put up in 8-ounce French square bottles; cap and label; sells for 20 cents.

#### *Cramp Relief.*

|                                |       |
|--------------------------------|-------|
| Tinct. opii .....              | 3iv.  |
| Tinct. ginger .....            | 3i.   |
| Tinct. cardamon .....          | 3i.   |
| Tinct. capsicum et myrrh. .... | 3i.   |
| Tinct. camphor .....           | 3iss. |

Put up in 2-ounce panel bottles, 25 cents.

#### *Silver Rouge.*

(For Cleaning Silverware.)

|                      |      |
|----------------------|------|
| Sodii bicarb .....   | 3i.  |
| Prepared chalk ..... | 3ij. |

Put up in 2-ounce turned wood boxes.

#### *Disinfectant.*

(For General Use.)

|                                |             |
|--------------------------------|-------------|
| Alum .....                     | 10 lbs.     |
| Sal soda .....                 | 10 lbs.     |
| Sal ammoniac .....             | 2 lbs.      |
| Salt .....                     | 2 lbs.      |
| Zinc chlor .....               | 1 lb.       |
| Muriatic acid com., q. s. .... |             |
| Water, q. s. ....              | 16 gallons. |

Dissolve the alum in 8 gallons of boiling water; then add the sal soda followed by the muriatic acid until the precipitate first formed is dissolved. Dissolve the remaining salts in the balance of the water and add to first solution.

#### *Headache Relief.*

|                                   |           |
|-----------------------------------|-----------|
| Compound acetanilide powder ..... | Gr. flss. |
| Ext. guarana .....                | Gr. ¼.    |
| Ext. rhubarb .....                | Gr. ¼.    |

For one powder. Put up four powders in envelope; sell for 10 cents.

**Metropolitan Window Displays.**

Articles appropriate for holiday gifts were the predominating feature of most drug store window displays last week. Of course, toilet sets, perfumes, soaps, etc., were the principal things shown. Some stores, however, which carry a larger assortment of holiday goods than the average retail pharmacy feature seasonable goods other than those mentioned. The Hegeman Corporation, for instance, devoted one of the windows in its lower Broadway store to an exhibit of cigars, wines, whiskies, cordials, brandies, elixirs, tonics, etc. The window was trimmed with holly, scattered here and there among the goods. Numerous small cards gave an idea of the range of prices. The bottles of liquor were symmetrically arranged—some on the floor of the window, others on glass platforms and others in wicker hampers. The bottles of different colors with the various kinds of labels, tags, caps, etc., made a very pleasing color effect. The display attracted considerable attention. The other window of the same store was given up to an elaborate display of bronze clocks and novelties, toilet sets of brushes, combs and manicuring instruments, perfumes, etc. This window also was trimmed with holly and mistletoe.

One of the most elaborate window exhibits was the burnt leather display at Wilson's pharmacy, Broadway and Forty-second street. The whole window—bottom, back and sides—was filled with burnt leather novelties of every conceivable kind. The back and sides were literally covered with leather with burnt or stained Indian heads, Gibson girls, the familiar Pharaoh's horses and other artistic designs. Then in almost endless variety were leather purses, bill books, cigarette and cigar cases, calendars and many other things too numerous to mention. Prices were plainly marked and monograms were burnt on purchases free of charge by an attendant. Another one of Wilson's windows had a very simple but effective display. It featured an antidote for grippe and consisted of an ordinary wheelbarrow tipped on one side, its contents (the small packages of the antidote) being dumped carelessly on the floor of the window.

The Alpers' pharmacy, Thirty-first street and Broadway, had in one of its windows a plaster figure of Santa Claus carrying perfumes, etc., which it was announced made very acceptable Christmas gifts. Mr. Alpers did not make an elaborate "drive" on holiday goods, for he says he is too near the big department stores to run any strong competition in that line.

The Knickerbocker Pharmacy on upper Broadway has been making a special bid for the patronage of smokers by calling attention to the Owl cigar. One of its large Broadway windows was piled high with boxes of this brand of cigars; a large cardboard owl surmounted the display and in the center was an illuminated sign.

Quite a novel and attractive method of drawing the attention of the passer-by to the hot soda counter has been devised by Reid, Yeomans & Cubit at their Nassau street store. Just at the entrance to the store in a very conspicuous place on the side of the building is a large sign shaped and painted like a soda glass. A pipe has been run out to this glass or cup from the store's steam heating service, and a cloud of steam constantly floats from the top of the glass. The sign tells some of the different hot drinks served within. On a cold day especially the device is tempting to say the least.

The Sherman Place Pharmacy, Seventieth street and Broadway, called attention in one of its fine show windows to horebound and wild cherry cough drops. There were some four or five pails containing 35 pounds each; one of the pails of wild cherry drops was overturned and the contents dumped on the floor of the window and against the front glass. A card on the pails gave the prices for different quantities.

An effective display of cough tablets was seen recently in one of the windows of the Kalish Pharmacy, Twenty-third street and Fourth avenue. There was a large wind mill made of the cartons of the cough drops; the wings of the wind mill bore reading matter setting forth the good qualities of the tablets; the price was on the mill windows. The mill at night was illuminated. In the foreground of the window were plates filled with wild cherry bark, menthol, licorice root and honey—the chief ingredients of the cough tablets. Other parts of the window contained groups of the tablet boxes.

The O'Neil Building**

The Head Line is Too Vague, too Remote from the Subject Matter, Which is Brought in Somewhat Tortuously.—The sentences—or, rather, the sentence, for there is but one in the body of the letter—is too long.

## A SPANISH EDITION OF THE PHARMACOPŒIA ASSURED.

The Trustees of the United States Pharmacopœia Convention to Undertake the Publication of the Spanish Edition—Efforts to Interest the Government Unavailing—The Volume Expected to Appear Within a Year.

(From our Regular Correspondent.)

Chicago, December 20.—Albert E. Ebert, who has just returned from Pittsburgh, says that work on the new Spanish edition of the U. S. Pharmacopœia is to go ahead as fast as possible. The decision to issue this edition was reached at a meeting of the trustees in the Pitt Hotel. After the motion had been passed the matter was placed in charge of a committee composed of Joseph P. Remington, Charles E. Dohme and Dr. H. C. Wood. These gentlemen were authorized to arrange all of the preliminaries and to report back on January 20 at a meeting of the trustees which is to take place at Washington, D. C. Efforts were made for a long time to have the Government get out this edition for the benefit of the Spaniards in the new island possessions, but so much red tape was encountered that it was finally found necessary to abandon this plan if anything was to be accomplished.

The sale of the regular edition of the Pharmacopœia has been so good that the trustees felt encouraged to go on with the work themselves. Competent translators are to be engaged. All that will be necessary will be to translate the work from one language into the other, and it is believed that this can be accomplished and that the volume can appear in the new tongue within a year. Interest in American pharmaceutical matters has increased so rapidly in Spanish speaking countries of late that it is believed the new venture will prove beneficial to all who are concerned.

Dr. Walter Wyman, Surgeon-General of the Marine Hospital and Public Health Service, was tendered a special vote of thanks for the publication of Bulletin No. 23, entitled "Changes in the Pharmacopœia of the U. S. of A., Eighth Revision." Also for the bulletin on Standardization of Diphtheria Antitoxins. A vote of thanks was also tendered Dr. Reid Hunt and Dr. Murray Galt Motter, of the Service, for their work on Bulletin No. 23.

With a view of bringing the Pharmacopœia to the direct attention of medical students, it was decided to present the professors of materia medica in the medical colleges with complimentary copies of the Pharmacopœia. The recipients of such copies will be requested to call the students' special attention to the purpose of the Pharmacopœia and the nature of official remedies.

The extent of additional honoraria to members of the Committee of Revision was considered at length, but action postponed until the next meeting of the board.

Several applications from publishers who desire to use portions of the text of the U. S. P. were discussed and the rate of compensation decided upon.

The board adjourned to meet at the New Willard Hotel, Washington, D. C., January 20, 1906.

The Pittsburgh College of Pharmacy tendered the Board of Trustees an informal dinner.

## Wyeth Bankruptcy Case.

Rochester, N. Y., December 22.—The case in bankruptcy of John Wyeth, of the Wyeth Chemical Company, is continuing before Acting Referee in Bankruptcy George B. Draper. George DeWitt, of the advertising department of the New York Herald and Telegram, was cross-examined. According to his testimony Wyeth had prevailed upon the newspapers to take his accounts with druggists in New York City on the ground that they were a young firm and did not want to cause any ill feeling by trying to collect from them.

The Wyeth Chemical Company was the manufacturer of a hair restorer that attracted considerable attention through an advertisement to grow hair on the head of John D. Rockefeller or forfeit \$1,000.

## A NOVEL STATE FUNCTION.

The King of Portugal, President Loubet and Suite Attend Lectures on Chemistry.

(By our Paris Correspondent.)

On Friday, November 24, King Carlos I, accompanied by the President of the French Republic and a brilliant staff of officials and numerous scientific celebrities, visited the Paris Museum, better known by its pre-Revolutionary title of the "Jardin des Plantes."

In the little amphitheater, which dates from Buffon's time, they were entertained with five short lectures by leading Parisian savants.

M. Henri Becquerel first described his researches regarding uranium and his discovery of radio-activity.

Madame Curie followed with a terse and interesting account of radium, its origin and its properties, the text of which follows:

## MADAME CURIE'S OWN ACCOUNT OF THE DISCOVERY OF RADIUM.

After M. Becquerel's work on uranium salts we studied, M. Curie and I, if it were not possible to find other radio-active substances. This work lasted several years, and I cannot describe it here in detail. It led us to the discovery of a new chemical element, to which we gave the name of radium.

Radium is found in various minerals—pitchblende, carnotite and autunite—of which I show you two samples from Portugal. But these radiferous minerals only contain imperceptible traces of radium. We obtain, for example, a decigramme from a ton of pitchblende. It is therefore very expensive. By gathering together all the prepared radium in the world one could hardly get more than 1 gramme. So it may be termed a rare substance.

Its properties are very curious. Enormously radioactive, this body emits rays of very varying activity. These rays discharge an electrified body immediately.

Here is an electroscope charged. I bring a capsule of radium near it and it is discharged at once. I can repeat the same experiment with the radium inclosed in this lead box. The radium rays penetrate and pass through lead.

Radium is self-luminous when quite dry, but is especially active on phosphorescent bodies, rendering them luminous.

Here is a screen coated with platino-cyanide of barium. I place the capsule of radium behind it; it marks a luminous silhouette on the screen. Diamonds are illuminated under the action of radium.

Radium rays color glass and porcelain, quartz and diamonds. Here are specimens of glass colored violet by its actions.

Radium also produces a radioactive gas, called "radium emanations." This gas emits rays like radium, but it disappears gradually from the container, while radium seems to remain unaltered for years.

Here is a glass tube containing radium emanations. It is slightly luminous in the dark. Here is a second tube emptied of air and containing phosphorescent sulphide of zinc. When I open this valve the emanation passes into the second tube and renders the sulphide luminous.

Radium constantly gives off heat. When protected from loss of heat its temperature is several degrees above that of the surrounding atmosphere.

Radium, therefore, without apparent loss, gives off heat, light and various rays. One asks how this can be. It is now thought that radium is an unstable chemical element which decomposes very slowly in giving off heat. It has been found, in fact, that in presence of radium a small quantity of helium gas is constantly formed.

We may therefore consider we thus see the first exemplified transformation of a chemical element.

M. Gabriel Lippmann explained his process of photography in colors in the same succinct fashion, and M. Lacroix gave a scientific explanation of the Mont Pelée volcanic eruption and the destruction of St. Pierre.

Finally, M. Henri Moissan (ex-professor of the Paris School of Pharmacy and French delegate to the Princeton University celebrations a few years ago) described his electric furnace and executed before the King and President the experiments by which artificial diamonds are obtained.

To synthesize diamonds, he explained, carbon must be dissolved in iron at a temperature of about 3,000 degrees C. The crucible full of the molten elements is suddenly plunged into cold water. Thus around the metal a solid outside crust is

formed, while the interior, still liquid, compresses itself in augmenting in volume and produces small grains of crystallized carbon in the form of diamonds.

Before leaving the visitors were shown the collection of botanical paintings on vellum (commenced over two centuries ago) and other interesting features of the establishment.

The King (who takes interest in science in general and natural history in particular) presented the museum with a valuable collection of specimens of fish, etc.

### THE AMERICAN PHARMACEUTICAL ASSOCIATION.

#### Local Committees Appointed—Over a Thousand Dollars Profit from the Exhibition—The George White Sloan Memorial Meeting.

The minutes of the Council of the American Pharmaceutical Association show that nine new members have been elected and nine were proposed since the Atlantic City meeting. It has been decided to issue reports of the address of President Beal.

#### LOCAL COMMITTEE FOR THE 1906 MEETING.

Local Secretary Frank H. Carter, of Indianapolis, has followed the instructions of the association and appointed the Local Committee of Arrangements. His associates are J. K. Lilly, treasurer, and J. E. Toms, secretary, with the following as chairmen of the subcommittees:

Finance, W. J. Mooney; Badges and Souvenirs, J. N. Helms; Transportation and Hotels, G. D. Moxley; Receiving and Conducting Arrivals, A. Timberlake; Monday Night Reception, Dr. John N. Hurty; Local Interest and Attendance from City, Maurice Schwartz; Attendance from Indiana, Leo Ellet, South Bend; Publicity (Secular Press and Journals), Dr. J. N. Hurty and Leo Ellet; Ladies' Committee, Mrs. Frank H. Carter; Commercial Travelers, N. P. Lynch; Entertainment, H. J. Huder.

#### A THOUSAND DOLLARS PROFIT.

A supplemental report of H. P. Hynson, chairman of the Committee on Exhibition at the Atlantic City meeting, has been submitted to the Council and approved. The report shows receipts of \$1,113 and expenditures of \$100.10, leaving a net gain to the association of \$1,012.90.

#### THE GEORGE WHITE SLOAN MEMORIAL MEETING.

The Council has decided that the Indianapolis meeting shall be known as the "George White Sloan Memorial Meeting," and that the Historical Section shall be requested to devote a session to commemoration of the services of Dr. Sloan.

An appropriation of \$500 has been made to cover the expense of publishing the monthly bulletin to the members, the publication of which was decided upon at the Atlantic City meeting, C. S. N. Hallberg, of Chicago, having been chosen as editor.

### To Regulate Sale of Poisons.

A bill has been introduced in Congress "to regulate the practice of pharmacy and the sale of poisons in the District of Columbia." The draft of the bill was carefully prepared by the Commissioners of Pharmacy of the District and it is a modification of the measure introduced at the last session of Congress.

The bill is declared to be the best constructed pharmacy bill ever presented for enactment. Its provisions safeguard the rights of physicians, dentists, pharmacists and the general public as no existing law attempts to do.

In connection with the bill the commissioners submitted a number of press clippings relating to the evils resulting from the traffic in cocaine. It is pointed out that in certain sections of the city the users of this drug buy it freely without any pretense of secrecy. Under the present law, it is stated, there is absolutely nothing to prevent such sales, and the police department even appeals for some radical remedy to check the evil. It is argued that by the enactment of the proposed bill deaths from poisoning by the use of carbolic acid, morphine, laudanum and other poisons would be decreased.

The commissioners earnestly recommend the early adoption of the measure.

### MOVING FOR FREE ALCOHOL FOR THE ARTS.

#### Three Bills Introduced in Congress—Methylated Spirit—Pure Alcohol in Bond—The Lovering Bill Revived.

A bill has been introduced in Congress by Representative Roberts, of Massachusetts, providing for the use of denatured alcohol in the arts free from internal revenue tax, this being the most important of three measures introduced bearing on the free alcohol question. The Roberts bill, which was framed and introduced on behalf of the Brotherhood of Painters, Decorators and Paperhangers of America, reads as follows:

Be it enacted, etc., That distilled spirits of an alcoholic strength of not less than 80 degrees above proof as defined by sections 32 and 49 of the Revised Statutes of the United States may, when rendered unfit for drinking purposes or for use as a beverage, be removed from distillery warehouses free of tax, under such regulations as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe, provided that such substances, approved by the Commissioner of Internal Revenue and the Secretary of the Treasury, shall be mixed with such distilled spirits so as to render the same unfit for drinking purposes or for use as a beverage.

Sec. 2. That distilled spirits, before being removed from distillery warehouses free of tax under the provisions of this act, shall be branded or marked as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe, and shall have affixed to each cask or package an engraved stamp indicating that such distilled spirits have been rendered unfit for drinking purposes or for use as a beverage, said stamps to be charged to them and accounted for in the same manner; and for the expense attending the providing and affixing of such stamps 10 cents for each stamp shall be paid to the collector of the district on making the entry for such removal.

Sec. 3. That any person who shall rectify or purify distilled spirits which have been removed from distillery warehouses free of tax under the provisions of this act, by removing or separating the substances from such distilled spirits, by any process whatever, shall on conviction be subject to a fine of not less than \$500 nor more than \$5,000 and be imprisoned not less than six months nor more than three years.

Sec. 4. That distilled spirits removed free of tax from distillery warehouses under the provisions of this act shall be not stored or deposited on any premises in which the business of a distiller, rectifier, wholesale liquor dealer, or retail liquor dealer is carried on, or on any premises connected therewith by any private or internal communication, and every distiller, rectifier, wholesale liquor dealer and retail liquor dealer who shall store or deposit, or cause to be stored or deposited, such distilled spirits on the premises in which such business is carried on, after such distilled spirits have been removed from distillery warehouses, shall on conviction be fined not less than \$200 nor more than \$1,000 and imprisoned for not less than six months nor more than two years.

#### PROVIDING FOR A REBATE ON ALCOHOL USED IN EXPORTED ARTICLES.

The Lovering bill providing for a rebate on alcohol used in the manufacture of preparations intended for exportation has again been introduced by its author. This measure merely places domestic alcohol on the same basis as the imported. Under the present registrations a manufacturer obtains a rebate of the tax paid on all imported alcohol which is used in preparations which he exports. The Lovering bill makes a similar provision for securing a rebate on alcohol of domestic manufacture. The text of the measure follows:

Be it enacted, etc., That on the exportation of articles manufactured or produced in the United States in part from domestic alcohol on which an internal revenue tax has been paid there shall be allowed a drawback equal in amount to the tax paid on the alcohol so used; provided that no other than domestic tax-paid alcohol shall have been used in the manufacture or production of such articles. Such drawback shall be determined and paid in manner provided for determination and payment of drawback on exportation of articles of domestic manufacture and productions made wholly or in part from imported duty-paid materials under section thirty of an act entitled "An act to provide revenue for the Government and to encourage the industries of the United States," approved July 24, 1897.

#### THE HILL BILL.

Mr. Hill, of Connecticut, has presented a measure providing for the use of pure (not methylated) alcohol in the arts under the following conditions:

Be it enacted, etc., That from and after the passage of this act either grain alcohol or methylated spirits, or both, at the discretion of the Secretary of the Treasury, may be withdrawn from bond and used without payment of the internal revenue tax thereon in any manufacturing processes wherein said grain alcohol and methylated spirits are consumed or destroyed upon the premises of the manufacturer, so that they become no part of the salable product or cannot be recovered therefrom.

Sec. 2. That the Secretary of the Treasury is hereby directed to appoint such officers and agents as may be necessary to supervise and inspect such use of grain alcohol and methylated spirits without payment of internal revenue taxes, and to make such regulations as he may deem necessary to provide for and control the use of grain alcohol and methylated spirits in manufacturing processes as provided in section one, which regulation shall provide for and include the reimbursement by persons so using grain alcohol or methylated spirits of all expenses incurred by the Government in such supervision and control in manner and form as the Secretary may determine.

Some surgical instruments which were found in the ancient city of Sybaris, and date from the year B. C. 510, were recently exhibited at the Academy of Science in Turin.

## THE BOSTON ASSOCIATION OF RETAIL DRUGGISTS.

**Busy Days for Boston Druggists—Delegates to Appear Before the Medical Association—Opposed to Requiring Formula on the Label—To Prohibit Sale of Cocaine Snuffs.**

(From our Regular Correspondent.)

Boston, December 21—The December meeting of the B. A. R. D. was held at the Massachusetts College of Pharmacy building on the evening of the 13th. The secretary and treasurer submitted reports, that of the latter showing a balance on hand of \$1,975.99.

The Executive Committee reported that several meetings had been held, at one of which resolutions on the death of Charles C. Goodwin were adopted, a floral offering sent at the time of his funeral and a committee appointed to present resolutions at the next meeting. At another meeting a committee was delegated to appear at the annual meeting of the Boston Medical Association, February 28, and address the gathering in the interest of the retail trade upon ethical and pharmaceutical lines. This matter was left with the chairman and secretary for future consideration. The death of C. M. Donahue was reported by this committee.

The convention committee submitted a final report, which included the balance of the list of the firms who had contributed. After paying all bills a balance of \$350 was left. On motion of Mr. Ernst it was voted to thank the donors to the convention's success by letter.

Mr. Carver, representing Henry Thayer & Co., was introduced. He spoke of his inability to be present at the previous meeting, but assured his hearers that his firm was in accord with the desires of the retail trade. He stated that no sales were made by his firm to department stores, aggressive cutters, mail order houses or physicians.

## LEGISLATION DISCUSSED.

Mr. Finneran then brought up the special subject for the evening—legislative matters. He briefly reviewed the legislative attempts of last year and outlined the possible legislation of the coming session. He advised the association to place itself on record, as he felt that the legislative committee would like to know the attitude of the organization on these subjects. On motion of Mr. Tucker the B. A. R. D. voted against any legislation compelling the labeling of packages or bottles with statements of ingredients or amounts. This was made applicable to manufacturers of patent medicines.

Mr. Bean moved and it was voted that the legislative committee be instructed to use their influence in endeavoring to have a pharmacist made a member of the Board of Health.

## TO PREVENT SALE OF COCAINE SNUFFS.

The subject of catarrh powders containing cocaine was also discussed. C. S. Sawyer deemed legislation necessary. On motion of Mr. Tobin the legislative committee was instructed to draft a bill, to be presented at the coming session, making it a crime to import, manufacture or offer for sale within this State any powder containing cocaine in any form.

F. F. Ernst, Ph.G., advocated holding a ball and stated that he wished the members to consider the question as he proposed offering a motion at the next meeting.

Mr. Finneran moved that the annual meetings and election of officers in the B. A. R. D. auxiliaries be held during the week following the annual meeting of the B. A. R. D. This matter will be considered at the January meeting.

## Colonel Carr as a Publisher.

Colonel Charles M. Carr, editor of *N. A. R. D. Notes*, has secured control of the *Dispensers' Journal*, devoted to soda water dispensing, which will hereafter be published by the C. M. Carr Company, 74 Dearborn street, Chicago. He announces that "the N. A. R. D. is to offer the *Dispensers' Journal* in a club with *Notes* at \$1 for the two papers, 85 cents for *Notes* and 15 cents for the *Journal*." The regular price of the *Journal* is 25 cents per annum.

## KINGS COUNTY DRUGGISTS MEET.

**Alcoholic Proprietaries Discussed, and Members of the K. C. P. S. Listen to a Paper on Ipecac.**

Elsewhere in this issue is printed a very full abstract of the paper on "Ipecac," read by Dr. I. V. S. Stanislaus, at the regular meeting of the Kings County Pharmaceutical Society, held at the Brooklyn College of Pharmacy, 265 Nostrand avenue, on Tuesday, December 12. The meeting was opened by President Paradis at 8.30 o'clock, and before proceeding with the routine business Dean Anderson of the college conferred the degree of Graduate in Pharmacy on four students of the college who had passed successful examinations at the last session, but who were debarred by the age limitation from taking their degrees on Commencement night. Their names are Harry W. Vinicombe, Arnold Lehmann, Grover A. Meyer, and Alice J. Kunkel. Miss Kunkel is the daughter of Charles Kunkel, a respected member of the society who conducts a pharmacy at Hamburg avenue and Linden street, Brooklyn.

The Committee on Legislation reported through Dr. William Muir on the recent ruling of the Commissioner of Internal Revenue in regard to the sale of proprietary medicines containing alcohol. He read the list of articles which had been specifically named by the commissioner, the list being identical with that printed in the *AMERICAN DRUGGIST* for November 27, on page 303.

The Committee on National Formulary reported with the suggestion that circulars be prepared and sent to the physicians of Brooklyn advertising the work being done by the society, but it was not deemed advisable to do this until the new edition of the National Formulary had made its appearance.

John G. Wischerth called attention to the close association of jobbers which had been formed in the metropolitan district for the purpose of raising prices to retailers. The action of the jobbers was resented by several speakers, and on the motion of Mr. Marsland the following resolution was adopted:

*Resolved*, That it is the sense of the Kings County Pharmaceutical Society that the Metropolitan Association of Retail Druggists, through the N. A. R. D., shall request all manufacturers to market their goods on the Direct Contract Serial Numbering Plan, and those who do not adopt this plan be requested to sell their goods in New York market without regard to the rebate plan or tripartite agreement, providing such sale does not interfere with existing arrangements in other parts of the country.

It was understood that the object in adopting this resolution was to guide the representatives of the Kings County Society in the M. A. R. D.

The constitution of the society was amended by the addition of a new section providing for the award of free scholarships.

Professor Anderson presented the society with a framed portrait of the late Prof. Walter Bryan on behalf of the Alumni Association of the college, and he improved the opportunity to make adequate mention of the many admirable traits of character and scientific attainments of the deceased.

Treasurer P. W. Ray announced the death of Luther F. Stevens, and moved the adoption of suitable resolutions. Mr. Keenan and Mr. Marsland, in brief eulogies, paid tribute to the late Professor Stevens' worth as a pharmacist and man.

Dr. Stanislaus then read his paper on "Ipecac," which proved both interesting and instructive. It was decided to bring the subject of the two varieties of ipecac now official in the Pharmacopœia to the attention of the medical societies, a committee being appointed for this purpose.

Ninety-one new local associations have been organized since the adjournment of the Boston convention of the N. A. R. D. They represent a membership of 934 active retail drug men.

## The Manufacturing Chemists' Registration Bureau.

The following titles have been received for registration in the Manufacturing Chemists' Registration Bureau: Chloroform Throat Lozenges, Parke, Davis & Co. and Syrup Euphorbia Compound, Parke, Davis & Co., Detroit, Mich.

**N. A. R. D. WOMEN ORGANIZED.****First Meeting of the Perfected Organization—Programme of Work—Plans and Scope of the Organization.***(From our Regular Correspondent.)*

Boston, December 29.—On December 11, at the Massachusetts College of Pharmacy, the first convention of the woman's organization of the N. A. R. D. took place. About 25 women took part in the proceedings, and they were all Bostonians, or residents of its immediate vicinity. The enthusiasm of those in attendance fully compensated for the lack of numbers. The members also received much encouragement from those from a distance, who had written words of commendation. These were many in number, and from those also who in the future will undoubtedly take an active part in furthering the aims of the organization. Good counsel and best wishes also came from the N. A. R. D., through Secretary Wooten. The communications of ex-President Voegell and W. O. Frailey, of Lancaster, Pa., were most gratifying, and their reading was followed by hearty applause.

Organization details and the constitution and by-laws were thoroughly discussed. These latter were adopted substantially as recommended by the committee in charge of this subject. It was voted to make the annual assessment \$1. The following officers were elected: President, Mrs. L. O. Wallace, Boston; vice-presidents, Mrs. Thomas Voegell, Minneapolis, and Mrs. L. G. Heinritz, Holyoke, Mass.; treasurer, Mrs. Charles Avery, Chicago; secretary, Mrs. J. G. Godding, Boston; Board of Management, Mrs. W. A. Pierce, West Chester, Pa.; Mrs. O. H. Brown, Council Bluffs, Ia.; Miss Mary Fien, Little Rock, Ark., and Mrs. Edgar Sparks, Burlington, N. J.

It was voted to hold future conventions at the time and place of the annual N. A. R. D. gatherings, and local organizations are to be entitled to one delegate, and one delegate more for every 15 members above the first 15.

Many resolutions of thanks for help extended were adopted. This list included the B. A. R. D., the N. A. R. D. and the pharmaceutical press.

A representative from the National Federation of Women's Clubs then addressed the convention, and this was followed by adjournment sine die.

**RETAILERS AND JOBBERS AT ODDS.****N. A. R. D. Takes No Action.**

Up to a late hour last week no reply had been received here to the M. A. R. D.'s appeal to the Executive Committee of the N. A. R. D., in which the latter was requested to define the National Association's attitude in the present controversy between retailers and jobbers in this city regarding discounts, etc. The referring of the matter to national headquarters by the M. A. R. D. caused quite a stir among jobbers, who resent the charge made by retail interests of bad faith and attempts to demoralize the situation. The wholesalers declare that the present trouble is simply the result of a strict enforcement on their part of the terms of their contracts with the proprietors. It is pointed out that jobbers elsewhere in the United States have done this and that the local jobbers merely followed suit. According to the terms of the contracts referred to, all retailers, both large and small, should be treated alike, and jobbers insist that this has been done, despite statements made by prominent M. A. R. D. interests to the contrary. The wholesalers assert that the N. A. R. D. really has not part in the controversy, since the matters in dispute rest entirely with the proprietor and jobber to adjust.

Reference has already been made in these columns to the fact that the Brooklyn Consolidated Drug Company has been cut off by at least one proprietor. It is further alleged that goods sold by that company found their way into the hands of cutters, and also that the Consolidated itself has violated contracts with manufacturers. Dr. William C. Anderson, president of the Brooklyn Consolidated, emphatically denies the charges

made against that company. He declares that the company was not cut off by the Castoria Company because of any act causing trade demoralization, but rather because pressure was brought to bear on the Castoria people, and the jobbers were strong enough to refuse to handle that company's goods if it continued to supply the Brooklyn buying club. Dr. Anderson thinks that the trouble is nothing more nor less than a move on the part of jobbers to stop all direct sales to retailers and make themselves the sole distributors for the proprietors. As to the fact that the Brooklyn Consolidated had offered for sale Pitcher's Castoria, Dr. Anderson said that Pitcher's was the original formula, and that this step had been taken in retaliation against the Centaur Company. He believed retailers were justified in taking such retaliatory steps against proprietors who do not treat them squarely.

**PHILADELPHIA COLLEGE OF PHARMACY PHARMACEUTICAL MEETING.****Criticisms of the Pharmacopœia—The Volume Too Bulky—Needless Repetition of the Details of Tests.**

The regular monthly pharmaceutical meeting of the Philadelphia College of Pharmacy was held on Tuesday afternoon, December 19, with William McIntyre in the chair.

**THE PHARMACOPOEIA NOT ADAPTED FOR USE AS A LEGAL STANDARD.**

Prof. Henry Leffmann, who is widely known as an analyst and writer on chemical subjects, was the speaker of the afternoon, and presented a criticism of The U. S. Pharmacopœia from the Point of View of the Analyst and as a Legal Standard. Some of the reasons advanced by the speaker as showing that the Pharmacopœia is not adapted for a legal standard were: That it does not come from a sufficiently restricted source; that it is not issued by the Government, and because of the time elapsing from one edition to the next it is incapable of quick adaptation to conditions.

In discussing the paper M. I. Wilbert said: "To pharmacists who are at all interested in advancing the status as well as the use of the Pharmacopœia it must be evident that the very attempt at making the book a comprehensive text book on the sciences relating to pharmacy not alone tends to increase the size as well as the price of the Pharmacopœia, but is also the one factor that has evidently delayed the publication."

Charles H. La Wall spoke of the recurring tests for the same chemical, and said that much space could have been saved by giving the test once and referring to it as need be.

William L. Cliffe, in speaking of the law governing adulterations and sophistications of drugs in Pennsylvania, said that the Board of Pharmacy, which has jurisdiction in the matter, considers the Pharmacopœia to be the best available standard, and that the law refers to the latest edition.

Dr. Lowe spoke of the doses in the Pharmacopœia and said that they were hardly average but rather low, generally speaking.

Specimens of a Bombay mace and of Pistachio nuts were exhibited by Chas. H. La Wall, and one of Java cinchona by Joseph W. England.

**A Federal Bill Requiring Publication of Formula.**

At the last session of Congress a bill was introduced which required the publication on the label of the names of the ingredients of all proprietary medicines intended for interstate transportation, but the measure never came to a vote. A similar measure has been introduced in this session of Congress by Representative Webb, of North Carolina.

The bill reads as follows:

Be it enacted, etc., That any person, firm or corporation, who shall ship or deliver for shipment from any State or Territory, or the District of Columbia, any patent or proprietary medicine, or any other secret medicinal compound, shall place on each bottle or package of such medicine a label, on which shall be printed in the English language the name of each ingredient contained in such bottle or package of medicine; and if such medicine or medicinal compound shall contain opium or any of the preparations of opium, chloral, cocaine or alcohol, then in such cases the quantity of these drugs contained in each bottle or package of such medicine shall be printed on the label in the English language.

Sec. 2. That every person, firm or corporation who manufactures,

or produces and delivers for interstate shipment or transportation to any State, Territory or the District of Columbia other than the State, Territory or District of Columbia, in which it is manufactured, any patent or proprietary medicine, or any other secret medicinal compound, shall place on each bottle or package of such medicine a label on which shall be printed in the English language the name of each ingredient contained in such bottle or package of medicine as provided in section one of this act.

Sec. 3. That this act shall not be construed to interfere with commerce within the State where such medicine or drug is manufactured nor with the exercise of the police powers of the several States.

Sec. 4. That any person, firm or corporation who shall violate sections one and two of this act shall be guilty of a misdemeanor, and upon conviction shall be fined not less than \$100 nor more than \$500 or imprisoned not less than one month nor more than six months, or both, in the discretion of the court.

Sec. 5. That nothing in this act shall be construed to prohibit druggists from filling the prescriptions of physicians.

Sec. 6. That this act shall take effect and be in force from and after the first day of January, 1907.

It will be observed that the bill not only requires the publication of the ingredients, but in the case of narcotic drugs and of alcohol requires a specific statement of the proportion of ingredients. It hardly seems probable that the bill will become a law, though in view of the recent attacks on proprietary remedies of all kinds there is a possibility of its doing so.

#### An Expanding Medical Weekly.

On January 1, 1906, the *Medical News* will cease to exist as a separate journal, and will be merged with the *New York Medical Journal*. The *Medical News* was established in 1843 by what is now the firm of Lea Brothers & Co., and, in keeping with every medical publication the Leas have ever touched, the *News* has passed through more than 50 years of only the highest and best of medical literary effort. The *New York Medical Journal* takes over the *News* just as it did the *Philadelphia Medical Journal* in 1903, retaining the best features and eliminating others. The *New York Medical Journal* has been for many years the best edited weekly medical publication in the United States, and with the features of the *Philadelphia Journal* and of the *News* added to it, it will stand head and shoulders above any other medical weekly.

#### Registered in New Jersey.

The following applicants, who were examined at the October meeting of the New Jersey Board of Pharmacy, have been granted licenses:

REGISTERED PHARMACISTS.—Fred. T. W. Bowne, Paterson; Henry E. Balcom, Norwalk, Conn.; Charles W. Baas, Scranton, Pa.; A. Jenner Bourchier, Newark; Luigi Donato Di Paola, Jersey City; Augustus Dangier, Long Branch; Charles P. Eves, Columbia, Pa.; Gdal S. Friedman, New York; Edward B. Flint, Newark; Paul Goldberg, New York; Frank M. Garton, Philadelphia; Robert C. Howard, New York; Samuel Kaufman, Yonkers, N. Y.; Joseph P. Kelm, Atlantic City; Sidney W. Lockwood, Bayonne; Wilbert J. Moore, Woodstown; Benjamin Machlin, New York; Charles Maier, Woodbury; Herman Meyersfeld, Hoboken; Alfred E. Oakes, Elizabeth; Fred. A. Sandmann, Brooklyn; Benjamin H. Williams, Jersey City, and Thomas A. Weaver, North Plainfield.

REGISTERED ASSISTANTS.—James R. Fazio, Newark; Emanuel Fantl, Newark; W. H. Harry Harbourt, Trenton; Jeremiah Harris, Newark; A. Hadden Seaman, Perth Amboy; Fred. Chas. Grant Secker, Newark.

#### DIED.

ACKERMAN.—In Turbotville, Pa., on Wednesday, December 6, A. K. Ackerman, in the fifty-sixth year of his age.

CALKINS.—In Elmira, N. Y., on Tuesday, December 12, William E. Calkins, in the seventy-first year of his age.

GREEN.—In Llewellyn Park, Orange, N. J., on Friday, December 1, David Ely Green, in the sixty-ninth year of his age.

KENNARD.—In Baltimore, Md., on Sunday, December 3, James B. Kennard, in the seventy-second year of his age.

KROH.—In Los Angeles, Cal., on Thursday, December 7, Dr. William Kroh.

SMITH.—In Ohio, last month, Everett William Fletcher Smith, in the fifty-fourth year of his age.

TAFT.—In Clifton Springs, N. Y., on Wednesday, December 6, James Horton Taft, in the eighty-fifth year of his age.

TUCKER.—In Baltimore, Md., on Monday, December 4, George W. Tucker.

WEBSTER.—In Baltimore, Md., on Wednesday, November 29, Charles R. Webster, in the forty-ninth year of his age.

ZIEGLER.—In Philadelphia, Pa., on Wednesday, December 13, Charles Henry Ziegler.

#### Greater New York News.

E. B. Bragg, third vice-president of the General Chemical Company, came from Chicago last week on a visit to the local offices of the company.

Emil Levi, manager for C. F. Boehringer & Soehne, 7 Cedar street, this city, sailed last week to spend the holidays in Mannheim, Germany.

J. H. Cox, secretary-treasurer of the J. H. Tilden Company, New Lebanon, N. Y., was in town recently on his annual Christmas buying trip.

George Coutellier, of the buying staff of Magnus & Lauer, sailed recently on the new Hamburg-American liner *Amerika* for a month's trip to France in the interest of his firm.

E. de la Balze, European agent of the Humphreys Homeopathic Medicine Company, is here with his wife and daughter from Paris, and will remain until after the holidays.

By January 2 the Powers-Weightman-Rosengarten Company expect to occupy their new quarters at 145 to 147 Front street, which include the five floors of the remodeled building.

Word has been received at the New York branch of Parke, Davis & Co. of the arrival of C. C. Murray, in charge of the Sydney, New South Wales, branch, at his post of duty. Mr. Murray lately visited the home office in Detroit.

N. Nicolai, foreign representative of Parke, Davis & Co., has returned for a visit to his firm's New York and Detroit offices after a year spent in Argentina and other South American countries.

A. G. Rosengarten, of the Powers-Weightman-Rosengarten Company, and Mrs. Rosengarten, who have been visiting in Europe, returned last week. Dr. George Rosengarten came over from Philadelphia on a short business trip.

During a recent severe wind storm three large plate glass windows were smashed in William Wilson's drug store, at Forty-second street, causing \$1,000 damage and leaving the store at the mercy of the storm.

Owing to the large increase in their business, Reid, Yeomans & Cubit have leased a room on the floor above their store on Nassau street. This will give additional floor space of about 15 x 30, which will be used for stock and office purposes.

Charles L. Gleeson, sales agent for P. E. Anderson & Co., of this city, has returned from an extensive business trip through the Middle West. Mr. Gleeson reports the trade outlook for the new year as very encouraging.

P. E. Hall, auditor of Parke, Davis & Co., has arrived in London, where he will remain about a month. He is accompanied by Mrs. Hall and Mrs. S. H. Caragan, wife of the manager of the traveling staff of salesmen attached to the New York office.

Frederick H. Bruckel has been awarded a verdict for \$10,000 damages against J. Milhau's Sons for injuries inflicted by the explosion of a gas generating device which the plaintiff had purchased of the defendant. The accident happened in 1902 and caused Bruckel the loss of an eye.

E. J. Beggs, of E. J. Beggs & Co., 101 Fulton street, is at Lakewood, N. J. Mr. Beggs left for Old Point Comfort in November to recover his health. His two sons, Edward and Arthur E. Beggs, have succeeded in the active management of the business.

Among the out of town people registered at the Drug Trade Club during the last few days were: Irwin Krohn, Cincinnati; A. J. Bremig, Allentown, Pa.; Gerald A. Dillon, Montreal; E. H. Haines, Chicago; W. P. Whelan, London, England; W. E. Fitch, M. D., Savannah.

W. G. Ungerer, of Ungerer & Co., 15 Platt street, this city, has returned from a two months' business trip as far West as St. Louis. Jeremiah D. McFerren, the New England representative of the firm, was in town last week. Both report trade conditions as highly satisfactory.

The marriage is announced of Miss Jessie Vincent, the youngest daughter of the late William C. Vincent, who was one of the oldest druggists in Brooklyn, and Willet L. Roe. The ceremony took place in the Little Church Around the Corner, in Manhattan.

James M. Bush, chairman of the Board of Directors of the London house of W. J. Bush & Co., Limited, and president of the American incorporated branch, sailed for London recently on the Carmania, after a six weeks' stay in this country on his annual visit. Edward Long, sales manager for the American house, has gone on a trip to Chicago and St. Louis.

Represented by an associate of former Judge Alton B. Parker, Alfred Freligh, a drug clerk, of 1174 Putnam avenue, Brooklyn, who killed his wife and mother-in-law, waived examination for the Grand Jury in the Gates Avenue Police Court. Former Judge Parker will appear in person to defend the accused man when the case is called in the County Court.

At the last meeting of the Bushwick Pharmaceutical Association, the members voted in favor of the proposed amendment to the constitution, changing the name of the association to the Brooklyn Pharmaceutical Association. The members voted unanimously to incorporate the association. The Board of Directors consists of Albert Fischer, Walter L. Schneider, Emil Krauscher, Henry Lentz, Otto Henner, August C. Severin and Charles Helmerzhalm.

In order to meet repeated requests for quicker delivery of goods and in view of the inability of the transportation companies to promptly meet the demands upon them, which has delayed goods in transit, the Powers-Weightman-Rosengarten Company has concluded to open a branch house at 412 to 416 Elm street, St. Louis, Mo., from which customers can obtain all chemicals listed by this firm. John F. Queeny, formerly of the Meyer Brothers Drug Company, will be in full charge of this branch.

Kuttruff, Pickhardt & Co., 128 Duane street, this city, are extending and remodeling their offices and making provisions for vaults and additional desk room, in preparation for the consolidation on January 1, 1906, of their business with that of the Farbenfabriken of Elberfeld Company. The name of the new corporation will be the Continental Color & Chemical Company. The San Francisco office of Kuttruff, Pickhardt & Co., which was opened a couple of years ago, will be discontinued on January 1, 1906.

F. L. Bodman, who for some time has been covering the general Eastern territory for the crude drug department of Parke, Davis & Co., has entered the employ of the Powers-Weightman-Rosengarten Company, and after the first of the year will take charge of the territory embraced in the New England States and adjacent to New York, Philadelphia, Baltimore, Washington and Richmond, territory that was formerly covered by C. A. Loring, who became manager of the New York offices of the company last summer.

Some 45 acres of land in New Brunswick, N. J., have been purchased by E. R. Squibb & Son, Brooklyn, on which the firm will erect six buildings of concrete and steel construction for the manufacture of chemicals, etc., as an addition to their Brooklyn plant. Two of the buildings will be 60 x 450, one 60 x 200, one 60 x 250, one 60 x 50 and one 60 x 40. The enlargement of the plant is made necessary by the increasing business of the company, and the tract in Jersey was purchased because a suitable location could not be secured in Brooklyn.

At the tournament of the Wholesale Drug Trade Bowling Association on Monday night, December 4, the teams competing were those of Merck & Co., Dodge & Olcott, Bruen, Ritchey & Co., Lanman & Kemp, Lazell, Dalley & Co. and Seabury & Johnson. The Dodge & Olcott team won both games played. The Bruen-Ritchey team suffered a double defeat. Other teams won and lost a game each. Mr. Caghey, of the Seabury & Johnson team, made the highest score of the evening, 214. In the bowling on Monday night, December 10, the Parke-Davis team was defeated for the first time this season, being beaten by the Lazell-Dalley team by a very small margin. The highest individual score that evening was made by

Ely, of Dodge & Olcott, the next highest was Kaiser, of Whitall-Tatum. The highest team score was made by Dodge & Olcott, 894, and the next highest by the Whitall-Tatum team.

#### Annual Meeting of the German Apothecaries' Society.

The annual meeting of the German Apothecaries' Society was held on Thursday night, December 7. All of the reports showed that the society is in a very prosperous and satisfactory condition. Treasurer Hirseman reported a total membership of 353, an increase during the year of 17 members. The receipts were \$2,528.06 and the expenses \$2,276.49. With the balance previously deposited the society now has \$3,166.47 to its credit. Mr. Hirseman made an additional report covering his nine years' service as treasurer. It showed that since 1896 there has been an annual average increase in membership of more than 14. The total income was \$19,690.57, the total expenses \$19,718.55, a deficit of \$27.98. Among the expenditures during that period were \$473.50 for charitable purposes, donations, etc.; \$831.70 for legal aid, \$1,500 for legislation, \$2,875 for periodicals for members, and \$879 for refreshments.

George Kleinau, chairman of the Legislative Committee, said he had received an opinion from a lawyer affirming the correctness of the decision recently obtained by the Board of Pharmacy in which it was held that where a druggist gives a personal name to a preparation, as "Jones' Tincture of Iodine," it does not exempt him from making it other than of U. S. P. strength. Mr. Swann said that this point had not been tested; he thought the Board of Pharmacy was wrong.

R. S. Lehman, chairman of the Entertainment Committee, urged all the members to attend the annual ball, which will be held in the Harlem Casino on January 11.

In his annual address President Imhof reviewed the work of the year. He recommended, in regard to the sale of poisons, that the members should either sell no poisons at all or should sell in strict compliance with the existing poison laws. He advised the members to give up the sale of liquor altogether. He regretted that the agitation for a representative on the Board of Health had been renewed, for he thought no good would result from it.

The following officers were elected for the ensuing year: President, Felix Hirseman; first vice-president, Chas. F. Klippert; second vice-president, August Diehl; treasurer, R. S. Lehman; recording secretary, O. A. Leister; corresponding secretary, George Kleinau; archivist, A. F. A. Wiggers; librarian, Fred. Trau; trustees, E. C. Goetting, C. F. Schleussner and Henry Imhof.

A rising vote of thanks was tendered the retiring president. Mr. Hirseman then took the chair and announced the following chairmen of committees: Scientific, Emil Roller; Trade, C. F. Plumb; Entertainment, S. V. B. Swann; Legislative, George Kleinau; Legal Aid, Paul Arndt.

#### Manhattan Association Meeting.

Very little business was transacted at the regular monthly meeting of the Manhattan Pharmaceutical Association last Monday night. The feature of the meeting was an interesting and instructive lecture delivered by Dr. Henry Kraemer, of Philadelphia, professor of botany and pharmacognosy in the Philadelphia College of Pharmacy. His subject was "The Application of Bacteriology to Pharmacy." The text of his lecture, which was accompanied by quite an elaborate exhibit of sterilizing apparatus, together with specimens which Dr. Kraemer brought over from Philadelphia, is given elsewhere in this issue. The meeting and lecture took place in the large lecture room of the New York College of Pharmacy. The attendance of members of the Manhattan Association was rather light, but this was more than offset by the presence of a large number of students of the college, who responded to President Alpers' invitation to attend the lecture.

President Alpers called the meeting to order about 9.30 p. m. After the minutes had been approved as read by Secretary Swann Treasurer Hitchcock reported on the condition of the Association's finances. A balance in the treasury of \$187.60 was shown. There were no committee reports. A communi-

cation of minor consequence was read and one new member was elected. President Alpers said that no conference had as yet been arranged with the Mayor in regard to having pharmacists represented on the local Board of Health. In a few brief but well-chosen remarks President Alpers then spoke of the association's good fortune in having such a prominent and able authority to lecture, and he said he took great pleasure in introducing Dr. Kraemer. The latter spoke for more than an hour and his lecture was closely followed by those present. Dr. Kraemer has a pleasing delivery and his discourse was entertaining as well as instructive. At its conclusion a collation was served in the library room of the college.

#### WESTERN NEW YORK.

**Good Weather a Bad Thing for Suburban Druggists—Price Schedule Advanced—Trade in Proprietaries Declining—But Little Drug Adulteration Reported by the Board of Pharmacy.**

*(From our Regular Correspondent.)*

Buffalo, December 18.—There is complaint of too good weather on the part of the outside retail druggists of Buffalo. They say that this enables the good people to go downtown every day after holiday goods, and then they buy their drugs and medicines in the same district. But there is always something to fill the ointment with flies.

#### THE NEW PRICE SCHEDULE ADVANCED.

There has been a further advance in the prices of proprietary medicines and other things pharmaceutical that department stores so often cut down in price, all the members of the trade, big as well as little, standing by it in the best possible faith, so the new hold on that side of the trade is good. It no doubt has much to do with the report that the retail business in the city is better this end of the year than it was last fall, while the spring business was best last year.

Still it appears to be the opinion of the best observers of the trade that the proprietary medicine or the proprietary anything has had its day and must in the future sell for less than it did and in smaller amounts as well. There have been some very flagrant violations of common decency by certain pretty well-known patent medicine manufacturers, not to put the case any finer, which has disgusted the retail trade and frightened the consumer, and it must affect the entire trade, as the public is not able to discriminate. If there is a big decline the trade will have to be labeled "Killed by spurious preparations."

#### THE WESTERN BRANCH OF THE STATE BOARD OF PHARMACY

has for the most part laid aside its campaign of education, repression and caution for the year and will take up few or no cases till the year is closed up and the January registration is passed. There will be business enough so.

A leading member of the board says he is pleased to find that there is so little adulteration of drugs or substitution of cheap products for expensive ones. The chief reason for watchfulness is that druggists get careless if left to themselves, and most of them are open to an occasional poking up that lasts quite a good while. If they persist in that sort of practice, forgetting poison labels, letting their standards relax, then there is nothing to do but apply the lash of a good fine. So it will be necessary to keep up the watch right along.

#### AUBURN AND ITHACA ORGANIZED.

J. D. Bellaire, the N. A. R. D. organizer who went eastward from Buffalo some months ago to look after trade interests in the middle of the State, appears to have let no grass grow under his feet, for he had no sooner brought Auburn into line than he proceeded to Ithaca and took up the same line of work. He found as something of an obstacle the old Tri-County Association, which had been the rallying center of the counties of Cayuga, Tompkins and Cortland for 20 years. It was still a strong body, but did not affiliate with the N. A. R. D. and stood up strong against anything of the sort, on the plea that there was no need of it, as prices were maintained and the associa-

tion was doing its own work. The argument that succeeded, however, was the "2-4-8" proposition, as it appears that some of the members at least were paying more than they should for proprietary goods; so at length a move was made that brought Ithaca into line, and Cortland is reported as "coming." It is arranged that the Ithaca and Cortland associations be of the double-header description, practically one body, but with President Elliot still at the head in Cortland, and A. B. Brooks will be president in Ithaca. Mr. Bellaire goes to his home in Philadelphia for the holidays.

#### CANADA.

**Details of the Big Merger—Sixteen Wholesale Houses Join Hands—Six Million Dollars Capital—Officers of the Corporation.**

*(From our Regular Correspondent.)*

Toronto, Canada, December 18.—The organization of the National Drug & Chemical Company, with a capital of \$6,000,000, was completed at a meeting held at the Windsor Hotel, Montreal, on the 7th inst. The following 16 firms were embraced in the merger: The Hattie & Mylius Company, Halifax, N. S.; Simpson Bros. Company, Halifax; Canada Drug Company, T. B. Barker & Sons and the D. McDairmid Drug Company, all of St. John, N. B.; Evans & Sons, Kerry, Watson & Co. and Lyman, Knox & Co., all of Montreal; Lyman, Knox & Charlton and Elliott & Co., Toronto; Henry Skinner & Co., Kingston, Ont.; Dominion Drug Company and J. Winer & Co., Hamilton, Ont.; London Drug Company, London, Ont.; Bole Drug Company, Winnipeg and Calgary, Alberta, and Henderson Bros., Vancouver and Victoria, B. C.

#### OFFICERS ELECTED.

The following officers were elected: President, D. W. Bole, M.P., Winnipeg; first vice-president, J. W. Knox, Montreal; second vice-president, A. B. Evans, Montreal; treasurer, C. W. Tinling, Hamilton; secretary, James Mattinson, London. The other directors are T. H. Wardlesworth, Charles Lyman and W. S. Kerry, Montreal; T. M. Henderson, Victoria; Wm. Henderson, Vancouver; H. W. Barker, St. John; W. S. Elliott, Toronto; James B. Hattie and F. C. Stinson, Halifax, and W. W. Bole, Winnipeg.

#### THE ONTARIO COLLEGE OF PHARMACY.

At the semiannual session of the council of the Ontario College of Pharmacy, December 4-8, it was decided to recommend to the Government an amended poison schedule embracing a list of the poisons which must be dispensed and sold only by qualified druggists. This includes a number of new poisons which have been discovered or placed on the market since the old schedule was adopted. The Infringement Committee's report drew attention to the increased sale of habit forming drugs and suggested urging upon the Government an amendment of the law in that respect. They also recommended that in view of the numerous fatalities from carbolic acid the registrar-treasurer be instructed to notify every druggist that the provisions of the Pharmacy act requiring the registration of each sale of carbolic acid must be strictly enforced. The report was adopted. It was resolved to take no immediate action to secure a larger college building. In regard to applications from students outside the province it was decided that they should be received on the same basis as Ontario students. Alexander Stewart, of Guelph, was appointed a member of the council in place of James Law, Guelph, resigned.

#### CANADIAN NEWS NOTES.

L. L. Stevenson has purchased the drug business of J. L. Spencer, London, Ont.

Henry K. Wampole & Co., manufacturing chemists, have removed from Toronto to Perth, Ont., where the municipality has given them special inducements to locate.

Edwin Thompson, of the English firm of Thompson & Capper, homeopathic chemists, was in Toronto recently in the course of an American tour. The firm has been appointed sole agent in England for the pharmaceutical machinery manufactured by the F. J. Stokes Medicine Company, Philadelphia.

## NEW ENGLAND.

**Window Displays Barred Under Liquor License Act—Interpretation of the Law Regarding Obstruction of Windows—Some Druggists Surrender License—Medal for Druggist Hero.***(From our Regular Correspondent.)*

Boston, December 20.—A recent order of the Board of Police is causing much criticism and annoyance to the retail trade. In the liquor law there is a provision that the street windows of licensed places shall be unobstructed. For many years this has been applied only to saloons and hotels by the powers in control, but now, through the spurring of the new District Attorney, the board has decided that this section is also applicable to drug stores. This interpretation, while against the interest of the trade at any season of the year, is an especial hardship at the present time, as in many stores the windows were already arrayed for the Christmas trade. Secretary Tobin, of the Boston Association of Retail Druggists, does not believe that this law applies to the drug trade, but states that without doubt some action will be taken to repeal this troublesome provision. He, however, hastened to comply with the order, as did many other druggists. The sentiment with several of the trade is to surrender the licenses rather than remove the displays of goods from the windows. S. A. Epstein, of Scollay square, wrote the board as follows:

Gentlemen: Being unable to comply with your request to remove certain window displays which more or less obstruct a clear view of my store from the street, I hereby surrender my liquor license. Yours most respectfully, S. A. EPSTEIN.

It would not be surprising if many more followed Mr. Epstein's example.

**DRUGGIST HERO RECEIVES MEDAL.**

Samuel B. Roos, who keeps a store on Blue Hill avenue, has just been awarded a bronze medal by the Massachusetts Humane Society. The deed for which the award has been made took place in 1903, when the youngster whose life was saved climbed to the seat of a coal wagon which stood near Mr. Roos' store, and, playing with the reins, frightened the horses, which started down Blue Hill avenue at a wild pace. At the risk of his own life Mr. Roos grabbed the bridle of one of the animals as the runaways passed his place of business and was dragged a block over the pavements before bringing the maddened team to a standstill.

Thomas W. Patrick, who coaches candidates for Board of Pharmacy examinations, has been granted a temporary injunction by the Superior Court restraining Joseph N. Clark and Charles O. Danforth from making, publishing or printing or selling questions and answers claimed to have been arranged by him for use of pupils preparing to take the examinations of the State Board of Pharmacy. He avers that Clark was a pupil of his, and with Danforth is publishing his questions and answers in book form without his authority.

**DAMAGES AWARDED FOR INJURY BY ELECTRIC LIGHT CURRENT.**

Pierre Brunelle, of Lowell, has just been awarded a verdict of \$5,500 against the Lowell Electric Light Company. This was for personal injury, a jury determining the sum to be given Brunelle. He sustained damages by being burned by an electric light wire in the cellar of his store while endeavoring to repair it. His hand was so badly injured that amputation of a part of it was necessary. He brought suit, which was contested by the company on the ground that if the wires were out of order one of its own workmen should have been employed to make the repairs, and, further, that no notice had been given it that the wire was defective in any respect.

**TALKED ABOUT.**

Joseph Ricord, of Salem, was recently arrested and taken to Providence, R. I., to appear before the Superior Court in that city. In 1904, while connected with a drug store in Providence, R. I., he was convicted of maintaining a common nuisance. He escaped from the court room while the judge was charging the jury, finally being located as above noted.

## PENNSYLVANIA.

**Chaos Follows the Loder Verdict—The Philadelphia Wholesale Drug Company Stricken from List of Accredited Wholesalers—Cocaine Sales Must Stop—Camden Furnishes Supplies.***(From our Regular Correspondent.)*

Philadelphia, December 21.—There is chaos in the retail drug trade in this city. Ever since the verdict in the Loder suit was rendered preparations have been under way for the marking down of such articles as do not come under the tripartite plan. These goods are being held up to the regular price, but other articles are liable to be marked lower than ever before. As yet the cutting has been confined in a measure to two or three stores, but after the holidays and after stock taking has been done then the fight is to be begun. George B. Evans will lead the fight for the retail drug trade. It is understood that he has given orders to mark down all proprietary articles, and if this is not sufficient he will make a reduction in other goods. By doing this he will draw the trade to his store and will deprive those who would not come into the Retail Association of a number of customers. There is considerable talk about the result of Loder's suit. There is no doubt that it will be carried to a higher court, for the retailers are satisfied that they cannot secure a just trial by jury, especially when the suit has been termed as against the "Drug Trust." There are no drug trust retailers and some one higher up than Mr. Loder is back of the suit. There are more suits said to be pending but as yet no action has been taken. It is thought those who contemplate suing the Retail Association will wait until the Loder case has been settled by a higher court before they will make a move.

**THE PHILADELPHIA WHOLESALE DRUG COMPANY REMOVED FROM LIST OF ACCREDITED WHOLESALE HOUSES.**

The best of feeling between the members of the Philadelphia Wholesale Drug Company and some of the local wholesale drug houses is not in evidence at the present time. The Wholesale Drug Company has been stricken from the list of accredited wholesale druggists. A leading retailer who is an officer of the company said that the Philadelphia Wholesale Drug Company adhered more closely to contracts than the jobbing drug houses did. While they did at stated periods make a division of the profits among those who purchased the various proprietary medicines, it was not done until the various manufacturers had been consulted and their consent given. All tripartite goods are sold at the list price and there is no deviation. The striking of the Wholesale Drug Company from the list of accredited wholesalers has caused some bad feeling in the trade, and it is likely that means will be taken to have the members of the company confine their transactions as much as possible to the Drug Company. It is contended that the only reason prices are as high as they are for staples is that the large drug houses own nearly one-half of the retail stores, as their owners or managers do not pay promptly, and the only way the jobbers have of making ends meet is to charge a good price for the goods. With the Wholesale Drug Company it is different; everything is done on a cash basis. All members are required to pay their bills every week and in this way there is always a profit to be divided among the members of the company.

**THE NEW PRESIDENT OF THE PHILADELPHIA WHOLESALE DRUG COMPANY.**

At the meeting of the newly elected Board of Managers of the Philadelphia Wholesale Drug Company, Limited, on December 12, Frank R. Rohrman was elected president to fill the vacancy caused by the resignation of E. R. Gatchell. This election has been forecasted in the AMERICAN DRUGGIST, and it meets with the approval of all the members. Henry C. Blair was elected vice-president. A handsome pearl pin was presented to the retiring president. Mr. Rohrman is one of the best known men in the local drug trade. He was born in this city and received a public school education. He graduated from the Philadelphia College of Pharmacy in the class of 1883, after serving his apprenticeship with Robert Shoemaker & Co., of this city. After graduating he went to Baltimore, where he entered into

business for himself at Charles and Read streets. He was there about eight years when he sold out his business and returned to this city. When the Apothecaries' Union was formed Mr. Rohrman became associated with it, and when this association was succeeded by the Philadelphia Wholesale Drug Company he became manager of the new company. Ever since he has been its manager, and it is largely due to him that the company has been so prosperous. Its quarters are many times as large as they were at first and there is some talk of seeking still larger ones.

#### VIGOROUS PROSECUTION STOPS COCAINE SALES.

A determined effort is being made to put a stop to the indiscriminate purchase of cocaine. There have been several arrests and four druggists have been held for court owing to the too free sale of this drug. Not only the city authorities but the national authorities as well have taken the matter up, and every effort is to be made to stamp out the evil. It has been discovered that boys are being used to purchase the drug. They are acting as purchasing agents for the drug victims of the Tenderloin and they make daily trips to Camden to procure for their patrons supplies of cocaine, morphine and other drugs which recent disclosures have placed an embargo on the sale of in drug stores in this city.

#### MARYLAND.

**Grand Jury Attacks Cocaine Evil—25,000 Sales Annually from One Store—Four Indictments Returned—Proposed Amendments to Pharmacy Law.**

(From our Regular Correspondent.)

Baltimore, December 20.—A crusade is under way against the druggists who violate the State Pharmacy law by selling cocaine and other habit forming drugs without a physician's prescription, or who fill prescriptions again and again without the sanction of the doctor who gives them. The cocaine evil is said to be rapidly on the increase, and the last Grand Jury called pointed attention to the matter in the Criminal Court before Judge Phelps. It began with the declaration that the members had been moved by a desire "to stamp out a widespread and rapidly growing evil in the city of Baltimore, and to issue a warning that shall enlist the active sympathy of the whole community toward the abolition of the abuse." The letter then continues: "Further, in the event of the law on cocaine selling being weak and insufficient, we wish to arouse public sentiment to such a pitch that the people of Maryland shall demand from the next Legislature a drastic enactment on the subject."

#### EVILS OF COCAINE ADDICTION.

The Grand Jury contends "it has found that certain conscienceless druggists for a few dollars profit are selling the drug to all who ask for it. Though not so widespread an evil as intemperance in the use of low grade liquor, cocaine taking is far worse in its effects, and as the habit is spreading with alarming rapidity we feel that steps should be taken at once to check it. Many merchants sell the drug openly and to all who ask for it, while others mix cocaine with other drugs and dispose of the dose. According to a reputable druggist, in the legitimate use of cocaine he handles only 2 ounces a year, while information has come to the jury that one druggist in the city dispenses no less than 5 ounces a week, or 260 ounces a year. As each ounce contains 480 grains, 96 '10-cent packages' can be put up from 1 ounce, making 24,960 single sales in one year in that store where the proprietor is said to sell 5 ounces a week. As the jury has also heard of four other stores doing a like illegal trade, it computes the annual output of these five stores alone at 125,000 '10-cent packages.' With cocaine obtainable at wholesale rates of \$4.50 an ounce, or 96 '10-cent packages,' a net profit of \$5.10 an ounce is netted to the vender, which in a 5-ounce a week shop means an annual profit of \$1,326."

The Grand Jury also returned indictments for alleged violation of the law against William H. Dull, 400 North Gay street; Charles M. Reinhardt, 2242 East Baltimore street; A.

Perel, 829 East Pratt street, and Henry J. Schireson, 1537 East Pratt street.

#### THE BALTIMORE DRUG TRADE BOWLING CLUB

has completed the second of the three series of games of 15 games each to be bowled during the season, and as a result the several teams occupy the following positions:

| Teams.                    | W. | L. | P. C. | Average.  |
|---------------------------|----|----|-------|-----------|
| James Bailey & Son.....   | 23 | 7  | .767  | 832 8-30  |
| Sharp & Dohme.....        | 19 | 11 | .633  | 813 9-30  |
| McCormick & Co.....       | 18 | 12 | .600  | 806 5-30  |
| H. B. Gilpin & Co.....    | 18 | 12 | .600  | 792 5-30  |
| Calvert Drug Company..... | 8  | 22 | .267  | 730 5-30  |
| Muth Bros. & Co.....      | 4  | 26 | .133  | 708 12-30 |

The team of James Baily & Son won not less than 14 games, losing only one, and that to next to the weakest team in the club, the quintette of the Calvert Drug Company. This latter aggregation, which prevented the Baily men from making a perfect record, has proved a stumbling block to the leaders during the past two seasons. The highest individual scores were made by the following:

| Names.            | Number games. | Average. | Spare average. |
|-------------------|---------------|----------|----------------|
| Brauer .....      | 30            | 182      | 812            |
| Coulson .....     | 15            | 179      | 819            |
| Lamar .....       | 24            | 178      | 765            |
| Lockwood .....    | 29            | 173      | 729            |
| W. Smuck .....    | 30            | 173      | 700            |
| Jahrlies .....    | 27            | 172      | 672            |
| Wickam .....      | 15            | 169      | 622            |
| Baumgartner ..... | 30            | 168      | 598            |
| James .....       | 27            | 168      | 747            |
| Davis .....       | 27            | 167      | 744            |
| Fairley .....     | 30            | 167      | 698            |
| Moore .....       | 26            | 167      | 701            |
| Goldsboro .....   | 27            | 165      | 644            |
| Perry .....       | 14            | 164      | 630            |
| Hayes .....       | 30            | 163      | 609            |
| Holzerman .....   | 28            | 161      | 582            |

First high average—Brauer, 182.  
Second high average—Coulson, 179.  
First high spare average—Coulson, 819.  
Second high spare average—Brauer, 812.  
High single score—Baumgartner, 246.  
Most 200 scores—Brauer, 7.  
Most honor or full house games—Brauer, 4.  
Best average three consecutive games—Brauer, 214 1-3.  
Most split spares—C. Holzerman, 9.

#### PHARMACY LAW AMENDMENTS.

The Maryland Legislature will begin its biennial three months' session next month at Annapolis, and the druggists of the State are making preparations to secure the passage of amendments to the present pharmacy law, which in actual practice has proved ineffective. Efforts will be made to get the sanction of the Assembly for an amendment to define more clearly the requirements of a registered pharmacist and of an assistant. Under the law as it stands the assistant can do everything which the registered pharmacist is permitted to do. Another matter that has occasioned much discussion is the relation of physicians to pharmacy. As things are now a physician may virtually conduct a drug store without an examination and compound prescriptions. Druggists are of the opinion that there ought to be some restrictions. A third question of general interest to the profession is the interchangeability of certificates of registration between States that have identical requirements. The Maryland Pharmaceutical Association was one of the first organizations to champion this idea, but under the prevailing statute no druggist can come here from another State and engage in the business without undergoing an examination before the Maryland Board. It is the opinion of leading druggists that this provision should be dispensed with in so far as qualified druggists of other States having advanced professional standards are concerned. The Maryland Pharmaceutical Association will hold its semiannual meeting at Annapolis during the sessions of the Legislature and will make a strong appeal to the members.

#### BALTIMORE NEWS NOTES.

News has been received here of the death on December 7, at Los Angeles, Cal., of Dr. William Kroh, who for some time conducted a pharmacy at Ashland avenue and Caroline street, but went to the Pacific Coast several years ago for his health. His store was purchased by Otto G. Schumann.

Everett William Fletcher Smith, who for many years conducted a drug store at Snow Hill, Worcester County, Md., but went to Ohio some time ago, died there recently, and his remains were brought to Snow Hill and buried in All Hallows' Protestant Episcopal Cemetery. The deceased was 53 years old

## OHIO.

**Business Good in Northern Ohio—Brisk Holiday Trade—Association Work Held Up for the Holidays.***(From our Regular Correspondent.)*

Cleveland, December 19.—The close of the year finds the wholesale druggists here in a happy frame of mind. Their business for the fall has been even better than they had anticipated and the business of the entire year is expected to show a very satisfactory improvement over that of the preceding twelve months, which was considered good. The jobbers have had an increased business all over their territory. Reorders for the holiday trade have been numerous, showing that retailers over the country are doing a good business. Most of them had prepared for a larger trade than usual, believing that people had more money to spend in the past, and this would seem to be true from the reports that have been received.

## GOOD LOCAL HOLIDAY TRADE. —

So far as the local retailers are concerned it is said they have done more holiday business than for several years past. All the Cleveland industries have been running full for some time past and people who wanted work could get it. This has put a large amount of money into circulation and the retailers in all lines are getting the benefit of it. Banks do not have so much money perhaps as usual, but at the same time the banking institutions of this city seem to be quite well supplied.

## N. W. D. A. COMMITTEES.

President Lucien B. Hall, of the National Association of Wholesale Druggists, has about completed the list of regular committees and will announce them at an early date. He desires to hear from each person appointed before he makes the names public, in order that the lists may be complete. Were they announced before the appointees had all accepted, and should changes be made necessary, people would get them confused and the work might not be so satisfactory.

## ALL QUIET AMONG THE ASSOCIATIONS.

Affairs among the associations are rather quiet just now because the members are busily engaged with their holiday trade. They have had little time for several weeks to look after matters of this kind. It is expected that association work will be taken up after the first of the year, however, and all unfinished work will be completed.

## CONVICTED OF FRAUD FOR SALE OF BLACK-NO-MORE.

James A. Herlihy, a druggist of Chillicothe, was tried and convicted in the Federal courts at Columbus last week on the charge of misusing the mails in the sale of what he called "Black-No-More," a preparation that was claimed to have qualities for turning the skin of a negro white. A number of witnesses were called and some of them testified that there was some merit in the preparation, while others purchased the preparation, but after using could see no good that it had accomplished. The punishment was a fine and the costs of the case.

## CLEVELAND NOTES.

D. Lesser has succeeded to the business of the firm of D. & L. A. Lesser, 463 Woodland avenue.

Marshall's various stores have been making a strong play on toilet articles and perfumes for the past few weeks. They have made some very handsome window displays in connection with this work.

Strong, Cobb & Co., wholesalers, say that from present prospects their business will show a nice gain over that of last year. The same thing was said at the store of Benton, Hall & Co. Both have had a most excellent business all fall.

## OHIO NEWS NOTES.

A few days ago the display window of Harbaugh & Mickey, at Fostoria, caught fire while J. N. Hicks was lighting the gas, and several hundred dollars' worth of Christmas goods were destroyed. Mr. Hicks' hands were seriously burned while endeavoring to extinguish the blaze.

J. D. Price, of the wholesale firm of Orr, Brown & Price, at Columbus, underwent a rather serious operation a few days

ago, and is said to have recovered in a very satisfactory manner. This is the second operation within six months that he has submitted to.

The Whitteker-Gulnner Drug Company, of Dayton, has been incorporated with a capital stock of \$50,000 by Arnold F. Guinier, F. H. Althen, William Stroop and Droman Niswonger.

The Columbus Pharmacal Company a few days ago used full-page advertisements in the daily papers to give publicity to their line of holiday goods. This company usually goes in pretty heavily on holiday goods of various kinds.

Engineers and pharmacists from the university at Ada had rather a sanguinary class "scrap" on Saturday, December 9. When the fire department was called out to quell the disturbance enemies joined hands and made it lively for the peace-makers. The engineers then loaded up a wagon with pharmacy students and hauled them about town. This done, the captives were tied to trees and the wagon, piled high with wood, was fired.

The firm of Rauch & Armhold has purchased F. A. Wheeler's store at Mansfield.

Edward Cowman succeeds the firm of Cowman & Fawcett at Bellefontaine.

Gerding & Kahle have purchased the drug business of Anglemyre & Buckle at Ottawa.

The firm of King & Williams at Delphos has been reorganized and the name is now King, Williams & Lellich, the latter having been admitted to partnership.

Duff Pancoast, who operates a store at Ashland, has opened a new store at Plymouth, which will be operated under the name of the Plymouth Drug Company.

## MISCELLANEOUS NEWS.

Isadore Maserek has purchased the drug business heretofore owned by Fred Nick at Erie, Pa.

W. M. Puckett, of Charleston, W. Va., has been succeeded by the Shelton Drug Company.

The Franklin Drug & Chemical Company, of Franklin, Pa., which combined nearly all the stores in the town a few years ago, is again disposing of them, three sales having been made within the last two or three weeks. The company has now only two stores, and it is possible that one of them may be sold later on. W. C. Mackey purchased the Hall branch of the business and Smith & Peters bought the Third Ward branch. John M. Reisman has taken the store that he operated before the consolidation was effected.

## Registered in Massachusetts.

For the month of November the Board of Pharmacy broke all previous records in the point of numbers examined. Five examinations were held, two of them at the M. C. P., 103 candidates appearing. Of this large number the following were granted certificates:

Frederick J. Cooper, Springfield; Theodore A. Davignon, New Bedford; Allyn E. Howe, Chelsea; William H. Leach, Plymouth; E. Bemis, Plymouth; William F. Brennan, Worcester; William R. Dacey, Boston; Edgar E. P. Fowler, Marblehead; Robert P. Golden, Leominster; Edward H. Howard, Brockton; William Hendry, Jr., Lawrence; Gustavus Jones, Brockton; Frank J. Logler, Cambridge; Frank A. Maffone, Newton; Louis A. Norcott, Amherst; Hilding C. Peterson, Brockton; George H. Sherbert, Allston; Edward L. Tighe, Marlboro; Harry W. Blake, Boston; Jonas S. Chaimarson, Lowell; George S. Conkley, Wakefield; Edmund J. Collette, Worcester; Harry H. Coman, Somerville; Orwan S. Cook, Jr., Boston; Frank S. Cragin, Lawrence; William J. Dinan, Wakefield; John T. Doyle, Abington; George A. Elliott, Holyoke; Lucius L. Gillett, Cambridge; George Haley, Methuen; Dennis W. Heffernan, Holliston; John B. Hoar, Roxbury; Noah Kolodny, Boston; David H. McGowan, Boston; Alfred O. Morse, Boston; Romeo T. Robillard, Boston; B. Perley Sawyer, Hyde Park; Thomas M. R. Allen, Brookline; Carroll A. Frisbie, Methuen; Felice Lauricella, Boston; John H. Mahoney, Boston; Ernest C. Martin, Somerville; Thomas H. O'Brien, Roxbury; Walter J. Ogar, Cambridge; Merrill Plummer, Medford; Charles E. Beach, Acton; Hallett E. Jones, Natick; George E. Murphy, Manchester, N. H.; Daniel W. Shea, Whitman; Henry W. Winship, Staughton; Samuel J. Gerrish, Jr., Portsmouth, N. H.; Charles H. Jones, Jr., Boston.

## Work of the N. A. R. D. Organizers.

The new organizations are distributed over 18 States, including Nebraska, Kansas, Iowa, New York, Ohio, Kentucky, Tennessee, Missouri, New Jersey, Pennsylvania, Indiana, Illinois, North Dakota, Minnesota, North Carolina, South Carolina, Michigan and California.

## THE WEST.

**The Ideal Drug Company to Buy a Chain of Chicago Stores—Profits from Economies, Not from Cut Prices—Liquor Sales Must Be Registered—Household Remedies Discussed by A. E. Ebert.**

(From our Regular Correspondent.)

Chicago, December 20.—A combination has been formed for the purpose of buying up about 100 Chicago drug stores. The stores thus purchased are to form a chain that will extend over all parts of the city. The name of the organization that is doing the buying is the Ideal Drug Company. It is said that prices will not be cut, but that profit will come through operating on a large scale, in buying and advertising. Herman Fry's store on Fullerton avenue has been purchased by the Ideal Company and it is probable that Mr. Fry may be engaged as manager.

#### REGISTERS OF LIQUOR SALES TO BE INSPECTED.

Energetic warnings to exercise great care in registering liquor sales have been issued to Chicago druggists recently by those who fear that there is altogether too much carelessness at present in this regard. Inspectors of drug store liquor registers have been assigned to other duty rather frequently of late. Attention has been called to the fact that the concessions granted to druggists two years ago will be endangered if the provisions of the city ordinance are not faithfully observed.

#### LECTURES ON BUSINESS TOPICS

have been made a feature at the Chicago College of Pharmacy. The first talk was delivered by Mr. Ebert, whose subject was Household Remedies. The second lecturer was Albert D. Thorburn, who discussed The Pharmacist's Laboratory. A laboratory suited to the means and needs of the pharmacist was described and the classes of preparations which could be made with profit were pointed out. W. K. Forsyth gave the third talk on How to Build Up a Prescription Business. He brought out the following points:

#### HOW TO BUILD UP A PRESCRIPTION BUSINESS.

"Quality rather than price the first consideration in stocking a prescription department.

"Gaining the confidence of the physician through friendly offices—calling his attention to new pharmaceutical processes, new remedies and changes and improvements in standard remedies.

"Gaining the confidence of the patient through tact, neatness, promptness and fair dealing."

#### CHICAGO NOTES.

Efforts are being made to have changes made in the cocaine ordinance which was recently passed for the purpose of preventing sales to "fiends."

The State Board of Pharmacy will meet February 20 in Chicago to examine applicants who have not passed the preliminary test. Another examination will follow the next day.

Jerome V. Pierce has been elected cashier of the new Bank of America. G. F. Sorrow, the vice-president, was formerly a druggist.

At the annual meeting of the Social Drug Club the following were elected: President, Iver L. Quales; first vice-president, I. M. Light; second vice-president, H. W. Medbery; third vice-president, Oscar Huyck; recording secretary, Henry F. Schaper; financial secretary, J. M. Schwalbe; treasurer, J. F. McDonald.

#### Plans United Drugstores Company.

Freeport, L. I., December 22.—The United Drugstores Company of America, which is being promoted and capitalized by W. A. Dawson, of this village, will open a store in Hempstead as a starter of the scheme to control the drug trade of Nassau County and eventually of a wider territory. Mr. Dawson has conducted a pharmacy here for about a year. He expects to capitalize the United Stores Company at \$100,000, divided into 1,000 shares of \$100 each.

## THE SOUTH.

**Trade Brisk in the Crescent City—A Liberal Christmas Gift by a Druggist—Parker-Blake Co. Aggrieved.**

(From our Regular Correspondent.)

New Orleans, La., December 18, 1905.—Trade conditions have undergone a change in this section in the last fortnight, and as a result of this, instead of the depression evident two and three weeks ago, trade is in much better condition. This applies both to New Orleans and to the country trade. The wholesale houses here are busy with their shipments to the up-country stores and are doing a good business with the country retailer. Everywhere the trade has donned its holiday attire and all in all the most favorable conditions prevail.

#### A DOLLAR TO EVERY ORPHAN IN NEW ORLEANS.

To-day the American Drug Store, which for many years occupied the site at Basin and Canal streets, moved into its new location at 1024 and 1026 Canal street, and in honor of the event Dr. Raymond Sauvage will present to every orphan in an asylum in this city a bright, new dollar as a Christmas gift and as a token of gratitude and appreciation for the manner in which he has been treated by the trade and the people of the city. Some time ago Dr. Sauvage announced that on the occasion of his removal from one place to the other he would give a dollar to each orphan in the New Orleans asylums. To-day his promise matures, as his new store was thrown open to the public bright and early this morning. The new place is surpassed by few in the South. It is on the uptown side of Canal street and adjoins the Pickwick Club. It has been elegantly fitted out and stocked as few drug stores in the South are stocked. Dr. Sauvage has notified all his patrons of his removal and expects to see them at his new store.

Another event in the drug trade to-day was the opening of the Economical Drug Store, which will be operated by A. Huberwald. This store is on the lower side of Canal street and almost directly opposite Dr. Sauvage's new store. Mr. Huberwald secured an excellent building for his store and the place is in all particulars a thoroughly modern, up-to-date and well-equipped drug establishment.

#### THE PARKER-BLAKE COMPANY LOYAL TO THE N. A. R. D.

The Parker-Blake Company, of this city, is somewhat injured at the manner in which it was treated by a recent issue of the N. A. R. D. Notes. This publication printed a long list of names of wholesale houses, stating that they were the houses which were the friends of the retailers. In this list the Parker-Blake people were overlooked and the officers of the firm feel that they were ignored without justification. The retailers here, who know the Parker-Blake people and what they have done for the retailers and their association, express the belief that the name was left out through error.

#### NEWS NOTES.

Jordan Brothers, two well-known Alabamians, have bought out the City Drug Store, formerly occupied by H. E. Ratcliffe, at Alexandria, La., and will henceforth operate that place. They have a good location and indications are that they will make the business profitable.

The Parker-Blake Company will on next Saturday distribute among its many employees several coops of turkeys and a large number of boxes of candles. This is the usual custom with the firm and every Christmas it supplies each of its male employees with a turkey for his Christmas dinner. Every one of the many girls working in the big establishment receives a 2-pound box of Huyler's candles.

#### Pharmacies Suffer in Russia.

It is reported in the *Pharmatzevticheski Vestnik* that the recent devastations resulted in three Jewish pharmacies being burned down in Saratoff, the Fisher Pharmacy, of Yaroslavl, being sacked, and the town pharmacy of Rostoff being burned to the ground, as also the Ilyinsk Pharmacy, of Kursk.

## The Drug and Chemical Market

The prices quoted in this report are those current in the wholesale market, and higher prices are paid for retail lots  
The quality of goods frequently necessitates a wide range of prices,

### Condition of Trade.

NEW YORK, December 23, 1905.

Little of a new or interesting character has developed in the market since our last report. A moderate distributive trade is reported by jobbing houses, but transactions of a speculative character are the exception. The quinine situation is unchanged, the market continuing weak, though no pressure to realize is evident. Buyers generally appear to be pursuing a hand to mouth policy concerning themselves only with the needs of the moment. An advance in quotations on camphor was announced by the refiners last week, and conditions in primary markets are responsible for a firmer feeling in Russian products. Preparations of bismuth have declined sharply since our last, and a new schedule of prices has gone into effect for corrosive sublimate, the difference in price between the powdered and lump salt being narrowed. There is little new or interesting to report in connection with botanic drugs, buckthorn bark is lower and burdock root is held at an advance. The Messina essences are held with more strength, values being frictionally higher on the staple products in this line. Menthol is steadier, and peppermint oil has developed a firmer undertone owing to increased export inquiry. Prices generally are well maintained despite the slow distribution.

#### HIGHER

Camphor,  
Lemon oil,  
Orange oil,  
Bergamot oil,  
Balsam tolu,  
Gum myrrh,  
Ergot,  
Chinese cantharides,  
Russian coriander seed,  
Juniper berries,  
Pink root,  
Blue vitriol,  
Burdock root,  
Gambog.

#### LOWER

Buckthorn bark,  
Cramp bark,  
Colocynth apples,  
Bismuth preparations,  
Yerba santa,  
Java quinine.

### Drugs.

Acetone offers more freely and values are easier at 15½¢ to 15¾¢. To competition among holders and a slackened inquiry is attributed the decline.

Amyl acetate is held with increased firmness owing to the difficulty manufacturers are experiencing in keeping up with the demand; quotations are practically withdrawn.

Balm of Gilead buds have eased off a trifle since our last, and now offer at 40c to 42c.

Balsam copaiba maintained its firm position, values for Para being well sustained at 38c to 40c as to quality and seller; Central American is held and selling at 30c, though this figure might be shaded in some quarters.

Balsam fir, Canada, does not vary from the previous range of \$3.10 to \$3.20 and Oregon continues quoted at 75c to 80c.

Balsam Peru is without quotable change and very little inquiry is experienced.

Balsam tolu is in good seasonable demand and the market is well sustained at 20c to 22c.

**Barks.**—Cherry has been in good consuming demand, with supplies obtainable at 8c to 9c as to quantity and quality. Bayberry is difficult to obtain at less than 14c, though some is available at 12c. Cascara sagrada is nominally quiet and easy at 5¼¢ to 8½¢ as to age and seller. Cottonroot is held with moderate strength and sales are making at 9c to 10c. Cramp is held with increased firmness and recent sales were at 7c to 9c. Black haw is inquired for only to a limited extent, but values are well sustained at 18c to 18c. Sassafras is in steady moderate request and holders quote 14c to 15c. Wahoo is scarce and firm, with holders quoting up to 60c.

Buchu leaves short are meeting with increased inquiry and values are firmer at 16c to 17½¢ for the better grades.

Cacao butter is firmer under the influence of light supplies and a brisk demand. Up to 29½¢ is named for prime Dutch; cakes are quoted at 34c to 35c.

Camphor monobromated has been marked up to correspond with the higher cost of the gum, the revised range being \$1.15 to \$1.50.

Cantharides, Chinese, are held with increased firmness in sympathy with the tone of the primary market, and 55c is generally named as an inside quotation; Russian is held and selling at \$1.25 to \$1.30.

Castor oil is meeting with a good routine inquiry, and values are steadily maintained on the basis of 10½¢ to 11½¢ for No. 1 in barrels and 11c to 12c for cases.

Codliver oil, Norwegian, continues to find a good consumptive outlet, the bulk of the demand being for jobbing lots for which \$26.00 to \$30.00 is paid; Newfoundland is held and selling at \$24.00 to \$25.00.

Colocynth apples are fractionally lower, the weakness being caused by corresponding conditions in primary markets; Trieste now offers at 30c to 32c, and Spanish at 25c to 26c, as to quality and quantity.

Cuttlefish bone is in light supply and firm at previous quotations, or, say, 16c to 16½¢ for Trieste and 12c to 13c for French and 40c to 70c for jewelers'.

Ergot has developed increased firmness owing to stronger markets abroad, and the spot quotations show an advance to 48c to 50c for the Russian or German.

Glycerin has continued in good consuming demand since our last, and the tone of the market is steady at 11½¢ to 12c for C. P. in drums or barrels and 12½¢ to 13c for cans.

Juniper berries are in strong upward tendency owing to reports of the loss of a heavy consignment by the sinking of a steamship. Holders offer with reserve at the inside figure of 4½¢.

Lycopodium is in improved position caused by increase of speculative interest in the foreign market. While 55c is named as inside some holders have advanced their limit to 60c.

Menthol is in good, seasonable demand and values are well maintained at \$2.40 to \$2.50.

Opium has not been in much demand since our last and the market remains quiet at previous quotations, or, say, \$3.10 for cases and \$3.12½ to \$3.15 for broken packages; powdered is weak and nominally held at \$3.55 to \$3.60.

Quinine continues slow of sale and the tendency of the market appears to favor buyers, though prices remain at the level last quoted, or, say, 19c for domestic and German. Java has sold lower since our last, one lot changing hands at 18c, though 18½¢ is generally named.

Saffron remains quiet, prospective buyers being deterred by the present range of values for American, which is quoted at \$1.15 to \$1.20. Valencia is held and selling at \$7.75 to \$8.00 and Alicante at \$5.00 to \$6.00, as to quality and quantity.

Yerba santa has further declined in the interval, there being sellers at 7c to 7½¢.

### Chemicals.

Arsenic, white, is in light supply, and wanted so that values are well maintained at 3¼¢ to 4¼¢.

Bismuth preparations were the subject of a sharp cut in price last week caused by a reduction in the price of metal. The revised range of values is as follows: Ammon. citrate, \$1.85 to \$1.90; Oxide hydrated, \$2.50; oxychloride, \$1.75 to \$1.80; salicylate, 40 per cent., \$1.70; 64 per cent., \$1.95; subcarbonate, \$1.75 to \$1.80; subgallate, \$1.85 to \$1.90; subiodide,

\$4.00; subnitrate, \$1.50 to \$1.55. The following explanation of the break in prices is given by the *Chemist and Druggist*: A reduction of 4 shillings per pound in the price of bismuth metal was announced on Wednesday, which now brings the quotation to 5 shillings per pound. The drop has caused considerable surprise to those who follow the article and several reports are current, it being stated that an outside mine, which has recently been taken into the Bolivian ring, has been underselling the convention and has now broken away altogether, owing to the fact that they have not secured what they believe to be their fair share of the business in bismuth. It is also known that Australia has been sending increased quantities of metal lately, and this may also be a contributing factor.

Bleaching powder is in better demand, but supplies are rather limited and trade is restricted in consequence; quoted at 1¼c to 1½c.

Blue vitriol maintains its firm position, values still tending upward; manufacturers have again advanced quotations to 5¼c to 6¼c, as to quantity.

Carbolic acid is in moderately active demand, but the available spot supply is limited, and values are firmly maintained at 18c to 14c for crystals in large drums and 20c to 22c for pound bottles.

Chlorate of potash is held with increased firmness, though prices are nominally unchanged on the basis of 9½c to 10c for crystals and powdered respectively.

Corrosive sublimate prices have been revised during the interval, powdered being now quoted by the manufacturers at 70c to 72c and lump at 68c to 70c.

Iodides are held and selling at the previous range. Potassium is quoted by the manufacturers at \$3.15, but outside stock is available at \$3.00.

Nitrate of silver is maintained at the recent advance to 41c to 44¼c, as to quantity, the higher cost of bullion influencing holders to firmness.

#### Essential Oils.

Anise has further improved in the interval, there being nothing now offered at under \$1.30 to \$1.35, with a moderate jobbing business reported at this range.

Bergamot has developed increased strength in sympathy with the primary market and new crop is quoted at an advance of 5c.

Camphor, Japanese, is in better supply and somewhat easier, with sellers at 22c.

Cassia shares in the improvement with anise and values are maintained with strength on the basis of 80c to 85c for 75 to 80 per cent.

Citronella is held firmly, there being sellers at 35c.

Lemon and orange are higher to arrive in sympathy with the upward move of prices in all Messina essences. Lemon is now quoted at 66c to 69c and orange at \$2.15 to \$2.20.

Peppermint is held with more firmness at Western sources of supply, but spot prices are unchanged, bulk still selling at \$2.40 to \$2.50 and HGH at \$3.10 to \$3.35. There is more export inquiry for the last mentioned.

#### Gums.

Aloes are neglected at the moment, but holders abate none of their firmness, and there is seemingly no pressure to realize. Barbadoes is quoted at 15c to 16c, Cape at 8c to 10c and Curacao at 6¼c to 6½c.

Arabic is not taken with any freedom by consumers, but values are well sustained, especially for sorts which are held and selling at 6¼c to 11c, as to quality.

Camphor is again higher, refiners' prices having been advanced 3c per pound on the 18th inst. The revised range is 85c to 85¼c for barrels and cases respectively, and although important demand is lacking prices are maintained with firmness.

Gamboge has moved into stronger position owing to spot scarcity and higher foreign markets. Recent sales of pipe were at 85c to 87½c, while broken is quoted at 80c to 85c.

Myrrh is held with increased confidence owing to the strong tenor of advices from primary markets, and the inside quotation for sorts has been advanced 25c.

#### Roots.

Althea, cut, is selling in small lots to the trade at 15c to 17c for the better grades.

Berberis aquifolium offers more freely, and values have eased off to the range of 11c to 12c.

Burdock is in small stock, and with an improved demand the value has been advanced to 12c to 13c.

Culvers is in good demand, and the market is quoted firm with sales at 9c.

Gentian is slightly easier and for small lots 3¼c to 4c is named.

Golden seal is well sustained in the face of a limited demand, nothing being offered at under \$1.32, while up to \$1.35 is asked.

Ipecac is maintained firmly at previous quotations, and a good demand is experienced at \$1.75 for either Rio or Carthagena.

Jalap momentarily is neglected, but holders are not anxious sellers, and 9½c to 11c is yet named, as to quality and quantity.

Sarsaparilla, Mexican, is slow of sale, but values are nominally unchanged at 10¼c.

Senega is not actively inquired for at the moment, but values are maintained at 58c to 60c.

Serpentaria has been in good demand, and the market is quoted firm at 40c.

Squill has been in good seasonable demand, and we hear of sales at 4¼c.

#### Seeds.

The market for druggists' seeds has been characterized by quietude during the past fortnight, and we have few new features of interest to report. Russian and Chinese products are attracting the most attention, owing to the disturbed political conditions in the countries named. Coriander is firmly held, natural being quoted at 7¼c to 8c and bleached at 8¼c to 10¼c. Stavesacre is maintained in firm position in sympathy with primary markets, recent sales of small lots being at 8c.

#### The G. T. Fulford Company Limited.

A joint stock company has been incorporated under the title of the G. T. Fulford Company, Limited, to take over and continue the proprietary medicine business of the late Hon. Geo. T. Fulford, of Brockville, Ont., carried on under the names of G. T. Fulford & Co. and the Dr. Williams Medicine Company. The capital stock is \$1,000,000, and the head office at Toronto. The incorporators are John Hoskin, John M. Langumir, Archibald D. Langmuir and W. H. Beatty, Toronto; W. T. Hanson, Schenectady, N. Y.; George A. Shirreff, New York, and Arthur C. Hardy, Brockville.

#### Pharmaceutical Affairs in Japan.

According to the *Chemist and Druggist* the bill to amend the pharmacy law has been revised and is to be introduced into the Diet during this session. During May and June of this year the Government laboratories at Tokio, Osaka and Yokohama have examined drugs and chemicals to the following numbers (the figures in parentheses indicate the samples rejected as unfit): Poisons 5,256 (15), dangerous 84,656 (719), original 110,217 (3,488), and drugs, etc., of foreign Pharmacopoeias 31,549 (688). To commemorate the war 111,405 camphor trees have been planted in the Province of Aichi, 1,582 of them being planted in the grounds of Governmental buildings and schools.

Inclosed find money order for subscription to the *AMERICAN DRUGGIST*. In your last number the prescription problems were very interesting. I hope to see more of them.

CARLTON B. WHEELER.

### Para Descubrir el Alcohol Metilo

El *New York Medical Journal*, del 10 de junio, publica un artículo del Dr. Heyward Scudder que contiene la revisión de las pruebas para el descubrimiento del alcohol metílico, al paso que da una idea del análisis de su invención y del Dr. Mulliken, que consiste en la oxidación del alcohol metílico ó formaldehído por medio de una espiral de cobre calentada, y el descubrimiento del formaldehído con la resorcina en la presión de ácido sulfúrico concentrado. Las soluciones alcohólicas fuertes deberían diluirse en tres volúmenes de agua antes de la oxidación. Después de efectuarse ésta se añade una gota de una solución de resorcina al  $\frac{1}{4}$  por ciento, y la mezcla resultante se vierte por un lado de un tubo de pruebas, conteniendo sobre 2 c.c. de ácido sulfúrico concentrado, colocado en una posición inclinada de modo que la solución no se mezcle con el ácido, sino que se quede arriba de él. En presencia del formaldehído fórmase en la unión de las dos capas un anillo blanco al principio, que después se vuelve rojo. Si estuviese presente más de una huella de formaldehído, sacudiendo ligeramente aparecerán por la capa superior copos de un color rojo característico. El acetaldéhído, que es el producto de la oxidación del alcohol etilo, produce un anillo y copos de un color amarillo ó pardo cuando se trata de igual manera.

El Dr. Scudder dice que no en todas circunstancias puede confiarse en una prueba que dependa de la formación de un color ó de un olor. Este hecho, que por lo común es conocido, lo pasan por alto aun los mismos químicos de considerable experiencia. En el empleo corriente se idean pruebas para casos especiales en que sólo están presentes un número limitado de compuestos extraños; pero tales pruebas pueden fallar enteramente si estuviese presente otro compuesto. En los trabajos de medicina, el ejemplo de esto más conocido, es el efecto de drogas y compuestos formados

patológicamente en las pruebas para la albúmina y azúcar en la orina.

Para asegurarse de que no existe ningún compuesto particular precisa hacer una prueba de color ú olor para aislar el compuesto en un estado medianamente puro y formar algún derivado de ello que tiene un puesto de fusión ó ebullición definido. La combinación de estas dos pruebas rinde evidencia cumulativa de sumo valor.

Pero en aquellos casos que ocurren frecuentemente, como en esta prueba de alcohol metílico, es posible estar seguros de una prueba si se toman ciertas precauciones para eliminar compuestos que podrían intervenir. Al hacer la prueba para alcohol metílico, el principal compuesto que origina dificultad es el alcohol etilo. Todas las pruebas denuncian este hecho, adoptándose por este motivo varios métodos para impedir que intervenga. En vino ó licor puede haber un número de otros compuestos que inutilizarían cualquier prueba. La eliminación de tales compuestos es á menudo asunto muy difícil.

### Apogeo y Extinción de una Farmacia Romana

La farmacia del Vaticano, establecida por el último papa para satisfacer las necesidades de 3,000 ó más peones y funcionarios que forman la población de la residencia papal, ha sido cerrada por orden de Pío X. Hace ahora veinticinco años que el papa Leon XIII pidió á los Hermanos de San Juan de Dios, cuya vocación especial es trabajos de hospital, que abriesen una farmacia para surtir á las personas residentes en el Vaticano, y al efecto fueron destinados varios aposentos, abriéndose la botica en el Patio de San Damaso. No tardó mucho tiempo en hallarse el establecimiento en situación de hacer concurrence ventajosa á las demás farmacias de Roma, con motivo de que todos los paquetes dirigidos al Vaticano están exentos de derechos y de inspección aduanera. Los hermanos encargados del establecimiento se aprovecharon de esta ventaja, que les había atraído tantos parroquianos, y trataron de extender sus operaciones, fabricando con este fin muchas marcas especiales de elixires y cordiales que ponían en frascos con la marca de fábrica del Vaticano y que hallaron mucho favor entre los turistas y visitantes de la ciudad Santa.

El difunto cardenal Mocenni, siendo administrador de los palacios apostólicos, había habilitado la farmacia del Vaticano de una manera suntuosa, se regocijaba en su éxito y puso de su parte todo lo posible para que llegara á tener toda la importancia que alcanzó.

Recientemente Pío X tuvo conocimiento de que se vendían licores dentro del recinto del Vaticano, y dispuso que cesase la venta inmediatamente. El hermano Diodato, que había tenido á su cargo la farmacia desde que se fundó, se resistió á cumplimentar la orden del Jefe de la Iglesia, por cuya desobediencia fué trasladado á un convento, quedando entonces cerrada en definitiva la renombrada farmacia.

## ALCALOIDES DE QUINA

Los libros de texto que tratan de química farmacéutica contienen sucintos informes respecto al modo como proceden las sales de los diferentes alcaloides de cincona hacia los radicales ácidos orgánicos más comunes, escribe el Dr. A. B. Lyons en la *Revista Farmacéutica*. La declaración publicada recientemente en un periódico farmacéutico de que existe incompatibilidad entre el sulfato de quinina y el acetato amónico indujo al autor á emprender una serie de experimentos cuyos resultados deberían interesar á todos los farmacéuticos.

El plan de experimentación era muy sencillo. Disolvióse un gramo de sulfato de quinina en 50 c.c. de agua, con la adición de 2.5 c.c. de ácido sulfúrico al cinco por ciento. Se efectuaron soluciones semejantes de los sulfatos de quinidina, cinconidina y cinconina. Empleáronse los sulfatos ordinarios comerciales de los alcaloides sin intentar hacer que las soluciones correspondiesen con exactitud en el alcaloide que contenían. Consumióse en cada una la misma cantidad de ácido sulfúrico, y al mismo tiempo suficiente para que diesen una fuerte reacción ácida con el papel de tornasol.

### ACETATO DE AMONIO

Preparóse una solución de acetato amónico mezclando volúmenes iguales de ácido acético oficial y amoníaco líquido, siendo la primera en exceso químicamente. Cuando se mezcló 1 c.c. de esta solución fuerte con 1 c.c. de solución de quinina, formáronse cristales casi inmediatamente, de modo que la mezcla se puso semi-sólida. Al diluir 1 c.c. de la solución de acetato de amonio con un volumen igual de agua y se añadió á ella 1 c.c. de la solución de quinina, no tardaron en formarse cristales, procediendo con rapidez. Con la adición de un poco más de ácido sulfúrico no se disolvieron los cristales, aunque desaparecieron al añadir mayor cantidad. La adición de 1 c.c. de alcohol en lugar del ácido, causó la solución inmediata de los cristales. Añadiendo 2 c.c. de agua en lugar de 1, no empezó la formación de cristales hasta después que la mezcla se hubo sacudido con firmeza por un minuto ó más. El depósito cristalino (tenues cristales aciculares cual los de sulfato de quinina) no fué, por otra parte, muy abundante. Empleando 2 c.c. de la solución de acetato de amonio y 1 c.c. de acetato, los cristales se formaron con más rapidez y llegaron á ser medianamente abundantes.

Mezclando 1 c.c. de la solución con 1 c.c. de la solución de sulfato de cinconidina, sólo aparecieron cristales después de sacudir por bastante tiempo; y aun entonces no fueron numerosos. Empleando una solución salina de 2 c.c. la cristalización se presentó más pronto. Las disoluciones de sulfato de quinidina y cinconina no dieron reacción alguna.

Estas observaciones no dejan de tener bastante interés especialmente en relación con la indicación de que se emplee acetato de amonio con preferencia al citrato sódico al preparar elixires que han de contener fosfato férrico ó pirofosfato. El alcohol que está presente en tales elixires eliminaría todo peligro de cualquier precipitado de quinina aun en el caso de contener el elixir tanto como un grano de sulfato por cada dracma fluida.

### CITRATO AMONICO

Una disolución de citrato de amonio conteniendo sobre diez por ciento de la sal con exceso distinto del ácido, se empleó en las series de experiencias siguientes. Se llevaron á efecto cuatro de éstas, añadiendo

1 c.c. de la solución de quinina á 1 c.c. de la solución de citrato amónico, á la que se había agregado anteriormente 1, 3, 5, y 8 c.c. respectivamente de agua. En el primer caso se desprendió casi inmediatamente un fuerte precipitado. La adición de 1 c.c. de alcohol sólo aclaró en parte la solución; con 2 c.c. se volvió transparente del todo. En el segundo caso el precipitado tardó más en formarse, pero fué en cantidad suficiente para volver el fluido más espeso. En el tercer caso los cristales aparecieron sólo después de haber sacudido la muestra, pero bien pronto llenaron todo el fluido. Con la adición de 2 c.c. de alcohol, la solución casi se aclaró. En la última los cristales aparecieron después de agitar por bastante tiempo, aunque últimamente ya eran copiosos.

En todos los casos la adición de algunas gotas de ácido sulfúrico al cinco por ciento no tuvo efecto aparente, mas los cristales se disolvieron al agregar una cantidad considerable de ácido.

Hubo de observarse que cuando ésta ó cualquiera otra de las soluciones salinas con que se hacían los ensayos se añadieron á la solución altamente fluorescente de bisulfato de quinina, la fluorescencia se extinguía inmediatamente. Es claro que aun en aquellas preparaciones que contienen una proporción considerable de alcohol existe marcada incompatibilidad entre los citados alcalinos y sales de quinina. Es precisamente esta incompatibilidad que constituye una de las principales dificultades para hacer elixires permanentes de los fosfatos de hierro y quinina cuando la cantidad de la última excede medio grano por dracma.

Los demás alcaloides de la quina con la sola excepción de la cinconidina no denuncian esta incompatibilidad. No hubo precipitación ó señal de cristalización al mezclarse cantidades iguales de la solución de citrato amónico y la solución de quinidina ó cincona, aun después de prolongada y fuerte agitación. La cinconidina revela incompatibilidad, pero en un grado menor que la quinina. Al mezclarse volúmenes iguales de las soluciones de sulfato de cinconidina y de citrato amónico, empezó á aparecer después de algún tiempo un precipitado cristalino, llegando á ser copioso. Con la adición de 1 c.c. de alcohol la solución se volvió casi clara.

### SAL DE LA ROCHELA

Es un hecho regularmente conocido que la quinina y la cinconidina son precipitados de las soluciones neutras por los tartratos de los alcaloides, como también se conoce el hecho antitético de que las soluciones de quinidina y cinconina no son así precipitados.

Las experiencias que se mencionan á continuación, llevadas á cabo con soluciones ácidas de alcaloides de cincona, no dejan de tener interés. Adoptóse el mismo plan que con los experimentos con citrato amónico. Diluyóse 1 c.c. de una solución de sal de la Rochela al 10 por ciento con proporciones variables de agua, y luego se le añadió 1 c.c. de la solución de quinina ó cinconidina.

En los experimentos con quinina temente una precipitación de tartrato amonico á las cuales se les había añadido solamente 3 c.c. de agua, pero al añadir 8 c.c. de agua, la precipitación no se verificó inmediatamente, y, evidentemente fué del todo incompleta. Los cristales que se formaron fueron muy pequeños y no cual tenues ag como es el caso con el citrato. Con 12 c.c. de agua se formaron cristales hasta transcurridos ve

tos, y en el entretanto se estuvo agitando fuertemente la solución. El precipitado fué mucho menos soluble en alcohol que el del citrato. También fué menos soluble en los ácidos; pero de ocho á diez gotas de una solución de ácido sulfúrico al 5 por ciento, generalmente bastaron para disolver el precipitado formado de 1 c.c. de la solución alcaloide, fuese la que fuese la concentración.

El tartrato de cinconidina demostró ser distintamente menos soluble en agua ó en alcohol que la sal de quinina. Las soluciones que contenían 12 c.c. de agua revelaron cristales al poco tiempo; aun con 15 c.c. de agua, los cristales aparecieron á los quince minutos.

Al paso que la quinina es apenas precipitada como tartrato de alguna solución más bien ácida, conteniendo 0.17 por ciento de alcaloide, la cinconidina revela alguna precipitación cuando la fuerza es solamente de 0.12 por ciento. (Continuará)

### Proceso Mejorado para Sacaratos Granulados

Para la administración de drogas cuyo gusto es detestable, los sacaratos granulados ofrecen el medio más expeditivo. Las preparaciones en esta forma hace tiempo son muy populares, especialmente en Francia, pero de aquí en adelante prometen serlo más con motivo de ciertas mejoras introducidas en el antiguo método de hacerlos, que Planés describe en un artículo que vió la luz pública en el *Journal de Pharmacie et de Chimie* del 1º de abril de este año. El antiguo procedimiento para hacer estos sacaratos comprendía dos partes: Primero, se procuraba el azúcar granulado de lo más homogéneo posible, y entonces se cargaban los gránulos con la substancia medicinal disuelta ó suspendida en un vehículo que después se eliminaba por la evaporación.

Esto daba por resultado que la substancia que había de incorporarse en los gránulos cubría solamente la superficie. Este proceso adolecía de tres faltas: la distribución desigual del medicamento, la pérdida de la droga por la adhesión á las paredes del vaso y la influencia del paso final por los tamices en la cantidad de droga que contiene la preparación acabada. De este modo la distribución desigual del medicamento es indudable, lo que puede demostrarse con cualquier muestra de sacaratos por este proceso analizando al efecto la cantidad de droga que contengan dos muestras diferentes tomadas de dos partes diferentes del mismo vaso.

Algunos escritores contravierten esta crítica, alegando que no importa que la distribución sea desigual, por administrarse la preparación en dosis de cucharadas, y si algunos gránulos no contenían más de lo necesario, y de esta manera la compensación estaba aproximadamente establecida. El autor, no obstante, no está satisfecho de un producto aproximadamente exacto. La trituration constante á que se acude para incorporar la solución medicinal á los gránulos de azúcar hace inevitable la adhesión de la substancia á las paredes del vaso en este proceso, tanto cuanto que el producto medicinal se adhiere meramente á la superficie de los gránulos sin penetrar en su interior. Finalmente, al hacer pasar el sacarato por los tamices sucesivamente, las partículas más grandes se quiebran cambiándose la composición de los gránulos mezclados, bien sea aumentando ó disminuyendo el promedio del contenido de cada gránulo que pasa por el cedazo y alterando de esta manera todo el

Con el nuevo proceso que el autor recomienda, se salvan todas estas inexactitudes. Consiste en preparar primeramente un sacarato amorfo, en el cual el principio activo está distribuido uniformemente, y luego en granular este sacarato. En otras palabras, el proceso es opuesto al método original. El sacarato amorfo se obtiene mezclando el medicamento disuelto en un vehículo apropiado con jarabe simple y no con azúcar, evaporando la mezcla siruposa primeramente al baño-maría, y después á una temperatura alta en el horno. Debe ponerse cuidado en mantener la homogeneidad de la masa agitándola bien en tanto permanece líquida. Cuando el sacarato está completamente seco, se le granula moliéndole y haciéndole pasar por varios tamices. La cantidad de jarabe que se consuma depende de la cantidad y densidad del azúcar que contiene. Fijando debidamente la temperatura para la desecación, asegurándose el vehículo que se use, etc., el proceso descrito puede seguirse en la preparación de sacaratos de cualquier producto medicinal apropiado.

### Para Exterminar Cucarachas y Hormigas en las Viviendas

Aunque se ha escrito tanto hasta la fecha de insecticidas y otros tóxicos para librarse de esta asociación que infecta nuestros hogares, vamos aquí á recordar algo de lo que se ha dicho y añadir algo nuevo para aumentar las probabilidades de hacer efectivo el exterminio.

#### HORMIGAS

Para sacudir las hormigas de una habitación y evitar que vuelvan, empléese polvo insecticida, mostaza molida, azufre, alcanfor, tabaco, clavos, aceite de cedro, petróleo, y, perseverancia. El bálsamo del Perú rociado en las patas de las mesas y aparadores, ahuyenta las hormigas de los muebles. Si se hace hervir 1 onza del bálsamo en un galón de agua, usando el líquido como una lavadura produce un efecto semejante.

Para envenenar las hormigas alimentadas con borax y azúcar ó torta de levadura y azúcar.

Para matar á granel los industriosos insectos, póngase alguna cal viva en la boca de sus nidos y viértase sobre ella agua hirviendo, ó bien póngase en sus guaridas una infusión de alcanfor ó tabaco. Engrásese un plato con manteca y colóquese en un sitio accesible á las hormigas y éstas no tardarán en cubrirlo; pasando el plato por encima de un fuego desaparecerán las hormigas y la grasa. Hágase un segundo ensayo y se obtendrá el mismo resultado. Satúrese un trozo de algodón en cloroformo y métase en la entrada de los nidos, poniendo lacre por encima para que los gases queden dentro. Esto debe hacerse cuando las hormigas están retiradas. Satúrese una esponja con agua endulzada, y cuando las hormigas la han atacado échese la esponja en agua hirviendo. Una rociadura de bencina con un pulverizador es muerte segura á la mayoría de los insectos. Como la bencina es peligrosa do quiera haya fuego, no se recomienda su empleo á menos que no sea en manos expertas. Quizás el carbón tetracoloruro prestaría igual servicio.

Salomón dijo «id á la hormiga»; pero lo que necesitamos ahora es algo que impida la hormiga de venir á nosotros. Se ha sugerido este medio. Tómese 2 partes de azufre por 1 parte de potasa, pónganse en un vaso de barro, y éste sobre un fuego hasta que las dos substancias formen una masa. Redúzcase entonces esta masa á polvo; hágase una infusión con un poco

de agua y rocíese con ella los sitios frecuentados por las hormigas.

Marcando con tiza á lo largo de los estantes por donde viajan las hormigas en las tiendas, variarán aquéllas de ruta.

Nueces ó taguas machacadas atraen las hormigas, y prendiéndoles fuego se achicharrarán aquellas. Migajas de pan empapadas en tintura de tuasia envenenarán las hormigas que las coman.

Otros medios para destruir, desterrar, sitiar los heterogéneos, himenópteros insectos consisten en marcar una línea cuarentenaria en los sitios frecuentados por aquellos con petrolatum carbolatado. Hecho esto para que no puedan escaparse, rocíense los nidos con una mixtura de 1 parte de alcanfor y 20 partes de cal viva. Viértese aceite de trementina en las grietas y agujeros donde se esconden los insectos, valiéndose de una alcuza. A. E. Magoffin refiriéndose al exterminio de estas plagas, dice: «Por años estuve asediado por los insectos; cansado al fin determiné la pasada estación deshacerme de ellos. No hice más que verter bisulfuro de carbono en los agujeros y nidos, y aquí fué Troya; ni vestigio quedó.»

#### CUCARACHAS

Puede prepararse una trampa para ellas como sigue: Hágase en el suelo un agujero para poner en él un plato hondo, vidriado, con los lados perpendiculares; ó bien constrúyase un trozo de falso piso y póngase en él el plato con alguna cerveza y azúcar moreno. Si todas las cucarachas no se ahogan en el plato, entonces tened en el sitio un erizo desayunado que dará buena cuenta de los insectos.

Se asegura que algunas de las preparaciones para exterminar estos insectos llevan como principales ingredientes borax, almidón y cacao, citándose las de Hooper y Peterman. La fórmula que sigue es un buen veneno:

|              |          |
|--------------|----------|
| Borax.....   | 37 onzas |
| Almidón..... | 9 »      |
| Cacao.....   | 4 »      |

Otro exterminador de cucarachas es como sigue:

|                                    |          |
|------------------------------------|----------|
| Timol.....                         | 2 partes |
| Acido salicílico.....              | 2 »      |
| Alcohol.....                       | 200 »    |
| Aceite de limón (para perfumar)... | 1 »      |

Según un libro antiguo de récipes, esta preparación extermina y no mancha. El olor no es desagradable y es fácil ventilar el cuarto.

Muchos insectos temen el póleo y el sassafrás por su fuerte olor; tan luego como se dejan en un cuarto, los insectos se marchan sin tardanza. Cuando no se puede obtener la hierba ó corteza fresca, se procura el aceite con el que se empapan trozos de algodón que se colocan en grietas é intersticios frecuentados por los insectos.

**IBOGAINA.** — Es un extracto alcaloide de *Tabernanthe iboga*, una de las *Apocynaceas*. Forma cristales incoloros, y según Pouchet y Chevalier (*Journal Pharm. et Chimie*, 1905, 329) produce un efecto tóxico poderoso en el sistema nervioso central. Provoca la excitación cerebral y finalmente la parálisis. Ejerce también un efecto cardíaco poderoso. Se ha empleado en pequeñas dosis, dando muy buenos resultados en la influencia y en la neurastenia.

#### Farmacéuticos de Empresa

¿Carecen los farmacéuticos de empresa? Un colega afirma que no aprovechan todas las oportunidades que se les presentan, y que podrían impulsar sus negocios con más determinación, obteniendo como consecuencia mejores resultados. Indisputablemente hay algo de verdad en esto, por más que el hecho no se limita al ramo de droguería al por menor. Muchos dueños de farmacias dejan escapar oportunidades que habrían de serles muy valiosas. Con frecuencia sobreviene el fracaso cuando con un poco más de empresa se hubiese trocado en éxito.

Y es precisamente el hecho de no haberse aprovechado de las oportunidades que lleva en pos la pesadumbre, cuando el fracaso ó la falta de fortuna nos dice que hemos perdido el tiempo. Llegar cerca de la meta, sin ver colmadas todas las aspiraciones, es más de sentir que arruinarse por un cúmulo ó combinación de circunstancias fortuitas ó imprevistas que fuera imposible evitar ó atajar. En un extremo el droguista al por menor no adelanta con los tiempos, y es en la cuestión de anuncios. Anunciar debería cuando emprende el negocio, cuando éste está establecido y más tarde al asomarse la concurrencia. Del resultado de anunciar tiene á su vista muchos ejemplos. En su estantería, en los armarios tiene sinnúmero de artículos que apenas si poseen mérito alguno, pero que el público demanda y compra por haber sido anunciados con frecuencia por los fabricantes.

Cuanto á la manera de anunciar, los recursos del farmacéutico son inagotables. No necesita precisamente hacer gasto alguno. Muchas farmacias están establecidas en las esquinas teniendo dos ventanas en dos calles diferentes, lo que constituye una ventaja inmensa para el anuncio. La exposición de artículos á la vista del público es fácil bajo estas circunstancias. Cuanto á la manera de presentarlos para que hagan juego y atraigan á los transeuntes, le servirá de guía al farmacéutico la idea que tenga del negocio, y su gusto artístico, factores importantes para atraer al público. Pero sobre todo, es la empresa del hombre que gen e ralmente labra su éxito.

#### Modo de Cuidar y Limpiar Efectos de Goma

Un colaborador del *Pharmaceutische Zeitung* (1903, pág. 124) recomienda la siguiente para cuidar los efectos de goma. Para impedir, dice, que los artículos de goma ó caucho endurezcan y se vuelvan quebradizos, deberían sumergirse de medio á tres minutos en parafina derretida á 100 grados, y suspenderse en un horno calentado á 100 grados. Esto permite que el excedente de parafina gotee, lo que toma sobre una hora. El caucho absorbe de 2 á 8 por ciento de parafina y por este medio adquiere notable resistencia á la influencia del aire, de la luz y del calor. Otros escritores han recomendado la inmersión de los efectos de caucho en una solución de ácido fénico en la que se ha disuelto 5 por ciento de glicerina. También se recomienda que se laven con amoníaco los efectos para que pongan quebradizos.

Es buena regla para seguirse que caucho no se expongan á la luz ó calor intenso, ni se pongan en contacto con grasas ..... ó vegetales. Casi todas las clases de caucho son das por las grasas, y en contacto con ellas se ablandan y desintegra. El caucho que ha perdido su elasticidad bajo la influencia de temperaturas altas -

brar parte de sus propiedades originales al lavarse con una solución de amoníaco, ó sumergirse en parafina, por más que nunca recupera sus condiciones normales.

Para limpiar tubería de goma, podremos usar tacos de alambre de acero, enjaguándose los tubos en agua caliente hasta que ésta pase bien clara. Si el tubo se hubiese puesto duro puede ablandarse sumergiéndolo en una solución de amoníaco por espacio de media hora.

Otro procedimiento es hacer hervir el tubo en agua por una hora, con ó sin glicerina, y permitirlo enfriar lentamente. La glicerina puede también emplearse con ventaja de la siguiente manera: el tubo de goma se restriega fuertemente con cepillo y se lava con agua caliente. Entonces se limpia con un taco de algodón mojado en glicerina y asegurado al extremo de un alambre. Este tratamiento se repite durante 24 horas. Para tubos de caucho que no se usan se empleará este tratamiento dos veces al año. Los tubos se pondrán en receptáculos apropiados.

### Eter y Cloroformo como Anestésicos

El *New York Medical Journal*, de diciembre 31 de 1904, dice: Que aunque la superioridad del éter al cloroformo como anestésico respecto á su mayor seguridad en la administración ha sido demostrada repetidas veces, puede, con todo, sacarse ventaja de cualquier cosa que contribuya á ensanchar nuestro conocimiento de la multitud de detalles de la manipulación relativa de las dos drogas. Los ensayos clínicos deben por supuesto admitirse como definitivos, pero sin negar el peso que llevan en sí las experiencias del laboratorio, por la luz que arrojan y que debe de tomarse en consideración para la comprensión completa del asunto que esperamos alcanzar. Un escritor francés eminente, M. Jaquet, de la Facultad de Basle, ha emitido recientemente un luminoso informe (*Semaine Medicale*) referente á las últimas experiencias de dilucidación llevadas á cabo en la materia. Trata de la acción de las dos drogas en el tejido nervioso, tanto el central como de la periferia, de su efecto relativo en la respiración y la circulación (cuyo fin es de arrojar dudas sobre las deducciones de la Comisión Hyderabad de que la paralización del corazón como efecto de una intoxicación por uno ó el otro de estos dos anestésicos es el resultado del paro precedente de la respiración), del grado de concentración del vapor anestésico por afectar la inmunidad de su acción, de los efectos de dos agentes en la presión de la sangre y de los resultados de la anestesia prolongada y repetida.

Tanto se extiende M. Jaquet sobre estos particulares, que no podemos siquiera dar un sumario, y nos limitamos, por consiguiente, á reproducir sus conclusiones. El éter y el cloroformo, dice, son idénticos en cuanto á la manera de producir la anestesia, pero ejercen distinta acción secundaria, que juega un importante papel en determinar su seguridad relativa. El cloroformo deprime el corazón, como también la respiración, baja la presión de la sangre. El éter, por el contrario, no origina estos efectos á menos de que no se dé á la dosis tóxica. El tejido nervioso expuesto al acto de vapor de cloroformo relativamente diluido queda inerte, mientras que el éter produce solamente actividad funcional transitoria. El gobierno de la manipulación es mucho mayor con el éter que con el cloroformo. La anestesia prolongada del éter se eleva mejor que la del cloroformo. Este causa inflamación enquistosa de todos los órganos, y

una tal degeneración que afecte un órgano debilitado ya, puede resultar en la muerte; el éter no produce lesiones histológicas apreciables. Los trastornos pulmonares que á veces sobrevienen á la anestesia con el éter deben atribuirse al que administra la droga más bien que á ésta. El favor creciente con que se recibe el éter como anestésico quirúrgico está justificado; es menos peligroso que el cloroformo.

### Linimentos Medicinales

**LINIMENTO COMUN.**— Aceite de olivas, 2 partes; amoníaco líquido, 1. Mézclase. — *H. Samar.*

**LINIMENTO CONTRA LA ALOPECIA.**— (a) Extracto de jaborandi fluido, 25 partes; tintura de cantáridas, 25; jabón, 10; alcanfor, 50; esencia de romero, 7; alcohol, 1; agua, c. s. para 100. H. s. a. — *Bartholow.*

(b) Alcohol de Fioraventi, 5 partes; tintura de cantáridas, 5; tintura de iodo, 5; cloroformo, 15; ácido acético cristalizado, 5 á 10.

Todas las mañanas se jabona la cabeza y se fricciona con esta mezcla. — *Besnier.*

(c) Éter acético, 21 gramos; cantaridina, 0.065. Disuélvase y añádase: esencia de espliego, 15 gotas; alcohol rectificado, 240 gramos; aceite de ricino, 28.

Muy recomendado para aplicar á las partes calvas, cuidando de jabonar bien la cabeza después de aplicado varias veces seguidas, para evitar una fuerte irritación.

**LINIMENTO CONTRA LA AMAUROSIS.**— Alcohol de romero, 30 gramos; bálsamo de Fioraventi, 15; esencia de espliego, 1. Tres fricciones en las sienes con una cucharada pequeña de este linimento en los casos de amaurosis producida por el abuso del tabaco. Vejigatorio repetidos en la región frontal y temporal; laxantes. — *Sichel.*

**LINIMENTO CONTRA LA CALVICIE.**— (a) Agua de Colonia, 120 gramos; tintura de cantáridas, 8; tintura de pimienta, 7.50; aceite de ricino, 7.50.

En la alopecia consecutiva á la debilidad debida á las fiebres graves, y en la sífilítica, se fricciona el cráneo por mañana y noche con una esponja mojada en este linimento. — *Bulkley.*

(b) Aceite de almendras, 24 gramos; aceite de ricino, 24; tintura de cantáridas, 5 á 8; acetato de cobre, 0.25; esencia de espliego, c. s.

Aplíquese todas las noches á la raíz de los cabellos una pequeña cantidad, para evitar su caída y facilitar su crecimiento. Suspéndase momentáneamente su empleo si se pone dolorido el cráneo.

(c) Ácido salicílico, 5 gramos; alcohol rectificado, 400; glicerina, 100; espíritu de jabón, 100; bálsamo del Perú, 30; agua de Colonia, 70. H. s. a.

En fricciones.

**LINIMENTO CONTRA EL COLERA.**— Tintura de cantáridas, 40 gramos; bálsamo de Fioraventi, 150; alcohol alcanforado, 60; aceite de trementina, 30; tintura de benjuí, 4.

Empápese una franela en esta mezcla, que se aplica sobre todo el raquis: pásese sobre el tejido de lana durante un minuto ó dos una plancha calentada regularmente. Se aplica de igual modo al epigastrio para calmar los vómitos de los cólicos, y á los miembros inferiores para que cesen los calambres. — *Bourgogne.*

**LINIMENTO CONTRA EL COLICO NEFRITICO.**— Cloroformo, 3 gramos; extracto de beleño, 3; láudano de Sydenham, 1; aceite de manzanilla, 30.

Embrocaciones á todo el vientre. — *Reliquet.*

**LINIMENTO CONTRA LA CORIZA.** — Cloral, 0.50 gramos; aceite de ricino, 15.

Se aplica en la mucosa nasal, después de la limpieza de la superficie.

**LINIMENTO CONTRA LA DEFORMACION GOTOSA.** — Esencia de trementina, 1 parte; cloroformo, 1 parte; bálsamo tranquilo, 3. Mézclense.

### El Emplaste Poroso y la Belleza

Una mujer neyorkina ha entablado una demanda ante los tribunales por daños y perjuicios en la suma de \$500 contra los fabricantes de un emplasto poroso, que ha sido la causa, según declaratoria jurada de un médico, que la dama en cuestión no pueda ostentar con orgullo los encantos con que la había dotado la naturaleza, viéndose obligada á huir los vestidos escotados ó telas transparentes con motivo de las descoloraciones y cicatrices que ha labrado en su hermoso cutis el devastador emplasto.

En la demanda consta que el emplasto había costado once centavos, y fué comprado en un bazar, un día de gangas, por recomendación de una amiga, de la demandante. Otro motivo que se alega para la compra, es que en un anuncio atractivo acerca de la composición del emplasto, se hacía mención del oloroso incienso de la Biblia como uno de los ingredientes más importantes, lo que pareció una garantía más á la dama de que para sus fines aquel parche era cosa excelente.

Cuando menos demostró que era eficaz, pues ha sido necesario que la desgraciada dama cubriera su obra con telas espesas, y sufriera en consecuencia la mayor aflicción que pueda caber á una mujer hermosa por tener que renunciar á los escotes que tan importante papel juegan en la sociedad. Quinientos pesos no parece suma adecuada para tanto pesar, y si el Tribunal halla realmente que los emplastos porosos en cuestión puedan causar tanta desdicha, poca será la penalidad para los fabricantes.

### Desinfección Fácil con Formaldehido

El valor importante del formaldehido como agente desinfectante, es á estas horas demasiado conocido para detenernos en él; pero la dificultad de liberar el gas sin la ayuda de un aparato más ó menos complejo y costoso, ha sido en muchos casos un obstáculo para su empleo, y por esta causa la Junta de Sanidad del Estado de Maine ha recomendado recientemente un método sencillo y seguro con el cual no hace falta ningún aparato especial, y da buenos resultados, según ha podido comprobarse por una serie de experiencias fructuosas tanto en Maine como en los Estados de New Hampshire y Vermont. En una vasija de buen tamaño se ponen 200 grm. de permanganato de potasio por cada 500 c.c. de formaldehido. Para una habitación que haya de desinfectarse bastará un balde que contenga unos 9 litros, siendo preferible que la habitación esté bien caliente. El formaldehido, á razón de 1000 c.c. para cada 1,000 pies cúbicos de espacio, se vierte sobre el permanganato, y se retira del cuarto inmediatamente el hombre fumigador, manteniéndose aquél cerrado por el tiempo de cuatro horas, en que se supone que la desinfección es completa. Las ventajas de este método simple son evidentes: no hay aparatos que transportar, no se corre riesgo de fuego de lámparas encendidas, y la liberación de todo el gas utilizable se

verifica en pocos momentos. Estas ventajas compensan con creces por la mayor cantidad de formaldehido que usualmente se consume con este método.

## NOTAS FARMACEUTICAS

### HIRSUTUS PARA WALNUTTA

Para hacer crecer el cabello y darle el color rico de la juventud. Es eficaz sin dañar en lo más mínimo. Aplíquese al cabello por todas partes con un cepillo de cerdas fuertes, y frótese bien en el cuero cabelludo:

|                                      |           |
|--------------------------------------|-----------|
| Parafina líquida.....                | 2 oz. fl. |
| Alumbre en polvo.....                | ½ dr.     |
| Cáscaras de nueces verdes (secas)... | ½ oz.     |
| Aceite de nuez moscada.....          | 5 gotas   |

Las cáscaras y el alumbre se digerirán en la parafina en un baño de arena durante una hora; fíltrese, y cuando haya enfriado, añádese el aceite. Primeramente se humedecerán las cáscaras de nuez en alcohol, permitiendo que el exceso se evapore, y entonces se digiere en la parafina.

### PETROMUL

Emulsión de petróleo. El único sustituto del aceite de hígado de bacalao. Es suave, nutritiva y grata al paladar.

|                                   |            |
|-----------------------------------|------------|
| Petróleo ámbar líquido.....       | 4 oz. fl.  |
| Acacia pulverizada.....           | 4 oz.      |
| Aceite esencial de almendras..... | 3 gotas    |
| Aceite de clavos.....             | 3 "        |
| Glicerina.....                    | 1 oz. fl.  |
| Hipofosfito cálcico.....          | 45 grn.    |
| Hipofosfito sódico.....           | 85 "       |
| Hipofosfito potásico.....         |            |
| Acido hipofosfórico (50 % ).....  | ½ dr.      |
| Sacarina.....                     | 5 grn.     |
| Agua, para hacer.....             | 16 oz. fl. |

Pónganse el petróleo y los aceites en un mortero seco, añádese la acacia y tritúrese hasta lograr homogeneidad. Luego añádense y tritúrense bien cuatro onzas fluidas de agua. Disuélvanse en tres onzas fluidas de agua caliente las sales y el ácido y mézclese con lo anterior. Añádese la glicerina, disuélvase la glicerina en un poco de agua y añádese y mézclese agua para hacer una pinta.

Esta preparación está indicada para catarro bronquial, toses asmáticas, trancazo y tisis crónica. Es estimulante, antiespasmódica, diaforética, antiséptica, demulcente y expectorante. Instrucciones: Una cucharada antes ó después de las comidas, y al acostarse, con un diluyente. Los niños en proporción según la edad.

### QUINATOL

Es realmente una preparación ideal para el cabello. Estimula el crecimiento, y el nuevo es sedoso, fino y suave.

|  |          |
|--|----------|
| Quinina, alcaloide.....  | 2-4 %    |
| ( Los porcentajes más bajos rinden las preparaciones más elegantes ) |          |
| Aceite de parafina.....  | 1 oz.    |
| Aceite de bergamota.....   | 10 gotas |
| Raíz de ancusa.....  | ½ dr.    |

Se digiere el alcaloide y la raíz con el aceite de parafina por espacio de media hora en un baño de

arena hasta resultar una solución clara, roja; cuélese entonces en una tela, añádese el aceite volátil y embótéllese inmediatamente. Resulta un producto cual jalea roja de un color agradable.

Instrucciones: Póngase una cantidad en las palmas de las manos y frótese bien el cabello y el cuero. Se aplicará por la noche y la mañana.

#### INSECTICIDA

Para exterminar toda clase de cucarachas, chinches, polilla, pulgas, hormigas, piojos, é insectos en general. Rocíense los sitios infectados ó se frota con el cepillo.

|                       |           |
|-----------------------|-----------|
| Petróleo.....         | 2 gal.    |
| Oleato mercúrico..... | 2 oz.     |
| Nitrobencina.....     | 2 oz. fl. |
| Raíz de ancusa.....   | 1 oz.     |

Mézclense el oleato y la nitrobencina, añádese algún petróleo, mézclese, macérese la raíz por dos días en la mixtura y decántese.

#### LINIMENTUM PARACAPSICOL

Es el linimento más eficaz que se conoce. Puede emplearse donde no haya superficies expuestas. Se aplica localmente frotando bien hasta que se efectúa la absorción. Puede aplicarse á vendajes. Resuelve toda clase de procesos inflamatorios. Es, en efecto, un linimento oleoso penetrante.

|                         |           |
|-------------------------|-----------|
| Aceite de parafina..... | 4 oz. fl. |
| Cápsico en polvo.....   | 4 dr.     |

Digiérese en un baño de arena y fíltrese. Puede añadirsele directamente lo siguiente: aceite de pírola ó menta piperita, fenol, timol, alcanfor ó eucaliptol, etc.

#### ACEITE DE CARRON MEJORADO

Es más superior al antiguo y más apropiado. Es una preparación apetecible para quemaduras, curtido del sol, pecas, escaldaduras, desolladuras ó afecciones del pulmón. Es de mayor aguante.

|                                 |           |
|---------------------------------|-----------|
| Aceite de linaza.....           | 2 oz. fl. |
| Agua de cal.....                | 2 "       |
| Mézclese y añádese              |           |
| Parafina líquida.....           | 1 "       |
| Sacúdense bien antes de usarlo. |           |

Lo siguiente da también una buena preparación:

|                               |           |
|-------------------------------|-----------|
| Aceite de linaza.....         | 1 oz. fl. |
| Agua de cal.....              | 1 "       |
| Mézclese y añádese            |           |
| Petróleo líquido (ambar)..... | 1 "       |

Con lo de arriba pueden incorporarse muchas substancias medicinales en estado licuado, con lo cual acrecentarán las virtudes curativas de la preparación.

#### ACEITE DE HIGADO DE BACALAO AROMATICO

a fórmula europea:

|                                  |             |
|----------------------------------|-------------|
| urina.....                       | 0.01 gramos |
| arina.....                       | 0.50 "      |

#### ZARZAPARRILLA DE AYER

Cada onza fluida de la zarzaparrilla de Ayer representa:

|                               |           |
|-------------------------------|-----------|
| Raíz de zarzaparrilla.....    | 10 granos |
| Raíz de bardana amarilla..... | 8 "       |
| Raíz de regaliz.....          | 8 "       |
| Corteza de cambrónera.....    | 4 "       |
| Raíz de rumexacetosa.....     | 3 "       |
| Hojas de sen.....             | 2 "       |
| Raíz de caulífolo.....        | 2 "       |
| Raíz de estilingia.....       | 4 "       |
| Raíz de fitolaca.....         | 1 "       |
| Corteza de cincona roja.....  | 2 "       |
| Ioduro de potasio.....        | 4 "       |

Solvente — Alcohol, 10½ mínimos por cada dracma fluida; glicerina, jarabe, agua.

Esta es la fórmula que ha suministrado á la prensa el Dr. Charles H. Stowell, de la Compañía del Dr. Ayer, á los periódicos diarios, se supone que para anunciar el artículo. Pero al mismo tiempo para demostrar que no se teme á la publicidad en relación con los remedios Ayer. Refiriéndose á la fórmula dice el *Lowell Sun* de febrero 22:

« Cuando preguntamos si no podíamos llevar esta receta á una botica para preparar con ella un pomo de Zarzaparrilla del Dr. Ayer, se nos dijo que era prácticamente imposible. Parece que se necesitan 3 meses para preparar esta zarzaparrilla para el mercado, á parte de los costosos aparatos y operarios diestros necesarios para su preparación. »

#### NOTAS PRACTICAS

LAS PROPIEDADES DEL TANTALO. — Según dice la (*Nature*, 71, 1852), el tántalo metálico se emplea con ventaja como filamento para lámparas eléctricas; pero falta por resolver si puede obtenerse el metal en cantidad bastante para aprovecharse para el fin indicado y otros. El doctor F. Mollwo Perkin ha dado á conocer varios estudios sobre las propiedades notables del metal, siendo la principal su ductilidad extremada combinada con su extremada dureza. El tántalo es, en efecto, tan duro, que se halló imposible agujerear una lámina de 1 milímetro de espesor con un taladro de diamante. El taladro volteando 5,000 veces por minuto, trabajó día y noche por tres días, logrando hacer una depresión de 0.25 mm. solamente. Para preparar el metal en lugar del diamante, para perforaciones, se han empleado métodos eléctricos y químicos.

MODO DE DESCUBRIR EL ACEITE DE SEMILLA DE ALGODON. — Sábese que después de cierto tratamiento el aceite de semilla de algodón no responde á la reacción Halphen (Bevan) con azufre y carbón disulfido, y que tales aceites se emplean para hacer margarina. Hase averiguado y demostrado que calentando durante seis horas á 200° C. disminuye considerablemente la intensidad de esta reacción, aunque sin eliminarla por completo, mientras que basta calentarla por media hora á 250° C. para destruirla por completo. Este último proceso, no obstante, da por resultado la liberación de mucho ácido libre, y el aceite no puede emplearse para tales fines técnicos. Con todo, si se introduce en el aceite dióxido de azufre hasta que despidiera fuerte olor de gas, y una hora después el exceso

se disipa por medio de una corriente de aire, fórmase un aceite que no puede distinguirse del legítimo de semilla de algodón ni en color, olor, sabor u otras propiedades naturales de aquél. El punto de fusión del acetato de colessterina (ó fitosterina) sirvió para descubrir la mezcla del tal aceite de semilla de algodón con manteca de cerdo. En opinión del autor estas experiencias deberían repetirse más á menudo. — K. FISCHER y ST. PEYRAN.

**MATRINA.** — En China se emplean las raíces de la *Sophora angustifolia* como remedio para la fiebre tifoidea. De las raíces se hace desprender un compuesto cristalino al que se le da el nombre de matrina, y tiene la fórmula  $C_{15}H_{24}N_2O$ . Tiene una acción tóxica en sumo grado; bastando para matar perros 0.3 de gramo por kilo.

**RAYOS ULTRA-VIOLETA.** — El Dr. Franz Fischer, ha publicado un interesante informe (*Berichte*, 37, 946) de la acción de la luz ultra-violeta sobre el cristal. Ocho clases diferentes de éste se expusieron á la radiación de una lámpara de mercurio-cuarzo, habiéndose descubierto que los que contenían manganoso tomaron un color violeta pronunciado á las doce horas. Sir William Crooks ha averiguado recientemente que el cristal expuesto á la luz solar en Uyuni (Bolivia) á unos 4,000 metros sobre el nivel del mar, tomó gradualmente el color violeta. Estos cristales contenían igualmente manganoso, de lo que infirió Sir William que la mezcla de silicato férrico y manganoso sufrió un cambio bajo la influencia de la luz, convirtiéndose en silicato ferroso y mangánico, siendo el último de un color violeta.

Según el Dr. Fischer, citado arriba, esta explicación es plausible, porque la coloración que él ha observado, por efecto de la radiación de la lámpara de mercurio cuarzo es rica en luz ultra-violeta química. La coloración violeta del cristal es visible cuando se emplean los tubos Röntgen, originándose este hecho de la acción de la luz ultra-violeta en el interior sobre el cristal que contiene manganoso. La coloración violeta que Sir William Ramsay ha observado en el cristal de rosa cuando se somete á la acción del radium, también puede relacionarse con el manganoso del vidrio, al mismo tiempo que con una honda corta de radiación.

### Farmacología y Terapéutica

**ACEITE DE EUCALIPTO EN EL TRATAMIENTO DE TIFOIDEA.** — El Dr. Cuthbert Hall, ha expresado la opinión que la droga que probablemente haya de ser más eficaz en el tratamiento de la fiebre tifoidea, debe poseer la propiedad de reducir la temperatura, de obrar como antiséptico y producir un efecto tonizador en el corazón y en el sistema en general. Estas indicaciones las llena en alto grado el aceite de eucalipto. El eucalipto cuando es puro posee muy poca potencia bactericida. El piperitone y los terpenos tienen una acción más potente, mientras que si el aceite ha de producir efectos bactericidas pronunciados, en este caso debe tener suficiencia de ozono derivado de la oxidación de los terpenos. Si no se tiene la seguridad de que la marca de aceite que se usa contiene mucho ozono, esta falta puede compensarse prescribiendo un poco de peróxido de hidrógeno al mismo tiempo que el aceite. El aceite empleado por el doctor Hall era el llamado *Eucalyptus Smithii*, y el cual consiste princi-

palmente en pineno, y éste estaba ozonizado por la exposición al aire y á la luz por espacio de un mes antes de usarlo. El efecto antiséptico pudo apreciarse en la apariencia alterada del paciente y disminución de la fetidez. Para adultos empleó dosis de 10 minims, suspendido en mucílago y administrado cada cuatro horas. Los enfermos pueden tolerar dosis mayores; pero debe ponerse cuidado en que no se presente alguna nefritis aguda por los constituyentes terpenos del aceite. La reducción de la temperatura es sorprendente, debido principalmente á la suave transpiración estimulada del paciente, y la cual puede que continúe por una hora ó dos. Este efecto no se menciona en los libros de texto. En dosis grandes el aceite de eucalipto obra como depresor profundo del sistema nervioso central. En los casos tratados por el Dr. Hall, notó la ausencia de delirio, que atribuye principalmente á la reducción de la temperatura; pero debida también probablemente en parte á un efecto sedante en el sistema nervioso central.

### NOTAS COMERCIALES

— Klip Klip es un manicuro perfecto que tiene fácil salida tan luego como se expone en el mostrador de la botica, y deja por consiguiente provecho á la casa. Pídase descripción del aparato y cotizaciones á la Klip Klip Company, 576 Clinton Avenue, South, Rochester (N. Y.).

— Tratándose de un artículo que por tantos años ha estado en el mercado, como es el caso con los emplastos porosos de la Allcock Manufacturing Company, de Nueva York, no es necesario hablar de sus propiedades como agente curativo, sino del beneficio que deja su venta. Nuestros lectores del ramo que no tuviesen el artículo harán bien en procurárselo. Los fabricantes lo anuncian en todas partes del mundo. Véase el anuncio que aparece en otra sección de este periódico.

**AKARALGIA.** — Es el nombre expresivo que la Wm. S. Merrell Chemical Company, de Cincinnati (Ohio), ha dado á un nuevo compuesto, del cual es principal ingrediente el salicilato de sosa del aceite de pírola. La reputación que se ha creado la Merrell Company con la fabricación de productos de pírola y la aceptación universal que han tenido por la Facultad Médica, son evidencia de que una preparación de indisputable excelencia se hace popular entre médicos y farmacéuticos.

— Dirigiéndose á Solom Palmer, Nueva York, se enviará una lista de precios de sus perfumes, polvos para el tocador, saquitos perfumados, jabones y demás artículos del ramo de perfumería. El fabricante es de los más antiguos y más conocidos, habiendo establecido su brillante negocio tan atrás como el año 1847. Los efectos que emanan de su establecimiento son de calidad superfin. Los farmacéuticos que lean el anuncio en la sección correspondiente, hallarán ventajoso ponerse en relaciones con esta casa tan antigua y acreditada.

**EUSOMA.** — Se recomienda como antiséptico y alterante, no venenosa, para administración interna y externa. La preparación representa 15 granos de *Eusoma tifoidea*. Aplícase el remedio como apósito antiséptico en el tratamiento de heridas de todas clases, de quemaduras, carbuncos, orzuelos, eczema, psoriasis, úlceras, erisipelas de insectos venenosos, etc. En efecto, puede utilizarse en todos los estados sépticos, y cuando se aplicó á una herida sin dar lugar á supuración. Los fabricantes, la Eusoma Company, de Cincinnati, envían material a quien lo solicite.

Las suscripciones pueden empezar en cualquier tiempo.

«THE AMERICAN DRUGGIST AND PHARMACEUTICAL RECORD» sale el segundo y cuarto lunes de cada mes. Todo cambio de anuncios debe ser recibido diez días antes de la fecha de salida.

Remesas deben hacerse con libranzas sobre Nueva York, giros postales internacionales ó por expreso ó correo en carta certificada. Toda correspondencia debe dirigirse á la AMERICAN DRUGGIST PUBLISHING CO., 62-68 West Broadway, New York, U. S. A.

## FARMACOPEA DE LOS ESTADOS UNIDOS

POR último ha quedado terminada la nueva edición de la *Farmacopea de los Estados Unidos*, revisada por la octava vez por una comisión especial, habiéndose distribuido por adelantado algunos ejemplares á la prensa técnica, si bien la obra no estará encuadrada hasta dentro de algunas semanas, y no recibirá la sanción oficial pública hasta el 1º de septiembre próximo.

Aunque en la materia en general se ha seguido la disposición de la *Farmacopea* publicada en 1890, esto no obstante, el presente libro encierra cambios importantes: se ha ensanchado la limitación de las impurezas inocuas de los productos químicos, se han introducido aquellos productos sintéticos de composición química definida, también el suero antidiftérico; establecido dosis medias, y por último se han adoptado casi todas las recomendaciones de la Conferencia Internacional para la «unificación de las fórmulas de los remedios potentes.» Los cambios emanados de la Conferencia no son tan numerosos como importantes, por aumentarse la fuerza de la tintura de estrofantó desde 10 á 10 por ciento, al paso que se ha reducido la fuerza de la tintura de acónito de 35 por ciento á 10 por ciento, y también de la tintura de veratrum de 10 por ciento á 10 por ciento.

El motivo de haber varios Estados y dependencias del Gobierno federal adoptado como legales los libros de la *Farmacopea*, la Comisión revisora se ha comprometido en un serio compromiso, puesto que si bien no era permisible rebajar materialmente los

tipos de pureza, es necesario que esos tipos no sean tan altos que hagan imposible comprar aquellos productos químicos que se conformen con ellos. Es un hecho que en muchas preparaciones químicas medicinales, la presencia de pequeñas cantidades de sustancias extrañas — con tal de que sean inocuas, es prácticamente negligible desde el punto de vista terapéutico, habiéndose formalmente reconocido este hecho con la introducción de una «rúbrica de pureza,» en la que están definidas las limitaciones dentro de las cuales es permisible la presencia de sustancias extrañas inocuas.

Los delegados de Ohio en la Asamblea Farmacéutica, presentaron un memorial pidiendo que se tomase alguna resolución para relevar á los farmacéuticos de responsabilidad en relación con los tipos de la farmacopea en la venta de sustancias que llevan nombres farmacéuticos, pero que no se emplean en medicina. Propusieron en su vista que la Comisión revisora descartase el uso de todos los nombres populares, tales como el «Amoníaco,» etc. Pero esta sugestión no se adoptó, salvándose la dificultad con la inserción en el prefacio del libro de la siguiente declaración:

*Los tipos de pureza y fuerza prescritos en el texto de la Farmacopea se aplicarán á sustancias que se emplean solamente para fines medicinales, ó cuando se compran, venden ó dispensan abiertamente como tales.*

La Comisión revisora está compuesta de hombres circunspectos que han tenido larga experiencia en cuestiones legales, y es probable que en este asunto se asesoraran con funcionarios encargados de administrar las leyes, y, por consiguiente, la declaración será según ellos lo suficientemente eficaz para impedir la persecución á que han estado expuestos los farmacéuticos y droguistas por aquel hecho; pero nosotros lo dudamos, y mucho dependerá de la actitud que asuma el representante de la ley.

La introducción de dos élixires, de un emplastro de caolín, de un compuesto de acetanilida — polvo, de una emulsión de aceite de hígado de bacalao con hipofosfitos, y varias preparaciones semejantes, revelan la tendencia á seguir la dirección popular de las medicinas y que seguramente provocará comentarios en pro y en contra. Habrá de condenarse por hacer causa común con el rebajamiento de la medicina, mientras que por otra parte quizás se alabe por reflejar el estado actual de cosas en el campo de los productos químicos.

Como libro, la nueva *Farmacopea* es altamente satisfactoria. El tipo es claro y legible, el papel de

buen cuerpo y el arreglo tipográfico artístico en su misma sencillez.

Tomada en conjunto la obra redunda en crédito de la farmacia americana é igualmente de los encargados de la revisión que han prestado libremente sus servicios y su saber á la causa de la farmacia. Volveremos á ocuparnos del libro en nuestros números venideros.

## ALCALOIDES DE QUINA

(Conclusión)

### OXALATO AMONICO

La quinina forma un contraste marcado con los demás alcaloides de cincona por el modo como procede con los oxalatos. Las soluciones ácidas de quinidina, cinconidina y cinconina no son precipitadas por el oxalato amónico. Procediendo de igual manera que con las experiencias anteriores averigüé que cuando se añaden 8 c.c. de agua á la solución de oxalato, la separación del oxalato de quinina, al añadir la solución de quinina, fué lenta, mas el depósito fué abundante. Aun después de añadirse 20 de agua, empezaron á formarse cristales después de poco tiempo, habiéndose sacudido la solución para dar lugar á la cristalización. Pareció haberse llegado prácticamente al límite cuando la solución contenía 0.07 por ciento de quinina. En varios ensayos el residuo de quinina en 10 c.c. del licor madre, del cual se había sacado el oxalato de quinina, importaba de 2 á 3 miligramos. En experiencias semejantes con soluciones de las cuales se había precipitado la quinina con sales de la Rochela, el residuo de alcaloide fué 6 ó 7 miligramos. De soluciones puramente neutras, no hay duda de que el alcaloide se elimina más completamente.

### SALICILATO SODICO

Los salicilatos de los varios alcaloides de quina son escasamente solubles en agua, pero se disuelven fácilmente en alcohol flojo. Cuando se mezcla la solución de uno de los alcaloides con otra de salicilato sódico se baja un precipitado que no es distintamente cristalino y toma una apariencia coagulada, agregándose las partículas en masas pegajosas.

En otros experimentos similares á los descritos presentóse un abundante precipitado en el caso de quinina y quinidina cuando se hubo añadido 6 c.c. de agua á la solución de 1 c.c. de salicilato sódico (10 por ciento), volviéndose clara la mezcla al añadir 1 c.c. de alcohol. Una cantidad casi igual de precipitado se depositó con soluciones de cinconina y sulfato de cinconidina después de haber añadido á la solución de salicilato 4 c.c. de agua, necesitándose una cantidad mayor de alcohol para redissolver el precipitado. El precipitado tiene efecto en soluciones mucho más diluidas si se emplea exceso de reactivo.

### BORATO SODICO

No existe incompatibilidad pronunciada entre las sales de los alcaloides de cincona y el borax, excepto aquella que se origina de la alcalinidad del borax. Cuando se hubo mezclado las soluciones ácidas de los alcaloides con un volumen igual de solución de borax de cinco por ciento, no se efectuó ningún cambio, excepto con la sal de quinina que rindió copia de cris-

tales. Estos pueden no haber sido más que sulfato de quinina neutro, y no se formaron en soluciones á las cuales se había añadido un volumen igual de agua.

### BENZOLATO SODICO

Cuando se añade 1 c.c. de cualquiera de las soluciones alcaloides, empleadas en los experimentos de que se ha dado cuenta, á 2 c.c. de una solución acuosa de benzoato sódico de al cinco por ciento inmediatamente se deposita un fuerte precipitado. Excepto con la quinina el aditamento de un poco de agua disuelve el precipitado completamente. Para el precipitado de quinina sobre 4 c.c. de agua es suficiente; pero una parte del precipitado que ha formado masas pegajosas, no se disuelve. Para la quinidina se necesitan 3 c.c. de agua, mientras que para la cinconidina ó cinconina dos son suficientes; pero tratándose de la cinconidina la solución empieza á cristalizar casi inmediatamente llenándose al poco tiempo de cristales aciculares. En este estado la adición de 6 c.c. de agua no redissuelve los cristales. Las soluciones que contienen quinidina y cinconidina permanecen claras permanentemente; la solución de quinina, después de algún tiempo rinde cristales diminutos verrugosos.

Si se diluye 1 c.c. de la solución ácida de quinina en 4 c.c. de agua, añadiendo 1 c.c. de una solución de benzoato al 10 por ciento, la mezcla se vuelve lechosa, pero pronto se separa un precipitado que se adhiere á los lados del vaso dejando el líquido claro. Pasado algún tiempo fórmanse grupos de cristales verrugosos que se pegan á los lados del vaso. Con una dilución de 1.8 resulta muy poco precipitado.

El límite de dilución para una solución de quinidina es aproximadamente el mismo que para la quinina.

La cinconina no se precipita en soluciones diluidas mucho más que 1.2.

La solución de cinconidina, en una dilución de 1.8, rinde, después de sacudirse, un precipitado cristalino copioso. A 1.12 se forman los cristales á la media hora, pero no en abundancia. Los precipitados todos se disuelven fácilmente con alcohol. No es fácil apreciar cuan solubles son en ácidos, porque estos causan la separación del ácido benzoico.

### FOSFATO SODICO

Al mezclar 1 c.c. de solución ácida de quinina con 1 c.c. de una solución de ortofosfato disódico al cinco por ciento, la mezcla primeramente gelatinó y cristalizó. Con la adición de 10 c.c. de agua los cristales no se disolvieron inmediatamente. Cuando la solución de quinina fué diluida con agua 1.5, antes de añadir el fosfato sódico, se presentó una cristalización abundante después de revolver la mezcla. Cuando la dilución era 1.7, aparecieron cristales después de algún tiempo. El precipitado cristalino se disuelve al añadir 2 ó 3 c.c. de alcohol.

Una solución de sulfato de quinidina de la fuerza empleada en estos experimentos, no revela reacción alguna con una solución de fosfato sódico.

Añadiendo 1 c.c. de una solución de cinconidina á 1 c.c. de una solución de fosfato sódico diluido con 2 c.c. de agua no tardan en desprenderse cristales abundantes. La adición de 1 c.c. de alcohol no disuelve los cristales; 2 c.c. rinden una solución clara. En una dilución de 1.5, dentro de media hora se presentan indicaciones de cristalización. La manera como proce-

den las soluciones de cinchonina con este reactivo es característica y sorprendente. Mezclando 1 c.c. del reactivo con 1 c.c. de la solución de cinchonina, resulta primeramente una solución clara, de la que se desprende lentamente una cantidad de rosetas cristalinas diminutas, notables por la desinclinación á diluirse en alcohol.

Cuando la solución de fosfato se vuelve neutra, en cuanto sea posible con ácido acético, nótese que su influencia en causar la cristalización en estas soluciones ácidas disminuye considerablemente, como podía esperarse.

#### IODURO POTASICO

No se presenta precipitado en las soluciones ácidas de alcaloides de cincona con una solución neutra de ioduro potásico. En soluciones puramente neutras de sulfato de quinidina conteniendo 0.25 por ciento del alcaloide, la precipitación del ioduro cristalino se verifica paulatina é incompletamente. Los demás alcaloides, como es bien conocido, no sueltan precipitado alguno.

#### CROMATO POTASICO

Este reactivo no precipita las soluciones ácidas de quinina. En soluciones absolutamente neutras conteniendo 0.2 por ciento del alcaloide se forman lentamente copiosos cristales. Para la quinina la reacción es manifiesta.

### FORMULAS CANADENSES

Convendrá tener presente que aunque los pesos y medidas expresados pertenecen á los sistemas métricos é imperiales, esto no obstante, las cantidades que se dan, en muchos casos no son equivalentes una de la otra. La Comisión se propuso suministrar fórmulas que rindan productos líquidos que midan veinte onzas fluidas (ó un múltiple conveniente de ese guarismo) ó mil centímetros cúbicos. Por supuesto, no pueden emplearse los dos sistemas para hacer una preparación.

#### 1. ALCOHOL DESDORIZADO (*Alcohol Deodoratum*).

|                               |       |         |      |      |
|-------------------------------|-------|---------|------|------|
| Alcohol (95 por ciento).....  | 160   | oz. fl. | 5000 | c.c. |
| Cal viva en polvo.....        | 300   | granos  | 20   | gm.  |
| Alumbre en polvo.....         | 150   | "       | 10   | gm.  |
| Espíritu de éter nitroso..... | 1 1/4 | dr. fl. | 4.5  | c.c. |

Mézclense bien por medio de la trituration la cal y el alumbre, añálese el alcohol y sacúdase bien, luego se agrega el espíritu de éter nitroso, y se deja reposar siete días al cabo de cuyo tiempo se filtra á través de carbón animal pulverizado.

#### 2. AGUA DE ACEITE DE ROSAS (*Aqua Olei Rosæ*).

|  |     |
|--|-----|
| Aceite de rosas.....                     | 1   |
| Fosfato cálcico ó talco pulverizado..... | 2   |
| Agua destilada.....                      | 500 |

Tritúrese el aceite de rosas con el fosfato cálcico (ó el talco purificado), añádese gradualmente el agua destilada, continúese triturando y fíltrese.

NOTA. — Las siguientes aguas medicinales pueden hacerse de la misma manera que el agua de aceite de rosas y emplearse en lugar de las aguas correspondientes del texto de la F. B.:

*Aqua olei anethi, aqua olei anisi, aqua olei carui, aqua olei cinnamomi, aqua olei fœniculi, aqua olei men-*

*thæ viridis, aqua olei menthæ piperitæ, aqua olei pimn-*

#### 3. CÁPSULAS DE APIOL Y ERGOTINA (*Capsule Apiol et Ergotini*).

Cada cápsula deberá contener de apiol cinco (5) mínimas (0.30 c.c.) y ergotina dos (2) granos (0.13 gm.).

#### 4. CERATO GALENO — COLD CREAM (*Ceratum Galeni*).

|                             |    |         |       |      |
|-----------------------------|----|---------|-------|------|
| Parafina líquida.....       | 16 | oz. fl. | 1600  | c.c. |
| Cera de abejas blancas..... | 4  | oz.     | 40.0  | gm.  |
| Espermaceti.....            | 1  | oz.     | 100   | gm.  |
| Borax.....                  | 30 | granos  | 0.625 | gm.  |
| Aceite de rosas.....        | 10 | mínimas | 0.2   | c.c. |
| Agua destilada.....         | 8  | oz. fl. | 80.0  | c.c. |

Disuélvase el borax en el agua destilada, derrítase la cera blanca y el espermaceti con la parafina líquida á un calor suave; viértase la mezcla en un mortero calentado, y añádese mientras esté caliente la solución de borax calentada previamente, procediendo con la trituration, y finalmente el aceite de rosas, y continúese la trituration hasta enfriar.

Cuando el tiempo está caliente la cantidad de cera blanca puede aumentarse á 5 1/2 onzas (53 gm.) y el espermaceti á 2 onzas (20 gm.).

#### 5. CLORAL ALCANFORADO (*Chloral Camphoratum*).

|               |   |     |    |     |
|---------------|---|-----|----|-----|
| Cloral.....   | 2 | oz. | 50 | gm. |
| Alcanfor..... | 2 | oz. | 50 | gm. |

Mézclense bien agitándolos en una botella, ó por medio de la trituration en un mortero calentado hasta quedar licuado y combinado.

#### 6. CLOROFORMO ALCANFORADO (*Chloroformum Camphoratum*).

|                 |   |         |     |      |
|-----------------|---|---------|-----|------|
| Alcanfor.....   | 2 | oz.     | 200 | gm.  |
| Cloroformo..... | 1 | oz. fl. | 100 | c.c. |

Disuélvase el alcanfor en el cloroformo por medio de la agitación.

#### 7. COLODION SALICILADO COMPUESTO — COLODION DE MAIZ (*Collodium Salicylatum Compositum*).

|  |          |              |         |
|--|----------|--------------|---------|
| Acido salicilico.....                            | 1 oz. .. | 45 granos .. | 11 gm.  |
| Extracto de cáñamo indico ..                     |          | 90 granos .. | 2 gm.   |
| Alcohol.....                                     | 1 oz. .. |              | 10 gm.  |
| Colodión flexible, suficiente cantidad para..... |          |              | 100 gm. |

Disuélvase el extracto de cáñamo índico en alcohol y el ácido salicílico en cosa de 5 onzas (50 gm.) de colodión flexible, que se contendrá en una botella alquitranada. Luego se añade la primera solución á la última, y finalmente el colodión flexible para hacer 10 onzas (100 gm.).

#### 8. ELIXIR DE BROMURO DE AMONIO (*Elixir Ammonii Bromidi*).

|                             |     |         |      |      |
|-----------------------------|-----|---------|------|------|
| Bromuro amónico.....        | 800 | granos  | 91.5 | gm.  |
| Acido cítrico.....          | 35  | granos  | 4    | gm.  |
| Elixir aromático, s. c..... | 20  | oz. fl. | 1000 | c.c. |

Disuélvase el bromuro amónico y el ácido cítrico en cosa de 10 onzas fluidas (ó 500 c.c.) de elixir aromático, agitando al efecto. Luego se añade bastante elixir aromático para hacer 20 onzas fluidas (1000 c.c.) y fíltrese si fuese necesario.

Cada dracma fluida contiene 5 granos (0.32 c.c.) de bromuro de amonio.

(Continuará)

### Determinación de Alcanfor en Linimento de Alcanfor

Por JOHN LOTHIAN, Ph. C.

El linimento de alcanfor de la Farmacopea británica contiene 21.45 por ciento de alcanfor tomando el promedio de la gravedad específica del aceite que da aquel libro. Se ha descrito (*Anuario de Farmacia*, 1902, pág. 497) como una solución saturada de alcanfor en aceite de olivas. Esto no es del todo exacto porque el Oleum Camphoratum de la Farm. Aust. contiene 25 por ciento, y una solución que preparé disolviendo exceso de alcanfor en aceite de oliva y permitiéndole permanecer por algún tiempo en contacto con el alcanfor que había cristalizado á una temperatura tan próxima como posible á los 15.5 grados C., contenía como se demuestra más abajo 26.39 por ciento de alcanfor.

El siguiente método para determinar el alcanfor publicóse en el *Analyst*, 1898. Se calientan de 3 á 5 grm. de aceite alcanforado por espacio de dos horas á una temperatura de 120 grados C., calculándose entonces la pérdida. Como se averiguó que bajo circunstancias semejantes el aceite de oliva ganaba en peso, tiene que hacerse una corrección por esta causa.

Los siguientes experimentos prueban no obstante, que prácticamente todo el alcanfor puede sacarse á una temperatura del baño-maría en cosa de una hora, sin que envuelva la necesidad de aplicar correcciones. Preparóse un aceite alcanforado conteniendo 22.37 por ciento, poniendo al efecto el alcanfor y el aceite de olivas en un frasco de pesar provisto de un tapón esmerilizado y disolviéndolo colocando la botella en agua caliente. No hubo pérdida de alcanfor en la preparación. En el primer experimento se calentaron 5.2144 grm. de este aceite alcanforado en una pequeña tina de evaporar colocada en un baño-maría. Después de dos horas despedía aun un olor tenue de alcanfor pero distinto. Se quitó, pesóse revelando una pérdida de 1.1276 grm. correspondiente á 22.12 por ciento, y después de tres horas y media la pérdida fué de 1.1578 grm., ó 22.20 por ciento. Esto demuestra que las últimas huellas de alcanfor, cual muchas otras sustancias volátiles en solución, son difíciles de eliminar.

En la experiencia que siguió empleóse un plato ancho de fondo plano que se ajustaba, precisamente en el anillo del baño-maría, empleándose 3.4534 gramos del mismo aceite alcanforado. Transcurrida una hora era apenas perceptible y al pesarlo, hallóse que la pérdida era de 0.7654, ó 22.16 por ciento. Obtuvieronse resultados semejantes en subsecuentes experiencias con aceites de diferentes fuerzas lo cual considero suficientemente exacto. Aunque á una temperatura más alta que la del baño-maría, el alcanfor queda completamente eliminado, se introduciría mayor error al aplicar la corrección que á emplear el método sugerido arriba. Sería conveniente en una farmacopea del futuro establecer algún límite tal como el siguiente: «Calentando 5 grm. en el baño-maría por una hora en un plato de fondo plano, no debería perder menos de 1 grm.»

Aceite alcanforado expuesto al aire á la temperatura ordinaria pierde alcanfor bastante rápidamente. Un aceite que contenía 21.88 por ciento de alcanfor expuesto en una tina de evaporar por espacio de cuatro días contenía 19.53 por ciento de alcanfor. El alcanfor en solución es dextrotatorio, y la fuerza del aceite alcanforado, puede determinarse fácilmente por el polarímetro.

Las soluciones incluidas en la tabla siguiente se hicieron como se ha descrito arriba, habiéndose tomado las gravedades específicas á 15.5 grados C. por medio del pyknómetro. Se observará que entre 10 y 26 por ciento la gravedad específica está en proporción directa á la concentración, siendo la proporción próximamente 0.00044 por unidad por ciento de subida en el alcanfor. Al mismo tiempo la gravedad específica varía según sea el aceite de oliva que se use, por consiguiente no ha de ponerse mucha confianza en este factor por sí solo:

|                                   | Promedio de alcanfor | Gravedad específica |
|-----------------------------------|----------------------|---------------------|
| Muestra de aceite de olivas..     | 0.0                  | 0.9145              |
| 1 .....                           | 10.03                | 0.9145              |
| 2 .....                           | 17.20                | 0.9247              |
| 3 .....                           | 19.47                | 0.9256              |
| 4 .....                           | 21.04                | 0.9262              |
| Solución saturada 26.39 (hallada) |                      | 0.9287              |

### Origen Médico del Imperio del Japón

Una de las tradiciones acerca del origen del imperio japonés, de que nos da cuenta el famoso viajero jesuita, el padre Charlevoix, se refiere á la emigración á aquel país de una colonia de chinos bajo circunstancias muy peculiares.

Sinosikwo ascendió al trono de China en el año 246 A. C., y desde luego dedicóse á tiranizar á sus vasallos y ejercer con ellos toda clase de crueldades, al mismo tiempo quería sostenerse en el trono todo el tiempo posible; también ansiaba prolongar su vida por medio de algún agente específico, para cuyo efecto despachó mensajeros de confianza á todos los países con quienes mantenía relaciones. Aprovechándose de estas circunstancias, uno de los ayudantes médicos agregados á palacio, quien de un momento á otro temía ser decapitado, dijo al Emperador que había sabido que existía el tal específico en el zumo de una planta que crecía solamente en las islas — que hoy forman el imperio japonés. También se aseguraba que la planta en cuestión era de una estructura tan delicada y sensible, que si no se arrancaba con manos puras y con precauciones especiales, perdería todas sus misteriosas virtudes antes de ser traída al imperio chino. Para evitar que tal desgracia sucediera se sugirió que 300 jóvenes é igual número de mujeres jóvenes también, todos sin mancilla y castos, fuesen elegidos para ir á las islas que guardaban en su seno tan preciosas plantas y recoger de éstas una cantidad suficiente para servir los deseos del Emperador. Púsose en ejecución el plan; el ayudante de médico se ofreció para capitanear la expedición y sus servicios fueron aceptados.

Embarcáronse los exploradores sin pérdida de tiempo para las islas japonesas, pero ninguno de ellos fué jamás visto otra vez dentro de los confines del imperio chino. Aquellas regiones del Japón que no había pisado planta humana, empezaron á poblarse rápidamente con una raza más vigorosa de cuerpo, y de mente lozana que los habitantes en general del celeste imperio. El jefe de la expedición se había proclamado rey y no tardó en hacerse levantar un magnífico palacio bautizándole con el nombre de Kanjoku — «gran casa, paraíso celestial.»

También nos dice el padre jesuita que los japoneses mencionan este hecho histórico en sus anales, y señalan el mismo lugar en donde desembarcó el ayudante de médico fundador del imperio; de igual modo enseñan las ruinas de un templo que fué erigido en su honor. — *American Medicine.*

### Confesiones de un Director

La mayoría de los farmacéuticos conocen algún médico que se opone á que se les altere la receta al ponerla, y es que no pocos médicos no conocen farmacia, pues con frecuencia es el caso que un médico es notable en la medicina; pero cuando se trata del lado práctico de hacer supositorios ó un paquetito bien hecho, es hombre al agua. No es que en farmacia no se hallen ignorantes, y cuando se trata de preparar un manuscrito se hallan embarazados. No es que no sepan lo que quieren decir, lo mismo que el médico sabe lo que necesita el paciente, pero en ambos casos falta la práctica.

Pero para que no se crea que nos ocupamos en generalidades, sino que sí sabemos perfectamente lo que tratamos, pondremos mejor de manifiesto lo que decimos: A veces acontece que un hombre escribe un artículo de primera clase, dividiendo los párrafos para hacerlos resaltar á la vista, poniendo sus puntos y comas, sus comillas donde corresponde, pero cuando se trata de ponerle un encabezamiento falla por completo, y no porque no sabe lo que quiere, sino porque no toma en consideración la apariencia artística de la página. ¿Qué efecto harían, por ejemplo, cuatro líneas de tipo fuerte para encabezamiento de este artículo?

También sucede que un hombre revisando una prueba hace una alteración cerca del principio de un párrafo lo que envuelve la composición entera del párrafo, porque el cambio viene á ocupar media línea ó una línea y media, y estas fracciones sólo se permiten al final de un párrafo. El que está familiarizado con la parte mecánica de la revisión de pruebas haría la modificación del tamaño de una línea ó dos, ó si hubiese dos palabras de más suprimirla una supérflua, ó cambiarla una larga por otra corta. No es esto un tratado para preparar original y corregir pruebas, sino que por vía de comparación queremos demostrar que no faltan autores que puedan aprender mucho aun de la misma rutina de la oficina, y lo mismo sucede con los médicos faltos de experiencia.

Hemos oído á farmacéuticos quejarse amargamente que al hablar ó discurrir con reporters estos han alterado las comunicaciones antes de publicarlas; pero esas quejas nada serían comparadas con las que habrían de emitir si el director dispusiese que se insertase verbatim lo que han dicho sin hacer funcionar el lápiz azul.

Precisa decirlo, algunas de nuestras lumbreras en la farmacia americana, repletos de ideas como un huevo lo está de carne, que manejan con facilidad la péñola, que son muy buscados como colaboradores de periódicos farmacéuticos, cuyos nombres aparecen como autores en libros de texto que se ofrecen como norma, no tienen más capacidad para preparar original para el impresor que algunos dependientes de farmacia que con timidez envían su primer comunicado al periódico.

El farmacéutico no pregoná que médico ha prescrito un octavo de grano de quinina y dos granos de morfina. Los directores de periódicos también se guardan para sí algunas cositas por las obligaciones que traen con sus colaboradores, al igual que procede el farmacéutico para con el médico cuyas recetas pone, sí como el primero tiene que protegerse á sí mismo sus parroquianos, de igual manera el director del periódico se protege á sí mismo y á sus lectores. El directoriere recetas, aunque el redactor esté algo

inseguro en su farmacia, y el director desea colaboraciones. Si tienen ideas los autores, él hace lo demás. — *Druggist Circular*.

### Linimentos Medicinales

**LINIMENTO CONTRA LA DIFTERIA.** — Iodo, 1 gramo; ioduro potásico, 2; agua, 10.

Para barnizar las superficies enfermas. — *Roger*.

**LINIMENTO CONTRA EL ECZEMA.** — Aceite de almendras, 10 gramos; glicerina, 10; óxido de zinc, 5. Mézclense. — *Rodet*.

**LINIMENTO CONTRA EL ECZEMA DEL ANO Y DEL ESCROTO.** — Aceite de linaza, 25 gramos; agua de cal, 25; óxido de zinc, 25; iodoformo, 4 á 8. — *Unna*.

**LINIMENTO CONTRA LA ERISPELA.** — Esencia de trementina, 30 gramos; aceite de olivas, 30. Mézclense. — *Lücke*.

**LINIMENTO CONTRA LA ERISPELA DE LA CARA.** — Ácido fénico, 4 gramos; tintura de iodo, 4; alcohol, 4; esencia de trementina, 8; glicerina, 12. — *H. s. a.*

Para embadurnar cada dos horas la placa erisipelada, así como una pequeña zona de piel sana circundante, y después cubrir todo con seda protectora. — *Hays*.

**LINIMENTO CONTRA LAS ESCARAS.** — (a) Aceite de ricino, 20 gramos; bálsamo peruviano negro, 10.

Para aplicar en planchuelas de hilo fino, dos ó tres veces al día, sobre las escaras que producen ciertas afecciones graves, y con especialidad la fiebre tifoidea. — *Graves*.

(b) Aceite de ricino, 2 partes; bálsamo del Perú, 1. Extiéndase sobre planchuelas de hilas, que se aplican sobre las escaras que se forman á los enfermos graves y particularmente á los atacados de fiebres tifoideas. Dos ó tres veces al día se ponen encima de las planchuelas cataplasmas de harina de linaza y además se lavan las ulceraciones mañana y noche con agua clorurada. — *Graves*.

**LINIMENTO CONTRA LA FARINGITIS SECA.** — Ácido fénico, 1 gramo; tintura de iodo, 1.20; tintura de áloes, 2; glicerina, 120; láudano de Sydenham, 40 gotas.

Para aplicaciones locales. — *Danet*.

**LINIMENTO CONTRA EL FAVUS.** — Ácido fénico, 1 gramo; bálsamo peruviano, 1; petróleo, 10; glicerina, 10.

Las aplicaciones de este tópico se hacen diariamente.

El *Dr. Khrenitchek* recomienda lavar la piel del cráneo con una disolución alcohólica de jabón blando de potasa, afeitarla y aplicar el tópico.

**LINIMENTO CONTRA LA FISTULA DEL ANO.** — Glicerina, 15 gramos; ácido tánico, 1. Mójese un clavo de hilas, más ó menos voluminoso, que se introduce, por la noche y mañana, en el recto.

Manténgase el vientre libre. — *Van Holsbeck*.

**LINIMENTO CONTRA LA GOTA.** — Cloroformo, 10 gramos; esencia de trementina, 10; bálsamo tranquilo, 30. Mézclense. — *Bouloumié*.

**LINIMENTO CONTRA LAS GRIETAS.** — Manteca de cacao, 5 gramos; aceite de almendras, 5; óxido de zinc, 0.10; borato sódico, 0.10; esencia de bergamota, 8 gotas.

En las grietas de los pechos, labios y manos.

### Aceite de Serpiente de Cascabel

No deja de ser curioso el siguiente telegrama de Brownsville, Texas, publicado por un colega:

« Esta mañana, al salir el tren de la línea de St. Louis, Brownsville y México, Mr. W. E. Ritz, encargado del expreso, actuaba de custodio de tres jaulas de serpientes de cascabel, consignadas á la fábrica de San Antonio, en donde se extrae el aceite de estos reptiles venenosos. Según los documentos de embarque, el peso respectivo de las tres jaulas era de 120, 35 y 50 libras.

» La serpiente de cascabel vale para el que la coge viva, á razón de 25 centavos la libra, por consiguiente no es insignificante el tráfico que se hace en esta región en reptiles, particularmente entre mexicanos.

» Dícese que los que habitan la región baja del valle del Río Grande, están muy irritados con motivo de la destrucción *vandálica*, llevada á cabo por los americanos en las comarcas donde abunda esa clase de serpientes, algunas de las cuales pesan de 15 á 25 libras, y sólo sirven para atraer los buitres devoradores después de muertas en el campo.

» Un reptil de ese peso rendiría 20 onzas de aceite, cuyo valor en el mercado es de \$1.50 á 2.50 la onza, y se emplea en el tratamiento de la tuberculosis, asma y otras enfermedades. La piel de la serpiente de cascabel, bien curtida, sirve para hacer hermosos bolsillos, zapatillas, bandas para sombreros, etc., valiendo de \$3.50 á \$3.75 según el tamaño y la cutimbre. Dícese que los desperdicios del reptil hacen una sopa exquisita, y hasta ensalada, muy apreciadas de los epicúreos.

» En vista de lo expuesto, no se necesitan hacer muchos cálculos para demostrar que una hacienda para la cría de serpientes de cascabel, es mucho más valiosa que una ganadería, puesto que la cría y multiplicación de esos reptiles no necesita cuidado ni envuelve gasto alguno. Los mexicanos tan aficionados á esa ocupación, dicen que las serpientes de cascabel son inofensivas una vez que uno no se acerca demasiado á ellas, y nunca atacan al hombre, á menos de que se las golpee, ó se ande tan cerca de ellas que pueda correr riesgo de menoscabo al cascabel, del que el animal parece estar muy celoso. »

### Un Perfume que Hiede

El perfumista tomó de la mesa un frasquito de cobre y dijo:

« En esta clase de frascos nos llega el aceite esencial de rosas. Según el estado del mercado esta esencia nos cuesta de \$10 á \$25 la onza. Este frasco está vacío ahora, pero todavía circula por él algún olor. »

Al oír estas palabras el visitante se sonrió con deleite; no había nunca olido la pura esencia de rosas; sacó el tapón esmerilado del frasquito, cerró los ojos en señal de éxtasis y aplicó la nariz al frasco, para apartarla al instante con movimiento de relámpago, y exclamó:

¡ Pudridero de huesos ! ¡ Fábrica de cola !

« El perfumista no pudo menos de sonreírse con la salida: « Todos los aceites esenciales, dijo, huelen cual éste. Y, con todo, no puede hacerse ningún perfume sin ellos. »

Alargando el brazo cogió de un estante un bote de cristal de facetas lleno de un aceite espeso, amarillento, parecido al petróleo y en parte refinado.

« En este bote, dijo, hay cuarenta onzas de aceite

esencial de rosas puro, cuyo valor excede de \$500. Ya sabéis á qué huele la esencia sola. Observad como hago ahora un rico perfume añadiéndole algunas cosas. »

Puso algunas gotas de la esencia en un pomito y lo llenó casi de espíritu de vino, añadiéndole una gota de extracto de almizcle, otra de lirio, una de néroli, una de rosa, de violeta, de naranja, de vainilla, y finalmente de aceite de clavos y bergamota.

« Oled eso, dijo, alargando el pomito ¿ no es exquisito ? »

La visita repitió: « ¡ Exquisito ! ¡ Eximio ! »

« Pues bien, añadió el perfumista, sin la base repugnante y costosa del aceite esencial de rosas, no olería la cosa mejor que un plato de sopa. »

### Aumento en el Costo del Caucho

Durante estos tres últimos años pasados, ha subido rápidamente el costo del caucho en bruto, pudiendo asegurarse que el precio elevado tiene casi el carácter de permanente. Este encarecimiento de un artículo de tan inmenso consumo, se ha sentido mucho en todas las industrias dedicadas á la producción de artículos de caucho.

Tomando como base el precio de caucho del Pará, que ha regido durante el período de referencia, no puede menos de sorprender el aumento:

#### Caucho del Pará, promedio de precio

|      |                      |      |
|------|----------------------|------|
| 1902 | . . . . .            | 0.7  |
| 1903 | . . . . .            | 0.75 |
| 1904 | . . . . .            | 0.80 |
| 1905 | . . (tres meses) . . | 1.20 |

La razón de esta rápida subida de precios, débese á la escasez de los abastos y al aumento del consumo. Los bosques primitivos que daban el caucho, están agotados por haberse empleado en la recolección métodos derrochadores y devastadores.

La explotación de nuevos veneros que rinden caucho de clase inferior, no tardará mucho tiempo antes que llegue á su fin por falta del producto.

La demanda de caucho aumenta constantemente. Todos los nuevos inventos y aparatos; como son, automóviles, neumáticos para carruajes, aparatos eléctricos, cables de telegrafía, etc., crean esa demanda siempre creciente que representa cantidades enormes de la tan rebuscada materia, particularmente de la mejor calidad.

En el curso de los últimos tres años transcurridos, los precios de los artículos fabricados de caucho de la mejor clase, han tendido constantemente al alza, y es de esperar que en tiempo no lejano aumente también considerablemente el precio de los artículos que se venden al por menor. Algunos fabricantes parece que se proponen salir al encuentro de las condiciones del mercado, empleando en la manufactura caucho de calidad inferior; pero en esto ha de haber un límite.

Los precios prevalecientes afectan el ramo de farmacia, é indirectamente á los cirujanos y á cuyas profesiones respectivas consumen artículos de caucho. Se sienten los efectos de esta situación en el mercado en la fabricación de emplastos, que requieren caucho del Pará de la mejor clase. Los fabricantes de emplastos baratos no pueden en consecuencia venderlos á precios altos por la goma en bruto, y echan mano de otro material.

Una yarda de emplasto adhesivo, c

como corresponde, contiene más caucho puro que un par de chanclos, por consiguiente, el emplasto legítimo de caucho vale bien su precio.

En vista de esta situación, aquellos que compran efectos de caucho y emplastos, deberían escudriñar la calidad y ponerse en guardia contra los precios bajos. — *Red Cross Notes.*

### Benzoinatol ó Petrobenzoinatus

Emoliente calmante. Excelente preparación para administrar varias drogas á la nariz, garganta, oído, ojo y otras partes del cuerpo, bien por medio de rociadura ó esponja. Preparación neutra, pura, blanca, suave, estable, con un olor aromático.

|                                |            |
|--------------------------------|------------|
| Parafina líquida.....          | 16 oz. fl. |
| Benjuí, pulverizado basto..... | 1 oz.      |
| Bálsamo tolú.....              | 4 dr.      |

Digírase en un baño de arena, á una temperatura alta por espacio de media hora, enfríese y fíltrese.

También puede hacerse con ventaja suspendiendo las gomas en saco de tela en parafina muy caliente.

Las siguientes sustancias pueden añadirse en porcentajes diferentes, como también muchas otras que no se mencionan. A continuación se dan los varios procesos por cuyo medio pueden producirse:

1. — Con aceite de pino (pumiliones) — por agitación al mezclarse.
  2. — Con alquitrán de pino — por agitación y decantación.
  3. — Con alcanfor — calentando suavemente.
  4. — Con flores de árnica — por digestión y filtración.
  5. — Con mentol — por mezcla y agitación.
  6. — Con ictiol — por agitación, calor y decantación.
  7. — Con hojas de beleño — por digestión y filtración mientras está caliente.
  8. — Con ácido fénico (cristales secos) — á un calor suave.
  9. — Con cápsico (polvos) — por la digestión y filtración.
  10. — Con timol (polvos gruesos) — calentando.
- Con cantáridas (polvos) — por la digestión y filtración.
12. — Con oleato de cinc — calentando y decantando. Con hojas secas convendrá humedecerlas primeramente con alcohol, permitiendo que el exceso del mismo se evapore espontáneamente y luego se acude al proceso de la digestión. Esto es aplicable á todos aquellos casos en que se digieren drogas secas orgánicas con aceites ó grasas. Un poco de amoníaco es una ayuda para la extracción.

### Nuevo Anestésico

Tiene todas las virtudes de la cocaína sin ninguno malos efectos.

- erlín, julio 20. — Dos científicos alemanes acaban anunciar en la *Deutsche Medicinische Wochenschrift*, el descubrimiento de un anestésico que posee todas las virtudes de la cocaína y sin sus malos efectos subsiguientes.
- La nueva sustancia se le ha dado el nombre de „pine.“ Amortigua el dolor con las aplicaciones locales, pero no contiene veneno.

## NOTAS FARMACEUTICAS

### BRILLIANTOL

Es una loción perfecta para el bigote, las cejas y el cabello á los que da un lustre hermoso. Esta preparación es suave, de color blanco é inofensiva.

|                                   |           |
|-----------------------------------|-----------|
| Parafina líquida.....             | 6 oz. fl. |
| Glicerina.....                    | 2 oz. fl. |
| Aceite esencial de almendras..... | 8 gotas   |
| Aceite de rosas.....              | 1 „       |

Sacúdense bien antes de usarse.

### PETROLATUM MERCURIOSO

|                            |           |
|----------------------------|-----------|
| Mercurio.....              | 1 oz. fl. |
| Petrolatum amarillo.....   | 12 „      |
| Peróxido de hidrógeno..... | 1 „       |

Tritúrese perfectamente el mercurio y el peróxido, añádese luego petrolatum, pequeñas cantidades de una vez, triturando todo el tiempo hasta que desaparezcan los glóbulos de mercurio.

Esto facilita la administración del mercurio por medio de la untura, y es preferible á la base de manteca. Es un núcleo excelente para todas las demás clases de ungüentos.

### LOCION DE TOCADOR

Emoliente ideal para el tocador. Es la única loción cicatrizante, refrescante y suave muy apropiada para curar rozamientos del cutis.

|                                   |           |
|-----------------------------------|-----------|
| Mentol.....                       | 5 grn.    |
| Parafina líquida.....             | 1 oz. fl. |
| Lanolina.....                     | 4 dr.     |
| Aceite esencial de almendras..... | 3 gotas   |
| Heliotropina.....                 | 3 grn.    |

Calientese al baño-maría la parafina y lanolina, mezclándolas; añádese el mentol, el aceite y la heliotropina; revuélvese hasta enfriar.

### CREMA DE PETROLEO

Cold cream. Es una preparación exquisita de uso general, para dispensarse, ó para el tocador; es suave y permanente. Podría llamarse un nutricio perfecto para el cutis.

|                                   |           |
|-----------------------------------|-----------|
| Cera blanca.....                  | 8 oz.     |
| Espermaceti.....                  | 1 lb.     |
| Lanum anhidroso.....              | 2 oz.     |
| Petrolatum blanco.....            | 40 oz.    |
| Agua destilada.....               | 1 pinta   |
| Borax.....                        | 4 dr.     |
| Tintura de vanillina.....         | 2 dr. fl. |
| Aceite de rosas.....              | 1 gota    |
| Aceite esencial de almendras..... | 3 „       |
| Aceite de limón.....              | 10 „      |

Derrítanse los primeros cuatro y cuélense. Calientese agua hasta hervir, disuélvase en ella el borax y añádese á lo primero. Agítase hasta que la mezcla se asiente; luego añádese la tintura y los aceites.

Para crema de la planta del sortilegio (witch-hazel) añádese el extracto de la misma en lugar del agua. Para crema de pepino, añádese zumo del mismo.

Para crema arnicada, añádese una pinta de una solución de flores de árnica, 4 onzas de la tintura por 12 onzas de agua.

### CAPSICOLATUM

Es un contrairritante perfecto para aplicaciones locales. Es superior á los emplastos de mostaza ó cataplasmas. No levanta vejigas. Es muy bueno para dolores en el pecho efecto de resfriados, y afecciones de la garganta, dolores en la zona del corazón y el estómago

y es excelente para dolores en las piernas, dolores de cabeza, de muelas, del oído y neuralgia.

Petróleo amarillo..... 4 oz. fl.

Cápsico en polvo..... 1 oz.

Se digerirá en un baño de arena por algunas horas, luego se deja reposar, y mientras está caliente se filtra ó cuela. Viértase en botes ó tubos mientras está aun caliente.

## NOTAS COMERCIALES

— En los Estados Unidos se emplea para fines farmacéuticos la creta tipo, conocida en el comercio por el nombre de Creta Inglesa Preparada de Thomas, cuyos fabricantes son la Thomas Manufacturing Company, de Baltimore (Maryland), E. U. A. Este excelente producto se despacha en trozos de forma cónica, bien de color blanco, bien sonrosado, y se empaqueta en cajas de madera de 8 libras, con cierre en las esquinas. La compañía suministrará muestras y cotizaciones al pedírselo.

**MOBILIARIO DE METAL.**—Los productos que salen del establecimiento de la Chicago Wire Chair Co. son de hechura elegante y sólidos, y consisten en muebles de metal de todas clases que por muchos años ha estado fabricando esta casa que dispone de una habilitación perfecta para muebles de alambre; sus precios dejan atónitos á todos los droguistas del mundo. Para satisfacerse de la bondad y excelencia de esta clase de muebles basta con preguntarlo á quien los usa. La fábrica está en el No. 67 N. Jefferson St., Chicago.

— Los molinos para drogas que salen del establecimiento de A. W. Straub Co., del No. 3737 Filbert Street, Filadelfia, comprenden varios tamaños y potencia, desde la máquina de mano á la que funciona al vapor. Se han estado ensayando por mucho tiempo esta clase de molinos, ya sea para la molienda de sustancias duras, ya sea para las gomosas ó húmedas. Son apropiados para las labores del farmacéutico y otras distintas. Por su utilidad nos permitimos llamar la atención de nuestros lectores al anuncio de esta compañía, que se hallará en el lugar correspondiente.

— Las Pastillas Bronquiales de Brown, son un remedio específico que tiene enorme demanda y salida prácticamente en todas partes del mundo. Es una de las medicinas más antiguas de los Estados Unidos, habiéndose anunciado extensamente y con perseverancia durante más de una generación. Las virtudes que poseen estas pastillas para aliviar la tos y los resfriados, como también para curar varias afecciones de la garganta, juntamente con el largo tiempo que han sido conocidas del público, son causa de que se vendan bien y dejen provecho, motivo suficiente para que se interesen en el artículo los comerciantes progresivos.

— En vista de la notable salida que el Ergoapiol (Smith) y la Glico-heroina (Smith) tienen en los Estados Unidos, es de esperar que se extienda su venta á todos los países de Sud-América. La Martin H. Smith Company, del No. 105 Chambers Street, Nueva York, fabricantes de estos dos productos, celebraría corresponder con personas del ramo para darlos á conocer. Los prescriben los médicos de todas partes del mundo, habiendo alcanzado la venta notables proporciones, debido seguramente á su indisputable valor terapéutico y al perseverante anunciar de los fabricantes. Nuestros lectores pueden ver su anuncio en la sección correspondiente de este periódico, y dirigirse á los fabricantes para más informes.

— Nos permitimos llamar la atención de nuestros lectores de los países españoles al anuncio de la Sal Hepática de la Bristol-Myers Company, del 277 Greene Avenue, Brooklyn, E. U. A., que aparece en el presente número. Esta excelente sal laxante se ha

demostrado que posee notable eficacia en el tratamiento de afecciones reumáticas y gotosas, al igual que en los trastornos del tubo digestivo. La Bristol-Myers Company tendría sumo gusto en entablar correspondencia con algunos de nuestros amigos de la América del Sur para establecer la venta de esta sal en aquellos países, al igual que en los Estados Unidos. Podemos asegurar á nuestros lectores del ramo que recibirán un tratamiento equitativo de estos fabricantes.

— Louis A. Boettiger, 48 Leonard St., Nueva York, ofrece al comercio una novedad interesante con el nombre de «Squeezit,» la que se observará en la sección de anuncios de este número: El valor de esta novedad se aprecia á primera vista. Quien gaste tabaco granulado ó picadura para la pipa ó para cigarrillos, conoce los inconvenientes de tener que atar y desatar el cordón del saquito del tabaco. El «Squeezit» obvia esta necesidad, pues una vez aplicado es permanente hasta que la bolsa esté vacía. El «Squeezit» se anuncia extensamente y está en poder de importantes mayoristas en todo el país. Los efectos se ponen en hermosas tarjetas de reclamo, dos (2) docenas en una caja. Para muestra é informes sobre precios y condiciones, dirigirse al fabricante citado arriba.

**ARTICULO PARA LIMPIAR EFECTOS BLANCOS.**— Merece recomendarse el «limpiador de efectos blancos,» fabricado por Carl M. Krieg & Co., de 110 Reade St., Nueva York, y convendría que se lo procurasen los farmacéuticos que aun no lo tienen para hacer frente á la demanda natural de la estación que atravesamos. El «Cleansum,» nombre del artículo, es inapreciable para limpiar lona blanca, pieles de gamo y de cabrito blanco sin curtir, como también para zapatos, cinturones, gorras, etc. Se pone en cajas de aluminio de dos estilos diferentes á \$24, la gruesa, menos 10 por ciento; la docena \$2, y en cajas de madera \$18 la gruesa, menos 10 por ciento, y la docena \$1.50. Hay un tamaño menor con el nombre de «Cleanswhite,» á \$9 la gruesa, menos 10 por ciento, ó 75 centavos la docena, puesto en cajas de madera. Krieg & Co., fabrican además el «Magic White,» que es líquido para igual objeto, puesto en un nítido cartón á \$9 la gruesa, menos 10 por ciento, ó 75 centavos la docena.

— Los droguistas están naturalmente satisfechos de tener medicamentos que hallan fácil salida y que dejan un buen provecho. Y es por esto que llamamos la atención del comercio de drogas á las preparaciones que ofrece la Garfield Tea Company, de Brooklyn (N. Y.). Los «Remedios Garfield» son: Te Garfield, Jarabe de Te Garfield; Polvos Garfield para el Dolor de Cabeza, Tabletas Digestivas Garfield, Emplastos Curativos Garfield, Emplastos de Belladona Garfield, Aceite de Lechuza Garfield y Remedio Densmore para la Corpulencia. Donde se han dado á conocer una vez estos remedios se cuentan entre los artículos más corrientes. Por ejemplo, tomemos el Te Garfield: este te de hierbas se ha colocado delante del público por muchos años, todo el mundo lo conoce, y muchas familias no toman otra medicina. Una venta de este te asegura un parroquiano satisfecho, y por este hecho se convierte en anunciante. Y precisamente por este resultado los boticarios de todas partes impulsan la venta del Te Garfield. Otro remedio universalmente conocido del que se han hecho ventas incontables son los Polvos Garfield para el Dolor de Cabeza. La cantidad que se embarca anualmente á todas partes del mundo demuestra concluyentemente que han merecido universal. Visitando el laboratorio moderno de la Garfield Company cualquiera queda convencido de que en la fi de los «Remedios Garfield» se pone esmeradísimo cuid: métodos empleados aseguran productos perfectos que en calidad. La popularidad de que goza cada una de estas raciones es merecida. La Garfield Tea Company desea estas agencias en todas partes del mundo. Se enviarán porm solicitarlo.

Rico, Hawaii y las Filipinas ... (oro americano) \$1.50

Otros países (franco de porte) ..... \$3.00

Las suscripciones pueden empezar en cualquier tiempo.

«THE AMERICAN DRUGGIST AND PHARMACEUTICAL RECORD» sale el segundo y cuarto lunes de cada mes. Todo cambio de anuncios debe ser recibido diez días antes de la fecha de salida.

Remesas deben hacerse con libranzas sobre Nueva York, giros postales internacionales ó por expreso ó correo en carta certificada. Toda correspondencia debe dirigirse á la AMERICAN DRUGGIST PUBLISHING CO., 62-68 West Broadway, New York, U. S. A.

## LA ASOCIACION FARMACEUTICA AMERICANA

LA Asociación Farmacéutica Americana es la organización que está relacionada más de cerca con los aspectos científicos de la farmacia en los Estados Unidos. En otra parte de este número aparece un informe completo en inglés de la junta anual quincuagésima tercera de la dicha Asociación. La fase científica del *informe* que revestirá mayor interés para nuestros lectores españoles, abraza sinnúmero de materias como queda comprobado por los extractos de algunos periódicos científicos que insertamos más abajo.

Con motivo de que los periódicos farmacéuticos americanos dedican una buena parte de sus columnas al aspecto comercial del ramo de drogas, se ha creído equivocadamente por algunos de nuestros colegas de la América del Sur que en los Estados Unidos se efectuaban relativamente pocos trabajos científicos de carácter farmacéutico. Para disipar tan errónea creencia bastará dar una ojeada á los actos de la Asociación que nos ocupa, y empezaremos por lo siguiente:

### INFLUENCIA DE SUBSTANCIAS ALCALINAS SOBRE VARIOS PROCESOS DE OXIDACION

El profesor Edward Schaefer tomó bajo su cargo la dilucidación de estas influencias, dividiéndolas según la naturaleza de la oxidación en tres clases: (1) Oxidaciones producidas por las sales de los metales pesados, particularmente los preciosos (e. g.: solución Fehling, etc.); (2) oxidación intra molecular (e. g.: azul de guayaco, quinona, peróxido de benzoil, etc.); (3) oxidación espontánea con la formación de productos más estables y más altamente oxidados.

La memoria encerraba un resumen de las labores llevadas á cabo en el Instituto Farmacéutico de la Universidad de Estrasburgo y en otras partes, y que han visto la luz en la prensa del ramo de varios países. El autor dió fin á tan interesante tema declarando que la influencia estimulante de los álcalies, aun de los más flojos, tenía tal alcance en los procesos de oxidación y autooxidación, que no fuera ya posible prescindir de su presencia en los trabajos químicos y farmacéuticos.

### ESCOPOLAINA

El informe presentado por Ernest Schmidt era la continuación de otro sobre el mismo tema sometido á la Asociación por el autor el año de 1892. El estudio de la constitución de la escopolaina se condujo de idéntica manera que los llevados á cabo fructuosamente para averiguar la estructura de la tropina, tropidina, tropinona y compuestos relacionados. El autor llegó á la conclusión que la analogía supuesta para llevar á cabo una investigación racional no estaba sostenida por los hechos revelados con las experiencias anunciadas. Para la investigación procedióse de tres maneras: (1) Tentativas para eliminar el oxígeno, (a) deshidratación y (b) reducción indirecta; (2) destilación de la escopoligenina con polvos de cinc en una atmósfera de hidrógeno que dió por resultado la formación de pirodina, y (3) oxidación con (a) bromo (que rinde escopoligenina), (b) con dióxido de hidrógeno (rindiendo un producto de oxidación inestable) y (c) con ácido crómico (rindiendo entre otras substancias una base libre de oxígeno).

### DETERMINACION DE LA ACETANILIDA

Con la determinación de la acetanilida en ciertos remedios para el dolor de cabeza, se creyó conveniente hacer ciertos ensayos relativos á la temperatura á la cual el éter ó el cloroformo—habiéndose empleado éste para separarlo de otros constituyentes, podría eliminarse obteniendo el residuo en estado para pesarlo. Estas experiencias han demostrado que la acetanilida era en extremo volátil á temperaturas relativamente bajas. De su solución de éter ó cloroformo puede evaporizarse el solvente á la temperatura del cuarto, manteniendo el peso constante del residuo sobre el ácido sulfúrico sin pérdida de substancia. Si el solvente se distila de un frasco desecándose el residuo á 50-60 grados, la pérdida por la volatilización es insignificante, alcanzándose prácticamente un peso constante en 12-24 horas. A los 95 grados puede apreciarse la volatilidad de la acetanilida, aun cuando se halle en un frasco de gollete angosto. El residuo que se obtiene de una solución de éter ó cloroformo cuando se expone el solvente no es acetanilida pura, y si se está en guardia contra pérdidas por evaporación, se obtienen invariablemente altos resultados.

### DETERMINACION DE LA CAFEINA EN PRESENCIA DE LA ACETANILIDA

Al determinar la cantidad de acetanilida y cafeína en los remedios para el dolor de cabeza, se le ocurrió á

W. A. Puckner, de Chicago, la extracción de ambas por medio del cloroformo, y la subsiguiente precipitación de la cafeína como perioduro. Se ha adoptado en su vista un método por el cual se extraen la acetanilida y la cafeína con el cloroformo en presencia del ácido sulfúrico, destilándose afuera el cloroformo y desecándose después el residuo para obtener cafeína, además la acetanilida. La cafeína extraída se precipita en iodo; el perioduro se descompone con sulfito sódico y se extrae la cafeína con cloroformo. Este asunto fué presentado y discutido por el autor del informe.

#### DETERMINACION DE LA CAFEINA

De las experiencias llevadas á cabo por W. A. Puckner, de Chicago, para determinar las condiciones bajo las cuales la cafeína podía desecarse sin pérdida, queda demostrado: (1) Si la cafeína se deseca á 95 grados, se disuelve en agua ó cloroformo, evapórase á la temperatura del cuarto y se deseca sobre ácido sulfúrico se obtiene prácticamente el peso original. (2) Si la cafeína se deseca á 95 grados, se disuelve en cloroformo, se evapora el solvente desde un plato poco hondo á 50-60 grados y se deseca á esta temperatura se obtiene prácticamente el peso original. Si bien puede demostrarse que la evaporación no es suficiente para afectar los resultados de un trabajo cuantitativo. (3) De una solución clorofórmica de cafeína el solvente puede destilarse, desecándose el residuo á 95 grados sin pérdida de cafeína. Si, por otra parte, se pone la solución en un plato poco hondo y después de la evaporación se deseca á 95 grados, entonces ocurre una pérdida apreciable de cafeína. Las conclusiones de Tasilly de que la cafeína no se vuelve hidrosa aunque se desequé á 110 grados, fueron hasta cierto punto confirmadas.

#### EL ALOE Y LA FARMACOPEA DE LOS ESTADOS UNIDOS

M. I. Wilbert, de Filadelfia, al dar lectura á su informe hizo hincapié en la necesidad de tomar en consideración la historia de las substancias medicinales al formular una descripción oficial, y expuso á la vez datos muy interesantes sobre el aloe de los que sólo podemos dar un ligero sumario: Aloe en las primeras ediciones de la Farmacopea de los Estados Unidos. La introducción y empleo del aloe socotrina legítimo. Empleo de aloe purificado en preparaciones oficiales. El artículo sobre aloe en la 8a. revisión decenal de la Farmacopea de los Estados Unidos. Enumeración de varios de los más importantes defectos. Necesidad de una descripción oficial de la droga pulverizada. Error de restringir el aloe oficial á las variedades que contengan isobarbaloin. Error evidente de continuar con el empleo del aloe purificado en las preparaciones oficiales de esa droga. Indicaciones para una solución más racional de los problemas envueltos.

(Continuad)

EMPLEENSE BUENOS MATERIALES AL HACER ARTICULOS DE TOCADOR.— El farmacéutico que usa una clase inferior de glicerina, aceites adulterados, productos químicos impuros, y otros efectos baratos y ordinarios no puede producir tan buena agua para el tocador, ni polvos para la tez, ni lociones cosméticas como aquellos fabricantes que se aseguran de cada artículo que compran y rechazan los de inferior calidad.

#### Ensayos con el Linimento Alcanforado

Por E. FULLERTON COOK, P. D.

El trabajo de que aquí se da cuenta fué emprendido con el objeto de establecer, si fuese posible, un método satisfactorio de ensayo para averiguar el porcentaje de alcanfor que está presente en el aceite alcanforado, ó sea el *linimentum camphorae* oficial. Para este fin se prepararon primeramente soluciones de alcanfor de aceite de semilla de algodón de un conocido promedio de fuerza, aplicándose los varios métodos de ensayo para determinar su relativa exactitud.

Es un hecho conocido que el alcanfor puede volatilizarse de su solución en aceite con la aplicación de calor, habiéndose aplicado este proceso como método de ensayo con resultados regulares. Una cantidad pesada de aceite alcanforado (sobre 3 c.m.), se colocó en un plato alquitranado, expuesto al calor de un baño-maría (100 grados C.) durante media hora, pesado entonces, y vuelto á calentar durante dos horas y media, y pesado.

Durante la primera media hora se volatilizó cosa de una tercera parte del alcanfor; pero después de tres horas de calentarlo, pudieron apreciarse en cada caso muy conocidos porcentajes, habiéndose eliminado aparentemente todo menos sobre  $\frac{1}{4}$  por ciento de alcanfor.

No se hizo ninguna tentativa para averiguar si había ocurrido un cambio en el aceite durante el tiempo en que se calentó, puesto que si el tiempo y la temperatura durante el cual el aceite está expuesto al calor son siempre uniformes, cualquiera alteración que hubiese ocurrido afectando el peso, se supone que fuese razonablemente uniforme y no debe por consiguiente tomarse en cuenta.

El proceso seguido en detalle vendría á ser lo siguiente:

#### ENSAYO CON EL LINIMENTO DE ALCANFOR POR LA EVAPORACION

Viértase sobre 5 c.c. de linimento alcanforado en un plato de porcelana alquitranado ó de platino; determínese su peso con exactitud, luego expóngase al calor de un baño-maría; determínese su peso exactamente; luego sométase al calor de un baño-maría (sobre 100 grados C.) durante el espacio de tres horas. Enfríese y pésese. Para averiguar el porcentaje de alcanfor indicado por el ensayo, sustráigase este peso de la cantidad de linimento de alcanfor tomado originalmente, multiplíquese la diferencia por 100 y divídase el producto por el peso de la muestra tomada. A este porcentaje, aparentemente sobre  $\frac{1}{4}$  por ciento puede añadirse como factor correctivo, para representar el total de porcentaje de alcanfor presente en la muestra.

#### EXAMEN POLARISCOPICO

El segundo método con el cual se han hecho experiencias, estaba basado sobre la rotación óptica del alcanfor la fijan á + 44.22 gr. en una solución alcohólica al 20 por ciento, (ter y Hoffmann (*Die Aetherische Olce*)); varias examinadas rindieron una rotación

una solución alcohólica de + 43.52 grados; en una solución de alcohol metilo + 43.68 grados, y en una solución de cloroformo + 43.77 grados, lo cual corresponde aproximadamente á los datos suministrados por las autoridades citadas.

Cuando, sin embargo, se preparó una solución de alcanfor con aceite de semillas de algodón como solvente, y otra muestra con aceite de olivas (disolviendo 2 gm. de alcanfor en bastante aceite para hacer 20 c.c.), hallóse que la rotación específica era de + 50.63 grados en ambos casos, y en un número de experiencias subsecuentes en las que se emplearon soluciones de aceite de semillas de algodón de diferente porcentaje, advirtiéndose el mismo aumento proporcional en la rotación óptica que la observada cuando el alcohol era el solvente. Por supuesto, se probaron primeramente las varias muestras de aceite de semillas de algodón y de aceite de olivas, averiguándose en uno y otro caso que eran ópticamente inactivos antes de examinarse las soluciones. Por consiguiente, parece ser cierto que las soluciones oleoginosas de alcanfor (ó á lo menos aquellas, en las cuales el aceite de semillas de algodón ó el de olivas son los solventes) poseen una potencia rotatoria más fuerte que las soluciones alcohólicas de la misma fuerza. Este hecho fué observado regularmente, ora cuando las soluciones estaban preparadas con la ayuda del calor, ó simplemente sacudiendo el alcanfor con el aceite frío hasta quedar disuelto.

Cuando este caso se hubo determinado, el examen demostró que la lectura de la rotación óptica de soluciones de alcanfor en aceite de semillas de algodón de diferente fuerza, tenía un alcance proporcional con el conocido porcentaje de la solución, y de estos hechos se llegó á la conclusión de que podría calcularse un número definido de grados en la rotación óptica que representarían 1 por ciento de alcanfor tratándose de una solución oleoginosa, tomando ese guarismo como factor para ensayar cualquiera solución de fuerza desconocida.

#### CONCESION VARIABLE EN LA LECTURA

El *linimentum camphoræ* oficial debería contener 20 por ciento por peso de alcanfor. Con esta fórmula se preparó cuidadosamente una solución, evitándose en todo lo posible la volatilización del alcanfor, tomándose su rotación óptica con un instrumento graduado para azúcar, en un tubo de 200 mm., á una temperatura de unos 25 grados C. La lectura fué + 58.5 grados, correspondientes á una rotación específica de + 93.88 grados. Esto, como puede apreciarse, dará una rotación óptica de 1 por ciento de alcanfor en aceite de semillas de algodón si se toma con un instrumento graduado para azúcar de + 2.925 grados, ó una rotación específica de + 4.694 grados. Estas cifras fueron confrontadas por un número de ensayos con otras soluciones de diferente fuerza, rindiendo teóricamente resultados muy aproximados á la verdad. Las ligeras variaciones que acusan los siguientes ejemplos pueden explicarse por la diferencia entre la temperatura en el tubo en que se preparó la muestra, y cuando se leyó la rotación que fué una mañana fría. Pero estas pequeñas diferencias pueden esperarse, puesto que es imposible obtener siempre condiciones de temperatura para un ensayo que correspondan exactamente con las obtenidas en la preparación de la solución:

#### ENSAYO DEL LINIMENTO ALCANFORADO — CUADRO DE LOS RESULTADOS

|   | Número de la muestra. | Cantidad de aceite de semillas de algodón tomado—gm. | Cantidad de alcanfor tomado—gm. | Porcentaje de alcanfor por peso. | Pérdida de peso, calentándolo $\frac{1}{2}$ hora—Por ct. | Pérdida de peso, calentándolo 3 horas—Por ct. | Rotación óptica (instrumento graduado para azúcar), tubo 200 mm.—Grados. | Porcentaje de alcanfor indicado por rotación. | OBSERVACIONES.   |
|---|-----------------------|--|---------------------------------|----------------------------------|--|---|--|---|--|
| 1 | 40                    | 10   | 20.                             | ....                             | ....   | ....  | +58.5  | 20.0  | Preparado al baño-maria en un frasco con tapón esmerilado. |
| 2 | 40                    | 10   | 20.                             | 12.1                             | 19.2   | ....  | +57.5  | 19.7  | Preparado al baño-maria en un frasco con tapón esmerilado. |
| 3 | 40                    | 10   | 20.                             | ....                             | 15.9   | ....  | +45.3  | 15.5  | Preparado al baño-maria en un plato destapado.             |
| 4 | 40                    | 8  | 16.6                            | 7.08                             | 15.8   | ....  | +47.5  | 16.2  | Preparado al baño-maria en un frasco con tapón esmerilado. |
| 5 | 40                    | 12   | 23.1                            | ....                             | ....   | ....  | +66.5  | 22.7  | Preparado al baño-maria en un frasco con tapón esmerilado. |
| 6 | 40                    | 5  | 11.1                            | 6.2                              | 10.1   | ....  | +29.0  | 9.9   | Preparado al baño-maria en un frasco con tapón esmerilado. |
| 7 | 40                    | 5  | 11.1                            | ....                             | ....   | ....  | +29.0  | 9.9   | Preparado por solución fría agitando.                      |

#### PRUEBA DE SAPONIFICACION INUTIL.

Se tomó el valor de la saponificación del aceite en una muestra de linimento de alcanfor, con la idea de aplicar los resultados á un proceso de ensayo, pero no fueron lo suficientemente uniformes ó concluyentes para usarlos para aquel fin.

#### PERDIDA POR LA VOLATILIZACION

De los resultados observados con el primero de estos procesos, y como queda ilustrado en la muestra 3 en la carta, en lo cual sobre 3 por ciento de alcanfor se pierde en la preparación, se ve que el aceite alcanforado al que se ha añadido un porcentaje completo de alcanfor, puede ser de buenas á primeras deficiente en fuerza alcanfórica durante el proceso de la manufactura, si no se pone cuidado en evitar la volatilización. Es, por consiguiente, esencial que el frasco esté bien tapado y que se le aplique muy poco calor. Con efecto, hallóse que el porcentaje necesario de alcohol se disolvía fácilmente (á las pocas horas sacudiéndolo de cuando en cuando) en aceite de semillas de algodón, sin la ayuda de más calor, á una temperatura de cosa de 25 grados C. (77 grados F.). En vista de lo expuesto se recomienda que, ó bien no se emplee calor en la preparación — si no se necesita inmediatamente — ó que se caliente ligeramente el aceite, retirado del baño-maria, añadiendo después el polvo grueso de alcanfor al aceite caliente, sacudiendo el todo de cuando en cuando hasta formarse la solución. Este cambio de manipulación podría introducirse con aceite en el proceso oficial, porque disminuiría mucho la posibilidad de que el linimento alcanforado sea deficiente en alcanfor, como se halla ser á menudo comercialmente.

Los investigadores de Inglaterra han sugerido varios métodos de ensayo; el trabajo se efectúa con el linimento alcanforado, hecho según la Farmacopea Británica, en el cual el aceite de olivas es el solvente; también varían algún tanto las condiciones bajo las cuales estos ensayos se han llevado á cabo.

EFFECTO DEL PEROXIDO DE HIDROGENO EN LA DIGESTION.— Después de practicar varias experiencias con un perro, se ha hallado que la administración del peróxido de hidrógeno aumenta la cantidad de jugo gástrico secretado, y también en mayor escala la cantidad de ácido hidrocórico libre, aumentando como consecuencia secundaria, el poder digestivo del jugo gástrico.

## EN BUSCA DE RECETAS

Por JOSEPH F. HOSTELLEY

En una botica cuyo dueño sigue atentamente la marcha de los tiempos que atravesamos, se adoptó el siguiente lema: «Si no os traen recetas id á buscarlas.» Y para cumplimentar este fin se dió el primer paso en el departamento de recetas. Uno de los argumentos más eficaces para atraer recetas á un establecimiento, es disponer de toda clase de facilidades para llenarlas. Una oficina con escasas existencias, insuficientemente habilitada mecánicamente para ejecutar con prontitud labor tan responsable, se denuncia por sí misma, más pronto ó más tarde, y tan luego como los médicos ó el público conocen semejante estado de cosas se dirigen á otra parte — al hombre que se esfuerza en atraerlas.

Entre las facilidades para llenar recetas debe comprenderse labor excelente de parte de quien las pone para que haga buena impresión en el médico, y preparación rápida que satisfaga al parroquiano y al paciente. Y estos son efectivamente dos factores esenciales que traen recetas á la casa, y á veces de muy larga distancia.

Pero el farmacéutico á quien nos referimos, siguió más literalmente el significado del lema, y después de dar el primer paso como se ha dicho, en el departamento de recetas, dió un segundo que fué más notable, puesto que fué en presencia de los practicantes de medicina que cuentan con más clientela en esta ciudad; á la oficina de cada uno de ellos se presentó con un argumento preparado de antemano, despertando de esta manera su interés; sugirió modificaciones en la manera de redactar las recetas. El farmacéutico, práctico en la materia, empleó mucho tacto; trataba de conquistar no de ofender; entre las peculiaridades de esas entrevistas citaremos el hecho de que aludiendo al Dr. Blank, que acostumbraba á especificar los ingredientes de una píldora tonizadora, el farmacéutico le dijo que él mandaba hacer estas mismas píldoras en gran cantidad, revestidas de gelatina, por cuyo medio podía dispensarlas con más rapidez y á satisfacción del enfermo.

Un médico de la vecindad acostumbraba ordenar un pomo original de cierto específico. El farmacéutico compró esta preparación en cantidad para obtenerla á los precios más bajos, conseguido lo cual le dijo al médico si cuando especificaba un pomo original (de doce onzas de cabida) podía el farmacéutico llenar uno de sus frascos de la misma cabida, pues de esta manera podía suministrar la preparación más barato.

Refiriéndose al asunto de los jarabes medicinales, haciendo algunas observaciones acerca de la inestabilidad de la mayoría y su muy conocida tendencia á fermentar, hubo de enseñar el médico muestras de los usados más frecuentemente, tales como jarabes de ipecacuana, de sen y serpentaria, cerezo silvestre, en las cuales la glicerina como preservativo había reemplazado el jarabe en una cantidad de veinticinco por ciento. Las muestras que sometió contaban de uno á cinco años.

A cada uno de los médicos á quienes entrevistó hubo de manifestar que cuando se prescribía salicilato sódico para administración interna, no se proponía dispensar otra cosa que la verdadera sal del aceite natural de pírola ó *wintergreen*.

Había obtenido el mejor aceite de olivas que se vendía en el mercado, el cual si bien el precio era más

alto, poseía incuestionablemente más valor que las clases inferiores. De este aceite, filtrado con sumo cuidado, dejó una muestra á cada uno de los médicos con quienes tuvo las entrevistas.

Incidentalmente el farmacéutico enseñó una vista fotográfica del departamento de recetas y cuarto de labor de su botica que revelaba las facilidades que poseía para poner recetas, contando con un surtido excepcional de utensilios farmacéuticos para emprender la prescripción en extensa escala, y una librería de cuatro andenes llena de libros de texto — buenos argumentos para convencer á un médico de que el despacho de recetas era cuanto pudiera desear.

## PREPARADOS FARMACEUTICOS

Por A. C. ZEIG, PH. C. San Francisco (Cal.)

La preparación de medicamentos para curar á los enfermos y heridos se remonta á varios siglos antes de que la farmacia fuese reconocida como profesión. La evolución del arte de curar es la evolución de la farmacia misma á través de tantos siglos de lucha para obtener su independencia como profesión.

### PRIMERAS FARMACOPÉAS

Al adoptar siglos atrás las farmacopeas y fórmulas tipo, fué un gran paso para ayudar al farmacéutico de aquellos tiempos. Según datos históricos, fué en Palermo, reino de Nápoles (Italia), en que se adoptó la primera Farmacopea con carácter oficial, corriendo el año 1150, siendo este libro reconocido por mucho tiempo después en toda Europa como tipo. Todo farmacéutico estaba obligado bajo juramento á manufacturar los medicamentos de conformidad con esa farmacopea.

Pero la primera obra que respondía á las ideas modernas de una farmacopea, y que como la citada recibió la sanción legal de Europa, fué la de un tal Valerius Cordus, de Nuremberg (Alemania), publicada por los años de 1546. Todos los farmacéuticos recibieron instrucciones para preparar las medicinas de conformidad con las fórmulas del libro.

Gracias á una obra publicada en 1542 por el Hermano Bernardino de Laredo, del convento de Valverde, cerca de Sevilla, se ha podido formar una idea de la naturaleza de las preparaciones farmacéuticas más populares en aquella época. Las medicinas las describe como laxantes, píldoras, polvos, pastillas, narcóticos, jarabes, aceites, cocimientos, unturas, pomadas, emplastos, confecciones y conservas. Con los pocos aparatos primitivos de que se disponía entonces, es notable la lista de productos manufacturados que ya se conocían.

### EL RENOMBRADO MITRIDATO

La triaca de hoy es sólo un ejemplo de las formas de medicación empleada en la antigua Roma. 1-  
fección de opio, admitida en alguna de las 2-  
peas europeas, es simplemente un sustituto y  
complejo y anticientífico electuario, conoci 0  
triaca ó mitridato, inventado por Andrómaco, me 0  
jefe de Nerón, cuya posición requería manejar las 15  
con sumo cuidado y no poco genio. Este afam 0  
electuario ha llegado á nosotros á través de 18 ce 1-  
rias, y dícese que Andrómaco lo dió á conocer 0  
una mejora del famoso mitridato que n

aquel tiempo. Si bien la composición de los dos electuarios era casi la misma, la triaca contenía carne de avispa y otros ingredientes nuevos activos, principalmente aromáticos, constituyendo en todo 60 en número. Pero el ingrediente activo parece haber sido el opio, cosa de 1 por ciento; la popularidad que tenía en aquellos tiempos de la degeneración de Roma, era por suponerle un preventivo y antídoto del veneno. Por contener un número de drogas escogidas, era imposible prepararlo fuera de los grandes centros del comercio de Italia. Se fabricaba en Venecia, durante la semana de la gran feria anual, que constituía una reunión para negocios y recreo.

Durante la primera mitad del último siglo los farmacéuticos de este país manufacturaban todas las preparaciones galénicas, y compraban sus ácidos minerales, como también los ácidos orgánicos, tales como el tartárico, cítrico, oxálico y benzoico, y los fuertes productos químicos principales que se empleaban en aquel tiempo.

#### INTRODUCCION DE EXTRACTOS FLUIDOS

La inclusión de un número limitado de extractos fluidos en la farmacopea de 1850, señala el principio de un período notable en la historia de la manufactura farmacéutica en este país, por cuanto esta clase de preparaciones de origen americano han llegado á alcanzar mucha popularidad, aumentándose el número en las revisiones subsiguientes de la Farmacopea de los Estados Unidos, de modo que abraza 88 extractos fluidos oficiales en la revisión de 1890, á parte de los reconocidos como semi-oficiales en el Formulario Nacional. Como adición á éstos, se preparan en cada laboratorio farmacéutico sobre 300 extractos no oficiales que constituyen parte de las existencias que se tienen á mano. En los Estados Unidos se manufacturan anualmente grandes cantidades de extractos fluidos. Tomando, por ejemplo, la cáscara sagrada que crece en la costa del Pacífico, según datos fidedignos se embarcaron á diferentes partes del globo, sobre 1.500,000 libras de corteza de cáscara, cuya mayor parte iba destinada á los fabricantes que hacen extractos fluidos, á guisa de los de la Farmacopea de los Estados Unidos, los no amargos y los aromáticos.

Refiriéndonos á los alcaloides, puede decirse que la extracción de alcaloides estaba en su infancia á la mitad del siglo, pues aunque hacía varias décadas que la quinina se conocía en el mercado, su empleo era muy limitado con motivo del precio subido á que se vendía. Lo mismo acontecía con la morfina. El cloroformo, el éter, el algodón pólvora y el colodión se usaban ya antes de la Guerra Civil, al paso que subsiguientemente se hubo de emplear la glicerina como solvente por los farmacéuticos, y por su medio se adelantó en la medicación de la piel, de cuyas resultas se incluyeron los gliceritos oficiales en la farmacopea de 1870. Ya ahora se emplean en el laboratorio grandes cantidades de glicerina. Su utilización como anti-séptico, en la forma de pasta, es de fecha reciente, y encierra grande promesa para el porvenir.

#### INCIPIO DE UN PERIODO DE FABRICACION

La demanda de agentes medicinales durante la era de Separación, obró como estímulo é impulsó la fabricación farmacéutica, para atender á la cual se abrieron muchos laboratorios. Aumentando la

demanda de productos químicos, se inventaron nuevos métodos para la extracción y purificación de alcaloides; y con la manufactura de cloroformo, éter, éter nitroso, como también de extractos fluidos y sólidos, se introdujo el proceso frío que está en uso en la actualidad. Hubieron de explotarse sinnúmero de productos de la materia médica, inaugurándose una era en la manufactura farmacéutica que por su alcance, la cantidad y naturaleza de los productos manufacturados, los aparatos mecánicos y maquinaria empleada supera á todos los esfuerzos de las centurias pasadas en este importantísimo ramo.

La gran actividad desplegada en la manufactura de productos farmacéuticos quizás justificaba hasta cierto grado la alarma que tenía preocupados á varios farmacéuticos al detalle, quienes sostenían que con tales manufacturas se espigaba en el campo del detallista, privándole de una parte de sus entradas, ó del provecho que obtenía fabricando sus propias preparaciones en cuanto fuese posible. Si bien esta opinión lleva autoridad y está en armonía con la situación farmacéutica de 30 á 40 años atrás las condiciones del ramo han cambiado radicalmente. El aditamento á la materia médica de un vasto número de productos de origen vegetal, animal y mineral, y la falta de maquinaria y aparatos necesarios, hacen que la fabricación de preparados farmacéuticos constituya un problema fuera del alcance ó capacidad del laboratorio de todo farmacéutico. Se han realizado más adelantos en estos últimos años en el perfeccionamiento de maquinaria para ahorrar labor en los grandes laboratorios, que en todas las centurias precedentes.

#### Preparación de Tintura de Estrofantó

Los periódicos farmacéuticos italianos han discutido largamente respecto á la manera más apropiada para preparar la tintura de estrofantó para evitar que se volviese turbia. Barbieri pretendía haber hallado un procedimiento que obviaba aquella dificultad, particularmente en mezclas acuosas, lo que no se conseguía con la fórmula oficial de la Farmacopea Italiana.

El método empleado era una modificación del oficial: Extraía las semillas reducidas á polvo con éter hasta que una gota de este líquido no producía una mancha grasienta puesta en un papel blanco; luego permitía que el polvo secase en el aire, agitando frecuentemente la masa hasta no despedir más olor de éter. En este estado maceraba el polvo con alcohol al 90 por ciento, tomando cinco veces su peso del menstruo. Después de cinco días decantaba el líquido, añadiendo la misma cantidad de alcohol fresco y macerando otra vez el residuo por espacio de cinco días. Sucesivamente procedía á la decantación y colación, exprimiendo el residuo, y uniendo en un vaso los extractos, filtrándolos después de dejarlos reposar por algún tiempo. Dícese que una tintura preparada de esta manera se mezcla con el agua sin enturbiarse.

Siendo semejante el proceso adoptado por la Farmacopea Italiana, y no obstante la tintura resultante quedaba turbia, Carlinfante (*Bollettino Chimico Farmaceutico*, 1904, No. 24) practicó una serie de experimentos con el fin de determinar el mejor método para hacer una tintura de estrofantó que se mezclase con el agua. Averiguó que la cantidad de grasa encerrada en las semillas variaba considerablemente (entre 27.2 y 40 por ciento). Preparó tinturas por el método oficial

al igual que con el procedimiento adoptado por Barbieri de las simientes que se les había extraído con anterioridad la grasa, bien con éter ó con éter de petróleo. La Farmacopea Italiana prescribe la maceración por ocho días con alcohol al 10 por ciento. En ambas tinturas se presentó la turbiedad al añadirles agua, y un oscurecimiento del líquido cuando las simientes se habían tratado con éter de petróleo.

León Schmitt, hace muchos años describió lo que él llamaba «el coeficiente del agua» de una tintura — á saber, la cantidad de agua que había de agregarse á 10 c.c. de una tintura para producir una turbiedad permanente en la misma. Carlinfanti cree que el hecho de que la tintura Barbieri mezclada con agua resultaba clara, debíase á que Barbieri empleaba un éter que contenía agua la cual disolvía algunas de las substancias que originaban la turbiedad; pero esto es una hipótesis que ha de probarse todavía. Carlinfanti, por su parte, recomienda eficazmente que se emplee el éter de petróleo, que esté exento enteramente de agua y alcohol, como medio para separar el aceite de las semillas de estrofantó, por cuanto que el éter de petróleo no elimina ni siquiera una huella de substancia activa de la droga.

### Linimentos Medicinales

**LINIMENTO PARA LAS GRIETAS DE LOS PECHOS.** — (a) Aceite de cade, 7 gramos; aceite de almendras, 6; glicerina, 6. Aplíquese con un pincel sobre el pezón dañado, después que haya mamado la criatura; si las grietas son muy pronunciadas ó extensas se aumentará la proporción de aceite de cade. — *Van Holsbeck*.

(b) Aceite de enebro, 2 gramos; aceite de almendras, 4; glicerina, 30. M. s. a.

Puede aumentarse la proporción de aceite de enebro, cuando las fisuras son anchas y muy profundas. Se pasa un pincel mojado en esta solución, por las partes hendidas ó ulceradas, de modo que se cubran completamente, y se repite esta operación siempre que el niño haya mamado.

(c) Aceite de ricino, 1 parte; subnitrato de bismuto, 1. Mézclense.

Para aplicar sobre la parte afecta, previamente lavada y desinfectada. Este linimento forma una capa protectora, á la vez que adherente, de consistencia blanda; calma rápidamente el dolor y la irritación refleja, y ofrece la ventaja de poder dejarse aplicado, gracias á su inocuidad absoluta, hasta que se desee dar á la criatura el pecho enfermo. — *Hirst*.

**LINIMENTO PARA LAS GRIETAS DEL PEZON.** — (a) Bálsamo del Perú, 3 gramos; yema de huevo, 12; borato sódico, 2; aceite de almendras, 15.

En unturas, lavando el pezón enseguida que haya mamado el niño. — *Harless*.

(b) Agua de rosas, 10 gramos; goma arábiga, 5. Disuélvase y añádase: aceite de almendras, 5 gramos; bálsamo del Perú, 1. — *Stoltz*.

**LINIMENTO PARA EL LUPUS.** — Ioduro potásico, 5 gramos; glicerina, 50; iodo, 0.10. Disuélvanse.

Embrocaciones con un pincel empapado en esta disolución en la región afectada.

Al interior aceite de hígado de bacalao. — *Billroth*.

**LINIMENTO PARA LA ORQUITIS.** — Láudano de Sydenham, 4 gramos; cloroformo, 4; aceite de manzanilla, 20; alcanfor, 2.

Fricciones mañana y noche.

**LINIMENTO PARA LA OTITIS.** — Extracto de belladona, 1 gramo; agua, 1; bálsamo tranquilo, 5. Dilúyase el extracto en el agua y mézclase con el aceite. Se introduce á gotas en el oído. — *Trousseau*.

**LINIMENTO PARA EL OZENA.** — Aceite de almendras, 30 gramos; extracto de Saturno, 4.

Empápense en esta mezcla pequeños cilindros de papel sin cola, é introdúzcanse tres al día en las narices para combatir el ozena. En el intervalo se sorberá muchas veces agua salada. — *Hedenus*.

**LINIMENTO PARA LA PARALISIS.** — Tintura de nuez vómica, 10 partes; bálsamo de Fioraventi, 10; Mézclense.

**LINIMENTO PARA LA PARALISIS INFANTIL.** — Esencia de romero, 2 partes; esencia de espliego, 2; esencia de limón, 1; alcohol, 12. Mézclense. — *Descroizilles*.

**LINIMENTO PARA LA PITIRIASIS.** — Alcohol, 45 gramos; aceite de ricino, 15; esencia de almendras amargas, 4 gotas; ácido fénico, 20. Mézclense.

Se emplea después de lavarse la cabeza. — *Duhring*.

**LINIMENTO PARA EL PRURIGO.** — Aceite de petróleo, 60 gramos; aceite de almendras, 60; láudano de Sydenham, 3.

Una fricción diaria á los enfermos atacados de prurigo: se les administrarán además los baños y purgantes repetidos. — *Bellencontre*.

### Envenenamiento con Aceite de Almendras Amargas

Heapy da cuenta de un envenenamiento grave con aceite de almendras amargas. Trátase de un muchacho de 9 años, fuerte y con buena salud, que fué á acostarse sin novedad alguna excepto un poco de dolor de muelas. Poco tiempo después se le halló vomitando y respirando de un modo desusado. No podía hablar, tenía los ojos muy abiertos y brillantes, los labios y dedos de un color violeta, las quijadas cerradas, con cierto espasmo en los miembros.

Cuando el que relata el caso lo vió había perdido el muchacho el conocimiento, respirando con dificultad, no respondía á la luz y el pulso era apenas perceptible en las muñecas. Al examinarlo se le notó un fuerte olor de ácido hidrocianico en la boca. La madre del enfermo dijo que al verlo con el dolor, había empapado un cachito de algodón en aceite de almendras amargas y aplicádolo á la muela. Acudióse al tratamiento de la respiración artificial, aplicación de amoníaco á la nariz y un emplasto de mostaza sobre el precordium, juntamente con las aplicaciones usuales sobre el cuerpo frío y una hipodérmica de estricnina. A la media hora mejoraba la respiración también el pulso. Continuóse el tratamiento al aparecer señales de que recobraba el conocimiento que ocurrió á las tres horas. En la noche siguiente el paciente se había restablecido completamente. No se le halló en el diente la mola de y probablemente se la había tragado al acostarse.

## NOTAS FARMACEUTICAS

## LOCION DE CALAMINA — LOTIO CALAMINAL

|                      |            |    |           |
|----------------------|------------|----|-----------|
| Calamina levigada .. | 40 granos  | .. | 2.59 gm.  |
| Oxido de zinc.....   | 20 granos  | .. | 1.29 gm.  |
| Glicerina.....       | 20 mínimas | .. | 1.25 c.c. |
| Agua (ó agua de ro-  |            |    |           |
| sas) c. s.....       | 1 onza fl. | .. | 28.4 c.c. |

Decántese la calamina y el óxido de zinc, tritúrandolos en un mortero sucesivamente con porciones del agua, decantándolos de la materia silica, y añádese después la glicerina.

## LOCION DE CAL SULFURATADA, SOLUCION DE VLEMINIK — LOTIO CALCIS SULPHURATÆ

|                         |            |            |    |          |
|-------------------------|------------|------------|----|----------|
| Cal apagada.....        | 3 oz.      | 132 granos | .. | 165 gm.  |
| Azufre sublimado....    | 5 oz.      |            | .. | 250 gm.  |
| Agua destilada, c. s... | 20 oz. fl. |            | .. | 1000 gm. |

Mézclese la cal apagada con el azufre y añádese la mezcla gradualmente á 33 onzas fluidas (1650 c.c.) de agua hirviendo. Luego hiérvase el todo agitando constantemente hasta que mida 20 onzas fluidas (1000 c.c.) de fuerza, permitiendo que la solución se ponga clara, dejándola reposar en un frasco bien tapado; luego se decanta el líquido llenando con él varios pomos que se guardan bien tapados.

## PASTA DE IODO Y ALMIDON — PASTA IODI ET AMYLI

|                              |       |      |        |
|------------------------------|-------|------|--------|
| Almidón en polvo.....        | 1 oz. | .... | 10 gm. |
| Glicerina.....               | 2 oz. | .... | 20 gm. |
| Agua.....                    | 6 oz. | .... | 60 gm. |
| Solución de iodo diluida.... | 1 oz. | .... | 10 gm. |

Hiérvase el almidón en la glicerina y agua, y cuando esté casi frío añádese la solución de iodo y mézclese bien.

## SOLUCION DE GLUSIDO, ELIXIR DE SACARINA — LIQUOR GLUSIDI

|                      |            |                 |           |
|----------------------|------------|-----------------|-----------|
| Elixir de sacarina.  |            |                 |           |
| Glusido .....        | 1 oz.      | 202.5 granos .. | 73 gm.    |
| Bicarbonato sódico.. |            | 292. granos ..  | 33 gm.    |
| Alcohol.....         | 5 oz. fl.  |                 | 250 c.c.  |
| Agua, c. s.....      | 20 oz. fl. |                 | 1000 c.c. |

Disuélvase el glusido y el bicarbonato de sodio en 13 onzas fluidas (650 c.c.) de agua, fíltrese la solución, añádese el alcohol al filtrado, y pásese bastante agua por el filtro, para hacer 20 onzas fluidas (1000 c.c.).

Cada dracma fluida representa 4 granos (0.26 gm.) de glusido.

## SOLUCION DE IODO DILUIDA—LIQUOR IODI DILUTUS

|                       |            |    |           |
|-----------------------|------------|----|-----------|
| Iodo.....             | 440 granos | .. | 50 gm.    |
| Ioduro de potasio...  | 600 granos | .. | 67.5 gm.  |
| Agua destilada, c. s. | 20 oz. fl. | .. | 1000 c.c. |

élvase.

## UCION DE GENJIBRE — LIQUOR ZINGIBERIS

|                                |            |    |            |
|--------------------------------|------------|----|------------|
| fuerte de genjibre (1 en 2)... | 10 oz. fl. | .. | 500 c.c.   |
| o purificado .....             | 6¾ onzas   | .. | 333.33 gm. |
| ar blanco.....                 | 6¾ onzas   | .. | 333.33 gm. |
| stilada, c. s .....            | 20 oz. fl. | .. | 1000 c.c.  |

rese la tintura de genjibre con el azúcar y el

talco purificado, añádese el agua destilada, sacúdense y fíltrese, devolviendo las primeras porciones del filtrado al filtro hasta obtener un líquido claro.

## SOLUCION ANTISEPTICA — LIQUOR ANTISEPTICUS

|                                       |              |    |          |
|---------------------------------------|--------------|----|----------|
| Timol.....                            | 9 granos     | .. | 0.5 gm.  |
| Eucaliptol .....                      | 9 granos     | .. | 0.5 gm.  |
| Aceite de menta piperita .....        | 20 mínimas   | .. | 1 c.c.   |
| Aceite de pirola.....                 | 20 mínimas   | .. | 1 c.c.   |
| Extracto fluido de índigo silvestre.. | 7½ drac. fl. | .. | 16 c.c.  |
| Acido benzoico natural.....           | 282 granos   | .. | 16 gm.   |
| Acido bórico.....                     | 282 granos   | .. | 16 gm.   |
| Talco.....                            | 180 granos   | .. | 10 gm.   |
| Alcohol (95 por ciento).....          | 15 onzas fl. | .. | 375 c.c. |
| Agua .....                            | 25 onzas fl. | .. | 625 c.c. |

Hace sobre 40 onzas fluidas (1000 c.c.).

Disuélvase el timol, el eucaliptol, aceites, extracto fluido y ácido benzoico en el alcohol. Disuélvase el ácido bórico en el agua con la ayuda del calor y añádese á la solución alcohólica. Luego añádese el talco, déjase reposar algunas horas, enfriese y fíltrese.

## SOLUCION BORACICA COMPUESTA—SOLUCION DOBELL LIQUOR BORACIS COMPOSITUS

|                     |            |          |              |
|---------------------|------------|----------|--------------|
| Borax.....          | 131 granos | ..       | 15 c.c.      |
| Bicarbonato sódico. | 131 granos | ..       | 15 c.c.      |
| Acido fénico .....  | 26 granos  | ..       | 3 gm.        |
| Glicerina .....     | 5 dr. fl.  | 36 mins. | .. 35 c.c.   |
| Agua, c. s.....     | 20 oz. fl. |          | .. 1000 c.c. |

Disuélvase las sales en cosa de 10 onzas fluidas (500 c.c.) de agua, y luego añádese la glicerina y el ácido fénico licuado previamente calentándolo, y finalmente bastante agua para hacer 20 onzas fluidas (1000 c.c.).

## SOLUCION DE CARMIN — LIQUOR CARMINI

|                       |                  |    |           |
|-----------------------|------------------|----|-----------|
| Carmín.....           | 1 onza 87 granos | .. | 60 gm.    |
| Solución de amoníaco. | 7 oz. fl.        | .. | 350 gm.   |
| Glicerina.....        | 7 oz. fl.        | .. | 350 gm.   |
| Agua, c. s.....       | 20 oz. fl.       | .. | 1000 c.c. |

Tritúrase el carmín en polvo fino en un mortero de Wedgewood, y añádese la solución de amoníaco, y después la glicerina, bajo una trituración constante. Pásese la mezcla á una cápsula de porcelana y caliéntese en un baño-maría, agitando constantemente, hasta que el líquido queda libre de olor amoniacal. Luego enfriese y añádese bastante agua para hacer 20 onzas fluidas (1000 c.c.).

## Jabón Natural

Nicaragua puede alabarse de poseer un lago cuyas aguas están tan impregnadas de bicarbonato de potasa y sosa, que cuando se restriegan en una cabellera grisienta se forma un jabón natural. No sólo se emplea esta agua como lavado para la cabeza, sino que poniendo un poco de grasa en las manos, puede prescindirse enteramente de jabón.

El agua diluida dícese poseer propiedades medicinales; con todo, los naturales no han hecho ningún esfuerzo para establecer un negocio. La exportación el año pasado fueron cuatro garrafones enviados á Guatemala.

### Esterilización del Catgut

Petit ha probado de macerar el catgut en aceite fenicado, hallándolo impracticable, porque el procedimiento toma un año para que la esterilización sea completa, y el producto queda resbaladizo al tacto. Sumergiéndolo en una solución de nitrato de plata hasta quedar ennegrecido el gut, y el método de esterilizarlo al calor seco de 150° C., endurecieron ambos el gut, siendo difícil atarlo. El acetono tampoco se halló que fuese mejor para el objeto que el alcohol absoluto, y fué rechazado por su olor desagradable. El método inglés de remojar primeramente el catgut en formaldehído y después en agua hirviendo por algún tiempo dependiendo del espesor del gut, es en opinión del autor un proceso demasiado complicado para tenerlo como inmejorable. El más práctico y seguro, como resultado de sus experimentos, es el método del alcohol absoluto. La esterilización se efectúa primeramente calentando gradualmente el gut á 130° C. por espacio de media hora. En este estado se halla ya bastante agotado de agua, y como consecuencia algo quebradizo; poco antes de usarlo se coloca en agua esterilizada, ó en cualquiera solución antiséptica de la que se empapa, y recobra su flexibilidad, elasticidad y fortaleza, pudiendo dependerse de él como sutura perfectamente estéril.

### Remedio para la Diabetes

El Dr. Silas G. Soules, escribe lo siguiente al *Boston Medical and Surgical Journal*: Después de investigar más de un año he hallado un específico para la diabetes melitus. Debería administrarse en dosis de 5 á 10 gr. inmediatamente después de cada comida, no debiéndose tomar en absoluto ninguna clase de alimento entre las comidas. El remedio es el ácido benzoico y sus compuestos. Convendrá administrarlo por algunas semanas, resumiendo gradualmente una dieta mezclada. No debería tomarse azúcar por espacio de algunos meses.

Aunque parezca temprano la presentación de mi informe, el único móvil que me ha guiado, es, que á haber aguardado hasta que el remedio tomase su puesto en la terapéutica, muchos miles de personas habrían sufrido á consecuencia de tan abominable enfermedad.

### NOTAS COMERCIALES

**HISTORIA DE LAS MEDICINAS DEL DR. SCHENCK.**—Hace 70 años que un joven nacido en la región arenosa de New Jersey, se dirigió á Filadelfia en busca de trabajo. Había aprendido el oficio de sastre, pero víctima de mala suerte, su salud era delicada y en la ciudad de los cuáqueros tuvo que acudir á varios médicos sin conseguir de las medicinas alivio para sus dolencias, y en tan precario estado regresó á su ciudad natal. Víctimas de insidiosa tisis el joven había visto morir á su padre y á sus hermanos y hermanas. Y esa era en efecto, según opinión facultativa, la afección que aquejaba á este joven, á quien consideraban incurable. Pero la Providencia le reservaba días más felices, porque una anciana mujer, que vivía en el campo, habiendo sabido del enfermo le trajo un día un frasco con medicina que ella misma había compuesto. Probar una cosa más para él, que había tomado tantas cosas fué fácil, pero el resultado fué diferente, pues empezó á sentir algún alivio, recobrando al mismo tiempo las fuerzas perdidas; la mejora adelantó gradualmente, y al cabo de un año de tomar aquella

medicina el enfermo había renunciado á la idea de que había de morir, puesto que había sanado.

Y siendo éste un caso tan excepcional, la noticia de la curación divulgóse por toda aquella región campestre, y con la salud el joven adquirió además la receta que lo había curado al morir la anciana mujer. Sucedió lo que era natural, que muchos afligidos de la insidiosa enfermedad sitiaron al joven en demanda del Jarabe para la Tos; él lo preparaba gratis para sus vecinos, circunstancia que aumentó su pobreza. Después pensó en cargar un precio nominal para cada pomo del jarabe; pero aun así, la demanda aumentó tanto, que con los aparatos que tenía para la preparación en el pueblo rural de Flemington, donde vivía, no podía abastecerla; además había añadido al remedio nuevos ingredientes dictados por su experiencia; había llegado el momento para tomar una decisión; sus vecinos le aconsejaban que aumentase el campo de sus operaciones, para que todo el país tuviese ocasión de probar las virtudes del Remedio para las Afecciones Pulmonares; decidió en su vista, volver á Filadelfia, donde antes había creído morir; allí se estableció, empezando desde luego la fabricación del JARABE PULMONAL DE SCHENCK; divulgóse la fama del remedio para las afecciones de la garganta y los pulmones, extendiéndose por todo el país. Los médicos empezaron á recetarlos, y con tal consumo, ni los aparatos para hacerlo, ni el edificio que servía de laboratorio tenían la capacidad para suplir la demanda. Mr. Schenck, que dirigía la fabricación, completó sus estudios de medicina, para hacer desde luego una especialidad de las enfermedades de la Garganta y Pulmones; dedicóse á la preparación de otros remedios simples para cooperar siempre con la acción del JARABE PULMONAL; tales eran, tónicos y laxantes. El ejercicio de la medicina le ofreció muchas facilidades para ensanchar el campo de sus conocimientos de las afecciones que atacan el sistema humano.

Después de larga experiencia y ensayos prácticos, el doctor Schenck produjo el TÓNICO DE ALGAS SCHENCK, que cual el remedio más antiguo, es un compuesto de naturaleza vegetal. Las algas marinas hace tiempo son conocidas por sus virtudes medicinales. En época ya tan atrás como el «Desembarco de los Peregrinos», esta hierba ya se utilizaba por aquellos que vivían á lo largo de la costa. Posee propiedades tónicas, es agradable y benéfica para la debilidad. En el Tónico del Dr. Schenck entran los mejores elementos de las salgas combinados con otros ingredientes vegetales, de lo cual resulta una medicina que entona el sistema en todos los casos de enfermedad. Es inofensiva al tiempo que potente.

Otros de los remedios conocidos son las

#### PILDORAS DE MANDRAGORA

compuestas de los principios activos del podofilo, y las descubrió el Dr. Schenck. Estas tres medicinas hace ahora 70 años que se conocen en el mercado, y no se han disputado sus virtudes. Se completan en su acción terapéutica. Las tres las utilizan los médicos en el ejercicio de su profesión. Son, en efecto, remedios de la Naturaleza, sin un solo ingrediente nocivo en ellos. La demanda del público para estos remedios aumenta constantemente. El antiguo edificio donde el Dr. Schenck hacía sus preparados ha sido reemplazado por una fábrica de seis pisos, situada en Sixth and Arch Streets, Filadelfia, donde el Dr. Schenck tiene instalados los aparatos más modernos para hacer medicinas.

Para terminar diremos que el primer doctor Schenck habiendo vivido cuarenta años, después de haberse dicho que muriéndose de tisis. Ha tomado á su cargo el negocio el Dr. J. H. SCHENCK, educado en los mejores colegios de los Estados Unidos, y se graduó en el afamado Colegio Jefferson, de Filadelfia. Educado en la experiencia de su padre en la preparación de sus tan conocidos remedios es su personalidad una garantía de la excelencia de los mismos.

Pago adelantado, Estados Unidos, Canadá, México, Cuba, Puerto

Rico, Hawaii y las Filipinas ... (oro americano) \$1.50

Otros países (franco de porte) ..... \$3.00

Las suscripciones pueden empezar en cualquier tiempo.

«THE AMERICAN DRUGGIST AND PHARMACEUTICAL RECORD» sale el segundo y cuarto lunes de cada mes. Todo cambio de anuncios debe ser recibido diez días antes de la fecha de salida.

Remesas deben hacerse con libranzas sobre Nueva York, giros postales internacionales ó por expreso ó correo en carta certificada. Toda correspondencia debe dirigirse á la AMERICAN DRUGGIST PUBLISHING CO., 62-68 West Broadway, New York, U. S. A.

## LA ASOCIACION FARMACEUTICA AMERICANA

**C**ONTINUAMOS el extracto de las labores de la Asociación que empezamos á publicar en el número anterior.

### ANALISIS DE LAS EMULSIONES

Según el informe presentado por L. F. Kebler y Geo. W. Hoover, de Washington (D. C.), de un examen llevado á efecto de cuanto se ha escrito sobre análisis de emulsiones, resulta ser relativamente muy poco lo que se conoce sobre este asunto, limitándose más bien el conocimiento á la determinación de la parte grasosa de estas preparaciones. Si bien se considera que el aceite de hígado de bacalao y otros cuerpos grasos son los constituyentes esenciales de las preparaciones, no puede negarse que hay numerosos agentes medicinales que ejercen un efecto saludable, al paso que también puede haberlos nocivos. Al determinar el valor terapéutico de una emulsión deben tomarse en consideración estos agentes, pues podría suceder que el agente emulsionador no ejerciese la función de nutritivo.

Al estudiar los métodos analíticos aplicables á emulsiones, se prepararon en el Laboratorio 14 emulsiones de composición conocida, y compráronse además en el mercado 11 preparaciones de componentes desconocidos. Entonces se analizaron todas estas emulsiones de la manera tan completa como fué practicable, y los datos obtenidos se ideó un proyecto de análisis que incluía la identificación y determinación, más ó menos completas de substancias inorgánicas, materia grasa, cuerpos grasos, alcohol, benzoatos, salicilato, sacarina, azúcar, enzimas y agentes emulsionadores. Se describieron los métodos empleados, y los

datos analíticos obtenidos por su medio se dieron en forma tabular. Por vía de comparación también se dieron los conocidos promedios de las composiciones de las emulsiones preparadas en el Laboratorio de Drogas.

### MODIFICACION PROPUESTA DE LA PRUEBA DE KELMER PARA EL FORMALDEHIDO

A. B. Lyons, de Detroit, presentó un informe sobre este asunto. La prueba de Kelmer es aplicable solamente á la leche ó á una mezcla de la solución con leche de que se sospecha. La leche contiene albuminoides de cuya presencia depende la reacción del color. En la modificación de la prueba propuesta por Lyon, se reemplaza la leche por la peptona de carne. Juzgóse esencial que hubiese una proporción correcta en los varios reactivos relacionados con la prueba. Al emplear un reactivo, simplemente para labor rutinaria, se recomienda una mezcla de un volumen de la tintura oficial de cloruro férrico en veinte ó veinte y cinco volúmenes de ácido sulfúrico fuerte. El procedimiento adoptado se describe á continuación: Póngase en un tubo de prueba 2 c.c. de la solución que ha de ensayarse (destílese si fuese necesario). Añádese 20 mm. de peptona de carne; sacúdase el tubo y añádese con una pipeta 2 c.c. del reactivo, permitiendo que se escurra hacia abajo por el lado del tubo inclinado, para que así quede una capa distinta en el fondo. Hágase un ensayo por duplicado, permitiendo que un tubo esté en reposo para el desarrollo de la zona de color. Mézclese el contenido del otro tubo agitándolo al efecto, y obsérvese el cambio de color. Límite de la prueba 1:4,000,000 formaldehido.

### METODO EXPEDITO PARA LA DETERMINACION DEL TRIOXIDO DE ARSENICO

Charles E. Caspari y Leo. Suppan, de St. Louis, dieron cuenta de un informe valioso sobre este asunto. Los métodos iodométricos empleados en la actualidad para la determinación del trióxido de arsénico, envuelven pérdida de tiempo si el trióxido se disuelve á una temperatura ordinaria en bicarbonato de sosa, ó si se comete un error debido á la acción del iodo ó carbonato de sosa, el cual se forma del bicarbonato si se lleva á cabo la solución á temperaturas más altas. El método descrito por sus autores tiene por objeto salvar estas dificultades, permitiendo efectuar la determinación del trióxido de arsénico en diez minutos, con un error máximo de 0.2 por ciento.

### ANALISIS DE LA PLANTA MEXICANA TECOMA MOLLIS H. B. K.

El material de plantas empleado en este análisis fué sometido al departamento de Agricultura de Washington, acompañado del informe de que los habitantes de ciertas regiones de México lo empleaban hasta cierto punto para el tratamiento de enfermedades, y en la creencia de que un examen revelaría la presencia

de constituyentes medicinales valiosos, que justificasen dar pasos para el cultivo y propagación de esta planta en los Estados del Sur, L. F. Kebler y A. Seidell del negociado de química prepararon una memoria de que se dió cuenta.

El nombre vulgar de esta planta, si es que lo tiene en la localidad en que crece, no ha podido aun conseguirse. Habiéndose sometido al Museo Nacional un espécimen consistente en flores, fruta, tallos y hojas, se reconoció con el nombre de *Tecoma Mollis*, H. B. K., familia Bignoniácea. También se anunció que esta planta era indígena de Colombia, Perú y Chile, y conocida en aquellos países por los nombres siguientes: *Tecoma sorbifolia*, H. B. K.; *Tecoma stans* y *velutina*, D. C.; *Stenolobium molle* y *Bignonia tecomoides*, D. C.

Después de un estudio detenido de la literatura relacionada con plantas medicinales, nada se halló respecto á haberse hecho ninguna investigación de esta planta bajo los nombres expuestos arriba, aunque fuera posible que se hubiesen hecho observaciones sobre la misma, bajo algún nombre local. Para este análisis, empleáronse sólo hojas. Se efectuaron análisis completos por los métodos de Dragendorff y de Parsons, habiendo mostrado los resultados que la *Tecoma mollis* no contenía alcaloide ni ningún otro constituyente de naturaleza medicinal bien definido. Aprecióse un principio amargo soluble en alcohol diluido, al que probablemente se debían las virtudes medicinales que la planta posee.

#### PIGMENTOS DE PLANTAS

La monografía que sobre este asunto han escrito los señores J. W. Brandel y Edward Kremers, de Madison (Wisconsin) representaba varios años de trabajo, que arrancan del descubrimiento de la timoquinona, hidrotimoquinona y timoquinhidrona en aceite de *Monarda fistulosis*. El preámbulo que precede á la monografía es una revista histórica de las varias hipótesis concernientes á los pigmentos de plantas, casi todas las cuales estaban basadas prácticamente en muy poca ó ninguna evidencia experimental, careciendo también de una base química exacta. La primera parte de este estudio está dedicada á la clasificación química de todos los pigmentos de plantas de estructura conocida con relación á sus hidrocarburos, y la clasificación de éstos principalmente, según su grado de saturación se habían revelado muy notables analogías, exponiéndose generalizaciones respecto al color y constitución del mismo. La segunda parte estaba dedicada á la clasificación botánica de pigmentos de plantas, revelando la extensión del trabajo efectuado en este sentido, y también analogías, que podrán servir de guía al futuro investigador. Asimismo, hechos conocidos desde mucho tiempo que estaban aguardando una interpretación racional quedaron definidos, estudiados desde el punto de vista de la hipótesis quinhidrona. De esta interesante y larga monografía sólo pudo incluirse un extracto en las actas de las sesiones de la Asociación.

LINIMENTO PARA LAS ULCERAS. — Glicerina, 30 gramos; extracto de sanguinaria del Canadá, 0.50.

Mójese una planchuela de hilas y se aplica sobre la úlcera cuya cicatrización se quiere apresurar. Esta mezcla pasa por haber prestado servicio en los casos de podredumbre de hospital. — *Vander Espt.*

#### Breve Relación Histórica de Remedios Sintéticos y de su Fabricación (\*)

Por WM. JAY SCHIEFFELIN, Ldo. en F., New York

En época ya tan remota como el año de 1541, Paracelsus anunció que el éter poseía propiedades para provocar el sueño; con todo, transcurrieron 300 años antes de que su empleo como anestésico en operaciones quirúrgicas fuese sugerido por los americanos Jackson y Morton.

El cloroformo fué descubierto en 1831 por Samuel Guthrie en los Estados Unidos, y próximamente en aquella fecha por Souberain en Francia, y Liebig en Alemania. Poco tiempo después de emplearse el éter como anestésico se empleó el cloroformo.

Liebig fabricó el clorol hidratado en 1831; en 1869 Liebreich dió á conocer su valiosa potencia hipnótica.

El iodoformo se preparó primeramente por Serullas en 1832, y si bien en 1836 ya se conocían sus propiedades terapéuticas, sólo fué en 1880 cuando empezó á extenderse su aplicación como apósito para heridas.

Kæmig dió á conocer en 1882 la cairina (hidro etiloxiquinolína), primer sustituto sintético de la quina. Si bien fué pronto reemplazada por la antipirina y fenacitina, su introducción al público es de interés histórico por señalar la entrada de la época de los sintéticos modernos.

Desde que Graebe y Liebermann lograron fabricar la alizarina artificial en 1868, la manufactura de tintes de anilina había tomado enormes proporciones, dedicándose un gran número de químicos en obtener varios derivados de los productos de la destilación del coaltar. Al introducirse en el mercado la cairina, estos mismos químicos prestaron su atención á productos farmacéuticos, haciendo ensayar fisiológicamente cada uno de los nuevos derivados, y como consecuencia de la actividad desplegada en esta dirección, bien pronto se impusieron á la facultad médica centenares de nuevos remedios, antipiréticos y analgésicos, antireumáticos y diuréticos, anestésicos é hipnóticos, midriáticos y tónicos, alterantes y sedativos, desinfectantes y parasitocidas, astringentes y contra-irritantes. En el espacio de veinte años han aparecido probablemente 2,000, de los cuales quizás 1 por ciento, se admitirán como adiciones permanentes ó estables en la materia médica. Hasta que un remedio no se haya consumido extensamente por diez años, puede considerarse que se halla todavía en su estado experimental.

La química orgánica adelantó más en Alemania que en Francia, Inglaterra ó los Estados Unidos; de aquí que casi todos los remedios sintéticos vinieran de los laboratorios de Alemania. La aparición de incontables mixturas teniendo como principal ingrediente la acetanilida expuso al supremo ridículo los métodos sintéticos americanos, habiéndose proclamado aquellas mixturas por sus autores como nuevos compuestos químicos y grandes descubrimientos americanos. Casi todos esos sintéticos imitados han desaparecido para nosotros un reproche que haya todavía uno que sobreviva, pues no puede negarse que presente un producto con pretensiones falsas atrae el descrédito.

Los legítimos remedios sintéticos que representan las varias clases de compuestos de carbón, ex-

(\*) Extracto de una memoria presentada al Congreso Lewis and Clark, celebrado en Portland (Oregon), el 14 de 1905.

su manufactura los procesos y métodos del laboratorio orgánico, y que pueden sumariarse como sigue:

*Químicamente*: Eterificación, saponificación, condensación, halogenación, nitración, diazotación, sulfonación, oxidación y reducción.

*Físicamente*: Solución, decolorización, filtración, cristalización, destilación, sublimación, extracción, evaporación, agitación, desecación, fusión y calentamiento bajo presión.

Los aparatos para llevar á cabo estas operaciones en extensa escala exigen de parte de los proyectores suma habilidad, y buen capital para construirlos. Los materiales que se emplean en los vasos para pruebas de ácidos son vidrio, porcelana, loza, hierro esmaltado, plomo químico, bronce, aleación blanca y madera asfaltada ó alquitranada.

Los auxiliares mecánicos comprenden bombas, compresores, pulverizadores, conductores, separadores centrífugos, sopladores, aventadores, inyectores, batidores, alambiques de vacío, secadoras, autoclaves y baños de temperatura constante.

Las bombas rotatorias empleadas para recoger arenillas, tienen sorprendente fuerza y capacidad, y con su ayuda pueden traspasarse precipitados fuertes con tanta facilidad como si fueran fluidos.

Los autoclaves con cabida de 500 litros, forrados de materiales á prueba de ácidos, con envoltentes de alta temperatura, permiten revolver y agitar bien el contenido bajo una presión de 60 atmósferas.

La relación del autor da aquí las reacciones para la formación de los sintéticos admitidos en la nueva farmacopea de los Estados Unidos: acetanilida, antipirina, bromoformo, cloralformamido, hexametileno-tramina, azul metileno, fenacetina, sacarina, sulfonal, trional, uretano y vanillina.

En el final de la memoria se predice que en el futuro se producirán otros poderosos y útiles remedios sintéticos, y si el químico no llega á crear nuevas sustancias para sustituir la morfina, quinina y cocaína, probablemente hará estos alcaloides sintéticamente, y también productos animales como la adrenalina.

LISTA DE SINTETICOS PARA LOS CUALES HAY UNA DEMANDA DE A LO MENOS 1,000 ONZAS AL AÑO, CON SINONIMOS QUIMICOS. SU EMPLEO EN LA MEDICINA ESTA INDICADO COMO SIGUE:

Formaldehido, Aldehido fórmico. VI.  
Geosota, Valerianato de guayacol. V.  
Hedonal, Uretano metilo propil-carbinol. XI.  
Helmitol, Citrato hexametileno tetramina anhidro metileno. IX.  
Heroína, Eter diacetílico de morfina. XV.  
Holocaina, Paradietoxi etenil difenil amidina hidroc. oruro. II.  
Hipnal, Monocloral antipirina. XI.  
Hipnona, Acetofenona. XI.  
Iatrol, Oxi-iodo-metil anilido. VI.  
Iodoformo, Melano triiodado. VI.  
Iodol, Tetraiodopirrol. VI.  
Lactofenina, Láctil fenitidina. IV.  
Losofano, Meta cresol triiodado. XIV.  
Licetol, Tartrato de dimetilpiperazina. IX.  
Lisidina, Metil glioxalidina. IX.  
Mesotano, Metil oxi metil éter de ácido salicílico. V.  
Neurodina, Acetilpara-oxifeniluretano. IV.  
Nitrito de etilo. III.  
Nosofeno, Tetraiodofenoltaleína. VI.  
Orfol, Beta naftol bismuto básico. VI.  
Ortoformo, Eter-parametilamido-oxibenzoico. II.  
Piocanino Amarillo, Imido-tetra-metilo-dipara-amido difenil metano. VI.  
Piocanino Azul, Hidrocloruro de penta y hexa-metil para-rosanilina. VI.  
Piperazina, Dietileno diamina. IX.  
Piperonal, Eter metileno de aldehido de protocatecnico. VI.

Piramidon, Dimetilamido fenil dimetilpirazon. IV.  
 Protargol, Proteína de plata. VI.  
 Purgatina, Eter diacetil de antrapurpurina. XVII.  
 Quinosol, Oxi quinolin sulfonato de potasa. VII.  
 Quinotropina, Quinato de urotropina. IX.  
 Resorcina, Meta dioxo bencina. VI.  
 Sacarina, Benzoil sulfonimido.  
 Salacetol, Salicil-acetol. VI.  
 Salipirina, Salicilato de antipirina. VI.  
 Salol, Salicilato fenítico. V.  
 Salofeno, Salicilato acetil-para-amido-fenil. V.  
 Saloquinina, Eter salicílico de quinina. IV.  
 Sidonal, Quinato de piperazina. IX.  
 Sidonal, nuevo, Anhidrido de ácido quínico. IX.  
 Sulfonal, Dietilsulfondimetilmetano. XV.  
 Tanalbina, Albuminato de tanino. VII.  
 Tanígeno, Acetil tanino. VII.  
 Tanoformo, Metileno ditano. VI.  
 Tanopina, Hexametileno tetramina tanino. VII.  
 Teocina, Dimetil xantina. IX.  
 Tiocol, Sulfo-guayacolato de potasa. VI.  
 Tioformo, Salicilato básico de bismuto. VI.  
 Trional, Dietilsulfonometilmetano. XI.  
 Trifenina, Propionil fenetidina. IV.  
 Uretano, Carbonato etílico. XI.  
 Urotropina, Hexametileno tetramina. IX.  
 Valil, Dietilamido de ácido valerianico. XV.  
 Vanillina, Aldehído metílico proto-catecuico.  
 Veronal, Dietilmalonilurea. XI.

### Supositorios con Capa de Parafina

Los supositorios de manteca de cacao conteniendo substancias higroscópicas pueden revestirse de parafina para resguardarlos. El método usual de darles la capa es insertar los supositorios en agujas y luego inmergirlos rápidamente en la parafina derretida, poniéndolos á un lado hasta que la capa ha endurecido. Por supuesto, para este objeto convendrá emplear una parafina que tenga el punto de fusión aproximado al del cacao. Se ha hecho oposición al empleo de parafina, como agente protector, porque el enfermo se olvida á menudo de quitar la capa antes de insertar el supositorio, y entonces no se derrite ó es absorbido como se tenía en vista. Sería conveniente que en la caja que contiene los supositorios se acompañasen instrucciones acerca de la manera de quitar la película de aquellos. El profesor Iconille, dice: que generalmente se prefiere dispensar supositorios que necesitan ser resguardados del aire, enviándolos en botellas con tapón esmerilado, ó en tubos de vidrio, conteniendo uno ó dos supositorios.

### Modo de Vender

El dependiente astuto nunca asusta al parroquiano dándole á conocer desde luego el precio del artículo que ha pedido. Con frecuencia se puede vender al comprador algo por un veinte y cinco por ciento más de lo que estaba dispuesto á pagar, tratando de convencerle acerca de la calidad del artículo y dejando el precio para lo último. Al parroquiano se le enseña desde luego el artículo barato, si lo ha pedido, y sucesivamente el de mejor calidad para que se cerciore de la diferencia, y después se le cotizan los precios. Con tacto, el parroquiano se deja convencer.

### Economía en Utensilios

Los bosquejos que aquí figuran ilustran varios mecanismos útiles ideados por un hombre ingenioso.

La figura 1 muestra la manera de guardar con economía de espacio embudos grandes. Están cogidos por una percha debajo del andén superior y se apoyan en zoquetes de madera de una forma para sostenerlos, y

Fig. 1.

clavados por debajo del andén; cada uno de estos zoquetes lleva una muesca en donde entra el pitón de los embudos que descansan sobre el estante inferior.

La figura 2 enseña la manera de colocar tubos de cristal que contienen remedios, y también las fórmulas de uso frecuente para que estén á mano y salvas al mismo tiempo. En un zoquete de madera de unas 2½ pulgadas de grueso se horadan sistemáticamente un buen número de agujeros de ¾ de pulgada, distantes uno de otro una pulgada, y sobre dos de profundidad. Cójanse varios zoquetes del mismo espesor y dimen-

Fig. 2.

siones y procédase á perforarlos como el primero, sólo que en varios de los bloques los agujeros deberían ser más pequeños que de ¾ de pulgada. Los tubos quedan derechos en estos orificios, saliendo la cabeza nada más que lo suficiente para cogerlos con los dedos. Entre los agujeros se pegan tiras de papel largas para poder asentar el contenido de cada tubo por escrito. Los bloques metidos en artesas se colocan uno por encima del otro, llevando aquéllas su correspondiente asidor.

En la figura 2 se sugiere que las fórmulas que á menudo se usan en las mesas de labor se tengan á mano de la manera descrita. Las fórmulas escritas sobre papel se pegan á una hoja de vidrio, con el escrito en contacto. El vidrio se apoya en toquinos por debajo de un andén inferior de modo que pueda meterse y sacarse resbalando. Cuando se copia la fórmula se saca el vidrio parcial ó totalmente. El resto de las fórmulas debería barnizarse para resguardar de la humedad, etc. Los cantos del vidrio que se pondrán ásperos.

La figura 3 representa un bastidor para y conveniente. Los receptáculos del filtrado se apoyan en un andén de debajo. No pueden entrar en los filtros polvo ni insectos, pues cada uno lleva tapacristal. El bastidor puede arreglarse de un modo poco fondo, ó bien aserrando una caja en dos mitades por su largo. Haciendo un agujero.

Fig. 3.

cada tapadera podría recibir el gollete de una botella de alimentación.

Fig. 4.

El diagrama figura 4 enseña la manera económica de guardar convenientemente tubos de vidrio largos en la parte interior de la puerta de un armario. En el zóquete inferior de madera en que se apoyan los tubos, se han perforado pequeños agujeros para recibir las cabezas de aquéllos. En la cara del zóquete superior se han abierto agujeros de  $\frac{1}{8}$  de pulgada, á igual distancia entre sí que los orificios del zóquete inferior. Luego se abren unas ranuras verticalmente en la cara del zóquete superior y por el centro de los agujeros. Un tapón puesto en cada uno de los agujeros mantendrá en su sitio el tubo respectivo; para sacar éste se saca el primero.

Fig. 5.

La figura 5 ilustra claramente un mecanismo sencillo para guardar una varilla de agitar de vidrio debajo de un andén conveniente. La cavidad se forma de una pieza de cinc, como se ilustra, y se sujeta diagonalmente con tachuelas por debajo del estante. De este modo se tienen á mano las varillas sin que las ataque el polvo.

Fig. 6.

La figura 6 ilustra una percha para recetas. Ya en uso en Filadelfia. Debería medir aquélla sobre tres pies de alto, y poder contener varias colecciones

de recetas de algunos años. La extremidad de cada alambre en la parte inferior de la colección se dobla alrededor de un ojete de hierro atornillado en el larguero de la percha. El otro cabo del alambre en la parte superior de la colección se dobla formando un ángulo corto para solicitar un ojete de la armazón opuesta á la del primer ojete, y las colecciones de esta manera quedan suspendidas horizontalmente. La extremidad del alambre de arriba la colección puede fácilmente soltarse cuando han de registrarse nuevas recetas. Cuando se ha de volver á poner una receta, ésta se sujeta en un bloque de madera con resorte. La percha está montada sobre roldanas. — *Western Druggist*.

### El Olor de la Antigua Botica

Firmada «Apothecary,» nos escriben una carta desde Massachusetts, que no deja de ser interesante, particularmente para las personas de cierta edad que en sus juveniles años frecuentarían seguramente la botica aspirando el olor peculiar que compenetraba todo el recinto, y que aun hoy día, después de tantas evoluciones como ha sufrido el ramo de farmacia, afecta los sentidos tan luego de pisar uno de estos establecimientos. Es indudable que muchos jóvenes eran como hinoptizados por el olor y se volvían farmacéuticos. Recordamos haber leído una narración, hace años, acerca de un viajante, que había antes trabajado algún tiempo en una botica, y quien al regresar de uno de sus viajes presentóse muy temprano por la mañana á su antiguo establecimiento, y al abrirlo el dependiente le pidió permiso para respirar una vez más el ambiente que le había embriagado los sentidos.

Pero volvamos á la carta que hemos mencionado arriba y que á la letra dice: «En otros tiempos las boticas emitían constantemente un perfume agradable, suave, que atraía á la gente; pero las farmacias modernas carecen de esa atmósfera, los olores son diferentes. ¿Cómo podría el que suscribe resucitar aquel antiguo olor ó perfume que era un misterio para el lego y que todo el mundo deseaba aspirar? Recibiría con gratitud cualquiera sugestión que respondiese á mi ruego.»

Todos los días leemos de artistas, literatos, pintores, que tratan de «crear una atmósfera,» ó de atraer á los lectores, expectadores ú oyentes para que se compenentren de la atmósfera por ellos creada. ¿Quién no ha oído de la «atmósfera literaria;» de la «atmósfera de los pueblos universitarios,» de la «atmósfera artística del Quartier Latin de París?» Pues lo que constituye esta «atmósfera» no podría expresarse con ningún grado de exactitud; parece como si un número de factores la formasen.

Nosotros estamos inclinados á decir que la atmósfera de las antiguas boticas estaba formada de tantas cosas, que desafiaban el análisis, como cualquiera otra atmósfera que hemos mencionado. En aquellos tiempos los boticarios manejaban más substancias crudas, muchas flores que secaban en el establecimiento, no pocas raíces, pepitas de frutas, todas más ó menos odoríferas, y con estos materiales manufacturaban mucho más que ahora. Tenían muchas esencias etéreas y no vendían la variedad de artículos ajenos á la farmacia, causa de que las puertas de la botica se cierran y abran constantemente renovando ó maleando el aire fresco el ambiente especial de las drogas. Antes una farmacia era una especie de santuario, hoy es un comercio como otro cualquiera. — *Drug Circular*.

## Linimentos Medicinales

**LINIMENTO PARA EL PRURITO.** — (a) Agua de cal, 30 gramos; glicerina, 30; aceite de almendras, 60. Recomendado para calmar el prurito del ano, tan frecuente en la artritis. — *Bazin*.

(b) Acido fénico, de 4 á 6 gramos; licor de potasa, 4; aceite de linaza, 30. Agítese antes de emplearlo en unturas. — *Bennet Brouson*.

**LINIMENTO PARA EL PRURITO VULGAR.** — Cloroformo, 8 gramos; aceite de almendras dulces, 60. Mézclense.

Para aplicar sobre las partes pruriginosas, según necesidad. — *Scanzoni*.

**LINIMENTO PARA LAS QUEMADURAS.** — (a) Agua de cal, 345 gramos; aceite de linaza, 120; yemas de huevos, núm. 4. Se batan las yemas con el aceite en un mortero de mármol, y añádase á porciones el agua de cal, agitando fuertemente la materia á cada adición.

Se aplica humedeciendo las compresas ó las planchuelas que cubren las quemaduras. — *H. de M. y H. M. E.*

(b) Agua de cal, 200 gramos; agua de rosas, 80; glicerina, 30; goma tragacanto, de 2 á 15. Disuélvase poco á poco la goma tragacanto en el agua de cal, agitando vivamente para impedir que se agrume; se añade el agua de rosas y luego la glicerina.

Recomiéndase para combatir las quemaduras superficiales, las escoriaciones y las grietas de los labios y pechos. — *Beasley*.

(c) Agua de cal, 283 gramos; acetato de plomo, 0.66; aceite de linaza, 283; ácido fénico, 28. Mézclense las dos primeras sustancias y adiciónense las demás.

(d) Aceite de olivas, 50 gramos; agua de cal, 60; salol, 10; tintura de opio, 10. — *Nicot*.

(e) Aceite de olivas, 60 gramos; salol, 10; agua de cal, 10; clorhidrato de cocaína, 0.50. Hágase según arte linimento.

Para uso externo. — *G. Reboles*.

**LINIMENTO PARA LOS SABAÑONES.** — (a) Láudano de Rousseau, 2 gramos; glicerina, 10; manteca de cacao, 2; aceite de olivas, 30. Introdúzcase en la mezcla una planchuela de hilas, que se pone en seguida en los sabañones no ulcerados.

(b) Alcanfor, 4 gramos; esencia de trementina, 30. Disuélvase y frótense con él los sabañones, antes de que se ulceren. — *Golfin*.

(c) Alcanfor, 5 gramos; alcohol rectificado, 12; glicerina, 20.

Muchas unturas al día sobre los sabañones no ulcerados.

(d) Alcanfor, 20 gramos; amoníaco líquido, 20; alcohol rectificado, 300; esencia de manzanilla, 3; esencia de enebro, 3. — *Richardin*.

(e) Bálsamo del Perú, 1 parte; bálsamo nervino, 2; agua de Colonia, 3. — Mézclense.

**LINIMENTO PARA LOS SABAÑONES NO ULCERADOS.** — Tintura de iodo, 5 gramos; licor de Labarraque, 25. Mézclense.

Se dan ligeras unturas sobre la parte enferma, y luego se seca al calor de la lumbre. — *Somolinos*.

## Nuevo Anestésico

(INFORME DE UN CONSUL DE LOS ESTADOS UNIDOS)

De un árbol que crece en el Africa occidental llamado por los naturales *yohimbehe*, se ha preparado un alcaloide llamado *yohimbine*, el cual cristaliza en forma de agujas cual seda de color blanco, y es soluble sin dificultad en alcohol, éter y cloroformo, aunque imperfectamente en agua. Se han analizado con detención las propiedades de este preparado, dando importantes resultados. Usualmente se emplea una sal de cloro de yohimbine que se descompone fácilmente. Las inyecciones hipodérmicas de yohimbine dan por resultado la anestesia local que se prolonga unas dos horas. Causa la insensibilidad de la córnea y de la fascia del ojo cuando se dejan caer unas gotas sobre las partes afectadas.

El médico italiano Dr. Magnani, acaba de publicar, en el *Annali di Oftalmologia*, sus experiencias efectuadas con yohimbine en oftalmología, según las cuales primero causa una comezón en el ojo, pero disminuye la sensibilidad de la córnea en dos minutos y la vuelve completamente insensible en diez minutos, durando entonces la insensibilidad por media hora. Los efectos en la pupila son imperceptibles y la adaptabilidad del ojo no queda afectada.

Después de la aplicación de la solución se efectúa un aflujo de sangre al ojo, de cuyo hecho deduce el Dr. Magnani que la yohimbine puede ser útil en enfermedades crónicas del ojo que necesitan que se aumente el abasto de sangre al ojo. La prefiere á la tropococaina con motivo de prolongar el estado anestésico, y á la cocaína porque no lastima los tejidos y no impide la nutrición sana de la córnea; además tiene la ventaja de no ser venenosa.

Según el *Medical News*, dos oculistas de los Estados Unidos informan que practicaron experiencias en sus personas respectivamente con soluciones de yohimbine de fuerza diferente habiendo sido favorables los resultados.

## Para Quitar Pintura y Barniz Viejo y Endurecido

En la *Revista de Productos Químicos*, A. Eberson recomienda el siguiente procedimiento para quitar enteramente la pintura ó barniz gastados sin deterioro de la superficie:

Prepárese una mezcla de alcohol, 55 partes; benzol, 20 partes; carbón disulfido, 25 partes; cera, 5 partes. Esto forma una masa glutinosa la que se aplica á la superficie en que está la pintura ó el barniz los que no tardan en ablandarse, y es fácil entonces rascarlos. La cantidad de cera que se use depende de la consistencia que se desee para la mezcla, y se añade solamente para impedir que la evaporación del carbón disulfido y del benzol sea demasiado rápida. El alcohol puede reemplazarse por 30 partes de espíritu de madera (alcohol metilo) y 25 partes de acetona. Primeramente disuelve la cera en una mezcla del carbón disulfido del benzol y la acetona, y añádese el alcohol á la solución. Un procedimiento semejante debería seguirse el primer caso, disolviendo la cera en el benzol y carbón disulfido, y añadiendo el alcohol después. lugar de cera puede emplearse parafina ó ceres como preventivo de la evaporación. El resblandimiento de las capas también se precipita añadiendo aceite ó grasas.

## Píldoras de Blaud Hechas con Aceite

Hemos de referirnos á una controversia ocurrida recientemente acerca del valor relativo del jarabe simple, miel de abejas, ó aceite de hígado de bacalao para la formación de la masa para la píldora Blaud. Un farmacéutico abogando por el jarabe, dice que el color del amasijo que se hace con él le deja satisfecho, mientras que las masas preparadas con aceite no merecían en modo alguno el nombre de píldora, siendo el color muy pobre é imposible de manipular bien para píldoras ó cápsulas.

El otro contendiente, que era médico, habría leído quizá en el *Deutsche Medizinische Wochenschrift* acerca de la nueva forma para hacer la píldora Blaud, ideada por Meissner, quien ha manifestado que al preparar su famosa píldora de hierro tenía en vista que se formase en el estómago del enfermo, por una simple transposición química, carbonato ferroso y sulfato potásico. Con todo, en la práctica, dice, en el curso de la manufactura de las píldoras se forman el hidrato ferroso y férrico en cantidad, con motivo de la transmutación de una porción del carbonato ferroso en estas sustancias en presencia del agua. Meissner, empeñado en mejorar esta fórmula, ha ideado lo siguiente:

|                                       |              |
|---------------------------------------|--------------|
| Sulfato de hierro desecado.....       | 9.00 gramos  |
| Carbonato sódico desecado.....        | 7.50 gramos  |
| Aceite de hígado de bacalao anhidroso | 12 00 gramos |

Con esta mezcla se llenan las cápsulas, tomando la precaución de excluir todas las burbujas de aire para impedir la posibilidad de toda oxidación. La reacción se efectúa en el estómago y forma carbonato ferroso y sulfato sódico, siendo útil este último para aliviar el estreñimiento que por lo regular sobreviene. El aceite de hígado de bacalao tiene por objeto defender el estómago de la acción cáustica del sulfato ferroso antes de que se transforme en carbonato.

## Determinación del Anhídrido Fosfórico en Comestibles

Fleurent, en el *Bull. Soc. Chim.*, expone el método siguiente: Si la sustancia contiene mucha humedad se seca y pulveriza. Después se pesan 10 ó 20 gramos, se colocan en un frasco cónico de 300 c.c., y se cubre con 50 ó 100 c.c. de ácido nítrico, cuya gravedad específica sea 1.48. Luego se calienta el todo con cuidado, y las evoluciones violentas de gas se dominan simplemente dando vueltas al frasco, cuando sea necesario. Cuando la acción ha moderado se evapora el líquido hasta quedar solamente en el frasco unos c.c., y luego se deseca en absoluto en un horno á 110-120 C. El residuo seco se trata con 15 á 20 c.c. de una mezcla de dos partes de ácido sulfúrico fuerte, y una de fumante; dese 1 gm. de mercurio metálico, y la materia orgánica es destruida calentando, precisamente como en la erminación del nitrógeno de kjeldahl. El ácido lido enfriado se diluye entonces con cuidado, se neutraliza con amoníaco, filtrase, lavándose el filtro con mezcla de solución de amoníaco 50 c.c., cloruro único 20 gm., y agua para hacer 100 c.c. La solución obtenida de esta manera, libre de materia orgánica, se precipita con una mezcla de magnesio, conduciéndose de la manera acostumbrada la determinación.

## FORMULAS CANADENSES

POLVOS DE ACACIA COMPUESTOS (*Pulvis Acaciae Compositus*)

|                               |          |
|-------------------------------|----------|
| Acacia pulverizada.....       | 5 partes |
| Tragacanto pulverizado.....   | 5 »      |
| almidón pulverizado.....      | 5 »      |
| Azúcar pulverizada.....       | 5 »      |
| Acido bórico pulverizado..... | 1 »      |

Tritúrense los polvos juntos hasta que estén bien mezclados.

ESPIRITU DE NARANJA COMPUESTO (*Spiritus Aurantii Compositus*)

|                                |             |              |
|--------------------------------|-------------|--------------|
| Aceite de corteza de naranja.. | 4 oz. fl.   | 200 c.c.     |
| Aceite de limón.....           | 1 oz. fl.   | 50 »         |
| Aceite de coriando.....        | 3 drac. fl. | 12 mns. 20 » |
| Aceite de anís.....            | 48 mns.     | 5 »          |
| Alcohol desdorado, s. c.....   | 20 oz. fl.  | 1000 »       |

ESPIRITU DE NARANJA (*Spiritus Aurantii*)

|  |           |         |
|--|-----------|---------|
| Aceite fresco de corteza de naranja dulce. | 1 oz. fl. | 10 c.c. |
| Alcohol desdorado.....                     | 9 oz. fl. | 90 c.c. |

Mézclese.

SAL DE CARLSBAD ARTIFICIAL (*Sal Carolinum Factitium*)

|                                 |           |
|---------------------------------|-----------|
| Sulfato de sosa desecado.....   | 44 partes |
| Sulfato de potasa.....          | 2 »       |
| Cloruro de sosa purificado..... | 18 »      |
| Bicarbonato de sosa.....        | 36 »      |

Tritúrense los ingredientes, bien desecados con anterioridad, hasta obtener un polvo fino uniforme. El sulfato de sosa desecado se prepara, secando lentamente la sal cristalina hasta que haya perdido la mitad de su peso.

NOTA.—Cincuenta y tres granos por una pinta de agua equivalen al agua de Carlsbad.

ESPIRITU DE ALMENDRAS AMARGAS (*Spiritus Amygdalæ Amaræ*)

|                                |            |         |
|--------------------------------|------------|---------|
| Aceite de almendras amargas    | 70 mrs.    | 10 c.c. |
| Alcohol (95 por ciento).....   | 16 oz. fl. | 800 »   |
| Agua destilada, s. c. p. hacer | 20 oz. fl. | 1000 »  |

Disuélvase el aceite en el alcohol y añádese agua bastante para hacer 20 onzas fluidas (1000 c.c.).

JARABE DE FOSFATO DE CODEINA (*Syrupus Codeinæ Phosphatis*)

|                        |             |           |
|------------------------|-------------|-----------|
| Fosfato de codeina.    | 40 granos   | 4.57 gm.  |
| Alcohol.....           | 7 drac. fl. | 47.5 c.c. |
| Agua destilada.....    | 3 drac. fl. | 18.75 »   |
| Jarabe, s. c. p. hacer | 20 oz. fl.  | 1000. »   |

Disuélvase el fosfato de codeina en el agua y el alcohol y añádese entonces el jarabe.

NOTA.—Se recomienda poseer más estabilidad que el jarabe oficial de codeina. La fuerza es idéntica al jarabe de codeina de la F. B.

JARABE DE JENGIBRE (*Syrupus Zingiberis*)

|                         |           |
|-------------------------|-----------|
| Jarabe de jengibre..... | 1 volumen |
| Jarabe simple.....      | 9 volumen |

Mézclese.

NOTA.—Esta preparación es idéntica en fuerza al jarabe oficial de jengibre.

## NOTAS COMERCIALES

**EMPLEO DE DINERO PROVECHOSO.** — Una de las industrias más lucrativas y más populares es la fabricación de aguas carbónicas llamadas vulgarmente gaseosas, puestas en botellas. Hay miles de personas dedicadas ya á esta industria, quienes ganan más dinero de lo que podrían á tenerlo empleado en otra industria semejante. Hay todavía muchas oportunidades para establecer este negocio, particularmente en México, la América Central y del Sur y de otros países cálidos donde todavía no conoce el público las gaseosas embotelladas. Para emprender este negocio se necesita relativamente poco capital. La Liquid Carbonic Company fabrica gasógenos (en inglés carbonators) y todos los demás aparatos y materiales para hacer las gaseosas puestas en botellas. Pídanse á la Compañía, en Nueva York, el catálogo (impreso en inglés y español) el cual encierra ilustraciones muy interesantes como también precios é informes completos de todos los efectos de compañía.

— La demanda de productos alimenticios de todas clases aumenta constantemente en todo el mundo, siendo las ventas enormes, como sucede con la Leche Malteada, que tiene una reputación universal, y es por todos conceptos un artículo casero porque se consume tanto por el enfermo como por la persona que goza de salud, y así lo toman los viejos como los jóvenes. En los Estados Unidos se fabrican dos preparaciones de esta clase, una de las cuales es la Leche Malteada de Borden que procede del gran establecimiento de la Borden's Condensed Milk Company, New York, E. U. A., la primera compañía que fabricó la Leche Condensada, y la que fabrica en mayor escala productos lácteos en el mundo.

INSTALACION DE LA BORDEN'S CONDENSED MILK CO.

En la reciente asamblea anual de la Asociación Farmacéutica Americana, verificada en Atlantic City, N. J., el sitio de verano más popular en la costa atlántica, esta compañía tenía una instalación especialmente atractiva de su Leche Malteada, como podrá juzgarse por la ilustración que se ve arriba. La Leche Malteada de Borden, bebida apetitosa y nutritiva, es muy solicitada hoy día hasta en las boticas donde se suministra al público desde los aparatos-fuentes. Mientras estuvo reunida la Asociación, durante una semana, se sirvió á los miembros á una temperatura helada, y la compañía dió además á cada uno de aquéllos un bonito *souvenir*.

— La muy conocida casa importadora de George Lueders & Cía., de Nueva York, ha duplicado sus facilidades comerciales recientemente con la adquisición del edificio de cinco pisos situado en el No. 220 de la calle de Pearl que han añadido á su antiguo domicilio en el No. 218 de la misma calle. Dichos Señores tienen en existencia un surtido extenso de Aceites esenciales, Esencias, Habas de vainilla, drogas y productos químicos relacionados con el ramo de perfumería y condimentos. Actualmente tiene la referida casa doce vendedores viajando en representación de la firma, y además del importante domicilio en la ciudad de Nueva York tiene sucursales en Chicago, San Francisco y ciudad de México. Esta casa tiene relaciones de primera en todas partes del mundo, y merece la pena dirigirse á ellos en solicitud de precios, por las ventajas que se obtienen.

— Tratándose de una casa tan antigua en el ramo como la Alcock Manufacturing Company, de Nueva York, cuyos emplastos son conocidos en todo el mundo, no ha de sorprender que personas sin escrúpulos hayan tratado de imitar sus efectos, y como esta compañía ha mirado siempre por los intereses de sus parroquianos al por mayor y menor, permitiéndoles el mayor provecho en la venta de sus efectos, cualquiera de los lectores del AMERICAN DRUGGIST que tenga noticia de la venta de efectos falsificados ó contrahechos, hará un bien al ramo en general, poniendo el hecho inmediatamente en conocimiento de la compañía citada arriba.

— Ya hemos tenido ocasión antes de ahora de referirnos á los efectos fabricados por la American Ferment Company, de Jersey City (N. J.), consistentes en píldoras de polvos en extremo solubles, ó para decirlo más claro, polvos revestidos de un envoltorio de naturaleza muy soluble, en forma de píldora. El antiguo amasijo para píldoras hecho con un excipiente, no puede compararse en solubilidad y valor terapéutico á esta moderna píldora friable que fácilmente se reduce á polvo bajo tenue presión de los dedos, y se pone naturalmente en contacto desde luego con los jugos gástricos del estómago al tragarse. Pueden obtenerse muestras y listas de precios con sólo dirigirse á la compañía, cuyo anuncio se hallará en este número.

— Habrá de interesar seguramente á nuestros lectores el anuncio de la Martin H. Smith Co., de 105 Chambers St., Nueva York, que se hallará en la sección correspondiente de este periódico. Los dos productos que fabrica esta compañía bajo los nombres de Glico-Heroína y Ergoapiol tendrán seguramente muy buena salida en Sud América no sólo por su excelencia tan celebrada ya, sino que también por el hecho de que los fabricantes están interesando á los médicos hispano-americanos por medio de muestras y circular descriptiva. Ambas se enviarán á quien las solicite á la compañía.

**APARATOS-FUENTES PARA GASEOSAS.** — Los artículos que se expenden en el mostrador al detalle y que dejan más ganancia, son las gaseosas, y también las aguas minerales, lo cual puede comprobarse fácilmente, pues no hay botica en los Estados Unidos que no tenga un aparato-fuente. Igualmente hay ganancia en fabricar y embotellar aguas aireadas. No pocas personas estarán interesadas en saber algo de los aparatos y de las casas que los fabrican, siendo una de ellas la American Soda Fountain Company, 278-288 Congress street, Boston, cuya compañía ha recibido numerosos premios en diferentes exposiciones donde ha exhibido sus aparatos, incluyendo grandes premios y medallas de Como la compañía hace importantes negocios con varios países tiene catálogos descriptivos en español, inglés y francés, que resarán seguramente á cuantos hombres de empresa que esté en el negocio de aguas gaseosas ó minerales, ó que piensen establecerlo. Para su mayor conveniencia la American Soda Fountain Company tendrá gusto en contestar cualquier demanda no mes de las personas del ramo.

## AFUERA LA ANESTESIA POR LA ESCOPOLAMINA

LA facultad médica ha sido muy tolerante con ciertas tentativas recientes para imitar un medio antiguo y desmedrado de anestesiación con la administración subcutánea de escopolamina y morfina. Creemos que en este asunto la tolerancia ha traspasado los límites de la prudencia, porque debería ser evidente, aun á las medianas inteligencias, que el procedimiento es «insidioso y envuelve peligro,» como asevera Bakes.

De Maurans se ha ocupado detenidamente de este asunto hace poco tiempo (*Semaine Médicale*, Nov. 8), hallando motivos suficientes para condenar la práctica citada, fundándose en que hace algunos meses se le atribuyeron doce defunciones. Entonces, parece que los que favorecían la anestesia por la escopolaminamorfina, se quejaron de la crítica del autor, exponiendo de su parte que los casos ocurridos deberían pesarse más bien que contarse. De Maurans ha hallado muy expedito para contestar á aquellos que dan su opinión, dirigiéndose al efecto á seis casos relacionados con los casos de defunción citados, con excepción de uno, han contestado renunciado ya á la práctica de la administración subcutánea.

Vece que la acción venenosa de la escopolamina es de igual manera en hombres y mujeres, en

los niños y los ancianos, puesto que en los doce casos citados, en que se imputa la muerte á la droga, figuran ambos sexos, no habiendo advertido que la naturaleza de la intervención quirúrgica hubiese tenido apreciable influencia en el fatal resultado.

Ya no cabe dudar, por estar bien establecido, que la escopolamina es un veneno potente de los centros respiratorios y cardíacos; su empleo, por consiguiente, al paso que no ofrece ninguna ventaja definida como anestésico, es demasiado peligroso para justificar nuevas tentativas en hacer la droga popular. Esperamos que no hemos de tardar en oír la última palabra acerca del empeño en resucitar la aplicación de una droga tan nociva.

## Causas de la Calvicie. — Modo de Precaverla

Por W. C. GOODE, Goderich (Ontario, Canadá)

Pocos artículos del tocador se piden con tanta frecuencia en la botica como las preparaciones para el cabello, y por este motivo esperamos que este estudio de las necesidades capilares que ofrecemos á los farmacéuticos, les será de alguna ayuda para hacer tales preparaciones.

Es un hecho que en los tiempos que corremos el cabello humano empieza á caer en un período más bien temprano, y la reluciente calvicie se nota en mucha gente que parece hallarse en el mejor período de su vida. El hombre que descubra los medios de combatir la devastación de uno de los más preciosos adornos que ostenta el hombre en la cabeza, tiene la fortuna hecha y con ella fama imperdurable. He de hacer constar que este artículo no conducirá á una consumación tan gloriosa, pero es posible que por su medio se prolongue la utilidad y hermosura del cabello algunos años, y yo opino, además, que la calvicie puede evitarse si con tiempo se toman ciertas medidas.

En primer lugar vamos á considerar la estructura y naturaleza del cabello. La parte inferior ó raíz del cabello consiste en una formación bulbosa en un folículo que se forma por la inversión de la piel. En el exterior del folículo hay dos glándulitas llamadas las «glándulas cebáceas,» que abastecen el cabello de aceite. El tallo del cabello consiste en tres partes — una central, ó medula, que es la continuación del centro pulposo del bulbo, una capa fibrosa que rodea éste, y una capa exterior escamosa. El cabello se nutre del cuero cabelludo por medio del bulbo, y por consiguiente depende de la buena circulación y sanidad del cuero, tanto como una planta del suelo en que crece. Con efecto, en muchas particularidades se parece á una planta que se desarrolla, y como tal necesita (a) aire, (b) nutrición, (c) sustracción á toda condición que tienda á la enfermedad ó decadencia.

¿Por qué se ponen calvos los hombres? Hay pocas cuestiones sobre las cuales se hayan expresado opiniones tan distintas. Sería cansado y ocioso ocuparse de todas ellas; la verdad es que la naturaleza cesa de conservar lo que crea cuando se violan sus leyes, y hay algunas causas principales que á ello conducen. Se dice que el cabello es de todas las sustancias animales la más duradera, habiéndose hallado en buen estado en las momias de Egipto después de 4,000 años. Si siguiésemos sin desvío las leyes naturales, con seguridad podríamos conservar la salud del cabello mientras viva la persona.

Los hombres se ponen calvos á menudo, las mujeres raras veces. ¿Por qué sucede esto? Creo que la causa principal consiste en el hecho de que las mujeres llevan el cabello largo y lo dividen en masas, permitiendo de esta manera que el aire circule, sin que los sombreros que usan, por su poco peso ó el espacio que ocupan, puedan impedirlo. Con los indígenas el caso es parecido, generalmente no gastan sombreros, apenas si conocen lo que es calvicie, al paso que la civilización, y las modas que impone para la cabeza, no tardan en producir su efecto que se determina en el deterioro de la cubierta natural de la cabeza. Estas analogías podrían multiplicarse á lo infinito, y demostrarían de una manera concluyente que el aire es el primer requisito para la salud del cabello, al paso que su exclusión con el uso del sombrero ó por llevar el cabello apiñado con el empleo de cosméticos pegajosos, es el primer paso para su menoscabo.

El estado mental constituye otro peligro. Se ha establecido por manera evidente — pues la historia registra sinnúmero de casos — que por efecto de una aflicción profunda ó por terror, el cabello se ha vuelto blanco en una noche. Con el pesar, la preocupación ó excitación, el cerebro se afecta, se atraca de sangre, que da por resultado una disminución de la circulación en el cuero cabelludo, de cuyas resultas el cabello está sin nutrir.

Precisa sustraerse á todo estado que tienda ó predisponga á la enfermedad ó decadencia del cabello. La calvicie en los hombres casi siempre está circunscrita á la superficie que cubre el sombrero, y buena parte del mal que se deplora, débese particularmente al sombrero llamado hongo que impide la ventilación, con lo cual aumenta la transpiración del cuero cabelludo, que en tiempo caluroso crea un estado horrible; el cabello está compenetrado de exhalaciones nocivas, ponzoñosas; viene á ser una incubadora de gérmenes morbosos. Las afecciones del cuero cabelludo, la caspa, el eczema, etc., que son á menudo la única causa de la calvicie, se originan indudablemente de semejante estado.

Es, pues, altamente necesario que el hombre se anticipe al asomo de estos males.

*Primero.* — Manteniendo la nutrición del cabello con el empleo de un cepillo de cerdas rígidas, que se pasará con vigor por el cuero una ó dos veces al día, ó bien echando mano del amasamiento.

*Segundo.* — Gástense sombreros livianos, bien ventilados, y cuanto más tiempo se pueda estar con la cabeza descubierta al aire libre tanto mejor.

*Tercero.* — Límpiase bien el cuero cabelludo con jabón de alquitrán, á lo menos una vez á la semana — y más á menudo en tiempo caliente, si fuese necesario. Si el cabello quedase muy reseco, aplíquese un poco de vaselina.

*Cuarto.* — Caso de usarse alguna loción, que no sea espesa ni pegajosa, y si fuese antiséptica mejor. Tengo conocimiento personal de varios casos en que el agua alquitranada ha impedido aparentemente la calvicie por sus propiedades antisépticas. Para este objeto considero una excelente mezcla la que sigue:

|                 |         |
|-----------------|---------|
| Glicerina.....  | ½ onza  |
| Bay rum.....    | 1 "     |
| Aq. pices ..... | ad. 8 " |

Mézclese.

*Quinta.* — Si apareciere caspa ó comezón en la cabeza, empléese el tratamiento antiséptico para el cuero cabelludo, que queda expuesto más abajo.

Después de que el cabello ha empezado á caer, convendrá adoptar un tratamiento algo diferente.

Húyase de todo tratamiento drástico, pues ataca el cabello más tierno el cual se arranca con la raíz.

Si es que se cree necesaria una loción, empléese el agua alquitranada. Límpiase el cuero cabelludo una vez á la semana con un buen jabón de alquitrán neutro; pero dense fricciones solamente con las puntas de los dedos.

Empléense aplicaciones antisépticas y germicidas para el cuero cabelludo. Más abajo se hallará una fórmula que ha dado excelentes resultados, habiendo atajado en un número de casos la caída del cabello. La adición del mentol es una buena idea, por aumentar la circulación del cuero cabelludo durante horas después de la aplicación:

|                         |         |
|-------------------------|---------|
| Resorcina.....          | 3 dr.   |
| Acido salicílico.....   | ½ dr.   |
| Mentol.....             | 20 grs. |
| Fr. canthar.....        | 6 dr.   |
| Extracto Ham. Dist..... | 2 oz.   |
| Glicerina.....          | 1 oz.   |
| Bay rum.....            | 4 oz.   |
| Alcohol para hacer..... | 16 oz.  |

Misce. sec. art.

Cuanto al estado mental á que me he referido antes, he de permitirme decir que además del beneficio que recibirá el cabello de descansar el cerebro una parte del día, el sistema en general quedará afectado favorablemente.

### Una Botella de Papel ¿Quién la Inventa?

En las grandes ciudades donde las necesidades son tantas, hace falta una botella de papel para leche, agua y otros líquidos de consumo diario. Es un hecho comprobado que con las botellas en que se pone leche, por no dejarlas bien limpias, se han propagado por su medio enfermedades contagiosas. Por este motivo si se inventase una botella para usarla una vez y después desecharla, la demanda popular quedaría No cabe duda que con nuestro genio inventivo sería el medio de fabricar tal botella, que por necesidad ser muy fuerte; falta ahora por saber si la construcción permitiría popularizarla, por supuesto, debería hacerse á prueba de infección en cuanto fuese posible. Si se hiciera una botella liviana á poco costo, bien se descartaría la botella de vidrio. Esta es una oportunidad para los inventores.

## PREPARADOS FARMACEUTICOS

Por A. C. ZEIG, Ph. C., San Francisco (Cal.)

(Continuación)

## CRESOLES SAPONIFICADOS

El ácido cresílico ó cresol, está tomando el puesto del ácido fénico como antiséptico y desinfectante. Usase en combinación con el jabón, y dícese poseer tres veces más de fuerza como desinfectante, y ser tres veces menos cáustico y venenoso que el ácido carbólico. En los Estados Unidos se fabrican anualmente grandes cantidades del compuesto antiséptico, y empléanse en obra quirúrgica, en soluciones del 1 al 2 por ciento.

El empleo de sales de hierro, orgánicas é inorgánicas, desempeñará siempre un importante papel en la medicina. El hierro popular dialisado de dos décadas atrás, ha sido reemplazado por la más popular combinación orgánica llamada «peptonato» de hierro. En los Estados Unidos se fabrican anualmente enormes cantidades de peptonato de hierro manganeso.

El empleo de ácido glicerosfórico y de los glicerosfosfatos en la medicación moderna, es realmente notable, por cuanto pueden eventualmente tomar el puesto de los hipofosfitos que tanto se emplean actualmente en la forma de jarabes. Por el hecho de ser higroscópicos, su consumo en tabletas no es practicable, de aquí que generalmente se presenten en solución en la forma de elixires.

El alquimista de tiempos remotos no pudo jamás imaginarse que el metal amarillo que trataba de producir, se utilizaría muchos siglos después en curar el hábito de la bebida. En los tiempos presentes el cloruro de oro, el cloruro de oro y sodio y el trimoburo de oro, los emplean constantemente en medicamentos el químico fabricante.

Las propiedades antisépticas y desodorizantes del óxido de cobre, por algún tiempo hicieron su empleo valioso en las preparaciones de cemento para llenar las cavidades dentales. En recientes investigaciones llevadas á cabo en la Cuarentena de Nueva York, se ha demostrado que el sulfato de cobre y el hidróxido de cobre cuéntanse entre los más inapreciables desodorizantes y desinfectantes que poseemos, tanto que prometen revolucionar el procedimiento de la purificación del agua en el futuro. Con el peso de una cantidad igual de cal viva en combinación con el sulfato de cobre, el hidróxido de cobre se precipita como el agente activo de la mezcla. Su acción es á la vez mecánica y química. La insolubilidad del hidróxido cúprico en agua, hace que su empleo como agente purificador del agua sea particularmente valioso.

## UNIFORMIDAD EN LA FUERZA DE LAS TINTURAS

Respecto á tinturas, importa saber que en la nueva farmacopea que acaba de publicarse, la fuerza de la tintura de la raíz de acónito, ha sido reducida de 35 á 10 por ciento, y de la tintura de verarum viride, de 40 á 10 por ciento. Dícese que se obró así de conformidad con la recomendación de la asamblea internacional reunida en Bruselas dos años atrás, de hacer todas las tinturas de drogas potentes de una fuerza homogénea. Este país es el primero en que la recomendación se ha adoptado oficialmente, aunque con algunas excepciones.

## REMEDIOS SINTETICOS

El empleo de remedios sintéticos primeramente introducidos en este país, hace unas dos décadas, ha ejercido influencia en la manufactura farmacéutica. El número de sintéticos empleados como remedios curativos aumenta constantemente, aunque algunos de ellos se han desacreditado como tales remedios y su empleo, en consecuencia, se ha suspendido, habiéndose introducido de cuando en cuando nuevos remedios que han tomado su puesto. Así es que el médico acostumbra al prescribir para alivio del dolor, en lugar de los antiguos para extirpar la causa del dolor, un sintético que mata el dolor instantáneamente, sin reparo en la causa. Con motivo del mayor costo de los sintéticos, este estado de cosas priva al farmacéutico detallista de una parte de sus ingresos que obtenía de las recetas, puesto que los antiguos remedios eran los que le dejaban provecho.

## EL TIPO DE LA FARMACOPEA

La farmacopea como autoridad tipo, ha servido de guía al fabricante como al detallista. Los nombres de Proctor, Maisch, Rice y Prescott, en relación con la Farmacopea de los Estados Unidos, al igual que en el campo de la farmacia científica, deberían recordarse siempre con gratitud, y honrarse. El empleo de un tipo autorizado para fijar la fuerza y calidad de las medicinas, es bien aparente y está reconocido por todos los países civilizados. En los Estados Unidos, la conformidad con los tipos de la farmacopea, no es obligatoria, y por este motivo la farmacopea no es siempre reconocida como autoridad.

En los tiempos que corremos es una particularidad deplorable de las preparaciones farmacéuticas fabricadas, su falta de uniformidad. El mercado está inundado é invadido de preparaciones con nombres farmacéuticos, que difieren en carácter ó naturaleza de modo que ni aun pueden mezclarse entre sí, aunque están en el mercado con nombres idénticos. Con frecuencia se ha oído á un farmacéutico decir que ha mezclado dos flúidos, uno preparado por Jones y el otro por Brown, siendo el resultado un precipitado repugnante. A prestar conformidad á los tipos de la farmacopea, semejante estado de cosas no podría existir.

## PERJUICIO DE NO SEGUIR LOS METODOS FARMACOPEICOS

Los adelantos que se han llevado á cabo en los conocimientos farmacéuticos han dado lugar á muchas mejoras en los procedimientos de fabricación, de que se echa mano frecuentemente para reducir el costo de la producción. En muchos casos en que existen des-

víos de las fórmulas oficiales, son debidos quizás á la viva concurrencia que induce al fabricante á adoptar una fórmula ó proceso menos costoso, para hacer una preparacion, que ha de ser tan buena como el producto oficial á un costo menor. El argumento aducido de que el adelanto en conocimientos farmacéuticos, en la actualidad hace posible muchos perfeccionamientos en los procedimientos, no es válido cuando se aplica á las preparaciones oficiales. Los médicos tienen derecho á exigir uniformidad, ó si se quiere, homogeneidad en las preparaciones oficiales. En primer lugar debería establecerse la prueba absoluta de que la preparacion es un adelanto sobre el método oficial, y en segundo que el producto es idéntico con el de la farmacopea.

Es por demás evidente que la falta de adhesión á los métodos farmacéuticos es desastroso á los intereses de la profesión y del público. Cuando no se adhiere al método ó tipo farmacéutico en la fabricacion de un preparado, la rotulata debería expresar cuánto difiere del tipo farmacéutico, para que el comprador pueda enterarse de que no es un producto oficial, y en este caso tendría ocasion para elegir entre el preparado oficial y el que no lo es.

La fabricacion de preparaciones farmacéuticas con dueño conocido, ó sean específicos, muchas de las cuales poseen indudablemente cualidades terapéuticas ha sido considerada como un mal sin tasa en su desarrollo en la última década. Si bien tales preparaciones no pueden reconocerse oficialmente hasta que el secreto de su combinacion no sea conocido, el hecho de poseer mérito terapéutico, les da derecho á ser aceptadas, siempre, como se ha dicho, que los fabricantes publiquen descripción completa de su composicion para el beneficio de la ciencia. Sólo con estas condiciones pueden clasificarse tales preparaciones como productos farmacéuticos, sujetos, por supuesto, á la correspondiente tipificacion, autorizándose su aplicacion para fines farmacéuticos.

Con el advenimiento de la nueva Farmacopea, con todos sus tipos correctos, el campo de la farmacia manufacturera promete muchísimo para el futuro. Como en el pasado, el químico fabricante sacará el material crudo de los campos verdes y de las entrañas de la tierra. El reino animal contribuirá mayor número de productos á la materia médica que en la actualidad, y el químico fabricante, á diferencia del alquimista del pasado, tendrá para guiarle en la manufactura de los medicamentos la luz de los conocimientos científicos y los tipos de la farmacopea.

#### UNGÜENTO DE AZUFRE COMPUESTO (*Unguentum Sulphuris compositum*)

|                                    |    |       |    |    |     |
|------------------------------------|----|-------|----|----|-----|

Disuélvase la pepsina en los líquidos previamente mezclados.

#### Terapéutica en la Peluquería

En la *Gazeta Terapéutica*, de oct. 15 de 1905, pág. 662, aparece una polémica interesante referente á las barberías, ó mejor dicho, á los peligros que se expone, sin saberlo, el parroquiano de las mismas. Es cosa corriente que aun en los establecimientos mejor atendidos, las condiciones son propicias para diseminar el contacto de lo que más repugna como son piojos ó liendres, tiña, caspa y el impétigo contagioso; item más la sífilis, la tuberculosis y hasta el mismo cáncer. Ya no cabe duda que muchos casos de cáncer en la cara se originan de heridas causadas por el barbero.

En vista de estos hechos, que son generalmente admitidos en los Estados Unidos, un número de ciudades han adoptado ordenanzas para la regularización de la profesión de barbero, cuya violacion basta para que aquel pierda la licencia. Estas ordenanzas están en vigor en los Estados de Nueva York y de Nueva Jersey, etc., en cuyas ciudades se exige á los barberos que empleen soluciones desinfectantes en sus manos cada vez que han atendido á uno de sus parroquianos, que usen solamente toallas esterilizadas, á parte de poner en práctica aquellas precauciones antisépticas más necesarias para mantener la tienda y los utensilios en las mejores condiciones higiénicas.

Algunos barberos, con la viveza comercial característica del Yanqui, se han aprovechado de las tales ordenanzas para adoptar métodos antisépticos que les sirven de anuncio. Por ejemplo, en una barbería de la parte baja de la ciudad de Nueva York, patrocinada por parroquianos que por su posición se supone rindan culto á la higiene, el barbero ha adoptado la costumbre, antes de afeitar al parroquiano, de poner en sus manos un juego completo consistente en una taza de cristal nueva, un cepillo nuevo y un trozo ó pastilla de jabón no usado, todo bien esterilizado y envuelto en papel de estaño. Después de haber usado estos utensilios el parroquiano los devuelve al barbero, quien á su vez los envía á la fábrica para que se esterilicen de nuevo. Otros barberos de la misma parte baja de la ciudad siguen el ejemplo de aquel delantero emprendedor, por considerar la innovacion una gran mejora sobre los antiguos métodos.

Hase creado ya tal demanda para estos juegos antisépticos de barberos, que una fábrica no hace otra cosa. La higiene entra de tal modo de moda en esta ciudad, que con frecuencia se halla, aun en las tiendas de barbero más modestas un hermoso y reluciente esterilizador niquelado cual los que sólo se empleaban antes en los hospitales. Estos esterilizadores son principalmente para toallas y trabajan á vapor bajo presión. Muchas otras mejoras de esta naturaleza se han planteado en las barberías de la metrópoli en virtud de las ordenanzas susodichas.

En muchos de los establecimientos de primera clase de las grandes ciudades hay sillas construidas sobre un plan aséptico, con brazos, asientos y respaldo de vidrio, y cojines de cuero parecidos á las sillas de los cirujanos. Algunas de esas tiendas también con instalaciones de aire comprimido para limpiar los vestidos de los parroquianos, para el cabello y para rociar la cara; igualmente se han en ellas habilitaciones para amasamiento eléctrico y ratorio, amén de otros adelantos de naturaleza atípica. Todos estos pormenores, para el hombre parecerán extraños, pero responden á los progresos de la ciencia. Mas lo esencial en un

barbero montado á la moderna, es la esterilización absoluta de las navajas, cepillos para la jabonadura y las tazas, jabón y por último, y por cierto muy importante, la esterilización de las manos que han de manejar tales utensilios. Otra precaución ha adoptado en las barberías bien montadas, referente al vestido de los oficiales los cuales llevan chaquetas blancas perfectamente limpias, á guisa de las que usan los ayudantes ó auxiliares de los hospitales.

Quizás no falte quien crea que todas estas precauciones son exageradas, pero estas personas seguramente no puedan darse cuenta de los peligros de toda infección. Los médicos saben perfectamente que muchos casos de calvicie han tenido su origen directa ó indirectamente en la barbería, y que muchas personas afectadas de enfermedades cutáneas que acuden á los especialistas, las contrajeron al contacto de una navaja, toalla ó mano de barbero. Cálculase que un noventa por ciento de los casos de calvicie los causa la caspa, resultado probable de los trabajos de un bacilo que mina el vigor de las raíces capilares. La infección se transmite indudablemente de una cabeza á otra por medio de los cepillos, llegándose á suponer que la razón de empezar la calvicie regularmente en la corona de la cabeza, es porque en general las personas pasan el cepillo con más fuerza por aquella proyección. Una vez infectado un hombre por el cepillo del peluquero, lleva la infección á su casa y por este medio la cogen los demás miembros de la familia, quienes, quizás de cuando en cuando usan el mismo cepillo del cabello que hay en la casa.

Dyer, autoridad americana, aconseja que no usen en la peluquería ni cepillo para el cabello ni brocha para la barba, y que con preferencia á la pastilla de jabón se empleen líquidos. Aquellas personas afectadas de enfermedades de la cara ó del cuero cabelludo no deberían ser servidas en las barberías, ni tampoco deberían emplearse en las mismas barberos que padecen de afecciones cutáneas ó venéreas. Si bien Dyer desearía ver abolidos la brocha y el cepillo, no sugiere nada para sustituirlos, quizás contando con que muchos parroquianos pudientes tienen en las barberías sus cepillos y taza, cuya previsión convendría que se generalizase. Es una mala costumbre aplicar á las heridas de la cara una barrita de alumbre, porque fácilmente puede servir de vehículo para la transmisión de la sífilis con motivo de que la sangre mancha el alumbre y luego se seca en él, y cuando se aplica á otra persona tiene lugar la infección.

#### UNGÜENTO DE EMPLASTO DE PLOMO. — UNGÜENTO DIAQUILON (*Unguentum emplastri plumbi*)

Emplasto de plomo..... 1 onza .. 110 gm.  
Parafina blanda..... 1 onza .. 110 gm.  
Aceite de bergamota..... 4 míns. .. 1 c.c.

Mézclase el emplasto de plomo y la parafina juntos, y cuando la mezcla ha alcanzado la temperatura de 100 á 170 grados Farht., añádese el aceite y agítase hasta enfriar.

#### Leche Seca en Polvo

Por efecto del sinnúmero de tentativas para manufacturar un producto alimenticio que encerrase en absoluto todos los constituyentes de la leche en forma pulverizada, hay ya en el mercado varias preparaciones que se venden con más ó menos éxito. Hace cosa de un año que un fabricante de Suiza (J. Klauss en Locle y Morteau), colocó en el mercado una leche en polvo que se pretende contiene los elementos esenciales de la leche en forma seca. Prepárase por medio de un procedimiento especial ideado por Just-Hatmaker, y el cual consiste en hacer caer la leche en forma de rociadura muy fina sobre unos cilindros que revuelven en direcciones opuestas calentados á 100 grados ó más por medio de vapor, que flota dentro de ellos á una presión de tres atmósferas. Estos cilindros están dispuestos paralelos entre sí, dejando un espacio intermedio de uno ó dos milímetros. Tan luego como la leche toca la superficie de los mismos en una rociadura fina, se evapora, formándose entre el cilindro y la leche una capa de vapor acuosa destinada á impedir el contacto directo de la leche y la superficie caliente. La leche evaporada se permite entonces que caiga en el espacio entre los dos cilindros, donde se prensa y se seca inmediatamente sin dejarle tiempo para hervir. Como estos cilindros sólo hacen seis revoluciones por minuto, el procedimiento de la desecación toma todo lo más cinco segundos. La leche desecada se ha convertido en una tenue lámina, que se corta con una hoja afilada fija debajo del cilindro, y cae en un vaso más abajo. Todavía se seca más enfriando gradualmente la masa; ésta se rompe después y se cuela por tamiz.

La leche en polvo preparada de esta manera se presenta en forma de escamitas de color amarillento claro, que se desmenuzan en partículas más finas; al tacto es pegajosa, con un olor ligeramente aromático parecido al de la leche hervida. Esta preparación rinde una emulsión uniforme, perfecta, al mezclarse con agua caliente. Es difícil distinguir esta emulsión de la leche natural. Para preparar esta leche se procede de una manera parecida al hacer el cacao del polvo; esto es, se restriega el polvo de leche con una pequeña cantidad de agua caliente, formando una pasta suave, añadiendo la cantidad necesaria de agua caliente, y agitando constantemente. El gusto es el de la leche hervida ó esterilizada. Para hacer un litro de leche que en su composición corresponda á la ordinaria de vacas, se tomarán 136 gramos del polvo seco.

La ventaja de esta preparación es su estabilidad, porque en estas condiciones puede transportarse á cualquier parte y puede hacerse á voluntad; además, la leche preparada, después que se le ha añadido el agua, no sufre alteración en su composición por dos ó tres días. En varios ensayos y análisis de esta leche en polvo, llevados á cabo en el laboratorio Carnegie de la ciudad de Nueva York, demostróse estar completamente exenta de bacterias. W. S. McGill ha empleado esta leche para la alimentación de 850 niños de 2 á 5 años de edad, sin haber experimentado el menor inconveniente. La leche se ha transportado de Nueva York á Shangai y traído de nuevo sin sufrir la menor alteración. Al examinar algunas muestras que se habían preparado seis meses antes, se hallaron perfectamente conservadas, y la leche que se desdobló de ellas no tenía ningún mal gusto. Esta leche puede mezclarse con chocolate, té, etc. Debería ser muy útil para cuando se viaja en los países tropicales.

### Linimentos Medicinales

**LINIMENTO DE ESCOPOLIA.** — Extracto de escopolia fluido, 24 partes; alcanfor, 1; alcohol rectificado, 4; agua, 1. Mézclense. — *Squire*.

**LINIMENTO DE ESPERMA DE BALLENA.** — Esperma de ballena, 1 parte; aceite de almendras, 9. Fúndase á un calor suave y agítase hasta que se enfríe. — *F. Port.*

**LINIMENTO ESTIMULANTE.** — (a) Jabón blanco, 2 partes; agua caliente, 35. Disuélvase y, después de frío, añádase: amoniaco líquido concentrado, 5 partes; esencia de trementina, 10. — *H. Adelaide de Dublin*.

(b) Amoníaco, 4 gramos; tintura de nuez vómica, 15.

En fricciones para combatir la parálisis. — *Magendie*.

(c) Esencia de cayeput, 15 gramos; esencia de trementina, 30; ácido acético, 30; agua, c. s. para 300; yema de huevo núm. 1. Bátase la yema con 120 gramos de agua; añádase la esencia de cayeput y de trementina, agitando la mezcla bien en una botella; luego añádase el ácido acético y después agua suficiente para completar 300 gramos. Agítase el todo bien.

De aplicación muy útil para el pecho en la bronquitis, asma y otras enfermedades pulmonares.

(d) Estricnina, 1 gramo; aceite de olivas, 25. Disuélvase.

Contra la amaurosis paralítica, dando tres ó cuatro fricciones diarias con 12 gotas del medicamento. — *Neligan*.

(e) Bálsamo de Fioraventi, 50 gramos; ácido hidroclórico, 5. H. s. a.

Se dan fricciones en los sabañones incipientes con el líquido que cabe en una cuchara grande. — *Fiévre*.

(f) Esencia de trementina, 50 gramos; amoníaco líquido, 50. Mézclense.

Se usa en fricciones y fomentos sobre la columna vertebral, en el cólera y el tétanos. — *Petit*.

**LINIMENTO ESTIMULANTE BALSAMICO.** — Bálsamo del Perú, 8 gramos; aceite de laurel, 8; aceite de nuez moscada, 5; esencia de clavo, 1. Mézclense. — *Reil*.

**LINIMENTO ESTIMULANTE RESOLUTIVO.** — Bálsamo de Fioraventi, 50 gramos; alcohol de romero, 50; tintura de cantáridas, 10. Mézclense.

Se usa en fricciones en el Hôtel-Dieu contra las afecciones reumáticas y las oftalmías tórpidas.

**LINIMENTO DE ESTIRONA.** — Estirona, 4 gramos; glicerina, 30; agua, 30.

**LINIMENTO DE ESTORAQUE.** — Estoraque líquido, 6 partes; alcohol concentrado, 2. Lícuese á un calor suave y fíltrese, y después añádase: aceite de sésamo, 1 parte. — *F. Helv.*

**LINIMENTO ETereo.** — Eter acético, 80 gramos; tintura de acónito, 15; tintura de raíz de árnica, 5.

En unturas contra los dolores neurálgicos. Cúbrase la región friccionada con franela y tafetán gomado.

**LINIMENTO DE EUCALIPTO.** — Esencia de eucalipto, 12 gotas; aceite de olivas, 84 gramos; vaselina, 28. — *H. Women*.

**LINIMENTO EXCITANTE.** — (a) Amoníaco, 1 parte; aceite de almendras, 8; alcohol de Fioraventi, 8; alcohol alcanforado, 3. — *F. Franc. de 1866*.

(b) Tintura de cantáridas, 15 gramos; alcanfor, 2; aceite de almendras, 120; jabón oficial, 30. M. s. a.

Aconsejado en ciertas formas de reumatismo muscular. — *Chomel*.

**LINIMENTO EMOLIENTE LAUDANIZADO.** — Ungüento de altea, 15 gramos; aceite de olivas, 15; láudano líquido, 4. Mézclense.

Cuando los dolores son intensos. — *H. de M.*

### Esponjas para el Baño.

Una parte de la prensa americana se ha ocupado recientemente de la manera como se pescan las esponjas, cuyo asunto interesa á los farmacéuticos que en general venden el artículo, y de igual manera á los profanos por la curiosidad que despierta. Se sabe que la estructura de la esponja está formada por ciertos animalitos marinos de especies inferiores que viven en los mares tropicales y se hallan cerca de la costa. La esponja está de ordinario adherida á rocas ó piedras, y por esta causa es á veces difícil y hasta peligroso pescarlas, siendo necesario buscar, esto es, bajar á lo fondo del mar, lo que verifican los naturales de ciertos países calidos, sin calarse vestido de buzo; llevan una piedra para ayudarles á sumergirse y una red cogida alrededor del cuello. A la piedra atan una cuerda con la cual se comunican con la superficie en que está la lancha. El buzo antes de arrojar al mar, toma mucho aire en los pulmones. Permanece en el agua, recogiendo esponjas, de tres á tres minutos y medio. Tan luego como siente la necesidad de respirar, tira de la cuerda y los compañeros lo suben.

Pero trabajar debajo del agua sin vestido de bucear es peligroso. Si no hay mucha profundidad de agua, el buzo vuelve en sí después de efectuar algunas aspiraciones, pero tratándose de una profundidad de 60 á 80 metros á que á veces se arriesgan los buzos, cuando éstos son traídos á la superficie se hallan en tal estado de colapso que no se reponen por algún tiempo. Tienen los pulmones congestionados y algunas veces sangran por la boca y la nariz. Este desangre comunemente se cree necesario cuando por primera vez en la estación se emprende el buceo. La piel del buzo se deshace en escamas, particularmente en los hombros, cambia de color el cabello, etc.

Más ventajoso es por cierto calarse el vestido regular de los buzos, porque de esta manera el pescador puede permanecer más tiempo en el agua con menos riesgo, y buscar con más cuidado las esponjas. Hay buzo que permanece casi una hora sumergido á una profundidad de 30 á 40 metros, pero á continuar por más tiempo, los pies se le ponen entumecidos y siente dolores en el estómago, etc. Aun entre esos buzos ocurren accidentes fatales con frecuencia por causas imprevistas.

Cuando se han descargado las esponjas en la costa, ó bien se las amasa con los pies ó se las bate con una tranca hasta que se desprenden las masas viscosas á ellas adheridas. En algunos lugares se rescriegan con arena ó se tienden sobre cuerdas, colgando en el mar para que con el vaivén de las olas y el viento se laven. No estando bien lavadas las esponjas despiden un olor de pescado desagradable, causado por los organismos que quedan en las celdas. Luego se procede á secarlas y en este estado se mandan al mercado. Los tratantes de mala fe espolvorean las esponjas con arena para aumentar su peso, que es la manera usual de venderlas. Las esponjas más grandes pesan de cinco

á seis libras. La cantidad que un pescador experto obtiene en un día de trabajo afortunado es de 100 á 150 libras, siendo el precio recibido sobre 8 dracmas (en moneda griega) por libra, después de limpias y secas.

El blanqueo de las esponjas es relativamente un procedimiento nuevo, el que se aplica á las mejores clases. Colócanse al sol, en un día muy claro y se tratan bien con agua salada, bien con productos químicos. A veces se les somete á una solución de sosa caliente para resblandecerlas y afinarlas. Después se lavan bien, y las partículas yesosas que naturalmente contienen se disuelven con ácido hidrocórico diluido. Terminada esta operación se colocan las esponjas en una solución de hiposulfito de sodio conteniendo algún ácido hidrocórico. Pero, con todo, es un hecho que el blanqueo de las esponjas acorta su duración, y su textura queda algo menoscabada.

La pesca de las esponjas florece especialmente en las costas del Mediterráneo, y en algunas islas del mismo mar. Está sumamente desarrollada esta industria en el litoral de Grecia, Dalmacia, Asia Menor, Siria, Túnez, Trípoli, etc., de cuyos puntos se exportan esponjas anualmente por valor de muchos miles de pesos. Probablemente los centros más importantes para el comercio de esponjas son Marsella, Esmirna y Trieste. Considéranse de segunda importancia Trípoli, Génova y Venecia. Otro centro para esponjas, aunque de menor importancia, son las Bahamas.

En un artículo publicado en una revista americana (*Harper's*) Furlong describe la vida de los pescadores de esponjas. Dice que de 700 pescadores griegos que exploran las costas de Trípoli, de 60 á 100 mueren anualmente y apenas si ninguno de ellos se sustrae á una muerte violenta cuando se dedican toda la vida á esta industria. El peligro yace en la alta presión debajo del agua y en la subida repentina á la superficie cuando la presión disminuye rápidamente. Hallándose en esta situación el buzo pierde el sentido, y algunas veces tiene paralizados los miembros hasta que vuelve á penetrar en las aguas y va al fondo. Generalmente trabajan de la salida á la puesta del sol, en los meses de abril á octubre, y no interrumpen sus tareas aunque reine una tempestad. Ganan de \$200 á \$600 al año, y por lo regular pasan el invierno en sus aldeas viviendo de lo que ganaron en el verano. Se alquilan á capitanes de buques, quienes á menudo los tratan como esclavos para así poder darles menos salario. Dícese que si un buzo no saca del fondo del mar bastantes esponjas, el capitán lo hace permanecer en el fondo no obstante las señales de aviso para que lo suban. El aire caliente que se introduce á bomba en los pulmones de esos buzos en los países tropicales no los refresca, de aquí que se cansen rápidamente.

Cuando usamos una esponja en nuestro baño diario, pocos de nosotros nos damos cuenta de cuán difícil es obtener este artículo tan útil, y de las vidas que se sacrifican anualmente para la comodidad y ayuda de la

### Exito muy Merecido

Hemos recibido la siguiente carta del profesor J. H. Beal, dean de la Escuela de Farmacia del Colegio Scio, en el pueblo de Scio (Ohio), antiguo presidente de la Asociación Farmacéutica Americana, y presidente en la actualidad del Consejo de ese Cuerpo, y vicepresidente de la Junta de Curadores de la citada Asociación. Dice así:—

Sr. Director:

El AMERICAN DRUGGIST, correspondiente al 13 de noviembre, que acabo de recibir, es un número altamente interesante é importante á la vez, por cuyo motivo desearía poseer uno ó dos números más.

Las Notas sobre Nuevos Remedios encierran un valor especial, y todo me induce á expresar mi aprecio del periódico por estar repleto de noticias y de datos los más modernos, y ser una publicación valiosa que siempre se lee con interés, y es útil á la vez al farmacéutico y á la profesión en general.

Deseando la continuación del éxito que ha alcanzado y que tanto se merece, me despido, con saludos á sus dignos directores.

Su afmo. y seguro servidor,

J. H. BEAL.

Scio (Ohio), nov. 13 de 1905.

### Esparadrapo Líquido

E. Dwight Kendall, de Nueva York, dice: «Los fluidos viscosos que se emplean como capa protectora cuando se aplican á heridas, contusiones, rasguños de la piel, al igual que para barnizar artículos de madera y otros materiales, para telas impermeables, para charolar superficies de metal y para otros fines industriales, y los cuales bajo nombres comerciales se han colocado en el mercado á intervalos por muchos años, consisten esencialmente de celulosa nitrada en diferentes menstrosos.»

Después de referirse Mr. Kendall á la historia del algodón pólvora y detallar un procedimiento propio para hacerla, que apenas si difería del oficial, sienta el hecho que el primer solvente conocido para piroxilina fué una mezcla de éter etilo y alcohol etilo, habiéndose dado el nombre de colodión á la solución. El artículo, dice, se vendía como colodión Maynard, y como cutícula artificial para cortaduras, quemaduras y rozamientos, pretendiendo que su notable fuerza contráctil al secarse unía los labios de la herida, ayudando á ésta á cicatrizar de primera intención; pero, en una ocasión (1847-8), después de haberse aplicado sobre la superficie de una mano lastimada de varias pulgadas cuadradas, la contracción excesiva de la película causó mucho sufrimiento, demostrando ser un inconveniente serio. El autor, estudiante entonces en la Escuela de Ciencias Laurence (Harvard) después de hacer varios ensayos averiguó que este defecto se remediaba con la adición al colodión de un pequeño porcentaje de aceite de ricino.

Después de hacer una corta digresión añade el autor:

La adopción del colodión en la fotografía fué un adelanto importante. Al rededor del tiempo en que se menciona, un periódico científico que se recibió directamente en el laboratorio, contenía esta simple relación: «El colodión se ha empleado como sustituto de la albúmina en fotografía. El mismo día teniendo

el autor colodión á mano, lo iodizó inmediatamente, dió una capa á una placa sensibilizada, obteniendo un negativo de Gose Hall. Este fué indudablemente el primer tiempo en que el colodión se usó en los Estados Unidos.

Las proporciones de alcohol y éter para un solvente de piroxilina pueden cambiarse mucho, mientras que la cantidad relativa de piroxilina que se emplee se determinará por la viscosidad que se necesita. Considéranse proporciones aceptables 100 volúmenes de éter por 40 volúmenes de alcohol (con preferencia absoluto). Otros solventes de piroxilina son acetono (y homólogos) varios éteres simples, alcanfor en alcohol absoluto, etc. El acetono, siendo barato, se emplea en cantidad considerable, algunas veces con la adición de alcohol metilo, también por su baratura. Para aplicaciones epidérmicas el colodión de éter-alcohol es el mejor emplasto líquido, porque no es irritante, y el solvente evapora tan rápidamente, que basta algunos minutos para aplicar con éxito varias capas para reforzar la película, que es muy adhesiva. La piroxilina puede emplearse como laca ligera, como barniz espeso ó sólido plástico.

### NOTAS COMERCIALES

— Probablemente el renglón más popular de perfumes, jabones y artículos de tocador manufacturados y vendidos en los Estados Unidos es el que sale del tan conocido establecimiento de Solón Palmer, de Nueva York. La casa tiene una agencia regular en Buenos Aires (República Argentina), para la venta de sus apreciados productos. Como el fabricante de los mismos es ya antiguo, sus artículos tienen cada día más salida y por esto les tendrá cuenta á los farmacéuticos de México y Centro-América familiarizarse con estos efectos y darlos á conocer á su clientela.

— Como todo lo bueno se abre paso, no cabe dudar que un día en este país y un día en otro, los productos de The Martin H. Smith Company Glico-Heroina y Ergoapiol llegarán á conocerse bien y apreciarse como se merecen. Su venta en los Estados Unidos y otras partes del mundo es considerable. Si entre nuestros lectores del ramo de farmacia hubiese alguno que no tuviese existencia todavía de esos productos, creemos le tendría en cuenta ponerse en relación con los fabricantes, quienes, por otra parte, anuncian bien para darlos á conocer.

— La Creta Inglesa Preparada de Thomas, está admitida como tipo en los Estados Unidos, y se da á conocer rápidamente en los países españoles. Cualquiera de nuestros lectores del ramo de farmacia puede procurarse muestras de este artículo para distribuir las, dirigiéndose al efecto á la Thomas Manufacturing Company, Baltimore (Maryland), E. U. A. Se pone esta creta en cucuruchos apropiados, en colores blanco y rosado, y se envasa en cajas de madera de ocho libras. Puede emplearse para todos los fines farmacéuticos y del tocador, y constándonos que el artículo es de primera calidad, lo recomendamos eficazmente á nuestros lectores.

— E. S. Wells, químico fabricante, cuyo establecimiento está en el No. 710 Grand Street, Jersey City (Estado de New Jersey), propaga en los países españoles una preparación eficaz para el exterminio de ratas é insectos. El anuncio del fabricante se hallará en la sección correspondiente de este número. Para anunciar tan útil artículo, Mr. Wells envía una hermosa litografía de colores, que atrae seguramente parroquianos. Corresponderá con gusto con cualquiera de nuestros lectores que creyese conveniente hacerse cargo de este renglón para su venta.

**DOLORES DE EXPOSICION AL SOL Y OTROS.**—Para el dolor y la pirexia causados por exposición á los rayos del sol, tan comunes en este país, y particularmente en nuestras grandes ciudades durante el solsticio de verano, las pastillitas de antikamnia, además de los baños de ducha fríos, constituyen el mejor remedio. Reducen la temperatura, aumentando la radiación del calor del cuerpo y disminuyendo la producción del calor. Estimulan el sistema glandular, particularmente las glándulas sudoríficas. En muchos casos su acción diaforética es fenomenal. Obran cual un analgésico amortiguando las sensibilidades del vaso-motor y de los nervios sensorios. Parecen aquietar los centros gangliónicos de todo el sistema nervioso, y la acción que ejercen en el cerebro es muy nimia, esto es, no atontan ó hacen perder el sentido. No parecen perturbar tampoco los riñones. Producen excelentes efectos en casi todos los desarreglos neuróticos, y en la terapéutica ocupan un puesto permanente. Están indicadas en los dolores solares, cefalalgia, neuralgia, ataques de reumatismo agudo, ciática, dismenorrea, irregularidades y todos los estados dolorosos. En el tratamiento de aquellos estados en que importa administrar quinina, se hallará que las Tabletas de Antikamnia y Quinina producen buenos efectos. La antikamnia, á parte de aliviar el dolor, previene todo trastorno del sistema nervioso, que es tan frecuente con la quinina. Para muestras, materia impresa y precios dirigirse á la Antikamnia Chemical Co., St. Louis (Missouri), E. U. A.

**OTRO VENDEDOR SILENCIOSO.**— Muchas son las navajas que hay en el mercado poseyendo cada cual más ó menos excelencia; pero la que parece haber alcanzado mayor popularidad y venta más extensa es la Gem Safety Razor, esto es, la joya de esta clase de navajas, instrumento á estas horas muy conocido en todo el mundo por su sencillez y excelencia de fabricación, su afinación exquisita, y especialmente por el fino temple de su hoja. Tiene el filo vaciado, cual la antigua hoja de Sheffield. Ya se venden en todas las farmacias estas navajas, dejando el suficiente provecho al detallista.

Si es que ha habido ninguna queja en seguida de la venta de una navaja Gem, estas quejas han sido siempre en menor número que de otras navajas de seguridad.

El grabado del «Vendedor Silencioso» que aquí se da, muestra un estuche bien lleno de la Gem Cutlery Company, del No. 34 Reade Street, Nueva York, cuya Compañía hace al farmacéutico al por menor una proposición muy apetecible para todo pedido inicial que se le haga. El contenido del estuche consistente en dos juegos No. 2, un juego No. 3, un juego No. 4, y tres navajas extra, valuados en \$37 al detalle, se da al recibo de \$20, que es menos que el precio al por mayor, sin cargar por el envío. Sólo un estuche á cada farmacéutico. Mencíonese el AMERICAN DRUGGIST al hacerse la compra.

# POWERFUL Astringent and Hemostatic

## HAY FEVER.

**S**OLUTION ADRENALIN CHLORIDE controls Hay Fever better than any other agent. By its prompt astringent action it reduces the congestion and swelling of the mucous membranes of the eyes, nose, etc., and checks the profuse secretion. It allays the sense of irritation and thus controls paroxysms of sneezing.

The method of treatment is this: *Solution Adrenalin Chloride* is sprayed into the nose by means of a hand atomizer adapted to the use of aqueous liquids, the 1:1000 Solution being first diluted by the addition of four to five times its volume of normal salt solution.\* Two or three applications daily usually afford complete relief.

In view of an early demand for *Solution Adrenalin Chloride* we urge immediate orders for supplies.

PRICE TO THE TRADE, NET, \$0.85.

\*Normal salt solution is readily prepared by dissolving one of our Compressed Tablets Sodium Chloride (No. 365) in four fluidounces of distilled water.

## 5 SECONDS BY THE WATCH!

**P**PROMPT and complete solution of its components is what the physician requires in a hypodermatic tablet. Flying to pieces when thrown into water is not sufficient. Many hypodermatic tablets do that, their undissolved particles settling to the bottom. Mere disintegration!

*Parke, Davis & Co.'s hypodermatic tablets* dissolve freely and fully, forming a clear solution, without residue. If you have the slightest doubt of it, drop one into a syringe half filled with lukewarm water and shake vigorously. In five seconds (or less) it will have dissolved completely.

NOTE.—Our hypodermatic tablet vials contain 25 tablets—not 20, as supplied by some other manufacturers.

ALWAYS SPECIFY "P., D. & CO." WHEN ORDERING.

# PARKE, DAVIS & COMPANY.

### Proprietary Medicines and Trade-Marks.

Proprietary medicines are not legal in France, but they are tolerated. French law has until recently been undecided on the point as to whether a trade-mark should be considered as independent of the product to which it is applied or if it should follow the fate of the product itself in case of litigation. It is now laid down as a point of law, says the Paris correspondent of the *Chemist and Druggist*, that the trade-mark is independent of the product, and thus it comes about that in respect to medicines, though officially illegal, the proprietor can claim protection on the matter of the trade-mark where he can obtain none for an imitation of the article itself as a secret remedy. The first definite judgment of the separation of the trade-mark from the product in France was given at Béziers on March 15, 1904, in favor of the proprietors of Goudron Guyot, and in respect to that there has been a probability of an appeal at the instance of the anti-patent medicine party in France, who could apparently make a rather good case as the law stands.

### How to Win Trade in Mexico.

Under date of May 8, 1905, United States Consul-General Richard Guenther, of Frankfort, Germany, transmits the following translated paragraph from a recent report of the Austrian Consul at Monterey, Mexico, relative to trading with Mexico:

The Mexican business man is the peer of any one in point of integrity. There are some exceptions, but not more numerous than in any other country. The exporter must reckon as an important matter the fact that the Mexican lays stress upon being treated as a gentleman. He uses the greatest politeness in his intercourse, especially with strangers, but in return he expects the same treatment. He does not like to be dunned, even if behindhand in his payments. The most important requisite for doing a successful export trade in Mexico is to have suitable representatives there who know the customs and conditions of the country, and who, above everything else, can make themselves liked by the customers. All correspondence with Mexican firms should be in the Spanish language, catalogues, etc., should be in Spanish, and prices ought to be stated in terms of United States or French currency.

### First Commencement of the Winona School of Pharmacy.

The first commencement of the Winona School of Pharmacy took place at the school grounds in Indianapolis on June 9. Fifteen students received diplomas. The principal address of the evening was made by A. F. Potts, president of the Commercial Club of Indianapolis, on the Great Men of To-Day. He said that the lawyer was no longer held up as the model man of the community and was no longer the guiding star of youth. "Far greater," said he, "is the great engineer or architect or craftsman who designs and executes some vast work from its inception upon the blank sheets before him to the massive, symmetrical building that towers skyward, or the beautiful bridge that spans the flowing stream. Greater the student who forces nature to give up her secrets in the laboratory and combining this and that separate element produces a chemical force."

Mayor Holtzman delivered an address in which he complimented the school for its work during the first year. Hugh Hanna, of the Executive Board, presented the diplomas.

The school is a department of the Winona Technical Institute, the grounds for which were purchased in March of last year at a cost of \$154,000. Since that time \$68,000 has been expended for equipment on the four schools of pharmacy, electric lighting, lithography and sign painting. A guarantee fund of \$100,000 has been subscribed by the directors to insure its work during the next year. The following graduates received diplomas: A. C. Cornet, N. R. Conwell, J. R. Ergenbright, N. W. Long, J. L. Mauk, Roy McClain, W. G. Miller, J. V. Riesa-beck, Elsie Stutzman, Lotta Vaughan, E. Turner, Lewis Twents, Edward Wagner, P. Weekly and E. Weekly.

CLARENCE G. DIXON.

Secretary of the Butler County, Pa., Retail Druggists' Association.

Clarence G. Dixon, whose portrait is shown herewith, is the active and accommodating secretary of the Butler County (Pa.) Pharmaceutical Association, and a hustling N. A. R. D. man. He has been putting forth special efforts of late to interest his fellow druggists in association work, and has succeeded in securing many new members for the State association. He is the proprietor of the Dixon Pharmacy, at Butler, established by him about three years ago, immediately after he graduated from the Western University of Pennsylvania.

### College Attendance to Count as Experience.

A movement has been begun looking toward making two years of college work count the same as experience in the four years' practical experience required under the Illinois pharmacy law, and President James, of the University of Illinois, has asked the opinions of a number of leading pharmacists in the following circular letter:

URBANA, ILL., March 23, 1905.

My Dear Sir:

The State Pharmacy law of Illinois at present requires that a young man shall have four years' practical experience in a drug store before being admitted to the State examination. The proposition has been made to the university to introduce a law into the Legislature permitting an apprentice to present two years of attendance at a school of pharmacy in lieu of two years in a drug store, so that the requirement of the law would read "either four years' practical experience in a drug store or two years' study in a school of pharmacy and two years' practical experience in a drug store."

I should be glad to know what your personal opinion may be as to the desirability of such a change in the Pharmacy law.

We intend to make the School of Pharmacy of the University of Illinois a thoroughly efficient institution, and we shall hope in this way to make it well worth the while of a young man to spend part of his apprenticeship period at the school; but I am not certain in my own mind as to the reasonable and proper action for the university in this matter of a change in the Pharmacy law, and I should therefore be greatly obliged to you for your opinion upon the subject.

Faithfully yours,

EDMUND J. JAMES.

### Registered in Illinois.

At the last examination conducted by the State Board in Chicago the following passed:

Registered Pharmacists.—P. T. Blount, S. M. Edison, A. J. F. Feuerbacher, V. C. Free, J. H. Gillis, A. H. Coette, John Gross, E. E. Jacobshagen, F. F. Krueger, Jos. F. Moell, C. W. Moors, L. I. Mulvey, Thos. J. Peters, Chas. Ruben, H. H. Todd, H. B. Vause, C. A. Walters, J. H. Wehrley.

Assistant Pharmacists.—C. E. Batterton, A. E. Bennett, R. W. Chilcote, L. E. Wnals, W. C. Fosselman, L. B. Fox, Henry Getzloff, C. A. Gunning, F. J. Hagen, M. G. Johnson, Wm. Kraemer, Ferdinand Nitzky, A. J. Nordling, Edw. Olaszewski, A. J. Roberts, Harry Rubenstein, I. C. Schimelfenig, H. G. Schmits, A. H. Schwartz, F. B. Stromer, Fred Wiltger, John B. Wiltger, J. P. Yochem.

Registered Pharmacists, "Time Service."—L. P. H. Bjorkegren, J. F. Friesen, H. F. Holden, Wm. Ouda, Lucy A. Prohaska.

### An Incurable Complaint.

There's one complaint the best M.D.  
Finds quite beyond his skill,  
And that's the one his patients make  
When he sends in his bill.

—Philadelphia Bulletin.

# To the Retail Druggist

WRITE  
"Merrell" and the results will please you.  
ON YOUR ORDERS

Are you seeking a prescription business?

Do you encourage your local physician to buy at home?

When you order supplies have you in mind trade of the highest class?

Is it not a vital element of success to have on your shelves pharmaceutical preparations to which **no exception** can be taken, either as to quality or price?

Maintenance of quality under **all circumstances** is to be commended. Hence in offering 40% discount on Fluid Extracts, Tablets, Pills, Elixirs, etc., the "Merrell" quality, developed through three generations, will be scrupulously adhered to. Trade conditions, affecting the wholesale and retail druggist, as well as the physician, call for a new order of business with the manufacturer; but no competition will justify the tendency to lower the standard of quality and to reduce prices in order to sustain volumes of sales. The same wholesome business policy which has kept the Merrell Company in the front rank for 75 years will be maintained, and we ask the support of the drug trade, with the assurance that the same regard for the quality of our productions, whether general competitive lines or special preparations which we control, will be given as in past years.

Kindly specify "Merrell" on your orders to jobbers. They will be supplied at 40% discount from "line" goods, and you will be satisfied with your action.

Yours to command,

## The Wm. S. Merrell Chemical Co.

New York

Cincinnati

San Francisco

## THE SOUTH.

**Advancing Price of Cotton Helps the Drug Trade—Adam Wirth Succeeds W. P. Taylor on the Louisiana Board of Pharmacy.**

(From Our Regular Correspondent.)

New Orleans, La., July 8.—In so far as her drug trade is concerned New Orleans has seen little unusual in the last two weeks. Trade has picked up somewhat and is now, both in the city and country, very good. The increase in the price of cotton has had a favorable effect in the country and a number of good influences have made themselves evident in the city trade.

## ADAM WIRTH ON THE BOARD OF PHARMACY.

An important change in the *personnel* of the Louisiana State Board of Pharmacy was made recently by Governor Blanchard when he appointed Adam Wirth to succeed W. P. Taylor, resigned. Mr. Wirth is well and favorably known in this city, and his friends feel that in appointing him on the State Board Governor Blanchard has bestowed upon him a deserving honor.

## NEW ORLEANS NEWS NOTES.

Ben Levy, buyer for the Druggists' Sundries Company, has returned from New York, where he spent three weeks buying a fine line of sundries for his house.

P. A. Streck has opened a handsome establishment in Claiborne avenue. It is in a desirable location and promises to become a flourishing enterprise.

The Steinau Drug Company has succeeded Henry Danne-mann in his handsome St. Charles avenue drug store and will henceforth operate that establishment.

Charles Ammen's drug store at Jackson avenue and Pry-tania street has been taken hold of by the Charles Ammen Company, Limited. This is one of the stand-bys of the Fourth District.

## SOUTHERN NEWS ITEMS.

Walker & Murray have succeeded the Christian Drug Com-pany, of Ensley, Ala.

Martin's Drug Store, an old established pharmacy of Brook-haven, Miss., has been advertised for sale.

Manning N. Christian is in charge of the prescription de-partment of E. B. Norton's Drug Company at Birmingham, Ala.

Baykin & Stuart, of Jeanerette, La., recently established a branch store in the eastern end of that progressive town. Both their stores, it is stated, are meeting with success in every way.

Charles M. Dospit, a popular young druggist of Houma, La., was recently happily married to Miss Lula G. Kohn. The wedding was largely attended and the young people were well remembered by their many friends.

The Mississippi Pharmaceutical Association will meet at Crystal Springs July 17. At that time the State Chautauqua will be in session, and it is said no more desirable time could have been selected for the meeting. At this meeting a good deal of important business will be transacted. There are said to be any number of new applications for membership in the hands of the secretary.

After many years J. W. McCorkle, of the old and favorably known concern of Meridian, Miss., the McCorkle Drug Store, has retired and his establishment has passed into the hands of E. E. Hammond, who for some time has been inter-ested in it as sort of partner with Mr. McCorkle. The latter is now enjoying a much needed rest. Mr. Hammond bears an enviable reputation in his town and throughout the adjacent territory.

## The Graduating Exercises at Vanderbilt University.

The commencement exercises of the department of phar-macy of the Vanderbilt University were held in the university chapel on Wednesday morning, June 21, the following gradu-ates receiving diplomas:

Garrard M. Barrett, Henry A. Buchi, William L. Flake,

John W. Harding, William T. Koch, Isaac M. McSwain, Toy E. Morris, Gilbert S. Stovall, James C. Ware and Putnam D. Whetstone.

## Hints to Buyers.

Ammonol, the well-known antipyretic, may be obtained in a number of different combinations, as may be seen by referring to the advertisement of the Ammonol Chemical Company in another part of this issue.

First-class prescription corks, machine cut, may be had of Justus Brauer & Son, 248 North Front street, Philadelphia. Goods up to standard and all full count can be looked for at the hands of this thoroughly reliable concern.

Merck's chemicals are always a safe specification in ordering such goods from the jobbing trade. Special attention is called to Merck's Morphine Sulphate. The advertisement of the house will be found in this issue.

We invite the attention of our readers to the advertisement of E. S. Wells, of Jersey City, N. J. "Rough on Rats" is intimately and favorably known in all parts of the country, and the druggist who fails to carry it in stock is neglecting a busi-ness opportunity. A large colored lithograph may be obtained by addressing the advertiser.

All druggists should be interested in Eskay's Albumenized Food, manufactured by Smith, Kline & French Company, of Philadelphia. This is admitted to be the ideal food for feeding infants in summer weather. By reading the company's adver-tisement and addressing the house by letter certain material advantages are to be had by which the businesslike druggist makes money.

"Montserrat" Lime Juice is undiluted and consequently a very much smaller quantity of it is necessary than in the use of many other brands in the market. It has the delicate flavor of the lime without any of the disagreeable musty flavor so common in inferior preparations. It is not only of a high pro-portion of citric acid, but is absolutely and invariably uniform. Evans & Sons, Limited, of Liverpool and London, are actively pushing this brand in America through their branch at 133 William street, New York.

There is one laxative suitable for pregnant women and its name is Abbott's Saline Laxative. Every one knows the danger of irritating the uterus and causing premature delivery, even by the use of so mild an agent as castor oil. Magnesium citrate was formerly employed, but it is difficult to procure a chemically pure article, and at any rate it is expensive and has to be sent for when needed; whereas the saline is handy, cheap, agreeable to the most squeamish taste and effective, without the slightest irritation.

The following editorial appeared in the N. A. R. D. Notes for April 22: There is no reason why any member of the N. A. R. D., or any retail druggist who is interested in increas-ing his profit, should handle any other dyes than the Wells & Richardson Company's Diamond Dyes. Diamond Dyes have been the standard dyes for twenty-five years. They have been the only dyes in which large sums of money have been con-stantly spent in advertising and that there has been a real de-mand created for, and in placing Diamond Dyes on the direct contract and serial numbering protective basis the Wells & Richardson Company made as great a concession to the N. A. R. D. and to retail druggists of America as any concession that has ever been made. The prices and discounts on Dia-mond Dyes are, we believe, absolutely fair. They are quick, ready sellers, and we can see no reason why any retail druggist should handle any other dyes. The Chicago R. D. A. Executive Board at its April 18 meeting strongly indorsed these dyes, calling upon its members to push them vigorously and in prefer-ence to all others for the reasons above stated. The Chicago example is a good one to follow.

# LAXATIVE BROMO QUININE

## ON THE DIRECT CONTRACT, SERIAL NUMBERING PLAN.

Among the universally sold articles—the staples in the Drug line during the past ten years, none has received greater support of the entire Retail Drug Trade than **LAXATIVE BROMO QUININE**.

The manufacturers fully appreciate this, and in keeping with the policy of allowing from the beginning a profit of one hundred to one hundred and thirty per cent., **LAXATIVE BROMO QUININE** has been placed on the **DIRECT CONTRACT SERIAL NUMBERING PLAN**, as the best discovered means of assisting every legitimate Retail Druggist to maintain this profit under the conditions which he now has to face.

At great expense, not only of money but most complicated labor, the manufacturers have been proceeding quietly for some months to put this plan in operation. A majority of the druggists throughout the country already have signed and returned the contract and the names of hundreds of other druggists who sign and return the contract are being added to the list every week. The results obtained up to this time insure success to the effort, and in order to make the Plan effective to the greatest possible degree, it simply remains for every Retail Druggist to realize that his individual co-operation is essential. Every Druggist who has not signed and forwarded the contract on **LAXATIVE BROMO QUININE** should take such action immediately.

If a supply of **LAXATIVE BROMO QUININE** is needed or if the stock on hand will permit it, the extraordinary **DATING OFFER** now in force enables the Druggist to purchase a quantity of **LAXATIVE BROMO QUININE**, obtaining the regular free goods, to be delivered at once and invoice dated November 1st, 1905, for cash discount.

## LAXATIVE BROMO QUININE

Price \$1.75 per dozen.

|  |                                  |
|--|----------------------------------|
| 6 dozen lots, 1 dozen free, . . . . .                          | Cost \$10.50 or \$1.50 per dozen |
| 12 dozen lots, 2 dozen free, 5 per cent. trade discount, " "   | 19.95 or 1.43 " "                |
| 36 dozen lots, 6 dozen free, 8 per cent. trade discount, " "   | 57.96 or 1.38 " "                |
| 60 dozen lots, 10 dozen free, 10 per cent. trade discount, " " | 94.50 or 1.35 " "                |

All Wholesale Druggists will accept orders under this **DATING OFFER**.

## PARIS MEDICINE COMPANY,

SAINT LOUIS AND LONDON.

### Syringe Boxes.

When you are in the market for syringe boxes made of white-wood, bass, oak, ash, etc., or for any other kind of fancy wood boxes, first-class work, low prices and prompt shipment can be had by dealing with the Henry H. Sheip Mfg. Company, 529 Columbia avenue, Philadelphia, Pa.

### Important Reduction in Price.

The Mallinckrodt Chemical Works announces that it has made a reduction in the price of the "M. C. W." brand of hydrogen dioxide, so that retailers may obtain it through the wholesale drug trade in competition with other brands which are sold direct to the retail trade. Druggists as a rule prefer to buy articles of this kind through wholesale houses in quantities as needed, and the reduced price of the "M. C. W." brand will enable them to do so.

The extensive sale of the "M. C. W." hydrogen dioxide in all parts of the country is doubtless due to three important facts—viz., that it possesses exceptional keeping qualities, a most desirable consideration in hydrogen dioxide; is free from acidity, and represents an exceptionally high degree of purity. The "M. C. W." dioxide has been the leading brand for many years and enjoys the full confidence of pharmacists and physicians.

### The Largest Contract for Carbonators on Record.

The Puffer Mfg. Company has just concluded the largest contract for carbonators ever placed. The Coca-Cola Company has purchased from it during the last winter and spring some 25 Faithful carbonators, which it has used in its various plants, and these have given such excellent satisfaction that it has just placed an order for 100 Puffer Faithful carbonators, which are to go to its bottling establishments all over the country. The order was placed through the Atlanta branch, the manager, W. B. Chase, being the successful salesman to land the order.

The Puffer Company is installing at the present time in the store of Henry Siegel Company, which is to be the largest department store in the city of Boston, and undoubtedly the most elaborate store of this kind ever fitted up, the largest and most expensive soda water apparatus ever built. Its appointments are complete and perfect in every way. The value of the apparatus is upward of \$30,000. It is built on the company's Constellation type; the syrups and beverages are cooled altogether by means of cold water from its private refrigerating plant, no ice being used in the apparatus at all. Its refrigerators for storage of bottled goods, etc., are cooled by means of the brine system. The apparatus is about 60 feet in length, and its furnishings are elaborate throughout in onyx, marble, metals and large mirror work. It should be seen to be appreciated.

The company has in process at the present time many new features for the coming season; many elegant designs for wall and counter apparatus, as well as its popular Constellation construction.

### California's New Industry.

The San Gabriel Valley Essential Oil Company, with its factory at Pasadena, Cal., is now known almost all over the world for its unexcelled flavors, known as Concrete Oleo Resins of Orange and Lemon, produced from the fresh fruit.

The increased demand for these flavors has necessitated the enlargement of the capacity of its plant and the employment of a very much larger force of hands than during the preceding year.

Its 'Oleo Resins have been recognized by the United States Government as original discoveries and patents allowed, which give the trade more assured confidence in their merits.

The company has also established an office at 97 Reade street, New York City, from which all shipments are made, where the jobbing trade can be supplied promptly.

This last move is a great advantage to the jobber, as it saves all the delay which was heretofore necessary when ordering from the coast.

This industry is one that has long been needed in California.

as besides giving the fruit growers a market for their oranges other than shipping East it gives employment to a great many hands.

It is believed by the San Gabriel Company that in due time the entire trade will recognize the superiority of American products and foreign orange and lemon flavors will be a thing of the past.

### Registered in North Dakota.

At a meeting of the North Dakota Board of Pharmacy, held at Fargo May 23-25, the following passed successful examinations:

Registered Pharmacists.—T. A. Findley, Westhope; E. Bennett, Willow City; J. G. Cowan, Carrington; E. E. Clemens, Jamestown; I. Bannister, Flaxton; A. S. Sigurdson, Valley City, and F. A. Scheele, Dasey.

Assistant Pharmacists.—J. C. Reinertson, Park River; A. L. Bachac, Fargo; E. Buck, New Rockford; W. R. Campine, Westhope; C. A. McKay, Langdon; H. N. Bjornson, Kulm; O. Almlov, Portal; H. T. Francis, Langdon; G. A. Richards, Granville; O. O. Slind, Sherwood; G. M. Shephard, Glasston; R. Swanlow, Milton; E. J. Skjold, Winnipeg, Man., and I. Hayes, Hecla, S. D.

The board has fixed September 19 for the next examination in Fargo.

### Millions of Coca-Cola Coupons to Build Up Retail Trade.

Possibly the most attractive piece of magazine advertising, and certainly one of the most expensive, that has ever been undertaken by any concern in this country is the one now being run by the Coca-Cola Company in practically all the leading magazines. This advertisement is in the form of an exceedingly handsome colored insert. This insert is an imported piece of lithographic work which is bound to attract the attention of all magazine readers. We are not informed as to how many of these inserts are being sent out, but from the number and circulation of the magazines in which we have seen it we would say that the number will run up into the millions. While the initial expense of this advertising will be enormous, it represents but a small proportion of the actual cost of the campaign. Every one of the inserts carries a coupon, and this when cut out and presented to any dispenser of genuine Coca-Cola will entitle the holder to one glass free, and the Coca-Cola Company stands ready to redeem these coupons at 5 cents each, the selling price of the drink, when returned to its office in Atlanta, Ga., with bill.

Now, not every one, of course, who sees this advertisement will take the trouble to cut it out and present it; but suppose that one person in two does it, that will mean that from three to five millions of these coupons will be redeemed, and this means just that much increase in business for the soda fountain owners. One million glasses of Coca-Cola at 5 cents each amount to \$50,000, and that represents an average of almost \$2 of business for each owner of a soda fountain in the United States.

This stupendous offer is not being put forth for just one month, but is to continue throughout the season. The Coca-Cola Company is actually sending millions of thirsty people a month to the soda fountains of this country to drink Coca-Cola at its expense, to say nothing of the actual amount of new business it directly represents. Think what it will be worth to have this many people sent to your stores. This sort of enterprise on the part of this company is deserving of the heartiest support and co-operation from the dispensers. They should display signs conspicuously about the front of their stores inviting holders of Coca-Cola coupons to drink at their fountains. A short ad in your local newspaper would bring persons to your fountain with these coupons far in excess of the cost of the advertisement.

### Ahead of Time.

The dry goods stores get out their show  
Of spring and summer wear  
About the time we're having snow  
And frost is in the air.

A magazine's a month ahead,  
No matter which you choose,

# The Lactated Food Proposition

There is a larger net profit in selling Lactated Food than can be made on any other standard food.

Lactated Food is on the \$2, \$4, \$8 schedule and is PRICE PROTECTED.

That is why our new Lactated Food proposition is making such a sensation among the aggressive retailers.

## HERE IS THE PROPOSITION

With a purchase of an \$8.00 quantity of Lactated Food we will mail to 20 of your customers, whose names you are to fill in on blanks we will furnish, a convincing booklet bearing your imprint and offering for free trial (on receipt of the postage) a 25c. package of this meritorious food; we will send, charges prepaid, for store advertising, 200 picture cards, with your name printed on them, 1 four-fold window display card and 25 Baby Booklets bearing your imprint.

*With a purchase of a \$16.00 quantity we will double the above special advertising offer and allow a discount of 5 per cent.*

BOROUGH OF BROOKLYN, NEW YORK.

### Glycerophosphate Syrups and Elixirs.

In the preparation of syrups and elixirs containing the various glycerophosphates a difficulty has been that the lime salt is only soluble in 25 or 30 parts of cold water. For this purpose, therefore, Schering & Glatz's Duotonol is preferable. It is a 100 per cent. pure combination of the glycerophosphates of lime and soda, equal parts of each, and is soluble in ten parts of cold water. Glycerophosphate of soda alone is so hygroscopic that it can be marketed only in the form of a 75 per cent. aqueous solution, but in Duotonol it is wholly desiccated. Being in powder form, Duotonol may also be dispensed in capsules, in which it keeps well.

If it is necessary to clarify solutions of the glycerophosphates a small amount of citric acid may be added. Phosphoric acid, even in traces, should not be used, as it precipitates the calcium salt.

While the hypophosphites, as is shown in authoritative works on pharmacology, pass unchanged through the system and possess no therapeutic efficacy, the glycerophosphates are completely assimilated. They replenish the enervated cells with phosphorus in the form in which it is naturally present in the body, stimulate the appetite, improve nutrition, increase blood formation and augment rapid tissue interchange. They never cause depression.

### Thomas Stoddart is Honored in His Own City.

The Buffalo weekly newspaper, *Truth*, for May 20, has an unusually well written and interesting biographical sketch of Thomas Stoddart, Councilman of the city of Buffalo and past president of the New York State Pharmaceutical Association, from which we extract the following:

In 1854, in the picturesque town of Dumfries, Scotland, was born Thomas Stoddart, for long Councilman of the city of Buffalo, and for long before that one of its most successful and intelligent merchants, a man whose family have their roots deep in historic Scottish soil.

Mr. Stoddart was 15 years of age when he came to the United States, and at 17 was employed in the drug business in a subordinate capacity, a business which he liked and wherein for that and other reasons he has succeeded beyond the measure of most men.

The house of Stoddart Bros. has long been most conspicuous in the local trade, and is now known all over the United States. Twenty-eight years ago it was founded by the brothers constituting the firm—Thomas and Charles—and it has grown to mammoth proportions. Three years ago the firm bought the immense building which it now occupies at 86 and 88 Seneca street. Previous to that the business was conducted in comparatively cramped quarters at 84 Seneca street. In the new building, four stories high, 50 feet wide, and extending back almost 200 feet, the business has grown by leaps and bounds, and is already twice as large as it was when the new store was opened.

There is something sterling and honest in the Scottish character, something that rings true, that engenders trust and confidence. Councilman Thomas Stoddart and his brother Charles as well have this quality in marked degree. People trust them, have complete confidence in them, and it is no wonder that they have taken a foremost place among the leading merchants of Buffalo.

In many other ways Thomas Stoddart has found vent for his tireless energy. For a number of terms he was president of St. Andrew's Scottish Society, of Buffalo, and materially helped to place it in the proud position which it now occupies. He was president of the New York State Pharmaceutical Association for two years, served as chairman of the Legislative Committee of the National Association of Retail Druggists, and is a member of the American Pharmaceutical Association. He was first vice-president of the Independent Club before it merged with the Liberal Club, is now a member of the Liberal Club, Ellicott Club and other social organizations. In fraternal societies Mr. Stoddart has been very active. He was one of the founders of Waverly Lodge, A. O. U. W.; a charter member of Red Jacket Lodge, Independent Order of Foresters, and is now trustee of Queen City Council, Royal Arcanum. The foundation of one of the most stable and prominent of Buffalo's building and loan associations was laid by Mr. Stoddart many years ago, and as outgrowth of it there came several of the substantial building associations now in existence in the city.

This is a sketch of Councilman Stoddart's activities in business and other lines, but there is still another side to the char-

acter of the man. He who has to chisel out a way for himself, and to tread the path thereof with perfect fortitude, must necessarily have another side. Some years ago politics attracted Mr. Stoddart's attention, and he became Councilman of the city of Buffalo. In such capacity nobody has doubted his integrity, the voice of slander has not been raised against him. The people have had and have confidence in his integrity and purpose. He has been generally on the right side of public questions, by reason whereof his friends expect that he will some day be called to go higher. He has the necessary youth and honorable ambition to entitle him so to do. The demand of to-day is for virility and integrity in high office. Mr. Stoddart has both.

### The Harriman Lines.

In the years of his reign Edward H. Harriman is youngest among American masters of transportation. It is scarcely more than six years—February 1, 1898—since the reorganization of the Union Pacific was completed and Mr. Harriman and his friends took final and formal possession of it. Within that time he has risen to the very first rank of the powers in American railroading.

What, however, is of more vital matter, the record is that Harriman railroading has been uniformly good railroading. It will be difficult to point to a case in which, in Mr. Harriman's hands, a railroad or its public has suffered hardship, and the instances are marked in which the immediate benefits of his control have been, to both, enormous.

It is not, then, merely that Mr. Harriman is the owner of 17,000 miles of railroad—it is, rather, because every mile of road he owns stands for good railroading—that he is worth estimating. He took over the "Alton" when it had aged like a puff ball and was ready to dissolve into dust. For years it had been famed as an earner, and where 7 and 8 per cent. dividends were treasured as an annual return Alton stock was ranked with things celestial. Unfortunately, these really unusual distributions were effected by indefensible economies. Railroading should occupy at least as high an industrial plane as farming, and the farmer that would strip his land yearly of its total produce and give nothing back to the soil would hardly rank as a thrifty husbandman. Good farmers keep up their machinery, buildings and fences, they fertilize occasionally, but the Alton fertilizing was put wholly into dividends, and Mr. Harriman bought a road that had not alone let bridges, tracks and rolling stock run down, but had even sold terminal rights, while distributing 8 per cent. to stockholders. Without delay or hesitation he set about making of the Alton the best possible road of its class, and its class is the first. He has overhauled the system completely, and put it physically a little in advance of every competitor. To instance: for thirty years the Alton had been strong in a territory possessing the richest coal deposits in Illinois, and not until the Harriman forces took hold of the road had it ever developed a coal business. Not only has the new Alton been equipped with what it never before had, cars and motive power to handle this traffic, but its engineers, in rebuilding the line, show the lowest maximum grades from the Illinois coal fields into Chicago. Beginning with nothing, the new owners have within five years developed a coal traffic that already ranks second in volume among the soft coal roads of its territory.—From "*Strategy of Great Railroads*," by FRANK H. SPEARMAN. Published by Charles Scribner's Sons.

"Doesn't your husband care enough for you to quit smoking?" asked the caller, who doesn't mind starting trouble. "I think he does," answered young Mrs. Torkins, "and I care enough for him not to ask him to."—*Washington Star*.

### The Worm and the Germ.

(A South American scientist declares that tapeworm destroys the germ of consumption.)

The Tapeworm is a yard of gumption,  
Which, when he bites, he cures Consumption.

In dire and deadly grip he closes  
Upon the germ Tuberculosis.

What matter though the Tapeworm piles  
His calling till the Patient dies?

Since fell Consumption's been prevented,  
The Patient ought to die contented.

—Wallace Irwin, in *New York Globe*.

**The Powers-Weightman-Rosengarten Company Chemicals.**

In all of the chemicals which the Powers-Weightman-Rosengarten Company makes it aims constantly to put into their manufacture the highest skill and the most painstaking care in order that they shall go out absolutely up to the full requirements of the Pharmacopœia. It aims and intends that the purity and excellence of its chemicals shall be at least equal to any other goods to be found on the market. Owing to a custom which it has followed for very many years, of protecting, in so far as lies in its power, the interests of the legitimate jobbing trade, it refrains from approaching the retailer direct, for it has found, no matter how it words its advertisements, they lead to the receipt of inquiries for quotations or the tender of orders for quantities too small for the Powers-Weightman-Rosengarten Company to accept, if it would continue to follow the policy above mentioned. In many cases the applicants seem to feel that the quantities inquired for are really quite large. Possibly they may be to the applicant, but still may not be large enough to warrant direct dealing with the manufacturer. If, therefore, the individual orders are referred to jobbers, it is not because the company does not desire the trade of the retailer, nor does this indicate any lack of appreciation of the value of the retailer's good will; but such action is necessary because the entire organization of the Powers-Weightman-Rosengarten Company is so adjusted as to make it impracticable to deal direct with any save the dealers in very large quantities. Its goods are carried in stock by every jobber in the United States, and no difficulty will be experienced by the retailer in purchasing his P.-W.-R. chemicals from any jobber.

**Registered in Kentucky.**

At the meeting of the Kentucky Board of Pharmacy held in Louisville, April 11, the following were registered. The class numbered 59:

L. A. Bentire, Louisville; Elmer Coats, Hopkinsville; D. C. Donan, jr., Three Springs; G. S. Du Bois, Paducah; H. F. Emerson, Patriot, Ind.; O. H. Falk, New Albany, Ind.; W. H. Fitzpatrick, Paducah; S. L. Gill, Paducah; L. H. Goemmer, Louisville; C. G. Hambo, Bellevue; C. V. Hocker, Leitchfield; J. A. Hoffman, Greenup; T. J. Keane, Louisville; Miss Ida Lambert, Louisville; E. F. Langenfeldt, Louisville; R. C. Pryse, Beattyville; G. W. Rader, Wellston, Ohio; L. B. Robinson, Morton's Gap; L. T. Schreff, Frankfort; L. B. Severs, Cloverport; A. L. Suter, Louisville; H. A. Taylor, Louisville; T. J. Winder, Cottageville; F. L. Zoeller, Louisville; J. Ambrosius, Louisville; Bruce Keith, Upton; W. H. Gardner, jr., Elizabethtown; C. A. Luckert, Louisville; Harry Plock, Louisville.

The next examination will be held at Dawson Springs, July 11. Applications should reach the secretary, J. W. Gayle, Frankfort, Ky., at least ten days before that time.

**A Profitable Line of Legitimate Goods for the Retailer.**

The products of the Tilden Company are strictly pharmaceutical preparations and the demand must be created with the medical profession, as it manufactures only prescription goods—a line of goods that are profitable to the dispensing druggist. His prescription department, financially speaking, is his salvation. The Tilden Company's preparations are, as a rule, seldom sold in original packages. The price is never printed on the package. The retailer makes the price. The Tilden Company has quadrupled its force of special detail men among the medical profession, which means that it is striving to build up the druggists' prescription trade. It is mailing thousands of booklets daily to the medical profession, in addition to having a score or more of men who do nothing but detail work. The only advertising that the Tilden Company does directly to the retail druggist is through the medium of such journals as the *AMERICAN DRUGGIST*. It is not and never has been interested in prize schemes of any character; therefore the legitimate drug journal, its price-list and its traveling men are its methods of reaching the druggists directly and through the physician indirectly, and the latter efforts it regards as an actual source of profit to the dealer.

The policy of the Tilden Company is a live and let live policy. It asks the closest scrutiny by the retail druggist of the prices charged to the end that he may understand how thoroughly consistent they are with the cost of production. The Tilden Company says: "Where quality is considered our prices are

much lower than those of our competitors. In short, our line is a most interesting one to the dispensing druggist because it represents the best possible quality, is thoroughly popular with the medical profession and very profitable to the dispenser. We solicit correspondence from the dealers and are always glad to send catalogues and discounts on application."

**Registered in California.**

At the last examination of the California State Board of Pharmacy the following passed successful examinations:

Registered Pharmacists.—W. G. Barry, F. C. Blaney, M. Cameron, G. H. Coulter, F. Cummings, S. A. Denis, W. M. English, J. R. Jay, H. C. La Brier, H. I. Shaefer, C. Truppel, F. Van Dam, W. Atwood, R. S. Baker, P. W. Byrd, F. M. Carter, C. H. Christal, C. F. Darling, J. F. Diddle, M. B. Dolcini, T. J. Feeley, G. P. Hedgpeth, W. L. Howard, R. C. Jackson, J. L. Justice, E. M. Kimberlin, W. R. Nolan, F. A. Nutter, W. Osgood, H. H. Patterson, F. S. Ream, C. H. Redmond, J. T. Regan, J. H. Seaton, P. A. Slimmon, C. S. Smith, W. M. E. Lindsay, J. R. Lindsay, M. Sydenstricker, R. J. Taylor, E. L. Thurston, T. W. Toomey, C. B. Whilden, G. A. Whitacre, H. Wessel, F. A. Wilson.

Assistant Pharmacists.—W. G. Brown, F. L. R. Burks, G. Peasa, J. W. Tuttle, T. F. Dierks, H. G. Parsons, J. A. Abreu, D. R. Douglas, M. S. Morris, W. H. C. Bartlett, J. B. Turner, A. D. Van Horn, O. A. Comper, A. L. Hoult, C. W. Blehard, W. A. De Graw, N. S. Elder, E. J. Ryan, J. W. McCoubrey, A. L. Garibaldi, J. W. Hauer, J. E. Pickerill, M. S. Tague, L. E. Morris, J. A. Haubrich, S. A. Watson.

**The New Mechanical Method of Treating the Eyes.**

The Ideal Company is putting forth a strenuous effort to educate the people through the power of persistent reiteration as to the special effectiveness of massage for the eyes. Success will cause a demand for the simple and thoroughly effective mechanism for applying massage to the eyes which is made by it under the name of the Ideal Sight Restorer. The interesting and comprehensive free treatise, as well as the book, "Perfect Eyes," copyrighted by this company, is the means of education resorted to.

The demand for the mechanism is growing; still educated men or women with personal confidence and experience to act as competent salesmen are hard to find. It is a vital necessity that the persons representing the goods should have such confidence and be able to instill it in others. The special attractiveness of this apparatus for the retail druggist consists mainly in its advance thought and new power for comfort for the afflicted. It offers painless and refreshing daily treatment for old and young alike. Myopia, where conditions are not excessively abnormal, may be retarded if progressive, or cured in many cases, although such cures are often tedious. In all other refractive errors the cure is claimed to be positive by daily use in six months.

Farsight and astigmatism, the causes of otherwise unaccountable headaches, are readily cured, it is said, and the headaches cease within the first two months. That alone should be of interest and value to the druggist. Presbyopia, or the inability to read or sew while distant vision remains good, a condition occurring usually between the age of 38 and 45 years, yields like magic to the stimulating action of this appliance.

Who does not have sympathy for the child with impaired or imperfect vision? He is less able to care for himself when dependent upon spectacles.

The child has good circulation, fresh blood, and the slight refractive or muscular error in the eyes of the child will, it is stated, readily yield to systematic massage. Does the druggist, both wholesale and retail, wish to assist in the perfecting of the men and women of the near future? If so write to the Ideal Company, 239 Broadway, New York, for full particulars regarding the Ideal Sight Restorer.

The coroner was inquiring into the death of Socrates, and Dr. Esculapius was on the stand.

"You say, doctor, that the deceased came to his death from drinking hemlock. In what region would hemlock most affect him?"

"In the lumbar region, I should say."

Not until the week following did the coroner see the joke, otherwise wit at the wrong time would have met its just and terrible punishment.

Solamente se venden en cajas ó botellas con el *fac-simile* de los propietarios en la parte exterior del paquete.

JOHN I. BROWN & SON, Propietarios, Boston, Mass., U. S. A.

LONDON AGENTS: THE ANGLO-AMERICAN DRUG CO.

### Paints, Varnishes, Mixed Paints, Brushes, Etc.

*In Every Variety*

Largest and oldest manufacturers in the world.

*Finest Quality*

We use only raw material of superior class and guarantee that our products will give perfect satisfaction, having proven successful in every test to which they have been subjected.

*Once Tried Always Used*

Cheap paints and varnishes of other makes in which materials of inferior grade have been used, invariably crack, split, wear out quickly, and are not to be recommended. There is no economy in buying anything but the *very best*; they are cheapest in the end.

We make only this kind

### Barnices, Pinturas ya Mezcladas, Brochas, Etc.

*En Todas las Variedades*

Los más grandes y más antiguos manufactureros en el mundo.

*Las Calidades más Finas*

Usamos solamente materias primas de la clase más superior y garantizamos que nuestros productos dan perfecta satisfacción, saliendo victoriosos en cualquier prueba á que se les someta.

*Una Vez Probadas Siempre Usadas*

Pinturas baratas y barnices de otras fábricas, en las que materiales de clase inferior se han usado, invariablemente se cuartean, descascaran, se acaban pronto ó quedan sin uso, no siendo por ningún respecto recomendadas. No hay economía alguna en comprar otras excepto cuando se adquieren las *muy mejores*, son al fin las más baratas.

Nosotros fabricamos solamente esta clase.

Catálogo Español completo enviado franco al hacer aplicación.

F. W. DEVOE & C. T. RAYNOLDS CO., 101 Fulton Street, NEW YORK, U. S. A.

# A Stitch in Time

If you could personally call and inspect the foreign department of this paper you would learn two facts of importance to your business:

- 1st. The completeness of our facilities for PRACTICALLY Introducing American Products into the markets of the world.
- 2nd. The slight expense at which you can have the use of these facilities.

Delay in making connections abroad is dangerous. While you are thinking somebody else is acting. It will cost you less to introduce your goods abroad now than it would a year hence. If you wait your competitors will get in before you. Come and talk it over. THAT won't cost you a cent.

### The Pharmacist in Palestine.

In Gallilee, the northern part of Palestine, the drug trade is in the best condition, says a writer in the *Süddeutscher Apotheker Zeitung*. In the comparatively large principal harbor and commercial town, Haifa, there are only two pharmacies, the German Apothecary Shop and the Normal Pharmacy, the latter being owned by an Austrian of Trieste, who is not able to speak German. In outward appearance this Austrian pharmacy, with its large, spacious shop, makes a more impressive appearance than the smaller German drug store. It is also distinguished from the other with its stock of bindings, bandages, trusses and similar articles, and contains besides a choice collection of powders and perfumes, toilet soaps and various toilet articles. While the German pharmacy does not carry perfumes and similar articles, but has its trade strictly limited to pharmaceutical articles, it makes quite an impression upon the professional man.

In the German pharmacy all things are arranged in exact order, as they are in all regular German pharmacies, so that nothing out of the ordinary strikes the eye of the critic. In passing from the pharmacy proper into the adjoining apartment one is greatly surprised. It seems strange when a druggist carries walking canes, umbrellas and several other fancy goods and articles of luxury in stock besides the pharmaceutical goods. In the Normal Pharmacy in Haifa we find a complete bazaar business, with a variegated assortment of collars, shirts, umbrellas, sticks, headwear, enamel and porcelain ware, earthenware, ladies' articles of all kinds, dress goods and toys. This side business apartment has an entrance from the street, but the customers are served by the druggist himself.

This instance shows the true situation of the business methods of the pharmacies of Palestine. When the Austrian druggist opened his business in Haifa he prepared for business emergencies, for when the drug business is not at its best he is able to make his living out of side lines. If the druggists of Jerusalem and Jaffa would transact their business in the same manner they would have quite a profitable business, instead of having to be contented with dry bread and a piece of watermelon for their dinner and supper.

The customers of the German druggist in Haifa consist chiefly of the inhabitants of the large and wealthy colony of the Wirtemberger Knights Templar, who at first made Haifa inhabitable for Europeans by beautifying the city in general, though these Wirtembergers are such strong and healthy people that they are very seldom ill.

The Austrian druggist has as customers the few remaining Europeans, and both druggists have for their customers an equal part of the Turkish and Arabian inhabitants who are advanced so far in culture that they have taken the doctor and druggist into consideration. The majority of the natives become sick or blind or starve and die without the aid of either doctor or druggist.

According to this state of affairs we cannot advise a German druggist to settle in Haifa, unless he carries a line of groceries in connection with drugs, as there is no complete grocery in Haifa, and unless he combines with his business anything that might possibly pertain to pharmacy.

A very suitable location for a German pharmacy would be in Akko, about one and a half hours' ride from Haifa, which is quite a large and well to do town. The city of Nazareth, which consists almost entirely of a Christian population, would be a very good place for a pharmacy if it were not for the great number of convents, orphan asylums, hospitals and other missionary institutions. This is also the case in Jewish Tiberia on the sea Genezareth, where the Scotch Jewish mission supports a hospital with a pharmacy.

In Tiberia there are also small Jewish drug stores, somewhat similar to those in Jerusalem. The medicine glasses and bottles which are set side by side on shelves were formerly used as jam and other preserve glasses. We see such things as tincture of iodine, spirits of sal ammoniac and insect powder, the latter a very necessary article in that city, where there are so many fleas and mosquitoes, and which sell at a high price. We were asked 25 cents for a small package of cotton which we could have purchased for from 3 to 6 cents in Jerusalem. On

noticing our disapproval of the price the druggist reduced it with alacrity.

Much worse than the harmless small Jewish druggists are the native Arabian medicine men who carry on their quackery and manipulations while praying to Mohammed for aid, which causes most of the incurable diseases of the eye and other ailments.

The Turkish Government, however, allows almost anything as long as it is left in peace, and therefore the European pharmaceutical conditions, which are so much desired by the European druggists in the Holy Land, are still a long way off.—*Western Druggist*.

### Examination of Foods and Drugs Entering Turkey.

By imperial trade a new law has been put in force for the examination of all foods, drugs and chemical or pharmaceutical preparations entering the Ottoman dominions. A very large laboratory has been opened in Constantinople, with branches in Galata; at Smyrna, Salonica, Trebizond, Scutari (Albania), Belrout, Alexandria, Bassori and Tripoli chemists examine specimens of the imported goods; in other places the duty is intrusted to medical officers. The first analysis of a given preparation is made free of charge; should it be found adulterated, damaged or harmful a report is drawn up and the interested parties are allowed 30 days within which to request the taking of a second sample, for analyzing which a fee of 100 piasters has to be paid. Monthly lists are published of goods that have passed the tests, and such as have passed once are not further submitted to investigation. Preparations the composition of which is not known are admitted only when issuing from some official academy or authoritative institution, etc.; they have then to be accompanied by a certified invoice. Recognized trade-marks may also constitute a sufficient guarantee.

The importation of the following substances into Turkey is forbidden: Cocaine, sulphite compounds, Koch's anti-tuberculous serum, cocculi, picrotoxin and cannabis indica. Such substances are returned to the senders. All compounds intended for use in the manufacture of explosives are likewise excluded, such as potassium and sodium chlorates and nitrates, nitroglycerin, picrates and gun cotton; but if prepared for medicinal use (potassium chlorate pastilles, for instance) they are admitted.

### A Wonderful Pharmacy.

The Paris correspondent of the *Chemist and Druggist* writes that "The Ten-Thousand-and-Two Nights' Entertainments" is the title of an amusing series of sketches—in the true "Arabian Nights" style—by M. Felix Duquesnel, the eminent journalist and critic. The following delicious bit of satire is from a tale called "The Brain-mender" ("Le Raccommodeur de Cerveille"): In the great Square of Ispahan old Abou-Hassan kept a pharmacy. Should I say 'a pharmacy?' for he was almost as much a sorcerer as a pharmacist. It was curious and really extraordinary, this shop, encumbered with porcelain vases and transparent phials, symmetrically arranged and bearing odd inscriptions. For by the side of the medicinal labels, which all the world over are borrowed from the Latin—the diascordium theriaca and pulvis cinchonæ (let us say bark powder for the benefit of the unlearned)—one might read others more suggestive. For instance, there was 'Extract of Illusions' for the aged, 'Grains of Good Sense' for everybody, 'Essence of Forethought' for generals and army service officials and 'Spirit of Modesty' for musicians and authors. And on the rounded belly of an enormous mortar, containing a sort of ointment which had a metallic golden sheen, shone these words in gigantic letters, 'Palm Oil.' This medicament was by no means the least popular, and the spatula, plunging therein ceaselessly, could scarcely keep pace with the demands. The emotion of the local doctors at the success of Abou-Hassan, their deliberation as to the desirability of prosecuting him for the illegal practice of medicine, the sage advice of the Dean of the Faculty, Sidi Bougredane, the visit of Ali-Gaga to the pharmacy, and the manner in which his brain was "made as good as new," are recounted with the same delicious irony.

# To the Retail Druggist

WRITE  
"Merrell"  
ON YOUR ORDERS and the results will please you.

Are you seeking a prescription business?

Do you encourage your local physician to buy at home?

When you order supplies have you in mind trade of the highest class?

Is it not a vital element of success to have on your shelves pharmaceutical preparations to which ***no exception*** can be taken, either as to quality or price?

Maintenance of quality under ***all circumstances*** is to be commended. Hence in offering 40% discount on Fluid Extracts, Tablets, Pills, Elixirs, etc., the "Merrell" quality, developed through three generations, will be scrupulously adhered to. Trade conditions, affecting the wholesale and retail druggist, as well as the physician, call for a new order of business with the manufacturer; but no competition will justify the tendency to lower the standard of quality and to reduce prices in order to sustain volumes of sales. The same wholesome business policy which has kept the Merrell Company in the front rank for 75 years will be maintained, and we ask the support of the drug trade, with the assurance that the same regard for the quality of our productions, whether general competitive lines or special preparations which we control, will be given as in past years.

Kindly specify "Merrell" on your orders to jobbers. They will be supplied at 40% discount from "line" goods, and you will be satisfied with your action.

Yours to command,

## The Wm. S. Merrell Chemical Co.

### English Pharmacy from a German Point of View.

Carl Stahl, a German assistant in London, has communicated an account of his experiences to a recent issue of the *Pharmazeutische Zeitung*, Berlin, in the course of which he says:

"After having passed my State examination, and completed my military service, I tried in vain to procure a situation in London from the Continent. Following the advice of a friend, I went to London with the firm conviction that I should be able to find a suitable situation in a short time. Unfortunately, I met with many disappointments, for although there are from 200,000 to 300,000 Germans in London, comparatively few pharmacies employ German assistants.

"Soon after my arrival here I went to the offices of the *Chemist and Druggist* in order to obtain the addresses of the German pharmacies. While seeking for work during the next few days my hopes fell considerably. In spite of this, however, I started off each day with fresh courage, supported with very good testimonials, to look for a situation. After having been to all the likely pharmacies, where I did not forget to mention my knowledge of French, which is highly thought of in England, I had to abandon my endeavors. Rather than remain idle I took a place as volunteer in a small newly established English pharmacy. While there I did not fail to try to find a better position; I sent reminders of my address, with copies of my testimonials, to all the German pharmacies. I had nearly given up hopes of finding paid employment in my own calling, and was about to earn my living as tutor in an English family, when the proprietor of an international pharmacy offered me a vacancy in his business. My salary amounted to £1 a week to begin with, as an outdoor assistant. After three weeks I obtained £1 10s. a week. The first three months are considered to a certain extent as apprenticeship, for English pharmacy is very different from the German. I spoke to a few German and French colleagues with regard to the wages, and they told me that they did not fare much better.

"The hours of service in English pharmacies vary considerably in the different parts of London. City pharmacies are mostly open from 10 a.m. till 6 p.m., but the hours in the West End are much longer. In the German and French quarters the pharmacies are usually open as late as 12 p.m.

"My hours are Mondays, Wednesdays and Fridays, 10 a.m. till 11.30 p.m.; Tuesdays and Thursdays, 9 a.m. till 8 p.m., and Saturdays, 9 a.m. to 5 p.m.; an hour for lunch every day, half an hour for tea, and an hour for dinner on the days I work till 11.30 p.m. There is no night duty, as manager and assistants live away from the business.

"The training of the English pharmacist, as far as the scientific part is concerned, is not so advanced as ours; in business he is, however, an example to the German, being a conscientious and prompt worker. . . . As distinguished from the custom in Germany, English pharmacists attach great importance to a well arranged window, and in the better shops very good and tasteful displays are seen."

### The Shah and the Savant.

M. Pierre Curie was summoned to the Elysée Hotel in Paris recently to explain the marvels of radium to Mouzaffer-ed-Dine. The savant explained to the Oriental potentate that in order to judge of the luminous effect of radium a dark room would be necessary. The Shah eyed the Grand Vizier, who inquired, "Suppose we draw the curtains?" "No, a dark room is indispensable." M. Paoli was sent for and confirmed the absolute necessity of total darkness, and the Shah and his suite descended into the hotel basement, into what is known as the "safe room." But M. Curie had hardly ordered the electricity to be turned off when a chorus of cries arose in French and Persian, "Light! more light." The light was turned on accordingly, and in order to judge of the effect of the pieces of radium M. Curie had brought with him the Shah placed his astrakhan headdress between the electricity and the element. The savant good-naturedly accepted the inevitable and gave

what demonstrations and explanations were possible under the circumstances. The Shah was anxious to confer on M. Curie the Order of the Lion and Sun, and upon his refusal (it is a principle with him not to accept decorations, and it will be remembered he declined the Legion of Honor itself) insisted upon a gift of some kind. The diplomatic M. Paoli once more came to the rescue, and the sum of 300 francs handed by the Shah to M. Curie was forthwith transferred by the latter to the Société des Amis des Arts, in which he takes an interest.

### Underpaid Postage on Letters for Foreign Countries.

United States consuls are constantly calling attention to the importance of putting the proper amount of postage on letters sent to foreign parts. "It seems," says one writer calling attention to the prevailing carelessness of the American people, particularly business men, in this connection, "that our people do not fully realize that the postage to foreign countries is 5 cents for each half ounce or fraction thereof and not 2 cents for each ounce or fraction thereof. The sending of letters at local rates to Canada, Mexico, Cuba, etc., has greatly increased the liability to stamp letters for all other countries at the same rate."

The same writer thinks it would be a good idea to have "the letters upon which the postage has not been paid in full returned to the sender." It might be a good plan; but it may be best for all concerned to have their attention called to the actual conditions under which letters are now carried. Parties who are so careless as to have their letters sent with insufficient postage must not be surprised if the letters are returned or when not returned if answers never come.

It not infrequently happens that the letter when read is relegated to the waste basket by an exasperated merchant or manufacturer. It indicates a degree of carelessness that leads foreign business men to believe it best to avoid dealings with those who do it.

A leading firm in Gottenborg, Sweden, writing to an American trade journal points out the evils of the present system in no uncertain tones. It says:

"In the December number of your journal we find some lines on the prepayment of foreign postage. We have read the article with great interest and think it well worthy of consideration. Being importers of great quantities of American goods we receive very many letters from the United States, and can from our own experience say that business men of no other nation are so extremely careless in these things as are the American firms. Not a single week passes without half a dozen or more letters coming to us with underpaid postage. And this not only from firms with which we are in regular correspondence, but also from manufacturers making us offers and sending their catalogues for inspection. Whether this is due to the ignorance or negligence of the 'office boy' we do not know. At any rate, we do not blame the boy but the firm for the carelessness.

"The foreign firm you refer to writes about 1 shilling 2 pence (26 cents) underpaid postage. This is enough, but we can give you a still better example as far as postage due is concerned. Upon the request for catalogues and quotations a firm in the United States sent us a heavy parcel of printed matter, the cover with a 2-cent stamp on it. The underpaid postage amounted to 5.64 kroner (about \$1.50). We thought this rather too much and returned the lot."

United States Consul John C. Caldwell, San José, Costa Rica, says that the question of underpaid postage is becoming an irritating one in his district, and is beginning to have a bad effect on merchants trading with the United States.

Success in the foreign field is sure to come to those who do well the little things that consuls and others familiar with the facts are constantly advising. Letters sent abroad without sufficient postage are penalized. Usually double postage is demanded before the letter is delivered to the party to whom it is addressed. The penalty, however, is not the dangerous feature in connection with this carelessness; it is the disgust of the recipient of the letter.

# LAXATIVE BROMO QUININE

ON THE

## DIRECT CONTRACT, SERIAL NUMBERING PLAN.

Among the universally sold articles—the staples in the Drug line during the past ten years, none has received greater support of the entire Retail Drug Trade than **LAXATIVE BROMO QUININE**.

The manufacturers fully appreciate this, and in keeping with the policy of allowing from the beginning a profit of one hundred to one hundred and thirty per cent., **LAXATIVE BROMO QUININE** has been placed on the **DIRECT CONTRACT SERIAL NUMBERING PLAN**, as the best discovered means of assisting every legitimate Retail Druggist to maintain this profit under the conditions which he now has to face.

At great expense, not only of money but most complicated labor, the manufacturers have been proceeding quietly for some months to put this plan in operation. A majority of the druggists throughout the country already have signed and returned the contract and the names of hundreds of other druggists who sign and return the contract are being added to the list every week. The results obtained up to this time insure success to the effort, and in order to make the Plan effective to the greatest possible degree, it simply remains for every Retail Druggist to realize that his individual co-operation is essential. Every Druggist who has not signed and forwarded the contract on **LAXATIVE BROMO QUININE** should take such action immediately.

If a supply of **LAXATIVE BROMO QUININE** is needed or if the stock on hand will permit it, the extraordinary **DATING OFFER** now in force enables the Druggist to purchase a quantity of **LAXATIVE BROMO QUININE**, obtaining the regular free goods, to be delivered at once and invoice dated November 1st, 1905, for cash discount.

## LAXATIVE BROMO QUININE

**Price \$1.75 per dozen.**

|  |                                  |
|--|----------------------------------|
| 6 dozen lots, 1 dozen free, . . . . .                          | Cost \$10.50 or \$1.50 per dozen |
| 12 dozen lots, 2 dozen free, 5 per cent. trade discount, " "   | 19.95 or 1.43 " "                |
| 36 dozen lots, 6 dozen free, 8 per cent. trade discount, " "   | 57.96 or 1.38 " "                |
| 60 dozen lots, 10 dozen free, 10 per cent. trade discount, " " | 94.50 or 1.35 " "                |

All Wholesale Druggists will accept orders under this **DATING OFFER**.

**PARIS MEDICINE COMPANY,**  
SAINT LOUIS AND LONDON.

## Hints to Buyers.

It is not always possible to go to a college to learn pharmacy. A very thorough and satisfactory course of instruction at home by mail is afforded by the Ohio Institute of Pharmacy, Columbus, Ohio. Write for particulars.

The quinine sulphate and cocaine hydrochlorate made by C. F. Boehringer & Soehne, 7 Cedar street, this city, are of the highest standard, while the prices are no higher than for other brands.

The attention of all druggists is called to the Roman shop bottles of the Dawes Mfg. Company, Pittsburgh, Pa. They are offered in sets of 145 and 216, and are ready for shipment the day they are ordered. Send for catalogue of other styles. The firm has all kinds of shop bottles.

Uricidin-Stroschein is one of the valuable articles in the list of German chemicals and pharmaceuticals imported and sold by the Fischer Chemical Importing Company, of 14 Platt street, New York. Instructive and valuable literature on the subject may be had upon application.

Every druggist who is alive to trade opportunities should handle Maji, which is being advertised extensively as a remedy that will remove superfluous hair painlessly, quickly and permanently. It retails at \$1.00. There is big profit in it and good advertising matter is furnished. The manufacturer is the Turkish Remedy Company, 161 Columbus avenue, this city.

Lanoline "Liebreich" and Adeps Lanæ "B. J. D." are two products which are official in the British and American pharmacopœias. Victor Koechl & Co., of New York, are the sole licensees for the United States, and their products are to be recognized by the "darring" trademark, which is always to be looked for as the distinguishing sign when purchases are made.

Any druggist who is not familiar with Dentacura should obtain a sample of it by addressing Department A, Dentacura Company, Newark, N. J. This excellent tooth paste is put up in collapsible tubes in very attractive form. Its use has demonstrated the fact that it is a preservative of remarkable efficacy, which no doubt accounts for its large sale in all parts of the United States and in many foreign countries.

An extensive line of tumbler holders is carried by Whitall, Tatum & Co.; there are numerous designs to select from and a wide range of prices, from a very low figure to the more expensive holders. The firm also has a full line of soda fountain requisites; these, together with sundries, glassware, etc., are described in an illustrated catalogue which will be mailed on application. Send for one.

Dr. Schenck's Mandrake Liver Pills are a vegetable substitute for calomel and can be recommended by the druggist to his trade as a perfectly safe cure for indigestion, colic, diseases of the stomach, jaundice, malaria and diseases of the liver. "Once used always used," is the motto of the manufacturers, J. H. Schenck & Son, Philadelphia. Write for prices and terms, mentioning the AMERICAN DRUGGIST.

The Roessler & Hasslacher Chemical Company calls particular attention to its preparation Perborate, a powder which produces hydrogen peroxide in water and active oxygen in various mediums; it is stable and adapted for storage and transportation. Other specialties are Calcium Peroxide and Magnesium Peroxide, germicides and strong oxydizing agents. Oxone produces pure oxygen instantaneously. These can be obtained from all wholesale druggists.

The trademark of the Taylor Brothers Company, Rochester, N. Y., on a thermometer is a guarantee that the thermometer is of the highest standard. For years this firm has been selecting and training the best workmen they could hire to make their well-known thermometers. Their clinicals are made by the most expert of these workmen. These facts have been placed before 30,000 doctors, according to the firm's statement. This will increase the demand. Every druggist should be prepared to hand these thermometers over the counter when called for.

In ordering ointment boxes from your jobber be sure to specify "Mount Washington." These goods are made in black walnut and in silver poplar and in sizes ranging from ¼ ounce to 16 ounces. They are impervious to grease and oil, the covers fit with absolute snugness and the boxes are of handsome appearance. They are put up in one-quarter gross packages and are carried in stock by all wholesale druggists.

Every druggist will readily admit that if he or any member of his family were sick and needed beef tea he would want only a first-class article. Every customer feels the same. Therefore it behooves the druggist who caters to his trade to handle a good brand that has proven its worth—namely, Armour's extract of beef or Armour's soluble beef, which are handled by all jobbers. It doesn't pay to take any chances by handling cheap brands.

We desire to call the attention of our readers to the advertisement of C. L. Flaccus Glass Company, of 41 Barclay street, New York. This concern is now the selling agent for the famous Appert glass containers, manufactured by the Mississippi Glass Company. The Appert glass represents certain very valuable qualities where the action of acids and of climate have to be considered. Every one in the drug trade should be interested in these announcements, appearing regularly in our columns.

Druggists should be interested in the Pasteur vaccines and antitoxines for veterinary use advertised by the Pasteur Vaccine Company, Limited, in this issue. These goods are produced at the Pasteur laboratories in Paris. The American branches are located at New York, Chicago and San Francisco and other branches are maintained in almost every part of the world. Our readers are invited to address the New York branch for literature and prices.

There is no economy in buying a showcase with cheap, wavy glass. The whole appearance of a case is spoiled by defective glass, no matter how elaborate the rest of it may be. The Grand Rapids Fixtures Company, of Grand Rapids, Mich., uses extra thick glass without a bubble and free from waves; it is all of the highest grade and double strength, the same kind of glass being used even in the doors and ends of the showcases made by this company. Any one needing a new showcase should consult this firm before buying.

Schleffelin & Co. call attention to the Gibbs formaldehyde generators, which provide inexpensive, safe, effective and convenient means for disinfecting and deodorizing with formaldehyde gas. The gas is produced from aldeform, which is a combination of formaldehyde, wood alcohol and water; when used in the Gibbs formaldehyde generators in the proportion of 10 ounces to 1,000 cubic feet of space the aldeform gives off formaldehyde gas in sufficient volume to kill all disease germs. The generators are made in various sizes and can be used repeatedly by refilling with aldeform. Houghton's formaldehyde soap is made with a base of pure olive oil, contains 5 per cent. of the standard solution of formaldehyde, and is a perfect antiseptic. Prices, circulars, etc., of both the generators and soap will be furnished on application to Gibbs & Co., 102-104 Fulton street, New York, or Schleffelin & Co.

### Doyen's Cancer-Serum.

On July 12 Dr. Delbert presented at a meeting of the French Society of Surgery the report drawn up by the committee appointed last December to report on Dr. Doyen's serum. There was a large attendance in spite of the tropical temperature, and the audience included many of the leading physicians and surgeons of the Paris hospitals as well as their assistants and pupils. The report may be summarized by the statement that the committee are unanimously of the opinion that "Nothing in the investigations made by them justifies the contention that treatment by Dr. Doyen's serum causes an improvement in the condition of patients who suffer from cancer." The report adds that the investigations were carried out on twenty-six patients, and they appear to have been conducted with method. Dr. Doyen will present his reply—defense, it might almost be called—at a Congress of Surgery to be held in Paris in October.

### An Improved Faucet for the Drug Store.

An ordinary faucet handled by several persons is kept in repair with difficulty because of the tendency of some people to close it with great force, thus damaging and finally ruining the disc or seat Ring. In the Bashlin Faucet, which is illustrated herewith, this cannot occur. No matter how much force is applied to the handle it cannot do any harm for the surplus pressure is not communicated to the seat ring or disc.

To further prolong the life of the Bashlin Faucet the water is packed from the screw threads of the stem, so that no grit that may be in any sediment can possibly act

on the thread to cut it out.

While the "water hammer," which is so annoying in so many cases, is not entirely overcome, yet in the Bashlin Faucet it is so greatly modified as to be scarcely noticeable.

This description applies equally to the Bashlin Compression Faucet, the Bashlin Self-closing Faucet and the Bashlin Basin Cock. All are carefully made of the best material and long service is promised.

These faucets will prove of great value in the drug store where the faucet is used so frequently. Further description and quotations may be had from B. F. Freeman, 177 Broadway, New York, manager of the New York Branch of the Bashlin Company, who are the sole makers of these faucets.

### Blotters and Testimonials.

Everyone uses a blotter and everyone appreciates a good blotter free. In view of this the Abbott Alkaloidal Company is putting out a blotter of good quality with an enameled top, on which appears a colored cut of its Saline Laxative container, with legend "Keep it on hand; it does the business and never gripes." Another catchline runs: "Blot from your memory every splotch of doubt as to the efficiency of Abbott's Saline Laxative as the best clean-out; the W. A. intestinal antiseptic as the best clean-up, and Triple Arsenates with Nuclein as the best general tonic known to the medical profession to-day." There is a paragraph addressed to the doctor. On the side are calendars for three months.

The Abbott Alkaloidal Company is in possession of a number of testimonials as to the efficacy of its preparations. One of these from a physician in Mississippi run as follows:

"I want to tell you that I have had perfect success with Nuclein in three cases of chronic malaria, one being myself, after I had exhausted every other means at my command. I feel that I owe the Nuclein a debt of gratitude and it will be the basis of my future treatment of such cases."

Write for a blotter to the Abbott Alkaloidal Company, Chicago, Ill., mentioning the AMERICAN DRUGGIST.

### Sal Hepatica.

The attention of the medical profession is being directed to the use of Sal Hepatica in typhoid fever and inflammatory conditions of the bowels. It appears to be a very safe saline laxative in such affections, being less obnoxious to the organism than sodium phosphate alone or other salines and is more readily eliminated.

By commingling lithium and sodium phosphates in proper proportions with certain of the "Bitter Water" salts the manufacturers of Sal Hepatica claim a compound is secured that is superlatively more active than either the lithium or sodium salt alone, or, indeed, than any of the natural purgative mineral waters. Recognizing this, the most eminent practitioners latterly have taken to prescribing Sal Hepatica in preference to the natural waters.

Sal Hepatica is very effective in limiting and reducing the amount of uric acid formed within the circulation and excreted by the kidneys, and is freely absorbed and taken into the blood and as rapidly (along with the chemical products formed) eliminated by the excretory ducts or organs as is readily demonstrated by its presence, after a brief course thereof, in perspiration and urine, the latter more particularly being doubled or trebled as to quantity and rendered decidedly alkaline.

Sal Hepatica is the original effervescent saline laxative, hepatic stimulant, uric acid solvent and eliminant of irritating toxins in the alimentary tract. It is manufactured under the direct supervision of J. Le Roy Webber, Ph.G., its originator, and only at the laboratories of Bristol-Myers Company, manufacturing chemists, 277-279 Greene avenue, Borough of Brooklyn, New York City.

### To Operate Cigar Stands in Drug Stores.

The latest development in company pharmacies takes the form of the incorporation by members of the Drug Merchants of America, the William B. Riker Sons Company and the United Drug Company, of the National Cigar Stands Company, having as its object the operation of cigar stands in drug stores and the importation and manufacture of cigars and tobacco products. L. K. Liggett, the secretary of the United Drug Company (Vinol and Rexall preparations), is president, and William C. Bolton, formerly of the Bolton Drug Company, Brooklyn, but now of the Riker Company, vice-president. The company was incorporated in Jersey City on July 20 with a capital of \$500,000, but the principal office will be in Manhattan. Among others interested are George C. Lyon, of the Hall & Lyon Drug Company, operating a chain of stores in New England, and C. E. Ball, of Holyoke, Mass.

### Recent Customs Decisions.

Oil of gardenia is dutiable as an alcoholic compound, according to a decision of the Board of United States General Appraisers. The Government chemist found the article to contain absolute alcohol by volume 27.7 per cent. George Lueders & Co., the importers, claimed it dutiable under paragraph 2 of the tariff, in accordance with a previous decision of the board, which held the merchandise bearing the same invoice name to be dutiable as such.

The Smith, Kline & French Company imported at Philadelphia arrow root in the form of a flour or powder. It was classified for duty under paragraphs relating to starch. The importer claimed it should be classified as a drug. The protest was overruled by the Board of Appraisers.

Kepler Malt Extract and Kepler's Solution, imported at San Juan, Porto Rico, by the successors of J. M. Blanc, were classified for duty as malt extract, but were claimed by the importers to be dutiable as medicinal preparations. The claim was overruled.

Judge Lowell, of the United States Circuit Court, district of Massachusetts, recently rendered an important decision defining the status of extract of nutgalls under the tariff law. The court overrules a previous decision by the Board of United States General Appraisers, and it is understood that the Government will appeal the case to the Circuit Court of Appeals. The importer, W. N. Proctor, protested against the decision of the board, which sustained the assessment of duty by the Collector of Customs at Boston. The court upheld the claim of the importer that nutgalls, advanced in condition by refining, grinding or other process, are properly dutiable at one-fourth of 1 cent a pound.

The Treasury Department announces that a drawback will be allowed on the exportation of articles in connection with which protegit, manufactured from imported borax, is used. The drawback will equal the duty paid on the imported material contained in the protegit, less the legal deduction of 1 per cent.

## BURROUGHS-WELLCOME ENTERTAIN THE SOCIETY OF CHEMICAL INDUSTRY.

Quarter Centenary Celebration of the Establishment of the Business  
—Two Thousand Guests—Many Distinguished Visitors.

On Saturday, July 15, the occasion of Burroughs-Wellcome's quarter century commemoration, the members of the Society of Chemical Industry and a number of medical, scientific and other distinguished guests paid a visit to the firm's works at Dartford, Kent, England, and to the Wellcome Club and Institute, founded for the benefit of the employees. The guests were conveyed by three special trains, two from Charing Cross, London, and one from Cannon street, London. Upon arrival at the station an alarm of fire was given from the platform by means of a special button, and the proceedings commenced with a smart display of fire drill by the firm's private brigade. The guests numbered about 2,000 and were entertained at luncheon in a large marquee erected in the club grounds.

After the loyal toasts, Mr. Wellcome proposed a toast to the "Society of Chemical Industry," which was replied to by the president, Dr. W. H. Nicholls, as follows: The Society of Chemical Industry, of which I have the honor to be the expiring president, has met with a most magnificent reception wherever it has gone in and around the city of London. We have had rousing welcomes; we have even had royal welcomes, but it remains for to-day, if you will pardon the pun, for us to receive a "Burroughs" welcome. We look upon it as one of the greatest honors that Mr. Wellcome, the head of this great organization, should have invited us here to lunch with his entire family. I am not accustomed myself to such a large family; 2,000 people at one sitting have not been common since the days of the loaves and the fishes. But when I have seen, as I have very well seen to-day, through the courtesy of Mr. Hill, the methods which have been devised for bringing comfort and pleasure to the employees, bringing them in closer contact with those above them, I feel that Mr. Wellcome has at last found what I believe to be the philosopher's stone of technical success. The man who does not forget those who work with him and those who work for him is bound to have the largest success. (Hear, hear and applause.) And as you have heard him limit the speakers to the briefest possible time, and as it would take much too long to state what I and my friends have seen to-day, permit me, Mr. Chairman, to conclude with the best wishes of the Society of Chemical Industry and the ladies who are with them for long life and prosperity to the head of this great firm and to his good wife, and may it come about, when the day arrives when work is over for him, that that dear little boy will be ready to take up the reins. (Cheers.)

Mr. Wellcome proposed "the employees," and presented them with a silver gilt cup in remembrance of the fact that the Wellcome Cricket Club had won the championship of the Chemists' and Druggists' Cricket League for five years in succession.

Mr. R. Clay Sudlow, general manager, replied.

Professor Armstrong proposed the toast of Burroughs, Wellcome & Co., and referred to the fact that every important expedition which had started from British or foreign shores during recent years had been equipped by the firm.

After Mr. Wellcome had replied, "Medicine and Pharmacy" was proposed by A. Gordon Salamon, the toast being coupled with the names of Sir James Dick, Hon. Surg. to H.M. the King, and R. A. Robinson, L.C.C. (president of the Pharmaceutical Society of Great Britain).

After luncheon the programme of entertainments was continued with athletic sports, May pole dances, garland and sword drill by employees, open air concert, fireworks, illuminations, etc.

The prizes were distributed by Lady Manson, and Sir Patrick Manson, speaking at one of the other functions, said that he felt that to-day had been an object lesson to all of them, not only of the heartfelt interest Mr. Wellcome had in the welfare of his employees, but of the wonderful organization of the firm, as exemplified in the forethought which had provided so bounti-

fully for the comfort and pleasure of every one throughout the day and by the precision with which a wonderful programme had been carried through.

If he were asked to name the keynote of Mr. Wellcome's success he would answer, "simplicity," and having in mind and in memory the old-fashioned prescription in which it was thought necessary to have 25 ingredients he would like to express his thanks and that of other members of the medical profession to Mr. Wellcome for the marvelous way in which he had helped them in their work.

Especially in his own particular sphere of interest—namely, tropical medicine—he was in a position to know and to appreciate the debt of gratitude they owed Mr. Wellcome for his liberality in initiating and supporting research work. The results had already been most valuable and the promise was greater still.

### International Trademarks.

The protection of trademarks is of such importance that several countries, France among them, have formed an international service of registration. The institution has its sittings at Berne, in the offices of the Industrial Protection Union. Its object is to give the same protection in all of the contracting countries as is given to the owner of the mark in his own country. The contracting countries are Belgium, Brazil, Spain, France, Italy, Netherlands, Portugal, Switzerland and Tunis.

A decree dated May 20, 1903, stipulates that every owner of a trademark regularly registered in France who desires that his work be protected in the contracting States, or those that may hereafter subscribe, must pay into the Central Receiving Bank of the Seine, or in the departments into the bank of the general "Trésoriers-Payeurs," the sum of \$4.82. The payment of this sum, which should be addressed to *l'Office National de la Propriété Industrielle*, 292 rue St. Martin, Paris, should be accompanied by the following: (1) A request to obtain the registry of the mark at the international office at Berne, accompanied by the name, profession and address of the applicant and the date and number of registration of the mark in France; (2) three copies of the mark, and in case of colors four copies, designating the exact color; (3) a stereotype plate not less than 1.77 inches, reproducing exactly the mark (this plate will be filed in the international bureau); (4) the receipt for a post office money order to the bureau at Berne for \$19.30 for a single mark, and for \$9.65 for any thereafter; (5) a power of attorney duly registered if the demand is made through another party.

A fulfillment of these formalities procures protection in the nine countries mentioned, as well as in all other States that may later adhere to the programme. The duration of protection is twenty years, a renewal being allowed by the fulfillment of all the conditions as in the first instance.

For the first mark registered in France alone \$24.13 must be paid, and \$14.48 for each one thereafter. In all the other contracting States named for each trademark registered the cost is \$46.32. This latter sum embraces the official cost, exclusive of the expenses of application, authentication, translation, etc.

It will be seen that the services of the bureau are of considerable value both as to price and simplicity, not to mention the great advantages to be derived. All information is furnished gratis by the Bureau International de la Propriété Industrielle, Berne, Switzerland.

### Corn Cure.

According to the Paris correspondent of the *Chemist and Druggist*, an enterprising American arrived in Paris recently, with the object of hawking a corn file in the public streets. He did not, however, understand the ways of the Paris police, and his business was soon stopped. The file consists of a piece of wood the size of a small dagger, which has been rather cleverly covered with a kind of emery powder, and at the price of 1 franc, at which the files were offered for sale, evidently left an ample margin for profit. When last heard of he was trying to get his consul to interfere, but has small hopes of success.

TERMS, CASH WITH ORDER

CHICAGO SALESROOM, 90 WABASH AVENUE  
GENERAL OFFICES AT WORKS, HAMMOND, INDIANA

Where All Communications Should be Addressed

### Powder Pills.

The American Ferment Company, of Jersey City, has, after a long series of experiments, perfected a new process for making pills with a thin coating which can be readily broken under slight pressure and which are at once highly soluble and practically free from the action of climatic change. The laboratory has now turned out a pretty complete line of pills, and is in a position to consider orders for special private formulas. Such orders will be quickly filled and at attractive prices. One agent is wanted for every community, and full terms and particulars will be supplied on application.

### The Humble Grass.

Ex-Senator Ingalls wrote many things descriptive of nature but none more beautiful than this: "Grass is the forgiveness of nature—her constant benediction. Fields trampled with battle, saturated with blood, torn with the ruts of cannon, grow green again with grass, and carnage is forgotten. Streets abandoned by traffic become grass-grown, like rural lanes, and are obliterated. Forests decay, harvests perish, flowers vanish, but grass is immortal. Beleaguered by the sullen hosts of winter, it withdraws into the impregnable fortress of its subterranean vitality and emerges upon the first solicitation of spring. Sown by the winds, by wandering birds, propagated by the subtle horticulture of the elements, which are its ministers and servants, it softens the rude outline of the world. Its tenacious fibers hold the earth in its place, and prevent its soluble components from washing into the wasting sea. It invades the solitude of deserts, climbs the inaccessible slopes and forbidden pinnacles of mountains, modifies climates and determines the history, character and destiny of nations. Unobtrusive and patient, it has immortal vigor and aggression. Banished from the thoroughfare and the field, it bides its time to return, and when vigilance is relaxed or the dynasty has perished it silently resumes the throne from which it has been expelled, but which it never abdicates. It bears no blazonry or splendor, but its homely hue is more enchanting than the lily or the rose."

### The Route to the Convention.

The annual convention of the American Pharmaceutical Association will be held at Atlantic City, September 4 to 16, this year. The selection of this charming seashore resort will no doubt attract a large attendance to this meeting, and on account of which the Pennsylvania Railroad Company will make reduced rates. The fare authorized for this occasion is one and one-third rate, on the certificate plan. Tickets and certificates will be issued August 31 to September 6 for the going trip, and the certificates will be *valid* at place of meeting September 7 and 8 on payment of fee of 25 cents, which will entitle the passenger to obtain a ticket returning at one-third the fare paid for the going trip. The return trip must be made on or before September 20. The fare one way from New York City is \$3.25, or, on the certificate plan, \$4.35 for the return trip. Additional information can be obtained from any ticket agent of the Pennsylvania Railroad Company.

### A Montreal Branch.

The recent establishment of a branch office and laboratory in Montreal by the Denver Chemical Mfg. Company bespeaks progress for this enterprising firm, which is widely known as the manufacturer of antiphlogistine. The company now maintains several branches, including one at Denver, Col., one in Sydney, Australia, and another in London, England, in addition to the main office and laboratory in New York City.

### The Emotional Young Lady.

There is gladness in her gladness  
When she's glad:  
There is sadness in her sadness  
When she's sad:  
But the gladness of her gladness  
And the sadness of her sadness  
Aren't a marker on the  
Madness of her madness  
When she's mad.

### Literature on the Perfume Industry.

From the American branch of Roure-Bertrand Fils (Grasse, France), Edwin H. Burr, 18 Cedar street, New York, we have received No. 1 of series II of the Scientific and Industrial bulletins issued by the French house. These bulletins are devoted entirely to the economics and chemistry of odoriferous substances, and they reflect the utmost credit on the publishers. The number under review is dated May, 1905, and is divided into three parts. Part I is taken up with a consideration of the influences having to do with the production of perfume in the growing plant. Part II is more of a market review, in which the position of the staple oils used in perfumery is set forth. Part III consists of a review of the current literature pertaining to perfumes and essential oils, and constitutes a good index to the literature of the chemistry of the oils and flavoring materials used in the perfume industry. Pharmacists who are interested could doubtless obtain copies of this series of publications upon application to the American branch of Roure-Bertrand Fils at the address given above.

### The True Insect Powder.

The registered trademark "Bee Brand" is the property of McCormick & Co., of Baltimore, Md., and is used to designate their absolutely pure insect powder, packed in air tight wooden bottles, retailing at 10 cents. This thoroughly reliable article may also be had in 1, 3, 5, 10 and 25-pounds, and in kegs and barrels. McCormick & Co. have made a special feature of importing fine closed flowers in the markets of production and grinding them in their own mills in Baltimore, thus insuring high quality and absolute purity. In these days, when insect powder is so largely and so generally sophisticated, the announcements of McCormick & Co. in the columns of the AMERICAN DRUGGIST should be of interest to all dealers who desire to supply their customers with reliable goods.

### Elastic Capsule Medication.

Eli Lilly & Co. have just issued a handsome illustrated pamphlet on elastic capsule medication, giving in natural colors the important preparations of this class. The work is replete with concise therapeutic notes on the various oils and oleoresins used in modern medical practice and the forms in which they may be administered best. The book is addressed to the practitioner and will be found full of useful information on this important and increasing line of recent pharmaceuticals. A copy will be sent to any practitioner on application to the publishers, Eli Lilly & Co., pharmaceutical chemists, Indianapolis.

### Codliver Oil for Babies.

Some who read Scott & Bowne's recent advertisements recommending Scott's Emulsion for babies teething were prone to smile, but Dr. E. Symes Thompson, in a Gresham College lecture, testified, according to an English contemporary, to the value of codliver oil, saying that he had found it amazingly successful in promoting the growth of teeth in children. And now we learn from Scott & Bowne that they have hundreds of letters from mothers stating that it eases teething as well. The fact should be better known than it is.

An agent of a life insurance company sent this to the medical department:

Through Holy Land a valiant knight did fare,  
He had a colic—tell me when and where?

The medical department replied:

Half mad with pain, cold chilled with dire affright—  
The hour and place—the middle of the knight.  
—Insurance Statement.

A Fort Worth druggist is in receipt of a curt and haughty note in an angular feminine hand: "I do not want vasoline, but glisserine. Is that plain enough? I persoon you can spell."—Texas Medical Gazette.

## MORPHINE SULPHATE

The FIRST MORPHINE was MANUFACTURED in 1827 BY MERCK

Kindly mention AMERICAN DRUGGIST when writing to Advertisers

### Hamamelis—Its Therapeutic Uses and the Poison Perils of Its Adulteration.

In an address delivered April 26, 1905, before the Danbury Medical Society, on The Practical Value of Old Remedies, John V. Shoemaker, M.D., LL.D., of the Medico-Chirurgical College, Philadelphia, Pa., spoke of witch-hazel, or hamamelis, in the following terms:

"Witch-hazel, or *Hamamelis virginiana* Linné, an excellent old-time remedy, has a well defined range of usefulness within which it is without a rival. Externally and internally it is sedative and astringent. It is used as lotion and ointment in many diseases and injuries of the skin, in leg ulcer and varicose veins. It is serviceable in acute and chronic diarrhoea, internal hæmorrhages, bronchorrhoea, epistaxis, varicose veins and varicocele.

"The distilled extract of hamamelis is a valuable application to sprains and bruises. Hamamelis is very useful in checking epistaxis, bleeding sockets after the extraction of teeth, bleeding hæmorrhoids and many other forms of hæmorrhage. An ointment containing witch-hazel is of service in burns, eczema, erysipelas, sunburn, seborrhoea, acne, etc. A diluted fluid extract of hamamelis makes an effective lotion in hyperidrosis. A witch-hazel lotion or ointment is an excellent application in fissure of the anus. When given internally this remedy exerts the same astringent and sedative action and is highly valued in the treatment of acute and chronic diarrhoea, dysentery, hæmorrhage from internal organs, purpura hæmorrhagica, varicose veins and ulcers and varicocele."

In his standard work on "Therapeutics" Hare also states that it is "a plant of extraordinary remedial power," and adds the following highly significant declaration:

"The one official preparation of the U. S. P. is the fluid extract (*Extractum Hamamelis Fluidum, U. S.; Liquidum, B. P.*), dose, 5 to 20 drops (0.35-1.30). The dose of the distilled extract, which is not official<sup>1</sup> and is a perfectly clear liquid, is from 30 drops to 1 drachm (2.0-4.0), and this is much the best preparation for internal and external use. Unfortunately, the preparations of the drug vary very much in both odor and efficacy. Some of the proprietary preparations of witch-hazel are more active than those ordinarily dispensed in the drug store. This is due to greater care in their preparation and to the fact that they are sold in original packages, without exposure to the air."

The truth of Hare's contention that the common commercial witch-hazels vary as to both odor and efficacy, and, for the reasons given, are less active than the proprietary article, as well as the peril of the common commercial and unidentified witch-hazels of the market, has been emphasized in startling fashion by such well known and creditable medical investigators and expert witnesses as Buller and Wood, whose voluminous report to the American Medical Association on the adulteration of witch-hazel and other medicinal extracts, etc., by wood alcohol and formaldehyde has attracted the attention of the medical profession and press throughout the country and still continues to excite the interest and evoke the comment of both.

As an example of the extent to which this adulteration has been carried by unscrupulous manufacturers of the common commercial and unidentified varieties of the product it may be stated that of 70 samples recently purchased from as many wholesale and retail dealers in the commercial article in six of the largest cities of the United States scrupulous investigation by the most reputable analytical chemists of the country showed, so we are informed, that 52 of the samples in question contained wood alcohol (poison) or formaldehyde (poison), or both.

In discussing this question the *Bulletin of Pharmacy* expresses the opinion that "the practice of substituting wood alcohol for grain alcohol in the manufacture of medicinal preparations is a most insidious and pernicious means of poisoning, and the sales of remedies and toilet preparations manufactured or adulterated with wood alcohol should be restricted by law."

<sup>1</sup> It is now in the 1890 edition.

Until, however, such laws be enacted by all States, it should be obvious, in the face of the pernicious conditions described, that the perils of the poisons specified—as is suggested by Hare—may be avoided in cases in which hamamelis is indicated only by using exclusively a standardized proprietary product of guaranteed and invariable purity, quality and strength, such as Pond's Extract of Hamamelis, which embodies and possesses all the qualities and advantages indicated by Hare as accruing from the greater care exercised in its preparation and the fact that it is sold only in original packages, without exposure to the air.

Pond's Extract of *Hamamelis virginiana* (as the plant is botanically described by Hare and Shoemaker, or *virginica*, according to Coston) has been relieving pain and performing other beneficent functions in the conditions indicated by Shoemaker for the past sixty years. While it has been imitated and substituted in every conceivable form during this extended period, it stands out to-day all the more efficient and esteemed by such comparison, and, in addition to its superlative medicinal properties and action, is a positive guarantee to physician and patient alike against any and all of the poison perils of the common commercial witch-hazel so vividly portrayed by Buller, Wood, Darlington, Lloyd, Hare, Gamble, London *Lancet*, *Journal of the American Medical Association*, *Medical News*, *Medical Record*, *Therapeutic Gazette*, *Boston Medical and Surgical Journal*, *Druggists' Circular*, *Bulletin of Pharmacy*, *Western Druggist* and numerous other medical writers and professional publications of equal standing and authority.

### A Case on Ball Bearings!

Every druggist or person who uses a showcase knows that the ordinary case door does not roll—it slides. If it is tight enough to exclude dust a little moisture will cause it to swell and stick; if it is loose the dust will get in and damage the goods. Cleaning the case is always difficult, because the doors cannot easily be removed. All of the showcase doors made by the Grand Rapids Fixtures Company, Grand Rapids, Mich., are on ball bearings. The balls rest on a steel track, which is not affected by moisture; the doors, while fitting snugly, thereby excluding all dust, work so easily that a mere touch is sufficient to open and close them. The track can easily be taken out and the doors removed for cleaning the case. Be up to the times and get one of these cases. The company's catalogue, giving prices and full information, will be sent on application. In writing kindly mention the AMERICAN DRUGGIST.

### Time to Stock Up.

When a big proprietary medicine house starts to advertise its remedies extensively it behooves every retail druggist to get in some of those goods so as to be ready for the demand that follows such publicity. There is splendid profit in handling Lactated Food. The manufacturer, the Wells-Richardson Company, Burlington, Vt., has started an aggressive advertising campaign in the leading newspapers of the country. This preparation is on the price-protected plan, and has been put on the \$2-\$4-\$8 basis. Have you taken advantage of the company's new special advertising offer to retailers? If not, send at once for particulars.

### "Mulford's."

No druggist should be without the new 1905 price-list of the H. K. Mulford Company, manufacturer of a complete line of standardized and physiologically tested pharmaceuticals, as well as a full line of antitoxins, curative sera and vaccines that yield a good profit and bring desirable business. The quality, terms and prices are just right. The company allows a straight discount of 40 per cent. on pharmaceuticals without requiring a contract. The goods will be supplied by your jobber. By specifying "Mulford's" you will save from 10 to 25 per cent. on your purchases.

## Hints to Buyers.

Phillips' chocolate is absolutely pure, and is one of the best brands for both cold and hot soda. It can be very highly recommended.

By specifying "Merck's" on their orders for morphine sulphate retailers will be sure to get a standard and reliable article.

Now is the time for any druggist who wants to make a special window display to get the required novelties by sending a postal to the C. I. Hood Company, Lowell, Mass.

The morphine sulphate in flakes and cubes made by the Mallinckrodt Chemical Works, this city and St. Louis, is of the highest purity. It may be obtained from all jobbers. Specify "M. C. W."

When replenishing your stock of quinine sulphate and cocaine hydrochloride specify Boehringer & Soehne's and you will get standard quality at prices that are no higher than for any other brand.

A bottle of Wine of Cardui costs 57 cents and retails for \$1 and is one of the best sellers. No druggist's stock is complete without it. Send for advertising matter and prices to the manufacturer, the Chattanooga Medicine Company, Chattanooga, Tenn.; St. Louis, Mo., or San Francisco, Cal.

Everything in the line of drugs, pharmaceuticals, chemicals, fluid extracts, oils, wines, capsules, surgical instruments and sundries can be obtained from the Frank S. Betz Company, manufacturing pharmacist, Hammond, Ind. The company's prices will interest you. Either small or large quantities are supplied.

The Roessler & Hasslacher Chemical Company, of this city, calls particular attention to Perborate, a powder to produce hydrogen peroxide in water and active oxygen in various mediums; Calcium Peroxide and Magnesium Peroxide, harmless germicides and powerful oxydizing agents, and Oxone, a compact oxygen compound to produce pure oxygen gas instantaneously. Sold by all jobbers.

Anything that will teach clerks to be accurate must appeal to every employer. A National Cash Register will do that. It will also tell who made the mistake, who took in bad money, etc. In fact, the details of every transaction are accurately recorded. The machine, in short, systematizes business, and a trial will prove that it is invaluable. If interested write to the National Cash Register Company, Dayton, Ohio, for particulars, kindly mentioning the *AMERICAN DRUGGIST*.

Suprarenalin Crystals contain the astringent, hæmostatic and pressor principle of the suprarenal substance; Suprarenalin Solution is a permanent, uniform and nonirritating liquid preparation; Suprarenalin Triturates contain, each, sufficient suprarenalin to make 15 minims of 1:1,000 solution. Made by Armour & Co., Chicago. Better see to it that your stock includes these.

"Merrell," on orders to jobbers, will mean a 40 per cent. discount from "line" goods. While offering this liberal discount the Wm. S. Merrell Chemical Company, this city, Cincinnati and San Francisco, guarantees that the well-known quality of its goods will be fully maintained at all times. Merrell's goods will undoubtedly build up your prescription business and will encourage your physician to buy at home.

Anything in the line of tin boxes, screw caps, etc., plain lacquered or lithographed, can be obtained from Burdick & Son, Albany, N. Y. Special designs and sizes are made to order. All orders are promptly attended to and are turned out by new and up to date machinery. A trial will convince any one of the merit of these goods. In corresponding please mention the *AMERICAN DRUGGIST*.

Sal Hepatica is an effervescent saline laxative, uric acid solvent and eliminant. It is a combination of tonic, alterative and laxative salts, with the addition of lithium and sodium phosphates. It should be on every druggist's shelf, as it is a preparation that can be recommended with the utmost confi-

dence. Prices, \$2, \$4.80 and \$10.20 a dozen; all jobbers. The manufacturer is the Bristol-Meyers Company, 277-279 Greene avenue, Brooklyn, N. Y.

Eusoma, made by the Eusoma Pharmaceutical Company, Cincinnati, Ohio, is an excellent intestinal antiseptic, and can be very highly recommended. It is of especial value in fermentative dyspepsia. It is an ethical preparation, and while not claimed to be a cure-all, it is a perfect, nonpoisonous antiseptic, antipurulent and alterative for both external and internal use. It is splendid for local application in eczema and other skin diseases. Eusoma is being extensively advertised in the leading medical journals. Druggists should have it in stock to meet the demand from physicians. It can be obtained from jobbers or direct.

### The American Soda Fountain Abroad.

One of the most profitable articles retailed over the counter is soda and mineral water, as those who have undertaken this business not only in this but in foreign countries testify. And there are very large profits in manufacturing and bottling aerated water. The American Soda Fountain Company, 278-288 Congress street, Boston, is headquarters for all kinds of machinery and apparatus in this line. The company's products have been awarded numerous prizes at different expositions, including grand prizes and gold medals. Particular attention is called to the company's foreign department, which is equipped with catalogues in Spanish, French and English; these catalogues can be had for the asking, and it will pay any one who is interested in the soda or mineral water business to send for one. The American Soda Fountain Company will be pleased to answer any inquiries and give any particulars desired by parties in this country or elsewhere.

### Another Hint for Foreign Investors.

One of the most popular and at the same time lucrative industries is the manufacture of bottled soda water. Thousands of people are already engaged in this enterprise, and they are probably making more money than they could in almost any other business with a similar investment. There are still many opportunities to enter this business, particularly in Mexico, Central and South America and other warm countries where bottled soda water has not yet been thoroughly introduced. It requires only a comparatively small investment to start such a business. The Liquid Carbonic Company manufactures, in addition to carbonators, all other apparatus and supplies for making bottled soda water. Send to the company, this city, for catalogue (which is printed in Spanish as well as English), which contains very interesting pictures and gives prices and complete information on the company's goods.

### A Special Dating Offer.

If any retail druggist needs a supply of Laxative Bromo Quinine, or if his present stock will permit it, he should take advantage at once of the Paris Medicine Company's special dating offer, which will enable him to obtain the regular free goods, to be delivered immediately and invoice dated November 1, 1905, for cash discount. Remember that Laxative Bromo Quinine has been placed on the direct contract and serial numbering plan. Every druggist who has not signed and forwarded the contract should do so without delay.

### 5 Drops to Be Extensively Advertised.

The Swanson Rheumatic Company, Chicago, announces that it is to start an extensive advertising campaign at the beginning of this month, which will last to May 1, 1906, in which \$165,000 will be spent to advertise 5 Drops. This will bring people into the pharmacy to call for the Swanson Company's product, and readers should be governed accordingly. It is suggested that purchases be made in time, so as not to lose sales.

## PHILADELPHIA COLLEGE of PHARMACY

The Oldest College of Pharmacy in America.

The members of the Faculty are well known authors and teachers.

A new curriculum with extension of courses has been adopted.

Additional instructors and increased facilities in the laboratories have been provided.

An auxiliary course, including Latin, pharmaceutical arithmetic, algebra, additional botany and physics, has been added to the first year instruction, but without increase in the cost of tickets to the student.

The laws of the States of Pennsylvania and New York compel every applicant for the State license to manage a drug store, to be a graduate of a college of pharmacy, and the diploma of this College is recognized in Pennsylvania and New York under the prerequisite laws, and throughout the world as a certificate of proficiency. Beginning with October, 1906, an entrance examination by the State Board of Education will be required.

Next term begins October 2, 1906. For further information and an Announcement, address

J. S. BERTEN, Registrar, 145 N. Tenth St., Philadelphia, Pa.

## The Maryland College of Pharmacy

Department of Pharmacy of the University of Maryland

Sixty-second Annual Session will begin September 25, 1905.

Catalogue giving full information in regard to courses of instruction, expenses, etc., will be mailed upon application. Address

CHARLES CASPARI, Jr., Dean, University of Maryland, Baltimore, Md.

## School of Pharmacy of the Medico-Chirurgical College OF PHILADELPHIA

Next Term begins Sept. 25th, 1905. The course in every respect is thorough and practical. Extensive laboratory courses in Manufacturing and Dispensing Pharmacy, Analytical Chemistry, Assaying, Botany, Pharmacognosy, Bacteriology and Hygiene.

Two year course leads to the degree of Graduate in Pharmacy—Ph. G.

Three " " " " " " Doctor of Pharmacy—Phar. D.

Send for Catalogue Address

JOHN R. MINEHART, Ph.G., M. D., Registrar.

## The New U. S. Pharmacopoeia

Orders for the new U. S. Pharmacopoeia (1900) are now being taken by the American Druggist Publishing Company at the following prices:

|   |        |
|---|--------|
| Bound in cloth, - - - - -                         | \$2.50 |
| " " sheep, - - - - -                              | 3.00   |
| " " flexible leather, - - - - -                   | 3.50   |
| Interleaved, sheep, - - - - -                     | 4.50   |
| Printed on one side of the page, sheep, - - - - - | 4.00   |
| " " " " " " " unbound, - - - - -                  | 3.50   |

The Flexible leather binding is especially commended as being much more durable than either the cloth or sheep binding. Orders will be promptly filled but must be accompanied by remittance to cover the cost of the book ordered.

## Prices Current.

The outside prices quoted are for such quantities as retailers usually purchase. When purchasing original packages the inside quotations should be expected, while a slight advance over the outside quotations given may be demanded for very small lots. Current commercial quality is understood unless otherwise indicated. For extra quality or for specified makes a slightly higher price will have to be paid.

## In Ordering Vaccines and Antitoxins

For Veterinary Use, Specify

PASTEUR

and get the original, produced at the Pasteur Laboratories, established in France by Pasteur, 1854.

Blackleg Vaccine was discovered in 1884 and is still produced for us by the discoverers. The original and genuine product which we furnish has been successfully used upon over 20,000,000 calves. The cord form known by the name "Blacklegline" is the most popular and best seller on the market as it is the most convenient, effective and economical method ever devised. Write for literature and prices. In ordering Vaccines specify PASTEUR and get the original.

## Air Cushion. Siberian Bristles.

THE IDEAL  
HAIR BRUSH.

U. S. Patented December 21, 1884.

NOTHING LIKE IT ON THE MARKET.

Do not confound this brush with the rubber back wire brushes. It is entirely different. The "Ideal" has an Air-Cushioned Back and Genuine Siberian Bristles. It is the best selling brush on the market.

Order through your jobber or direct from

## To The Wide . . . Awake Pharmacist

As the Hay Fever Season will soon be upon us, it is well to see that you carry in stock a sufficient supply of FORMALDEHYDE-KELENE tubes, so as to be ready to meet the increased demand which will follow our advertising it to the medical profession this season.

We also furnish "GRADUATED KELENE" in tubes for general anæsthesia, also put up for use as a local anæsthetic.

Write for our Reference Book, which not only describes the above mentioned product, but other preparations of interest to you.

### FRIES BROS.,

Mfg. Chemists,  
92 Reade Street,  
NEW YORK.

Kindly mention AMERICAN DRUGGIST when writing to Advertisers.

## A Good Showing FOR OUR - - PROGRESSIVE PHARMACISTS

Over 23,000 Torsion Balances

Without Knife Edges or Friction

already purchased by the 35  
to 40 thousand Retail Drug-  
gists of the

U. S. and CANADA.

TORSION BALANCES

in use over

16 YEARS

give the same good service to-  
day as when they were new.

Need Never to be Discarded.

Send to-day for the PHILADELPHIA FRANKLIN INSTITUTE'S  
Report, giving the reasons why TORSION BALANCES are MORE ACCU-  
RATE, MORE DURABLE, MORE SENSITIVE than any KNIFE EDGE  
Scales can be made. Also for Illustrated Catalogue.

THE TORSION BALANCE CO., 92 Reade St.,  
New York.

A large Lithograph, 14 x 21, in seven colors, of the above Rough on Rats illustration (Household Troubles), which has convulsed the world with laughter, with comic descriptive verses, mailed free to any address.  
E. S. WELLS, Jersey City, N. J., U. S. A.

**Unbeatable Rat Exterminator** Equally effective against Mice, Roaches, Ants and Bed Bugs.

**ROUGH ON RATS**

Cockroach or Beetle. Fools the Rats. Mice and Bugs, but never disappoints or fools the buyer. Used 30 years.

**Rough on Roaches** (non-poisonous)..... 15c, 25  
**Rough on Fleas** (powder), for dogs, etc..... 25c  
**Rough on Flies** (liquid), cans, household..... 25c  
**Rough on Red Bugs** (liquid)..... 15c, 25c

All above at druggists; they are too heavy and too low priced to go by mail or express.

La preparación "Rough on Rats" es un exterminador de ratas insuperable, eficaz también para ratones, cucarachas, subandijas, hormigas y chinches. Se emplea en los Estados Unidos desde hace treinta años. Se envía a la dirección que se indique una litografía de la ilustración de arriba, 14 x 21, en siete colores. También fabricamos otras preparaciones semejantes que los droguitas pueden vender fácil mente. Invitamos a los lectores de este anuncio en el extranjero a que nos den precios y condiciones. Se venden estas preparaciones por los tratantes al por mayor de Nueva York.

## THE WEST.

**A Chicago Daily Takes Up Poison Sales—Reform Demanded—Druggists Should Act—More Drug Stores Robbed.***(From our Regular Correspondent.)*

Chicago, September 21.—An editorial in one of the leading local newspapers has called attention to lax conditions governing the sale of poisons in Chicago, as well as the handling of harmful drugs in general. It is urged that a child can buy cocaine and morphine whenever a druggist sufficiently unscrupulous to make the sale can be found. It is said that such traffic is now going on. Of course, in the better class of stores such sales would not be made under any conditions, unless there was a physician's order. Unfortunately all do not have the same moral standards. It is on account of the laxity in this regard that efforts are being made to secure the passage of a law that will make the order of a responsible physician virtually obligatory before the sale can be made. It has been suggested that the druggists themselves could throttle this evil if they would attack it in a determined manner and expose those who make improper sales whenever information of such misdoing reaches them. As long as the guilty ones continue in business, it has been pointed out, just so long will there be a certain odium connected with the business, for at every exposure the druggist implicated is held up for public condemnation.

**DESPERATE STRUGGLE WITH BURGLARS.**

Thieves who recently entered the store of John Dietz & Brother, 3901 Wentworth avenue, made an unsuccessful effort to kill Henry Tietz, 27 years old, because that plucky young man fought with the intruders. Tietz grappled with one of the robbers and the other placed his revolver against the clerk's body and fired. Tietz then released the burglar and went to the telephone to call a physician. While he was at the telephone he was again shot in the shoulder. The thieves escaped. Mr. Tietz was taken to the Lakeside Hospital, where the doctors believe he will recover. The same night thieves got into the store of George Bollinger, at State and Thirty-eighth streets. They rummaged through the basement but failed to get anything of value.

**NOTES.**

Wayne C. Jones, treasurer of the Eli Lilly Company, Indianapolis, visited the Chicago branch office recently for a conference with Sales Manager F. L. E. Gauss and to meet Local Manager Robert Hevenor.

Chas. L. Gleeson, sales agent for P. E. Anderson & Co., importers and exporters, of New York, has been in this city renewing acquaintances and shaking hands with his old friends. Mr. Gleeson spent part of his summer in Canada, combining business and pleasure. He is one of the most successful electric lights of commerce that comes to Chicago.

Walter Schmitt, who has been for four years assistant in chemistry in the University of Illinois School of Pharmacy, leaves the school to take a position in the chemical laboratory of Armour & Co., Chicago. Albert H. Clark has been appointed to succeed Mr. Schmitt. Mr. Clark is a graduate of the school, with honors, and was prescriptionist for R. N. Dodds, at Springfield, Ill., for more than ten years. Later he was employed in the chemical laboratory of the Searle & Hereth Company.

The Frank S. Betz Company has introduced a perfume department, having invested about \$35,000 in that part of the business. The capital stock of \$750,000 is to be increased to \$1,000,000. Mr. Betz and his wife and three sons are in Europe. He will be absent from the plant about two months and will leave his two sons in Germany to be educated. While abroad he will make a number of connections in England and on the Continent with firms to represent them. Mr. Betz started in business ten years ago in one room and with little or no capital. To-day he has nearly 500 men on his pay roll and he also contracts for the entire output of a number of factories.

## THE SOUTH.

**Trade Good in New Orleans in Spite of the Yellow Fever—Drummers Inconvenienced by Quarantine—Three New Stores on Canal Street—Druggists' Baseball Realizes Twelve Thousand Dollars for Fever Sufferers.***(From our Regular Correspondent.)*

New Orleans, September 18.—Trade conditions in New Orleans are exceptionally good and indications are that they will continue so. The business being done by the druggists here is excellent, and there is every indication that more than favorable conditions will continue to prevail. The fever situation is practically as it was two weeks ago, excepting that the mortality has decreased remarkably. That the fever is in check there is little doubt, but the object of the authorities is to stamp it out entirely.

**TRADE GOOD DESPITE THE YELLOW FEVER.**

Trade with the country is good. This is the least that can be said of it. The conditions brought about by the epidemic and which it was believed would hurt business a great deal have not had that effect, and all in all the business done by the druggists here is better than that done in many preceding years at the same time. Little out of the ordinary has developed. The drummers, on account of the quarantines, are unable to come and go as heretofore, but that is natural, and no serious effects are being felt. Many of the drummers were out of New Orleans when quarantines were declared, and these have stayed out all the time. Those who were here went into detention camps and put in the necessary time there in order to get into their respective territories.

**THREE NEW STORES ON CANAL.**

The first of these will be the Paragon Drug Store, which is now being stocked and which will be opened October 1. This store is one of the handsomest on Canal street. It occupies the ground floor of the Macheca Building, and the Macheca Bros., who own the big Canal street building, are the principal backers of the Paragon Drug Company. For display purposes the Paragon has an admirable site. Two large and roomy show-cases have been installed. A splendid soda fountain has been made part of the equipment of the new store and will add to the attractiveness of its interior.

Katz & Besthoff will be ready to start to work on their new store within a short time. They will occupy the building now occupied by the Truefit Clothing Company, in Canal, between Carondelet and St. Charles streets, and will open their store just as soon as they can prepare the building. The Truefit people will move out October 1, and the drug men will then take charge of the building.

Another new drug store for Canal street is assured for November 1. This is the handsome establishment which E. Huberwald, for many years manager for the American Drug Store, will open in the block between Burgundy and Rampart streets. The location Mr. Huberwald has secured is admirable. The building is a large structure and has 40 or 50 feet frontage on Canal street. It was formerly occupied by one of the "Penny Wonderlands" and affords ample accommodations for an unusually large drug establishment. Mr. Huberwald's store will be named the Economical Drug Store and will be fitted in the latest and most modern style. The work of alteration has already begun, and it will be opened by November 1. The Economical Drug Store will be just a short distance from the American Drug Store, which for so many years has been successfully managed by Mr. Huberwald. It is the third new store which will be opened on Canal street before the first of next year.

**DRUGGIST INITIATES MOVEMENT FOR AID OF YELLOW FEVER SUFFERERS.**

Probably one of the most successful movements started in this city for the benefit of the yellow fever fund was that which originated in the office of the Parker-Blake Company

# Armour's Hot

|---|------------|
| One Patent Urn, with Reservoir.....   | Free       |
| One Odorless Gasoline Stove — new.....  | Free       |
| (Will burn 10 to 12 hours without refilling)                                  |            |
| Six Carlsbad China Mugs.....  | Free       |
| (Original Carnation decoration; very handsome)                                |            |
| One Vigoral Hanger, "The Drinking Girl".....                                  | Free       |
| (A new one in 12 colors)  |            |
| One French Plate Glass Vigoral Sign.....                                      | Free       |
| One French Plate Glass Hot Beef Tea Sign.....                                 | Free       |
| One French Plate Glass Tomato Bouillon Sign.....                              | Free       |
| (Elegant signs in colors)   |            |
| Twelve Window and Mirror Signs—new.....                                       | Free       |
| (Just the signs to paste on mirrors and windows on a cold day to catch trade) |            |
| Four 2-lb. Jugs Vigoral.....  | List Price |
| One 5-lb. Bottle Fluid Beef.....  | List Price |
| One-fourth Dozen large size Bottles Fluid Beef.....                           | List Price |
| One 5-lb. Bottle Tomato Bouillon.....   | List Price |
| Two 1-lb. Cans Chicken Broth.....   | List Price |

Supplies sufficient to make from 1200 to 1600 drinks in each case. The price asked for this case is the list price of the supplies it contains for making drinks. Positively no charge is made for Urn, Mugs, etc., etc. Order at once to secure Urn. Trade supplied by all jobbers. Receipts for serving in each case.

Price of Urn and Stove when not packed in Vigoral Urn Case, \$7.00 net.

## Vigoral Dispensing Case

Price, \$7.20 Each

### CONTENTS OF CASE

One 2-lb. Fancy Jug Armour's Vigoral.  
Two 2-lb. Fancy Jugs Fluid Beef.  
One 2-lb. Fancy Jug Armour's Tomato Bouillon  
One-half Dozen Imported China Mugs, (Carnation Decoration)  
One Vigoral French Plate Glass Sign  
One Tomato Bouillon Lithographed Hanger  
One Set (6) Strip Window Signs

Each case contains sufficient supplies to make 700 to 800 drinks. All goods packed in fancy dispensing jugs. A big profit in this case.

Trade Supplied by all Jobbers

**TOMATO BOUILLON.** For Oyster Cocktails and Hot Drinks. Will keep indefinitely in any climate.

## VIGORAL The Most Delicious of all Beef Drinks

For serving hot drinks, bouillon, broth, etc. A combination of all the stimulating properties of prime lean beef, highly seasoned, and ready for immediate use. May be served hot or cold. You cannot make a poor drink if you use Vigoral.

### CHICKEN BROTH

A concentrated Chicken Broth, possessing the real chicken flavor. It is packed in one-pound packages only. If entire can is not used at the time it is opened it should be set on ice, otherwise it will not keep for any length of time after it is opened.

### FRENCH BOUILLON

A seasoned Fluid Beef of delicate and piquant flavor.  
1-lb. Bottles. 2-lb. Fancy Jugs. 5-lb. Bottles or Jugs.  
10-lb. Jugs. Also packed in 4-oz. Bottles.

### CELERY BOUILLON

Where a celery flavor is desired this product will give entire satisfaction.

2-lb. Fancy Jugs. 5-lb. Bottles or Jugs. 10-lb. Jugs.

### MOCK TURTLE

Has a tempting flavor. A popular drink.  
2-lb. Fancy Jugs. 5-lb. Bottles or Jugs.

2-lb. Jug Vigoral

ARMOUR & COMPANY, Chicago

and which netted the yellow fever fund something over \$12,000. It was the scheme of C. C. Johnston, treasurer of the big drug company, and was carried out last Saturday at Athletic Park. It consisted of a ball game and other amusements and was known as the Diamond Festival. One of the largest crowds that has ever attended Athletic Park was present last Saturday when the festival took place. New Orleans turned out in its best clothes in honor of the event and all the business houses closed. Too much credit cannot be given to Mr. Johnston and the men with him who carried out the scheme. The ball teams were the Parker-Blakes and the Glycozones. The latter won the game by the score of 4 to 0.

#### SOUTHERN NEWS NOTES.

An elaborate programme has been arranged for September 16, and will be carried out to the letter.

The Brandon Drug Company has been organized at Brandon, Miss., with W. S. Barnes, a well-known resident of that town as manager. Mr. Barnes is a successful business man and success is predicted for him in his career as a drug man.

S. J. Stewart has opened Stewart's Pharmacy, at 2300 Baronne street, corner Philip street, this city. He has a handsome establishment there, and is in a very desirable location. Success will doubtless attend his efforts to build up a good trade in that vicinity.

Dr. Hosey, well known in Meridian and that section of Mississippi, has organized the Enterprise drug store and is now getting ready to launch the enterprise on its career. He is well and favorably known and his project is backed by some of the best men in the Mississippi town.

Arthur D. Parker, of the Parker-Blake Company, recently interested himself with W. R. Irby, and together they bought the Sherrouse Medicine Company, manufacturer of Tichenor's antiseptic. The deal is looked upon as a paying investment. The purchase price was not stated.

The \$366 worth of Glycozone donated by Charles Marchaud, of New York, to the city of New Orleans, has been bought outright at cost price by the Parker-Blake Company. Mr. Marchaud donated the goods to be sold, the proceeds to go to the yellow fever fund. The money has already been placed to the credit of the fund.

At the present time the New Orleans druggists are very indignant over the action of the Van Vleet Company, of Memphis, which recently sent out circulars to the trade offering to assume all obligations of the New Orleans houses in the way of trade contracts at 6 per cent. In this way it has endeavored to secure the trade controlled by the New Orleans houses. It has been successful to a small extent.

Indirectly defending the action of the Van Vleet Company, a Memphis morning paper recently stated that Memphis druggists had written offering their aid to the New Orleans houses, and extending to these companies the use of their respective laboratories. This statement has been investigated, and it develops that none of the New Orleans houses has received such an offer from Memphis.

#### To Give Free Scholarship.

The New Orleans Item is conducting a very interesting contest; it proposes to give a full scholarship in the New Orleans College of Pharmacy to the young person who gets the largest number of coupon votes. The coupons are clipped from the daily issues of the paper. The trustees and faculty of the New Orleans College of Pharmacy have decided to offer a handsome gold medal to the students making the highest mark and best record during the course prescribed.

"Isn't that a brigantine that's just coming up?" inquired the first passenger.

"I think not," replied the seasick man nearby. "I don't remember having eaten a brigantine."—*The Philadelphia Press*.

#### A French Pharmacist Held for Homicide by Imprudence.

Monsieur Bonnet, pharmacist, Faubourg St. Antoine, Paris, and his laboratory porter, Pozlés,<sup>1</sup> were tried by the Tenth Criminal Court recently for "homicide and complicity in homicide by imprudence."

On May 19 last Madame Marchand, a railway man's wife, sent her husband to the pharmacy in question for 3 cents' worth of ipeca. The emetic was for her daughter Lucie, a child of eight, whom she feared had commenced to develop whooping cough.

"I had opened the pharmacy earlier than usual," Pozlés stated in court, "and I did not wish to disturb M. Bonnet because the customer was in a hurry. I am convinced the word 'Ipeca' was on the bottle I opened. I can read and write well enough, and I was accustomed to serve trifling orders at a similar situation I held in the provinces."

Unfortunately, "the whitish powder" he served was nux vomica and the child died in a few hours.

"The bottle containing the nux vomica was in the poison cupboard," stated Monsieur Bonnet. "But I had been called to serve chloroform during the night and probably left the key in the lock by mistake."

(The French law requires the poison cupboard in pharmacies to be kept locked.)

It was not his habit, he added, to allow the laboratory porter to serve. He had an assistant, who had not arrived when M. Marchand called. He had caught Pozlés selling articles—glassware canules—a few days before and had threatened him with immediate dismissal if he served anything whatever again.

The parents claimed \$2,000 damages, and the Court condemned the pharmacist and the porter to "jointly" pay \$1,000. M. Bonnet was likewise sentenced to one month's imprisonment and Pozlés to three months, but as both benefit by the First Offender's act and are not likely to appear in court again this part of the punishment is purely nominal.

As a matter of fact, it is an open question whether the pharmacist is even technically responsible for the child's death. The mother went to a doctor, who at once wrote out an order for the immediate admission of the child to the Trousseau Hospital and for the application of a stomach pump. But at the hospital she was received by a "stout man," who declared the dying child "a born idiot, who wanted a box on the ears," and told the mother to "take her home and put her to bed!" This charming specimen of Bumbledom is probably the direct cause of the decease for which a pharmacist has been condemned, and it is not to the credit of the administration of the Paris hospitals (humanely and intelligently conducted institutions as a rule) that the "stout man" "could not be identified" when the trial came on.

#### A College Hold Up.

An "announcement" of a college of pharmacy comes to hand with 19 pages of advertising and 20 pages of information concerning the college. A college of pharmacy or any other college which hasn't sufficient funds to enable it to get out an annual announcement without "holding up" business houses for advertising has no excuse for further existence, and a college which has the necessary funds but deliberately engages in the hold-up game has no excuse for ever having been brought into existence.—*Western Druggist* for August.

#### Not There.

Mrs. Nagget: "There, stupid! There's the iodine in that bottle. Hand it to me."

Mr. Nagget: "Where?"

Mrs. Nagget: "Oh, pshaw! in that bottle. Can't you see the label, 'Tinct. Iodine?'"

Mr. Nagget: "No, my dear, that's extinct iodine. The bottle's empty."—*Philadelphia Press*.

<sup>1</sup> Other accounts spell it Paulières.

**The College House of the Philadelphia College of Pharmacy.**

Two years of successful work have fully justified the views held by its promoters when they resolved to found a dormitory for the oldest college of pharmacy in America, says Prof. E. Fullerton Cook in a circular recently issued by him. The circular continues: But it is more than a "place to sleep in." It has meant to the majority of the young men who have lived there for the past two years a home in the best sense of the word. Friendships have been cemented and associations created which will never be forgotten and which will result in lasting good. Truly there is no "royal road to learning." The new curriculum, which goes into effect in October, means more and better work on the part of each man than it has ever meant. But what better investment can a young man have than a thorough and comprehensive knowledge of the profession of his choice? The college has done her part nobly in the past and stands to do far better work in the future.

Older graduates speak in sad terms of the cheap boarding house, with its meager bill of fare, and worse than that, the cold room, the cheerless surroundings, the solitary midnight grind over books, and the weary looking forward to the final examination and its terrors. The College House heartens a man. He meets there others who are bearing the same kind of burden and the association proves the truth of the trite saying, "A fellow feeling makes us wondrous kind." But more than this, it develops a spirit of helpfulness. Each man is anxious to give his friend pointers, and whether the pointers always "point" to what one is going to get in examination is not so much to be considered as the fact that, after all, the man has added to his stock of knowledge, and the pointers are not wholly lost. Any one can see that cheerful companionship and bright surroundings are conducive to study and to the development of all that is best in American manhood.

The College House opens in September with brighter and better prospects than ever before. At this time, August 15, three-fourths of the rooms have been engaged. It is therefore important that all students wishing to avail themselves of its privileges should apply at once for rooms. It is certain that with enlarged classes there will be more applications than can be filled. A schedule showing the location of the rooms and giving terms will be furnished on application to Prof. E. Fullerton Cook, 145 North Tenth street, Philadelphia.

**George Lueders & Co. Double Their Facilities.**

The well-known importing house of George Lueders & Co., of New York, has recently doubled its facilities for business by acquiring the five-story building at 220 Pearl street in addition to its present quarters at 218 Pearl street. It has on hand a very large assortment of essential oils, essences, vanilla beans, drugs and chemicals in the perfumery and flavoring line. There are at present 12 salesmen traveling for the firm, and in addition to the large quarters in New York City there are branch houses in Chicago, San Francisco and Mexico City. This firm has first hand connections in all parts of the world, and it is well worth while to inquire prices of it.

**Reduction in Price of Stearns' Antitoxin.**

The past method of marketing antidiphtheric serum has been unsatisfactory alike to physician, patient, druggist and manufacturer. The abuse of exchanges, which has been excessive and is peculiar only to American antitoxin establishments, has caused the seemingly high cost.

Frederick Stearns & Co. announce that they propose to remedy this condition: First, by reducing the list selling price of their diphtheria antitoxin; secondly, by offering more liberal discounts to druggists (40 per cent.), so that they can sell to physicians at 25 per cent. from list; thirdly, by discontinuing the exchange feature entirely and setting an expiration date of at least 18 months, demonstrated by recent authorities as fully warranted, thereby obviating the necessity of renewal.

Stearns' diphtheric antitoxin, in the Simplex syringe, is now

offered in three packages only, which experience has shown to best fulfill all clinical requirements:

|                                    | New list price. | Net to druggists. | Old list price. |
|------------------------------------|-----------------|-------------------|-----------------|
| No. 1. 1,000 units (immunizing)... | \$1.75          | \$1.05            | \$2.00          |
| No. 2. 2,000 units.....            | 8.00            | 1.80              | 8.50            |
| No. 3. 3,000 units.....            | 4.00            | 2.40              | 5.00            |

Discount to druggists of 40 per cent. from new list price.

The price of the streptolytic serum made by Stearns has also been reduced, the new price being \$3 per package, less 40 per cent. to pharmacists or less 25 per cent. to physicians.

**Registered in Illinois.**

At the meeting of the Illinois State Board of Pharmacy in Chicago, September 12, 13, the following passed successful examinations as registered pharmacists, assistant pharmacists and registered pharmacists under Section 5 of the Pharmacy law:

Registered Pharmacists: A. L. Hault, Chas. L. Higgins, Curt Krieger, Isaac Sissman and F. H. Winters, all of Chicago, and E. B. Anthony, Kewanee; Frank Baker, jr., Rochelle; Geo. R. Fithian, Newton, and C. F. Powell, Lee.

Assistant Pharmacists: H. E. Anderson, Percy von Bachelie, D. T. Cropp, I. B. Fouchsman, A. A. Henkel, D. L. Holland, R. F. Mayfield, E. W. Mosley, Ewald Nudelman and Benj. Spear, all of Chicago, and H. C. Dusenich, Monmouth; S. P. Roush, Danville, and S. H. Veaco, Chicago Heights.

Registered Pharmacists, Section 5: Chas. W. Crawford, Theodore Karmen and J. F. Martin, of Chicago, and Gilbert J. Brady, Litchfield, and Jas. S. Day, Clinton.

The next meeting of the Illinois State Board of Pharmacy for the examination of applicants for registration will be held in Springfield, on Tuesday, October 10.

On Tuesday, November 14, the board will hold a meeting in Chicago for the examination of applicants for registration who have not heretofore passed the preliminary test required. On the following day, Wednesday, November 15, an examination will be held for those who have previously passed the preliminary test. Applications should be filed with the secretary of the board, F. C. Dodds, Springfield, Ill., in advance.

**To the American Pharmaceutical Association.**

BY HELEN ALPERS.

The monks of St. Bernard have heard a call  
Re-echoing from the dizzy mountain height;  
Some one needs succor in the darksome night.  
Oh, may they help before destruction fall!  
The way is rough and steep, but they recall  
The marks that others left to guide them right  
On rocky slopes: their holy vows they've made,  
That in their willingness to aid they'd give their all.  
To rescue Pharmacy you climb the height,  
To save from where by Commerce she is driven.  
The way is marked by others who have striven  
To do their utmost for her sorry plight.  
And when from Greed and Gain she shall be freed  
She'll be Profession, both in name and deed.

**Improvements at the B. P. C.**

The Brooklyn College of Pharmacy has undergone a renovation during the summer recess. The walls of the main lecture hall have been treated to a coat of oil paint and the ceilings decorated. In addition to this a new system of steam heated radiators has been installed on the lecture platform, the coils of eight pipes being fitted like a frame work around the black-board, in front of which the lecturer stands. The library has been made more attractive by the application of a coat of light green washable paint to the walls and by artistic ceiling decorations, making the room a most cosy and comfortable retreat.

**"Hot Stuff"; Its Making and Serving.**

Druggists and all firms who have soda fountains must begin to think about their "hot stuff" business for the coming fall and winter. Hot chocolate and other familiar drinks will be as popular as ever, but there are many new drinks this season, and no one should be behind the times by not having these when called for. By sending to the L. A. Beeker Company, 911 Halsted street, Chicago, any one can get the firm's "Hot Stuff" book, which tells all about these new drinks, what is needed

## THE DJAMSE.

The native masters in the art of mixing medicine show a decided partiality to very complicated prescriptions, *tout comme chez nous* in the days of ignorance, the infancy of therapeutics. The Chinese druggists always keep in readiness for their customers large packages containing the necessary drugs against ailments of all kinds. The man whose wife brought increased joy and bliss to his home by an addition to his family, asking for *djamse*, receives, *e.g.*, à *raison* of about a dime American, a rather extensive pharmacognostic collection, which contains between forty and fifty different substances and reminds one

The Great Steel Steamship Dock, Tandjong Priok, the Port of Batavia. Native Longshoremen in the Foreground.

of the celebrated *theriac*, in ancient times concocted by European apothecaries from sixty different simpliciâ, under supervision of a commission appointed by the authorities to prevent their leaving the more expensive ingredients out. The contents of the packages dispensed by the Chinese druggists, are easier to verify than that whilom famous *theriac*, for all the primary elements have been kept in their natural state, intact, not even ground to powder. Everybody can convince himself, without the aid of a commission appointed by the authorities, that the *djamse* is no swindle, and an arrangement by which the most precious constituents are done up separately, in scraps of paper, gives him the greatest possible security on this score.

Quite another question is his security as to the internal condition of his purchase: more often than not the *obat* is stale,

tainted, covered with mildew or freely mixed with dead and living insects. This, however, to the native mind, does not diminish—perhaps enhances—its virtue.

The care bestowed on keeping the drugs apart leaves also much to be desired. The several simples are continually get-

Market Scene in Bultenzorg, Java.

ting mixed, and this is the more dangerous as some of them contain deadly poison; *warangan*, for instance, brotherly sharing its allotted place with articles of daily use in the preparation of food, consists principally of arsenic.

Most of the druggist's supplies are, of course, products of the soil, but some are imported from foreign countries, *via* Singapore, as *kajoe manis tjina* (licorice), *kalembak* (rhubarb), *ganti*, *poetjoek*, etc., from China; the common *moestaki* or *menjan arab* (olibanum) from North Africa; the more expensive *moestaki* (mastic), used by the Arabs, from South Europe; *kardamoenggo* (cardamon), *djinten* (cumin), *adas* (fennel), *ketoembar* (coriander), etc., from British India.

## CHINESE DRUG STORES ARE WELL STOCKED.

The shops of the Chinese druggists, indeed, are well stocked, if not all of their stock is in prime condition, but they do not deal in the herbs and roots which the *doekoens* demand fresh from the gardens and the woods to brew their poisons. It is necessary to go to the *pasars*, the native markets, for the study of these ingredients, generally put up for sale by more or less ancient dames, who also deal, on a smaller scale, in the drugs already described. They offer, furthermore, with their roots and herbs a great variety of lotions, perfumes, oils, *bedak* (powder for the face), *stangi* (incense), mixtures against all unpleasantnesses that flesh is heir to. Every different *waroeng* or stall has its own specialty with other commodities on the side. This trade comes most to its right in East and, principally, Central Java; the *pasars* of West Java, even at Batavia, Bogor and Bandoeng, have little to show in comparison. But at Djokja a whole section of the *pasar* is set apart for the sale of *obat djaawa*. The saleswomen here and in East Java are called *toekang tjirken*, probably after the name of a popular laxative remedy to be had from their dainty hands; in Batavia and elsewhere in West Java they are called *toekang vempa vempa* or, to distinguish them from the druggists, *toekang djamse*. Though as a rule not belonging to the class of native physicians or *doekoens*, they have some idea of the curative power of the *obat*, the medicine they sell, and are often consulted in minor ailments.

## WOMEN DRUG SELLERS.

It is quite a sight to watch them on the regular market days, squatted down between the other *pasar*-people. The crowd, coming in from the surrounding country, leaves them not a moment's rest. Busily engaged in helping her customers, the *toekang tjirken* takes the *obat* demanded, by means of a spoon with a long handle, from the different compartments of her well provided booth, deftly working her instrument in all directions; she wraps the purchase in a leaf and hands it to the purchaser on a *tetampa* at the end of a piece of bamboo; she knows what each new arrival wants before he (most times she) has spoken a word; she concludes a bargain with a wink and a nod; she is discretion personified.

# Antidiphtheric Serum

## NO RISK OF LOSS FROM UNSOLD SERUM.

Our Diphtheria Antitoxin is freely returnable. We positively protect you from loss.

It yields you a living profit. It is prepared and tested according to the most approved scientific methods. There is no question of its purity and potency.

It has the unqualified confidence of the medical profession.

(Written for the American Druggist.)  
**PHARMACY IN THE FAR EAST.<sup>1</sup>**

BY ALBERT ZIMMERMANN.

On landing from the steamer at any of the larger seaport cities of India and other countries throughout the East one is astonished to note the great size of the ports and the extent of the commerce.

All the larger cities of the East are divided or built up in two sections, one being exclusively European, for commercial and dwelling purposes, and the other used by the natives. The English language is spoken by the great majority of the native people in the larger cities of the Far East.

IN INDIA.

The larger and modern drug stores are chiefly owned and conducted by Europeans and are fitted in up-to-date style. They carry in stock a large line of English, with some German, French and American toilet and proprietary preparations. Among the American preparations having a good sale are Laxative Bromo Quinine, Listerine, Mennen's Talcum Powder, Mellin's Food, Horlick's Malted Milk, Cuticura Preparations, Mother Siegel's Syrup, Pink Pills, Bile Beans and Scott's Emulsion. These preparations are all more or less extensively advertised in newspapers, on the inside and outside of street cars, billboards, circulars, and by sample.

IN BOMBAY

is a large wholesale and manufacturing drug house—Kemp & Co., Ltd. Their quarters comprise a very extensive building, as large as any occupied by American jobbers. In connection with their wholesale business they conduct five large retail stores in Bombay, situated in both the native and European sections of the city. Alfred Pell, F. C. S., the general manager of this extensive business, is always glad to meet foreign visitors interested in this line, and a talk with him is always cordial and most interesting, as he is unusually well informed upon all the conditions in India. Mr. Pell is the author of a valuable Pocket Pharmacopœia, a well bound volume of about 300 pages, which makes an excellent reference book for the practitioner.

In the real native sections the stores range from such as those just mentioned to the premises of the native drug and remedy dealer, who sells native herbs, roots, etc., and some remedies prepared from these. His store, or shop, is usually one of a row of huts which are not larger than five feet front, eight feet deep and six feet high, the stock consisting of a few drawers, bottles and jars. In the rear of this shop is a room wherein the proprietor and his family dwell. In India these huts are usually built of brick or stone, covered with cement and coated with lime. The orthodox Hindoo patronizes only

Native Bazaars in Bombay.

PATENT MEDICINE ADVERTISING IN BENARES.

In Benares I saw an English proprietary remedy advertised by rather a unique method for these countries. A native seated on top of a hackney coach was beating a large modern bass drum and circulars printed in Hindustani were being distributed from the coach by a European to the hundreds of natives, all eager to get one of them, who were attracted by the beating of the drum and surrounded the coach every time it came to a stop. While the greater portion of the nearly three hundred million natives of India are poor and cannot purchase such articles, about one-fifth have sufficient income to make such purchases when necessary, this proportion being sufficient to create a fairly good market.

The European stores are patronized by the resident Europeans, tourists and the educated and wealthiest natives, chiefly Hindoos and Mohammedans. Occasionally one finds stores owned and conducted by natives located in the European section of the city. These are conducted in a partly modern way, and in one of the stores I visited the owner presented me with an extensive price list in pamphlet form printed in English, which consisted of ten pages and listed foreign toilet and proprietary remedies and staple drugs and chemicals. In this class of store foreign prescriptions are compounded.

<sup>1</sup> Mr. Zimmermann has recently returned from a tour through India, Japan and Java.

the native drug shop; he never will eat, drink or touch anything that has been in the hands or touched the body of a white man, such contact being deemed unclean. For this reason one is at perfect freedom when passing through the narrow, dirty streets in the cities of a more religious character and need not fear coming in contact with the natives' clothing, which at times is not always in the cleanest condition and may be a carrier for germs of the plague and other contagious diseases.

In all the cities and in some of the towns and villages they have a kind of public market where a large variety of articles are sold. This market is a daily affair and varies in extensiveness according to the size of the place. In these markets in the villages and towns is usually found the drug vendor whom the natives patronize.

The greater portion of India is free from woodland, and in these sections coal is scarce and too high in price for the natives to use. Under these conditions they are forced to get some kind of fuel and for this purpose they use all kinds of dung, which is made into a paste with water, shaped into flat, round cakes and dried. Passing through one of these native villages at sundown when the natives are preparing their meals is not an agreeable ordeal, as the smoke generated from this fuel is very irritating and of unpleasant odor. They use no chimneys, the cooking being done over an open fire, sometimes inside at the window of the hut, but mostly outside in the open air.

# AKARALGIA MERRELL

The native medicine man in these countries usually practices without any diploma and gives drugs as he pleases in unlimited quantities and variety, a case of hit or miss.

#### IN BURMAH AND THE MALAY PENINSULA

the European pharmacies are generally owned by European physicians, as many as four or five being interested in the same store and having their offices located in the same building. The native drug shops are similar to those of India and Ceylon. The population of the Malay Peninsula consists largely of Chinese.

In the East Indies the natives are all Mohammedans. They greet the Europeans very politely by a squat, and when they wear a palm hat they tip the same. When on horseback they dismount and lead the horse to the side of the highway. Natives who have made the pilgrimage to Mecca and those in the larger cities do not practice this polite greeting, their native methods being more or less changed by contact with the Europeans. The natives patronize only native vendors of drugs, and these are usually located in the market places in the towns and villages. Here these markets are conducted even more extensively than in India. The houses and huts in this section are built entirely of bamboo. A great many Chinese make their home in the East Indies, and for mining and contracting work they are preferred to the natives. In India and Ceylon there are no Chinese.

#### CONDITIONS IN CHINA.

In China everything is still very primitive; the Europeans have not invaded that country so extensively as the other countries of the East and consequently the natives have not been so well educated. Pharmacies in the cities and towns of China are usually confined to small spaces, the interior fitted with wood drawers and some shelving containing some porcelain jars, arranged behind a long table similar to the counters used in our own stores. The prescriptions call for crude drugs, which are dispensed in coarse, unground form, are carefully weighed, then mixed and wrapped in paper and the directions written upon this paper wrapping. The medicine is chiefly used in the form of infusion. In the regular pharmacies they do not sell proprietary remedies. This constitutes a separate trade and there are a few stores where they sell exclusively proprietary articles, the reading matter being printed in the native language. Some few American preparations are sold. It is important that any preparation or article of merchandise sold throughout the East should bear a sign or emblem or a figure like a trademark, because the natives easily recognize and remember such signs.

Passing through the streets of the larger cities in China one can see the preparation of smoking opium in the few shops given to the manufacture of this article, the front being open, leaving the interior of the shop entirely exposed to view. The opium which is used in China and the East is cultivated in India and contains only about 2 per cent. of morphine.

The opium is extracted with hot water, three to four times, until fully extracted, the aqueous extracts being then concentrated in copper receptacles over charcoal or wood fire, the more dilute at first, then the concentrated, finally, near the end, some molasses is added to preserve the paste in a soft homogeneous condition and to give it adhesive qualities to facilitate the rolling into pills for the pipe.

The opium dens in Chinese cities exist in large numbers and the visitor can enter without any restriction and freely inspect them.

#### IN JAPAN.

The Japanese are the most advanced of the Eastern races, and the drug stores, even in the smaller towns, are conducted more or less after the European fashion. They use chiefly drugs and chemicals imported from Germany. In the Imperial Hygienic Laboratory in Yokohama all form of substances are analyzed for their quality, food products, drugs and chemicals, proprietary medicines and toilet preparations. All this work is done gratis for the benefit of the people, the institute being supported by the Government. The supplies used by the army and navy are also examined and tested here as to their purity.

Foreign proprietary preparations pay 10 per cent. in their selling price. This will probably be reduced to 5 per cent. when peace has been declared. The Japanese are very in their supervision of soda water manufacturers; the carbonic acid after it is generated must be passed first through concentrated sulphuric acid, then through a solution of potassium permanganate, finally through a solution of sodium bicarbonate to the water to be charged. Each bottle or syphon must be labeled as to the date of bottling. In Osaka there is a large chemical works manufacturing large quantities of sulphuric acid and other acids, also soda products. Some of the wholesale druggists also manufacture chemicals.

American articles of manufacture in general are poorly represented in these countries, and are very little sold. American dealers should pay more attention to these fields for disposing of their merchandise and open up new markets for American goods before the other nations get too far ahead of them; for our own country is getting the more we need other markets for our own goods. I have been informed by some of the American manufacturers' agents that our manufacturers are too independent. They decline to manufacture the special class of goods desired by these people, leaving this for the other foreign nations who cater to this trade and are getting it. American goods are not packed properly and are never delivered at the promised time. In this American manufacturers are more or less handicapped on account of having no regular steamship lines to the Indian ports, the vessels sailing irregularly and they wait for full cargoes. It is best to sell goods from stock held in the larger cities, insuring prompt delivery and proper packing.

#### An American Pharmacist in Europe.

Joseph Jacobs, the well-known druggist of Atlanta, Ga., passed through this city recently on his way home, after a stay of several months in Germany. Mr. Jacobs brought back with him his son, who has been at school in Frankfort for the

Raths Apotheke, Hildesheim, Germany.

# Popularity and Price Protection

## POPULARITY

**LAXATIVE BROMO QUININE** originated as the first product of its kind and through merit and continuous extensive advertising it has become an absolutely staple article.

## PRICE PROTECTION

The terms and discounts on LAXATIVE BROMO QUININE from the beginning have afforded a most liberal profit, and now, by the adoption of the DIRECT CONTRACT AND SERIAL NUMBERING PLAN, this profit is absolutely insured to the retail dealer. The support of this Plan by the Retail Drug Trade demands, simply, that **EVERY INDIVIDUAL** Druggist shall sign the contract. Those who have not done so should sign and have the contract properly recorded without further delay.

## SPECIAL DATING OFFER

**JANUARY 1st. 60 DAYS.**

If a supply of LAXATIVE BROMO QUININE is needed, or if the stock on hand will permit it, the DATING OFFER now in force enables the Druggist to purchase a quantity, obtaining the regular free goods to be delivered at once and invoice dated January 1st, 1906, for cash discount.

## LAXATIVE BROMO QUININE

**Price \$1.75 per dozen.**

|  |                                  |
|--|----------------------------------|
| 6 dozen lots, 1 dozen free, . . . . .                          | Cost \$10.50 or \$1.50 per dozen |
| 12 dozen lots, 2 dozen free, 5 per cent. trade discount, " "   | 19.95 or 1.43 " "                |
| 36 dozen lots, 6 dozen free, 8 per cent. trade discount, " "   | 57.96 or 1.38 " "                |
| 60 dozen lots, 10 dozen free, 10 per cent. trade discount, " " | 94.50 or 1.35 " "                |

**WHOLESALE DRUGGISTS WILL ACCEPT ORDERS UNDER THIS DATING OFFER.**

**PARIS MEDICINE COMPANY,**  
SAINT LOUIS AND LONDON.

past year, and who will probably take up the study of pharmacy this winter at the Philadelphia College of Pharmacy, his father's alma mater.

Mr. Jacobs says that despite all that we hear about the ideal conditions of pharmacy in Germany the *Deutsche Apotheke* is not above doing a little substituting. At one of the leading pharmacies of Cologne he asked for Isterine and was given in its stead a bottle of "Amerikanisches Listerine

Old Nuremberg Pharmacy, in the Germanic Museum, at Nuremberg, Germany.

Mundwasser," which was not even a respectable imitation of the genuine article.

Hildesheim is a little city on the bank of the Innerste, about 18 miles southeast of the city of Hanover. Mr. Jacobs spent some time there and is enthusiastic over its charming antiquities. All the houses in the town are old, one dating from the sixteenth century being looked upon as painfully modern, while some of the structures date back to the eighth century. The town hall, or *Raths Haus*, shown in the background of the accompanying illustration, dates back to the fifteenth century, while the *Raths Apotheke*, in the foreground, was built even earlier. The interior of this old *Apotheke* is as quaint and curious, so Mr. Jacobs says, as is the exterior.

The curator of the German Museum in Nuremberg is Herman Peters, formerly a pharmacist and the author of a history of pharmacy which has been translated into English and which is the first comprehensive history of pharmacy published. Mr. Peters, by the way, is a brother to the African explorer. Mr. Peters has shown a special interest in pharmacy by collecting the materials and arranging within the museum the interior of an old Nuremberg pharmacy dating back to the middle ages. Among the mementos which Mr. Jacobs has sent to his friends in this country is a photograph of this old Nuremberg pharmacy, which we reproduce herewith.

#### Notes from a Mexican Traveler.

George A. Randolph, of the Paris Medicine Company, who has recently returned from a trip through Mexico, contributes the following notes on the drug business in that country: From the standpoint of both the drug business and pleasure, the latter part of the rainy season, or about the month of September, is the best time to visit the Republic.

The cream of the entire drug trade can be reached by visiting about a dozen cities, which might be mentioned in the order of general importance, as follows: Mexico City, Monterey, Guadalajara, San Luis Potosi, Vera Cruz, Merida, Campeche, Tampico, Puebla, Chihuahua and Torreón.

The hotel accommodations, outside of Mexico City, are not very good, but are bearable for the short time which it is neces-

sary to remain in each point. I stayed at the Hotel Sanz, in Mexico City, which is under American management and considered the best in the Republic.

The railroad facilities are fair and there is a great deal of construction work now under way. Pullman service is maintained on both the standard and narrow gauge roads, and the railroad fares are about 3 cents, Mexican, per kilometer, which figures a little less than 3 cents per mile. The National and Central railroads are the largest systems in the Republic and service on the former is generally considered superior to the latter; but to reach important points it is necessary at times to travel on both systems, as well as on the smaller roads. To reach Guanajuato it was necessary to travel some miles on a tramcar line which was recently flooded.

As in other foreign countries, it is advisable for the American to develop his "trading" propensities as much as possible, for it is necessary to dicker with every one, from the hotel keeper to the old Indian woman who sells drawn work or pottery. As an example of this I recall an incident of the purchase of some opals at the little town of Queretaro, which is near the famous opal mines discovered by Cortez. At this town several natives had a quantity of the stones, for which they quoted the combination rate of about \$15, Mexican, but the lot was finally purchased for the sum of \$2, gold, or about \$4, Mexican.

In connection with the trip to Mexico it is most interesting to read F. Hopkinson Smith's novel, "With the White Umbrella in Mexico," and some historical works or novels treating on the early Toltec and Aztec inhabitants. "The Fair God" and "Aztec Treasure House," both by Lew Wallace, are novels of this order, and the story of "Mexico," by Susan Hale, is a descriptive and intensely interesting book.

My trip from a business standpoint was very successful indeed, and I am sure there is a great field in that country for the sale of products of American manufacture.

#### Patents for Exported Articles.

In "Consular and Trade Reports" for September 5 an interesting report from Robert Grimshaw, of Hanover, Germany, was printed on methods employed by manufacturers to introduce typewriting machines into Europe. Consul-General Mason contributes another report from Mr. Grimshaw on the importance of securing patents on articles imported into Germany when such articles are patentable. His letter follows:

I have often had occasion to write American manufacturers and exporters on the subject of having what they have to sell in Europe patented in the countries where they wish to sell them, and in some cases what I have to say has taken effect. But I should be glad of an opportunity to say, for the benefit of manufacturers as a class and for that of American export trade as a whole, some of the things that I have said from time to time to individuals. From the point of view of the manufacturer patenting is desirable, because it prevents the foreigner from doing what he has otherwise every legal right to do at any time that he sees that a foreign invention is meeting with success, and possibly success at his expense, in that it is being sold in his territory and supplanting his own products—viz.: make and use of it.

From the point of view of the selling agent in Europe, who is asked to spend time and money doing missionary work, the desirability of patenting the new thing is evident from the first, and the conviction strengthens with the success of the agent in the unprotected territory. For the manufacturer has at least the protection of home patents, and if through leaving himself unprotected he loses his foreign fields, he has at least his own country to work in with no one to say him nay. But the selling agent abroad, who has put in hard work to convince a very conservative public of the superiority of the new thing (a task which is none of the lightest, especially if there is a marked difference in first cost against the novelty), is cut out completely. This digging wells half down to water is sel-

# Direct Contracts that mean PROFITS

Study the prices in our direct contract and you will find that these contracts mean to the retailer—just one thing, viz:—**MORE PROFITS.**

Compare the profits that these contracts enable you to make with the profits you are making on dozens of other products on your shelves.

We have been consistent friends of the retailers for over 20 years.

We have always sold our products for you and we shall continue to do so. You have a right to good-sized legitimate profits and we are giving them to you

## 30 Cents Net Profit Per Bottle

That is what our contracts mean on Paine's Celery Compound to the retailer who is trying to do business in the cut-price demoralized districts.

## 40 Cents Net Profit Per Bottle

That is what our contracts mean on Paine's Celery Compound to the retailers in the full-price territories who must be protected from any invasion to maintain full prices.

dom relished even by the most philosophic and philanthropic of agents.

#### PENALTIES FOR INFRINGEMENT.

But when we consider the question solely from these two standpoints we have still by no means got a full view thereof. There is the customer to consider. He does not want to buy a lawsuit with a machine or other purchase. In case the article to be sold is not patented in the country in which it is offered for sale there is the danger that it has already been patented by another, and that the patentee will very justly bring against the purchaser an action for infringement of his chartered rights. In this danger the resident agent—the missionary—participates. It is useless to assure the customer that the manufacturer is one of the largest concerns in his native country and will protect the purchaser against any possible suits for infringement. In the first place the customer has no means of verifying the statement about the financial weight of the manufacturer, and in the second he does not care; he does not wish to be annoyed by any suits, no matter how heavily he may be backed up. In the third place, if he knows anything about German patent law, and the case is a German one, he will quietly remind the missionary that in that country the infringement of a patent is not merely a civil but a criminal offense; and no manufacturer in America, however influential in financial circles, can get around that part of the difficulty. Section 36 of the German patent law of April 7, 1891, says: "Whoever knowingly uses an invention contrary to the ordinances in sections 4 and 5 will be punished with a fine of 5,000 marks or with imprisonment not to exceed one year." The quoted sections 4 and 5 are those which secure to the inventor the sole rights of the invention which he patents.

#### CONVEYING FALSE IMPRESSIONS.

Further, there are many manufacturers who seek to convey to their agents and to the customers the impression that the matter is patented in the country of sale, not by directly saying so but by implication. Sometimes this implication is only one of silence; but for all that the attempt, whether unlawful or not, is dangerous in most countries, and especially in Germany. For section 40 of the law, already quoted, says distinctly that whoever marks objects or their packages with any sign calculated to impress one falsely with the idea that the object is patented according to the German law shall pay a fine of 1,000 marks. I had been for months in correspondence with the European general agency of an American manufacturer. To get a definite answer, or even any answer at all, as to patents, was next to impossible. At last, however, I got the following: "Our friends, the ——— Company, apologize for the delay in answering our letters about patents, which they say has occurred through oversight. They write: 'As you may be aware, probably we have a great number of persons applying for patents in our own and foreign countries, and to possess you of definite information concerning them would be rather a difficult matter. It will, however, suffice and be entirely satisfactory to you to say that we will fully protect our customers against damages resulting from any lawsuits brought against them by reason of the use of our devices.'"

The foregoing is not to be commended. I have not the slightest doubt that I can get from the Remington typewriter people, or from the Westinghouse concerns, or from the McCormick establishments, within 15 minutes after application to the proper head of department, the number and date of every patent owned or controlled by the concern in question in any country in the world where they are protected. If any one does not believe it let him try a little bit of infringement and call at the office of the company in question to discuss the matter in person.

"No, I am not a Christian Scientist," said Kandor.

"But you believe in throwing physic to the dogs," remarked Dr. Krabbed.

"Not if it happened to be your physic and my dogs."

#### Recent Customs Decisions.

Hellotropin crystals and artificial musk, imported by M. L. Barrett & Co., Chicago, were held by the Board of United States General Appraisers to be dutiable as chemical compounds and not as coal tar products, as claimed by the importers.

The Board of General Appraisers denied a claim made by Middleton & Co. for free entry of arrowroot flour. The action of the collector in assessing duty at the rate of 1½ cents a pound was affirmed.

An important decision was handed down recently by the General Appraisers with regard to the classification of ginseng. The Wa Chong Company, of Port Townsend, Wash., protested against the rate of one quarter of 1 per cent per pound and 10 per cent ad valorem. The importers claimed free entry. The board argued that even though it were found that ginseng had medicinal qualities, it was nevertheless edible. Examination of the official samples seemed to show that the merchandise was not in a crude state, but had been subjected to treatment other than sun-drying, and that therefore the claim for free entry was not well founded. The board overruled the protest, but did not affirm the action of the collector at Port Townsend.

#### How to Resign.

"Going to resign, are you?" asked Assistant Postmaster-General Wynne of an indignant person who had been pouring his grief into his ears. "Can't stand it another minute, eh? Put up with it as long as you could, and now you're going to throw up your job and tell your chief what you think of him? Yes, I know. Last straw and all that sort of thing? Uh-huh."

"Did you ever see my set of rules for resigning? I framed them up years ago when I was in the newspaper business and I have used them ever since. I have resigned often since then, always in the way prescribed in these rules. Perhaps they will be of service to you. Here they are:

"Rule 1. After receiving the last straw don't do anything for two hours. Above all, don't write anything.

"Rule 2. At the expiration of two hours write your resignation and make it as hot as you can. Relieve your feelings and say everything you have been penning up in your breast. Scorch the scoundrel.

"Rule 3. Then go home.

"Rule 4. The next morning, immediately upon arising, read over your resignation and tear it up.

"Rule 5. Go to work at the usual hour.

"Take a copy of them," continued Mr. Wynne, "and you will find that they are absolutely essential to any man who expects to resign frequently and still continue to rise in the world."—*New York Times*.

#### That Patent Medicine Tax.

Washington, October 5.—Temperance people throughout the country have evinced the liveliest interest in the order recently promulgated imposing a license tax on manufacturers of patent medicines supposed to contain alcohol. Internal Revenue Commissioner Yerkes is receiving many letters on the subject, together with samples of compounds the basis of which is suspected to be alcohol. It is understood that Commissioner Yerkes has ordered an analysis of hundreds of samples that have been sent to the Department and that the results will be given to the public in an official circular. Whether the medicines containing alcohol will be specifically mentioned by their trade names has not been disclosed.

#### Information Concerning the Commerce of Santo Domingo.

The Bureau of Insular Affairs of the War Department has on hand a limited number of copies of the April Summary of Commerce of the Republic of Santo Domingo, recently compiled in the office of the Controller and General Receiver, Customs Service of Santo Domingo. The publication is printed in Spanish and English, and copies may be obtained upon request to the Insular Bureau.

**A REMARKABLE WINDOW DISPLAY.**

A window display of remarkable interest to those who thronged the streets of Boston during the week of the N. A. R. D. convention, from September 18 to 23, was made by Woodward's Drug Store, 100 to 102 Tremont street. The display proved both pleasing and instructive even to the pharmacists who joined the usual crowd of sightseers. Through the courtesy of J. F. Finneran and C. R. Pollard, who are the proprietors of Woodward's Drug Store, we are enabled to reproduce a photograph of the window display. From this it will be seen that choice specimens of crude vegetable drugs formed the display proper, but it was in the arrangement of the speci-

that it included a parcel of gum benzoin weighing 15 pounds, a log of sandalwood weighing 18 pounds, surrounded with cuttings of and the ground wood, gourds of aloe, specimens of the costly ambergris and musk pods, grain musk, opium in the lumpy masses as imported, with a covering of poppy leaves. The list of drugs exhibited in addition to those named included hops, cardamom seeds, senna pods, saigon cassia, lovage, calamus, buchu leaves, gamboge in pipes, nux vomica, licorice root, Honduras sarsaparilla, cassia fistula, star anise seed, lavender flowers, henna leaves, uva ursi, cochineal, bitter apple, Spanish saffron, gum thus, bayberry wax, gum chicle, white agaric, Jamaica ginger root, dragon's blood in reeds, red

A Great Boston Window Display.

mens that the makers of the display made their great hit. Select chamomile flowers of prime quality were used as a floor covering, where most pharmacists would have used a fancy paper of some kind. On this ground were arranged at irregular intervals specimens of various crude drugs, ranging from Chinese nutgalls to opium. A lignum vite mortar, 75 years old, occupied the center of the stage, and the beauty of the varied range of specimens was greatly enhanced by the artistic quality of the cards which were used to indicate the drugs displayed. As may be seen in our engraving, the cards gave the botanical names of the drugs, together with their common names and synonyms. The photograph does not show the beauty of the card, which was neatly printed in black, white and red on a brownish background. Some idea of the interesting character of the window show may be gathered when it is known

cinchona bark, calabar bean, gum guaiac, quince seed, sage, Job's tears and paraffine wax.

**Curious Gastronomic Feats of an Englishman.**

Soda fountains are popular in London, according to *The Soda Fountain*, which says that the number of American soda water fountains in the metropolis is rapidly increasing. One of them has recently been added to the American restaurant in the Strand. I saw an Englishman there the other day washing down a mutton chop and fried potatoes with a chocolate ice cream soda. The American in charge of the fountain told me that was nothing. He had seen an Englishman take a strawberry ice cream soda with a Welsh rarebit and then call for another glass of it.

**Christmas Chances.**

The holidays approach. The apothecary who wants a harvest in the perfumery end of his business can have it. It's but a question of securing the right goods.

The pioneer house in tasteful holiday packages, the Theo. Ricksecker Company, 74 Reade street, New York, admittedly continues each year to lead in original creations, rich, up to date presentation goods of rare beauty and attraction and quick sale, totally different from the rest. It's a feast to the eye to see their variety and elegance, and the surprises, on visiting its offices in Reade street. It's a feast to the olfactory nerve to smell the contents.

The druggist who wants not only the most beautiful goods, but wants to beat the record in his cash drawer, will make no mistake in sending the order in for the Theo. Ricksecker Company's special offer on page 17. The features in the bonus and free advertising are unique, as is everything this house turns out. The assortment is liberal. The prices are right. Send for it. Get your goods in time to duplicate. Don't miss this excellent chance.

**Burnt Sugar as an Antiseptic.**

The custom of burning sugar in a sickroom is very current among all classes in France, but up to the present had been regarded by scientists as one of those harmless and useless practices which are rather tolerated than insisted upon by the medical profession. But M. Trillat, of the Pasteur Institute, now assures us, says the *Chemist and Druggist*, that formaldehyde is given off by burnt sugar, and is one of the most antiseptic gases known. Five grammes of sugar having been burnt under a 10-liter glass "cloche," the vapor was allowed to cool. Vials containing the bacilli of typhoid, tuberculosis, charbon, etc., were then introduced. Within half an hour every microbe had succumbed. Again, if sugar be burnt in a closed vessel containing rotten eggs or putrid meat, the disagreeable smell disappears. M. Trillat affirms that the formaldehyde combines with the gases given off by the putrid animal matter and renders them inodorous.

**Year Books.**

B. W. Huebsch, 150 Nassau street, New York, is offering in this issue his Year Book, in vest pocket and desk styles. This has been found by druggists to be a very valuable addition to their stationery stock and to be a ready seller and a profitable item to handle. We recommend our readers to correspond with the advertiser with a view to stocking a line.

**Don't Use String.**

Reis' Advertising Tape has so many good points over string or cheap ribbon for packing small or large boxes of drugs or candies that it commends itself at once to the progressive storekeeper. It is dainty, but strong, and carries your name and address printed continuously on its face. The novelty of it serves to strengthen its advertising value. The tape is made in different widths for different purposes—some narrow enough for very small packets, some wide enough for 3 or 4 pound parcels. G. Reis & Bro., 640 Broadway, New York, are the sole manufacturers, and druggists interested are invited to write there for further particulars.

**Hints to Buyers.**

There is an increasing demand for Antiphlogistine, and every druggist should be prepared to supply it. It is a good plan to order in \$24 lots, and thus get the 5 per cent. discount offered by the Denver Chemical Company.

When in need of any kind of pharmaceutical machinery such as tablet machines, pill machines, etc., consult Arthur Colton, Detroit, Mich. Send for his new catalogues. Plans are submitted for special machinery.

The Giant Chemical Company is making a good offer to retail druggists—namely, 6 dozen A-Corn Salve and one box (50) Neil Burgess 5 cent cigars given free with every gross of A-Corn Salve. A clear profit of \$25.40 on an investment of \$9.50 isn't a bad business proposition, is it?

In replenishing or putting in a stock of lozenges, gum drops, etc., it will pay the druggist to investigate the lines made by the Roworth Mfg. Company, 85 Maiden Lane, this city. This firm makes the well-known London Hospital Throat Lozenges, and its diamond licorice, rose and lemon jujubes are great sellers.

All druggists who are about to fit out new stores or refit old ones are recommended to consult the lines of Roman shop bottles made by the Dawes Mfg. Company, of Pittsburgh, Pa. Send for catalogue which gives full details of this and other styles of bottles. The prices are right and the goods perfectly reliable.

If you specify "Abbott's" you will be sure to get the original saline laxative, which has been extensively advertised to the medical profession for years. There is a growing demand for alkaloids and alkaloidal preparations. Every druggist should be well supplied. Write for the Abbott Alkaloidal Company's special proposition to retail druggists.

No druggist's stock is complete without the Garfield remedies. They have a wide reputation and an extensive sale; the remedies include Garfield Tea, Garfield Headache Powders, Owl Oil, Garfield Tea Syrup and Garfield Digestive Tablets. It would be well for any pharmacist to send for prices and terms to the Garfield Tea Company, Brooklyn. Kindly mention the *AMERICAN DRUGGIST* when writing.

The fact, as claimed by the manufacturer, that over 23,000 Torsion Balance scales are already in use by retail druggists throughout the country is sufficient proof of the merit of these scales. The scales are entirely free from knife edges or friction. Have you seen the company's illustrated catalogue? If not, send to the Torsion Balance Company, 92 Reade street, this city, for one.

A marked improvement has been made in hypodermic syringes by the invention of the hollow piston, as contained in Dr. Loud's self-lubricating syringes. The piston is made of aluminum, with a hollow interior to contain the lubricating oil. The oil preserves the packing, always keeps it moist and pliable, and makes the syringe work smoothly and easily. The syringes are so constructed that the oil (5 per cent. odorless carbolic acid) does not come in contact with the injection fluid. These syringes are made by Becton, Dickinson & Co., 160 Duane street, this city. Send for further particulars, referring to the *AMERICAN DRUGGIST*.

One of the most profitable articles retailed over the counter, especially in warm countries like Mexico, Cuba, Central and South America, is soda and mineral waters. There are large profits in manufacturing, bottling and dispensing aerated waters. Authentic reports from parties in these countries leave no doubt whatever that this is a very paying proposition. Any one who contemplates starting a soda or mineral water plant should communicate with the American Soda Fountain Company, Boston, Mass. The company has catalogues in Spanish, French and English, which may be had for the asking. These catalogues are also valuable to parties who are already manufacturing and dispensing soda water, for they contain many new ideas.

# More Business Now Easy Business Later

---

Get our October catalogue. Use its goods and hints for more business now. And from the holiday goods it displays choose the things for easy business in December.

The yellow page items are just the leaders you need to draw October trade your way. In the more than fifty departments there are goods and prices revised to date and guaranteed for the month.

Our line of holiday goods is the largest and most varied and on the pink pages of our October catalogue are a picture and description and a net price for every item in the line.

One cent for a postal card and the minute to write "Send me catalogue No. V553" — do it now.

### Soap an Index of Civilization.

It is an accepted fact that the prosperity of any country can be estimated in a large degree by the demand for luxuries. Soap, although fortunately regarded as a necessity in these modern days, can readily be classed among the household luxuries which modern manufacturing methods have placed within reach of all classes.

Not so very long ago the commoner kinds of soap were regarded as good enough for toilet use, but nowadays it is customary for the great mass of people to have one soap for laundry, another for the bath, another for the toilet, for shaving, for the complexion, and there are also soaps possessing distinctive medicinal virtues.

Scientific research is responsible for conditions now existing which make it possible to produce soaps for every conceivable purpose, at popular prices. Some of our large representative manufacturers, notably Armour & Co., have entered the soap field for reasons which will appeal to reasoning people. The

basis of good soap is good raw material. Without this no scientific manipulation will attain the desired results. As producers of soap-making raw materials Armour & Co. possess distinctive advantages, the benefits from which are enjoyed by the people at large. This well-known firm have at their command the highest skilled soap makers and every modern appliance having for its object the production of a very high measure of soap value.

A glance around the drug stores of the United States will indicate to what extent the Armour soaps have developed in popularity.

The Sylvan Series, consisting of seven different floral odors, is now one of the most popular toilet soaps in general use. Not only is the soap itself carefully prepared, in order that it may have a soothing action upon the skin, but in addition the perfumes have been most happily combined. The Sylvan Series of toilet soaps can be obtained in any floral odor to suit the taste, and for this reason has been called the "soap with a sentiment." For those who prefer the dainty fragrance of the violet Sylvan Violet Soap can be recommended. Then there is the lilac, heliotrope, rose, &c., all of them true reproductions of the flower. Sylvan Series can best be described as a highly perfumed toilet luxury, at a popular price.

As affecting the interests of the retail druggist, Sylvan Toilet Soap has proven itself to be a profit maker, because of its attractiveness, and its popular price has induced many people to adopt it for their toilet who formerly were less fastidious. Sylvan Soap not only affords the druggist a chance to sell the particular odor desired by one person, but covers the whole field of floral perfumed soaps, comprising a complete variety of "Dame Fashion's" fancies.

### Big Money in Post Cards.

Almost every drug store now handles post cards as a side line with a good profit. Some would-be manufacturers are putting very cheap comic cards on the market, but they sell only for a short time, and the public is looking for something better. There are, we believe, only two firms in the United States that are making illustrated view post cards by the same process as the German manufacturers, who are known to be experts in these lines. One of these firms is Curt Teich & Co., 119-125 East Lake street, Chicago, who have expended \$60,000 in special machinery to manufacture these cards. Their product is claimed to be the best ever manufactured here and equal to any card manufactured in Europe. The above firm is manufacturing, besides view cards, a very large line of comica, and it is offering a special inducement in this issue.

Any druggist buying cards should write to this firm before placing an order with any other firm. Curt Teich & Co. have

manufactured cards for the last five years and turn out a million cards every month. Their line consists only of the best sellers. When you write to this firm please mention the AMERICAN DRUGGIST.

### He Wanted to Make a Larger Profit.

It is always commendable for any dealer to make the largest possible profit, but when this desire for gain overcomes his scruples and he is led to ask a high price for an inferior article his undoing is then only a matter of time. This was recently exemplified by a dealer who for several years has served Vigoral as a hot beef drink. During the latter part of last season a competitor induced him to take another article that was claimed to be "just as good as Vigoral," but a little cheaper. The result of this was that there was a gradual but very perceptible decrease in his sales of hot beef drinks, and he closed up his hot drink fountain with practically two-thirds of his last purchase on his hands. He commenced to figure out how this happened, and he decided this year to throw away the cheap article and buy Vigoral again, and he has already started the season with this product and is making quite a point with it among his trade that they have Vigoral now and not some cheap substitute. There are many dealers who can be benefited by following this gentleman's example, for there is no truer maxim than that "good drinks cannot be made from poor material," and the dealer that seeks to satisfy his trade with goods "just as good as Vigoral but cheaper" is doomed to disappointment in his cash receipts and to seeing his customers going to a neighbor who is serving the very best drinks for the price he charges. So that we say, in all honesty, be satisfied with a fair margin of profit. Make the best drink you can, get a fair price for it, give the best service you can and your success with hot drinks is assured. If you have not an apparatus perhaps it will be worth your while to write Armour & Co., Chicago, for an illustrated price-list of their hot drink supplies, showing their free china hot water urn, nickel hot water urn and other free goods for dispensing hot drinks packed in their Vigoral case offers.

One of the largest soda water dispensers in America has pronounced Vigoral the most delicious of all beef drinks. It is served at every hot drink soda fountain from Maine to California. It is the popular drink in New York, San Francisco, New Orleans and St. Paul. Wherever good hot drinks are served Vigoral is the standard beef drink, and there is no reason why every dealer should not serve it, as a hot drink apparatus given in their case offers will set a man up in business even though he serves no other hot drinks.

### An Indestructible Shaving Brush.

The accompanying illustration gives a sectional view of a

shaving brush, the bristles of which are imbedded in hard rubber—or, rather, they are put into a rubber bed, which is then vulcanized, so that the bristles and rubber are practically a unit and cannot by any device be separated. This makes a quite indestructible brush, except so far as ordinary wear of the bristle or hair is concerned. The ordinary form of shaving brush is one in which the bristle or hair is imbedded in rosin or cement, with the inevitable result that the constant application of water to it brings about dissolution and releases the only part of the shaving brush which is of any value to the shaver. The new brush is manufactured by the Rubberset Brush Company, of Newark, N. J., and is now submitted to the consideration of the drug trade in an advertisement in these columns. A full line is manufactured, from the cheapest to the most expensive grades. We particularly invite the attention of our readers to the advertisement.

# WARNING.

The trade are warned that certain persons are offering adulterated and inferior meat extracts in packages which infringe the trademarks of LIEBIG'S EXTRACT OF MEAT CO., LTD.

In order to deceive, the salesmen in some instances even represent themselves to be connected with the original Liebig Company.

Dealers are warned that these imitations have no connection whatever with the Liebig Company, and in selling same they render themselves liable to prosecution for substitution and infringement of the Liebig Company's rights.

If any dealer is in doubt about the meat extract in his possession being genuine LIEBIG COMPANY'S Extract, we shall be happy to report on it if he will mail us the outside wrapper from one of the jars.

## Prices Current.

The outside prices quoted are for such quantities as retailers usually purchase. When purchasing original packages the inside quotations should be expected, while a slight advance over the outside quotations given may be demanded for very small lots. Current commercial quality is understood unless otherwise indicated. For extra quality or for specified makes a slightly higher price will have to be paid.

THE C. F. BLANKE &amp; CO.,

ST. LOUIS.

In Ordering Vaccines and Antitoxins

For Veterinary Use, Specify

PASTEUR

and get the original, produced at the Pasteur Laboratories, established in France by Pasteur, 1854.\*

Blackleg Vaccine was discovered in 1884 and is still produced for us by the discoverers. The original and genuine product which we furnish has been successfully used upon over 20,000,000 calves. The cord form known by the name "Blackleg" is the most popular and best seller on the market as it is the most convenient, effective and economical method ever devised. Write for literature and prices. In ordering vaccines specify PASTEUR and get the original.

THE IDEAL  
HAIR BRUSH.

U. S. Patented December 21, 1896.

NOTHING LIKE IT ON THE MARKET.

Do not confound this brush with the rubber back wire brushes. It is entirely different. The "Ideal" has an Air-Cushioned Back and Genuine Siberian Bristles. It is the best-selling brush on the market. Order through your jobber or direct from

HENRY L. HUGHES, Exclusive Licensee and Importer, Room 439, 78 Monroe St., American Express Bldg., CHICAGO, ILL.

A large Lithograph, 14x21, in seven colors, of the above Rough on Rats illustration (Household Troubles), which has convulsed the world with laughter, with comic descriptive verses, mailed free to any address.  
E. S. WELLS, Jersey City, N. J., U. S. A.

## Unbeatable Rat Exterminator Equally effective against Mice, Roaches, Ants and Bed Bugs.

**ROUGH ON RATS** Though a poison and originally designed for Rats and Mice, experience has demonstrated it the most effective of all exterminators of Roaches, Ants and Bed Bugs. The only thing at all effective against the large Black Cockroach or Beetle. Fools the Rats, Mice and Bugs, but never disappoints or fools the buyer. Used 30 years.

**Rough on Roaches** (non-poisonous).....15c, 25  
**Rough on Fleas** (powder), for dogs, etc.....25c  
**Rough on Fleas** (liquid), cans, household.....25c  
**Rough on Bed Bugs** (liquid).....15c, 25c

All above at druggists; they are too heavy and too low priced to go by mail or express.

La preparación "Rough on Rats" es un exterminador de ratas insuperable, eficaz también para ratones, cucarachas, sabandijas, hormigas y chinches. Se emplea en los Estados Unidos desde hace treinta años. Se envía a la dirección que se indique una litografía de la ilustración de arriba, 14x21, en siete colores. También fabricamos otras preparaciones semejantes que los drogistas pueden vender fácil mente. Invitamos a los lectores de este anuncio en el extranjero a que nos pidan precios y condiciones. Se venden estas preparaciones por los tratantes al por mayor de Nueva York.

# Parke, Davis & Co.

### The New Secretary of Parke, Davis & Co.

Frank G. Ryan, who has been elected by the Board of Directors of Parke, Davis & Co. to the posts of secretary of the company and assistant manager, has a host of warm friends all over the United States who will join with us in congratulating him upon a well deserved promotion and the house of Parke, Davis & Co. upon its good fortune in having so able a

man at hand to take the important positions. Mr. Ryan on graduation from the Philadelphia College of Pharmacy in 1884 took a post as instructor in that institution, but at the same time carried on some other work. He retained his connection with the college, being promoted from time to time, until about four years ago, when he was invited to become chief pharmacist of Parke, Davis & Co. How well and how satisfactorily he has filled that important post, which was created for him, is shown by his present promotion, which carries him out of the purely chemical into the purely executive portion of the work. In his new field of labor Mr. Ryan will receive the cordial support not only of the staff of this firm but also of the drug trade at large, for few men are so generally popular in the trade as he is.

### Recent Customs Decisions.

#### GUM TRAGASOL.

The Board of United States General Appraisers has ruled that gum tragasol is not a drug within the meaning of the tariff act, but is properly classified as an unenumerated article. The board said the evidence showed it was not used as a medicine or in any way in compounding or preparing medicines or chemical preparations. The testimony showed it is used to take the place of gum tragacanth and also Irish moss.

#### "AROMATIC SEEDS."

An importation of aromatic seeds was held to be dutiable under the provision in the tariff act for "seeds of all kinds not specially provided for." The importers claimed free entry under the provision relating to "drugs, such as seeds aromatic." The importation included the following varieties of seeds: Pepper, balm sweet basil, bene, borage, catnip, hyssop, sage, sweet marjoram, etc. The Board of United States General Appraisers decided the case against the importers.

### Advertising Thermometers.

That it is politic to send customers a reminder is generally admitted. All realize that letters are not long remembered, no matter how interesting they may be. What is wanted is something that will keep your name constantly before both present and prospective customers. Such an article is furnished by Taylor Brothers Company, Rochester, in its very attractive advertising thermometers. Write it for a descriptive list, mentioning the AMERICAN DRUGGIST.

### Curious Drug Adulterants.

At the Atlantic City meeting of the American Pharmaceutical Association McKesson & Robbins made a departure from the ordinary exhibit in more ways than one. As stated in our last issue, the principal feature of their exhibit was the apparatus used in the demonstration of the virtues of Calox, which is an oxygen yielding dentifrice, the introduction of which marked a new era in this special field. In our account

Opium Adulterants, Exhibited by McKesson & Robbins at Atlantic City, N. J.

of their exhibit we failed to mention one of its most interesting features—namely, a collection of adulterated drugs which really formed an excellent supplement to the report of the Committee on Drug Adulterants.

We present herewith an illustration of the tray on which these adulterations and sophistications were displayed. Among these were numerous bullets and pieces of metal and stone, and also a piece of camel's excrement which had been found in the interior of balls of crude opium. Another curious and profitable adulteration shown consisted of the injection of plaster of Paris into the musk sack of a specimen of castoreum, the interior having first been scraped bare.

# AKARALGIA MERRELL

A new and most attractive form of exhibiting the valuable properties of pure Sodium Salicylate,  
(From Natural Wintergreen Oil)  
overcoming chronic migraine by single daily doses.

Send for Literature:

**Something New.**

Announcement has been made that the Apollinaris Company, Ltd., London, to meet the existing demand for an effervescent Hungarian aperient water is now placing upon the market natural Apenta carbonated and that the Apenta carbonated, known as Sparkling Apenta Splits, is bottled at the Apenta Springs, Budapest, Hungary, is put up in cases of 50 splits and is a pleasant and refreshing aperient for morning use. The water will be extensively advertised in the daily papers.

**Concerning the Matter of Neatness in Parcels.**

What kind of parcels do you send out? Are they tied with clumsy, inelegant string or cheap ribbon that easily breaks? You've no doubt often felt the need of something more dainty than string and stronger and cheaper than ribbon, and that's why we want to draw your attention to a packing tape made by G. Reis & Brother, 640 Broadway, New York. This tape has the appearance of ribbon, but far more strength and substance, which keeps it flat on the package.

Parcels tied with it have a very smart appearance and are perfectly secure. In addition to these advantages it is printed with your name and address, from four to ten times every yard, so that in tying a package you also label it with your "ad" in such a neat and novel way that it goes right home with your customers. Messrs. Reis will send samples and prices free to our readers.

**Important to Buyers.**

Our readers have probably seen the advertisements which have recently been appearing in our columns warning the trade of the prevalence of adulterated and inferior meat extracts which are being offered in packages infringing the trademark of Liebig's Extract of Meat Company, Limited. In many instances the people who visit the merchants to sell these imitation brands even go so far as say that they are connected with the original Liebig Company and are selling the genuine brand.

The Liebig Company are taking every means to warn dealers that these imitations have no connection whatever with the company, and merchants will understand that in selling imitation and infringing brands they render themselves liable to prosecution for infringement of the Liebig Company's rights.

There may be cases where these imitations resemble the genuine so closely that even the dealer is deceived. If any merchant is in doubt about the meat extract in his possession being genuine the Liebig Company will be happy to report on it if he will mail them the outside drapper from one of the jars. Cornelle David & Co., 120 Hudson street, New York, are the sole agents in this country for Liebig's Extract of Meat Company, Limited.

**To Build Up the Prescription Trade.**

The Tilden Company, of New Lebanon, N. Y., and St. Louis, Mo., have quadrupled their force of special detail men among the medical profession. The products of this firm are strictly pharmaceutical preparations, and the demand must be created with the medical profession, as they manufacture only prescription goods, a line of goods that are most profitable to the dispensing druggist. His prescription department, financially speaking, is the druggists' salvation. The Tilden preparations, as a rule, are seldom sold in original packages. The price is never printed on a package. The retailer makes the price, and the Tilden Company have materially increased their efforts to enlarge the prescription business of the retailer. They are mailing thousands of booklets daily to the medical profession, in addition to keeping on the road a score or more of men who do nothing but detail work. The only advertising that they do directly to the retail druggist is through the medium of the pharmaceutical press. The Tilden Company are not and never have been interested in prize schemes of

any character; therefore the drug journal, their price-list and traveling men are their methods of reaching the druggist directly, and through the physicians indirectly, and the latter they regard as an actual source of profit to the dealer. The Tilden policy is a live and let live policy. They ask the closest scrutiny by the retail druggist of the prices charged, to the end that he may understand how thoroughly consistent they are with the cost of production. In short, this line is a most interesting one to the dispensing druggist, because it represents the best quality, is thoroughly popular with the medical profession and very profitable to the dispenser. They solicit correspondence from the dealers and are always glad to send catalogues and discounts on application. Address the Tilden Company, New Lebanon, N. Y., or St. Louis, Mo.

**An Attractive Offer.**

The Dalley Mfg. Company, of 12 Duane street, New York City, are offering in this issue a premium of one dozen Olivine soap with a purchase of one dozen of Dalley's Magical Pain Extractor, which offer means a profit to the retailer of 150 per cent. on his investment. Dalley's Magical Pain Extractor, more popularly known as Dalley's Salve, is one of the oldest proprietary articles in the United States, and it enjoys to-day a widespread and persistent sale, based entirely upon its valuable qualities, nothing whatever having been spent upon it in the way of advertising during the present generation. The soap premium is something which the druggist can very readily sell, as it is put up in a beautiful package and the soap itself is of unusually fine quality and odor. We particularly commend this offer to the attention of our readers.

**Exactng Requirements of the Present Day Traveler.**

The present day prosperous American traveler, whether he be tourist or on business bent, demands that he shall be housed not only in safety but with almost luxurious comfort and with every possible convenience at his disposal. To meet this demand vast sums have been lavishly expended in the rearing of such hotels as, for instance, The Lenox at Buffalo, N. Y., which is an excellent illustration of the great advance made in recent years in American hotel construction and management.

The building is a model of fire proof construction, and the boilers, electric dynamos, water sterilizing plant and all other machinery are housed in a building entirely separated from the hotel. The interior is furnished with refined, artistic taste; each room and suite is provided with a bathroom and long distance telephone, and finally a culinary department and dining room service of unsurpassed excellence is at all times assured the patrons of this hotel.

For all these things the discriminating traveler expects, and is expected, to pay no more than he did before modern palatial hotels of this character came into existence.

**A Useful Novelty Display Case.**

We illustrate herewith the "Silent Salesman" showcase No. 32, made by John Phillips & Co., Limited, of Detroit, Mich.

This case is designed especially for use on top of other cases and for the display of novelties, sundries and specialties. The case is finished in oxidized copper frames; glazed with sheet-glass top, front, ends and shelf; has a mirror door on hinges, and the bottom is provided with rubber cushions to prevent it from scratching other cases. No store should be without one or more of these cases. For fuller details write John Phillips & Co., Detroit, mentioning the AMERICAN DRUGGIST.

# Popularity and Price Protection

## POPULARITY

LAXATIVE BROMO QUININE originated as the first product of its kind and through merit and continuous extensive advertising it has become an absolutely staple article.

## PRICE PROTECTION

The terms and discounts on LAXATIVE BROMO QUININE from the beginning have afforded a most liberal profit, and now, by the adoption of the DIRECT CONTRACT AND SERIAL NUMBERING PLAN, this profit is absolutely insured to the retail dealer. The support of this Plan by the Retail Drug Trade demands, simply, that EVERY INDIVIDUAL Druggist shall sign the contract. Those who have not done so should sign and have the contract properly recorded without further delay.

## **SPECIAL DATING OFFER**

**JANUARY 1st. 60 DAYS.**

If a supply of LAXATIVE BROMO QUININE is needed, or if the stock on hand will permit it, the DATING OFFER now in force enables the Druggist to purchase a quantity, obtaining the regular free goods to be delivered at once and invoice dated January 1st, 1906, for cash discount.

## **LAXATIVE BROMO QUININE**

**Price \$1.75 per dozen.**

|  |                                  |

**WHOLESALE DRUGGISTS WILL ACCEPT ORDERS UNDER THIS DATING OFFER.**

---

**PARIS MEDICINE COMPANY,**  
**SAINT LOUIS AND LONDON.**

## Hints to Buyers.

All kinds of seamless tin cans and boxes are made by the Buckeye Stamping Company, of Columbus, Ohio. Catalogue and samples furnished on application.

Everything in the way of pharmaceutical apparatus, drugs, chemicals, and chemical and physical apparatus may be obtained from the old and reliable house of Elmer & Amend, 205 Third avenue, New York City.

Fellows' Syrup is an established trademark, the property of the Fellows Medical Mfg. Company, Ltd., Montreal, Canada, and 26 Christopher street, New York. The drug trade is warned against buying or selling colorable imitations of it.

The Wood Products Company, Buffalo, N. Y., offers its Columbian Spirit to our readers in this issue. This is a first-rate article for all purposes except internal use, being the equal of grain alcohol in color, odor and permanence.

Are you familiar with the line of chemicals and preparations made by the Albany Chemical Company? Its articles are standard and are sure to give entire satisfaction. Specify "A. C. Co." on your orders.

The Chattanooga Medicine Company offers a fine business proposition in connection with its Wine of Cardui. The latter is a good seller, and yields handsome profits. Unusually attractive advertising matter will be furnished on application. Write for details.

The Henry H. Shelp Mfg. Company, 529 Columbia avenue, Philadelphia, will furnish samples and estimates of white wood, bass, oak, and ash syringe boxes, and any other form of fancy wood boxes. This old house possesses extensive facilities for first-class work at inside prices, and consumers will do well to consult them before placing orders.

The chemicals of the Powers, Weightman, Rosengarten Company, Philadelphia, are sold in wholesale quantities only, but may be obtained by the retail druggists by specifying P. W. & R. when ordering of their jobbers. The line is a very extensive one, covering both medicinal and technical chemicals. The purity and excellence are absolutely standard.

Anhydrous and hydrous lanoline is offered to the trade by Victor Koechl & Company, New York, under the trade names of Lanoline "Liebreich" and Adeps Lanae "B. J. D.," both of which are to be recognized by the "Dartring" trademark. These products are official in both the United States and the British Pharmacopoeias.

The C. L. Flaccus Glass Company, 41 Barclay street, New York, is sole selling agent for Appert glass containers, an advertisement of which will be found in this issue. By writing for Pamphlet 10 a full description of the line may be obtained. An interesting feature of this line is the lime water container and dispenser.

The line of insect exterminators, together with the famous "Rough on Rats," manufactured by E. S. Wells, Jersey City, is offered to the attention of the retail druggist through an advertisement appearing in this number. These goods are in persistent demand and should be carried in stock by every druggist.

One of the best articles for a side line in the drug store is a good hair brush. The Ideal brush has an air-cushioned back and genuine Siberian bristles; it is entirely different from the rubber back wire brush. Order from your jobber, or direct from the sole licensee and importer, Henry L. Hughes, 78 Monroe street, Chicago.

The Fischer Chemical Importing Company, 14 Platt street, New York, will be glad to supply druggists with interesting literature concerning their line of German chemical and pharmaceutical products, among which are some very important items which have attracted the attention of a large portion of the medical profession.

Attention is invited to the advertisement of W. J. Bush & Co., of 5 Jones Lane, New York, and 185 East Kinzie street, Chicago. This old essential oil house is offering oil of sandal

and oil of cloves, together with other leaders in their line, to the drug trade of the United States. The products of this house can be thoroughly relied upon for quality.

In ordering ointment boxes of your jobber specify "Mt. Washington" and you will obtain the best wooden box for the purpose on the market. It is made in black walnut and silver poplar, and in sizes from  $\frac{1}{4}$  to 16 ounces. The wood is impervious, and the covers fit snugly. In addition to these good qualities the box is a particularly slightly one.

We call the attention of our readers to the new advertisement of the National Licorice Company, of 106 John street, Borough of Brooklyn, New York, which appears in this issue. The licorice specialties of this concern are ready and profitable sellers, and this is the beginning of the season when they will naturally be in demand.

Manufacturers and retail druggists who are in the market for bottle stoppers, collapsible tubes, hand pill machines, hand pill compressors, suppository and bougie molds, or metal syringes, should address A. H. Wirz, 913 Cherry street, Philadelphia. This old house makes a very full line of these goods and can be depended upon for first-rate work at correct market prices.

Eusoma, made by the Eusoma Pharmaceutical Company, Cincinnati, is a non-poisonous antiseptic, alterative and antipurulent for both external and internal administration. It is an echinacea compound and one of the most efficient and reliable preparations of its kind ever offered to the medical profession. Send for sample and descriptive circular matter, mentioning the AMERICAN DRUGGIST.

The Quaker City drug mill manufactured by A. W. Straub Company, 3737 Filbert street, Philadelphia, will be sent on trial to any druggist who is not familiar with it. This small and inexpensive mill is capable of grinding a great variety of substances, including the most difficult, and it has been found to be thoroughly practical and remarkably strong and durable. Descriptive pamphlet may be had on application.

Smith, Kline & French Company's price-protection plan, involving on their part an expenditure of a very large sum of money, should be of interest to all progressive druggists. We particularly invite the attention of our readers to the advertisement of this house appearing on the back cover of this issue. Every druggist alive to his own interests should carry Baskay's Albumenized Food and get his share of profit and protection.

The old perfumery house of Solon Palmer, of New York, is advertising to the retail drug trade in the columns of this paper. The remarkable sale of the line in America is being duplicated by a demand which is springing up in other parts of the world. So much has this been the case that the house has been compelled to open agencies in Singapore, Straits Settlements, and Buenos Aires. The druggist who does not carry this line in stock is neglecting a valuable business opportunity.

Thomas' English Prepared Chalk, in white and in pink, packed in 8-pound lock cornered wooden boxes, may be had of any wholesale druggist in the United States. The Thomas Mfg. Company, Baltimore, has achieved a remarkable sale of its product, not alone in the United States, but in Mexico and in South American countries. The advantage of using this article must be apparent to every thinking dealer. To those who are not familiar with it a sample will be sent upon application.

One particularly strong point about the show cases made by the Grand Rapids Fixtures Company is that all the company's cases are very carefully finished. Some cases have only one coat of varnish, and the whole finishing process is probably done in two or three days. And then the varnish used on cheap cases cracks and turns white. Not so with this company's cases; three coats of the best varnish are used, and it takes 18 days to finish a case; the varnish does not peel, crack or turn white when exposed to moisture. Every part of the work is done by skilled workmen who use nothing but first-class material. Before buying write to this company for prices, catalogues, etc.

**GENERAL OFFICES AT WORKS, HAMMOND, INDIANA**

Where All Communications Should be Addressed

Our readers should follow the series of advertisements which W. F. Young, 49 Monmouth street, Springfield, Mass., is running in the agricultural and stock papers of the country. Mr. Young sells his Absorbine and Absorbine Jr. mainly through the retail drug trade, and has always been a very helpful co-operator both in the matter of advertising in the press and in other direct means. As a great number of inquiries from horse owners follow his advertising, he particularly wishes to be informed just what druggists are regularly carrying his goods in stock, so that he may be able to refer inquiries direct to them. If any of our readers have not already notified him regarding this we would suggest that they at once address a postal to him.

#### Thymol Iodide U. S. P.

This valuable antiseptic has been recognized by the U. S. P. Eighth Revision and it will doubtless be a matter of interest to pharmacists generally to know that the Mallinckrodt Chemical Works have taken up its manufacture. Thymol Iodide of a very inferior quality has been imported into this country and offered to the drug trade, and pharmacists, therefore, should be particular to order it under the label of some well-known and reliable manufacturer. The product manufactured by the Mallinckrodt Chemical Works answers the full requirements of the Pharmacopœia and consequently may be relied upon for proper therapeutic results. Thymol Iodide, as most of our readers are aware, is largely sold under the trade designation Aristol.

#### Preparing for the Hot Soda Season.

The time is fast approaching when druggists will have to start their hot drinks department. In making plans for the coming season no druggist should fail to notice the fine special offer made by Armour & Co. of hot drink supplies. The offer includes a beautiful carnation china urn, of original design, 29 inches high, with a Carlsbad china cylinder fitted over a 2-gallon copper lined tank, with water gauge, etc., and gasoline heater. It is richly finished and decorated and is an ornament to any counter. Besides this urn the offer includes six china cups, a Vigoral hanger, "The Drinking Girl"; plate glass signs, a dozen strip signs and a card of directions. All the foregoing are free, the price asked for the carnation china urn case being the list price of the supplies it contains for making drinks. Each case contains sufficient supplies to make about 2000 drinks. The price of the case is only \$25 east of Missouri River and \$30 west of Missouri River. The price of the urn and stove separate is \$10, net.

Another exceptional offer by Armour & Co. is the Vigoral urn case. The case contains a patent urn with reservoir, gasoline stove, six china cups (carnation decoration), a Vigoral hanger and numerous window and mirror signs, four 2-pound pigs of Vigoral, together with fluid beef, tomato bouillon and chicken broth—enough to make 1,200 to 1,600 drinks. Price of case, \$20 east of and \$25 west of Missouri River.

#### A Standard Remedy.

We are pleased to class among our new advertisers this week the firm of Kress & Owen Company, of New York, which displays its popular product, Glyco-Thymoline, which is now looked upon as a standard remedy for catarrhal conditions. The name "Glyco-Thymoline" has been used by this firm and its predecessors for a period of 17 years and has recently been registered at the United States Patent Office under the new trade-mark law, which gives perfect protection to the property rights in the name. This calls to mind that under the provisions of the new law an injunction granted in one circuit court against an infringer is operative in every circuit court in the United States without a rehearing.

#### A New Tar Soap.

A. R. Bremer, 659 Hudson street, New York, well known through his famous Coke Dandruff Cure, has brought out

a new toilet soap which he has called Coke White Tar Soap. It is recommended for its antiseptic, deodorizing and healing properties and is said to be a cure for eczema and other skin eruptions. It is manufactured from white pine tar and vegetable and mineral oils. It is an excellent thing for the toilet generally, particularly for shampooing and notably, as stated, for skin diseases. Druggists are invited to correspond with the manufacturer with a view to stocking this excellent article.

#### A Valuable Catalogue.

Those druggists who are in trade to make money—and the majority come in this category—should write to Butler Brothers, Chicago, for their October catalogue. It contains special offers to the retail drug trade on holiday goods which should not be lost sight of. There is money in this line, and our readers would do well to write for a copy of this catalogue.

#### A Michigan Farmer Raises Catnip.

Franklin Smith, a farmer who lives 18 miles south of Battle Creek, Mich., has become tired of raising the ordinary crops and is trying something new and has made a success of it. He has a catnip farm. He has just harvested his catnip and finds that it pays. The catnip is put up in half-bushel packages and is sold to wholesale druggists. Smith says he gets \$30 per ton.

#### Increased Discounts to Jobbers on Major's Goods.

A. Major has sent a personal letter to every jobber in the United States announcing an increase in the discounts allowed by him to jobbers to 15 per cent., less 2½ per cent. in ten days, freight and boxes free in ten gross lots. He states that this increase was due to the impression gained at the recent meeting of the N. W. D. A. He also offers to let jobbers send out his cement on sale, and to redeem returned lots.

#### Hood's Calendar Offer.

We think it will be to the advantage of all retail druggists to accept Hood's calendar offer for 1906 as early as possible.

The calendar for 1906 is a beauty and is equal to, if not better than, any heretofore put out by this enterprising firm.

Every calendar given away by the retailer is a constant and steady advertisement for himself, as the retailer's name is attached to the calendars he receives.

Certainly this must be the cheapest kind of advertising the retailer can do, as his calendars are furnished to him without extra cost.

How to obtain Hood's calendars is explained in regular advertisement in another part of this journal.

#### Sues "Ladies' Home Journal."

Suit has been begun in the Superior Court, Chicago, for \$250,000 damages against the Curtis Publishing Company, publisher of the *Ladies' Home Journal*. Samuel B. Hartman, of Columbus, of the Peruna Drug Company, is the plaintiff. In the August issue of the *Journal*, the declaration says, appeared a specimen advertisement of the medicine company, including a testimonial from Representative George H. White, of North Carolina. In the next issue of the magazine, the declaration alleges, the testimonial was reprinted, but with it was a signed denial from Mr. White that he had given the testimonial. This denial, Hartman alleges, was obtained through a misunderstanding, as Mr. White, he swears, signed the original testimonial.

If you and I and ewe and eye  
And yew and aye (dear me),  
Were all to be spelled u and I,  
How mixed up we would be!

—Harvard Lampoon.

## Prices Current.

The outside prices quoted are for such quantities as retailers usually purchase. When purchasing original packages the inside quotations should be expected, while a slight advance over the outside quotations given may be demanded for very small lots. Current commercial quality is understood unless otherwise indicated. For extra quality or for specified makes a slightly higher price will have to be paid.

## WANTED

a Glass blowing Establishment and depot for Chemical Apparatus for the Manufacture of Laboratory equipment. Address K. W. 4650, Care Rudolf Mosse, Cologne, Germany.

## THE STRICKLAND DRUG AGENCY AND DRUG CLERK'S REGISTRY OFFICE.

Established in 1863 in our present office for the sale of Drug Stores and allied business only.

At this season our offerings are numerous. Call and see our list in any section. We can supply your wants from \$500 up. If you want a store for removal write any business touching drugs. We are on deck. If you have a drug stock for sale advise us. We will buy anything and everything for a drug store.

This offering is worthy of your respectful thought. We will present the Klondyke Drug business, vicinity of New York City, to a druggist having \$10,000 or \$15,000 cash. An interest will be given at a fair fixed price based close to invoice. Good man more needed than the money, and only to a druggist qualified to assist the owner handling a trade of \$80,000 or over every year. This pharmacy is a marvel of completeness and beauty. A large force in this store requires the man of ability, system and steadiness necessary in an enterprise of this kind.

**NEW YORK CITY.**—\$25,000 yearly sales. 20,000 prescriptions. Rent, about \$1,200 yearly. One of the finest stocks. I can arrange easy terms. We have a party with \$2,000 to join in the purchase.

**BROOKLYN.**—\$30 daily. You can stay two weeks behind the counter on trial and buy for \$5,000, half cash.

**NEW YORK STATE.**—Long Island, \$10,000 yearly sales. Fine corner. Beautiful fixtures. \$35 rent. One of the best towns on South Side. Putnam County. \$15 daily. Rent \$165 yearly. Only store. \$5,000, half cash. Cortland County. \$5,000 sales. Two stores in town. Large complete stock. Price, \$5,600. Westchester County. Sales, \$40 daily. No heavy goods. A money earner corner. Rent, \$50. Price, \$7,000 cash. North Long Island. Sales, \$5,000. Price, \$2,500. Rent, \$30. Tompkins County. Sales, \$30,000. You can buy this offering at invoice.

**NEW JERSEY.**—Coast town. \$30 every day. Rent, \$400 yearly. Progressive city. First-class trade. Price, \$6,500.

**Jersey City.** Sales over \$40. Choice corner. Large stock. Price, \$9,000.—Jersey City. \$30 daily. Handsome and convenient pharmacy. Large store. Five or ten years' lease may be had. Price, \$5,000, part cash.

Note this. Lease, 20 years. Sales, \$50,000 yearly. Hustling New Jersey town. Price right. Terms right. The lease is a valuable adjunct to the holder, and is absolutely at variance with the custom these days.

## THE STRICKLAND DRUGGISTS' AGENCY.

36 Beekman St., New York City.

FOR SALE BY JOBBING TRADE

Burdock has developed increased firmness owing to scarcity, and holders of the limited available supply ask 11c to 12c.

Golden seal has continued quiet and the recent advance has not been sustained, there being sales toward the close of the market at \$1.35.

Ipecac is held with increased firmness, prices having advanced during the interval to \$1.85 to \$2.00 for both Rio and Carthagena.

Kava Kava is well held, and we hear of no sales at under 11c to 12c.

Mandrake has eased off since our last, and recent sales were at 4½c to 4¾c.

Musk is firmer in sympathy with other Russian products and 13c to 14c is now named.

Pink is scarce and values are tending upward, with holders now asking 35c to 38c.

Rhatany is in better supply and holders are more free to offer at 10c to 12c.

Rhubarb, of the cheaper grades, is held less firmly, and we hear of sales at 19c.

Senega is maintained in firm position and recent sales were at 60c to 61c, as to quality and quantity.

Serpentaria is without new feature of interest; sales since our last were at 37c to 39c for Texas, and 40c to 42c for Virginia; Canada held and selling at 11½c to 25c.

Squills has developed increased strength and holders show no disposition to shade 4c to 5c.

Valerian, Belgian, continues scarce and wanted, and the inside quotation has been advanced to 7½c, with up to 8c named.

#### Seeds.

There has been a fair jobbing movement in seeds since our last, and values continue firm on most varieties. Russian anise has advanced to the range of 6¾c to 7c. Colchicum is well held at 21c to 25c. Russian wormseed is maintained steadily at 17c to 17½c. Coriander is in upward tendency owing to diminishing spot supplies, and natural Russian is held at 8c to 8½c, and bleached at 9c to 9½c; Bombay natural quoted 6c to 6½c, and bleached Morocco, 10½c to 10¾c. Celery is in good demand and firm, at 7¾c to 8c. Sunflower has declined owing to arrivals of new crop and spot quotations are now 4½c to 4¾c.

#### Work of the National Association of Retail Druggists in New York.

The two organizers engaged by the M. A. R. D. have collected enough money since they started work to pay their salaries, amounting to \$75 a month each. The organizers have had to overcome a wrong impression in the retail drug trade recently. Some members of the trade have been under the impression that all they had to pay was \$7.50 and that this included the organization fee, the N. A. R. D. dues and subscription to *Notes*. They have objected to paying \$8.50, the M. A. R. D. dues, with an additional 50 cents for the increase in the price of *Notes*. This is a false impression. Druggists are supposed to pay \$8.50 dues, of which \$5 goes to Chicago as dues to the national association and subscription to *Notes*, and the remainder goes to the M. A. R. D. There is no longer any organization fee.

Manager DeShetley, of the N. A. R. D.'s Department of the East, expresses himself as much gratified with the progress of the work in his charge during the past two or three weeks. Most of the work now consists of strengthening the permanent organizations effected in the different districts of the city. The work is necessarily slower than formerly, but the association is steadily gaining ground here. No further steps have as yet been taken toward forming a permanent organization in the few districts remaining to be organized, and probably nothing to this end will be done until the M. A. R. D. is prepared to

go ahead with that work or thinks the time is ripe for such action.

The cases against various department stores which have been brought by the Peruna Company are still pending, the hearings having been postponed in order to give the company's attorney, Mr. Reid, sufficient time to prepare replies to the answers made by the firms involved. Mr. Reid was expected to arrive in this city last week, and as soon as he does these cases will probably be expedited. It is understood that later on one or two more organizers may be put in the field by the N. A. R. D., although nothing definite has as yet been decided in this respect. Complaints are growing less and less in this city, and the situation in the whole Eastern section is, we are pleased to say, very satisfactory.

#### The Indian Territory Board of Pharmacy.

The Board of Pharmacy of Indian Territory met at Muskogee, I. T., October 17, 1905, with all the members present. L. Mathews, president of the board, retired from office and H. M. Mitchell, Vinita, I. T., the newly appointed member of the board, was qualified and took his place as a member. His appointment is for five years.

A class of 22 took the examination and the following made the grades ranging from 75 per cent. to 91 per cent. general average:

Mrs. C. D. Almon, Muskogee; C. C. Chatham, Hoffman; F. L. Hughson, Centralia; R. B. King, Helena, Ark.; W. L. Karr, Mounds; G. E. McCreery, Tulsa; L. L. Moore, Muskogee; Henry McCreary, Bennington; E. L. Martins, Tulsa; C. B. Mills, Garven; M. Z. Mitchell, Hartshorn; Frank Selvidge, Burneyville; Paul Sanger, Tulsa; Maybel Taylor, Muskogee; T. A. Trowick, Francis, I. T.; S. A. Wynn, Campbell, I. T.

The colleges and departments of pharmacy of universities joining the conference of Pharmaceutical Facilities at the recent meeting of the conference at Atlantic City, were enrolled on the list recognized by the Board of Pharmacy for the Indian Territory.

The next meeting of the board will be held in Poteau on January 16, 1906. Poteau is centrally located from north to south, but is in the eastern part of the Indian Territory; has four railroads and is accessible to a large part of the Cherokee and Choctaw Nation.

#### The Rudest Man of His Age.

John Hunter, the famous British surgeon, anatomist, physiologist and medical writer, who died in 1793, was one of the rudest men of his age. He returned home late one evening from his round of professional calls and found his wife entertaining a few friends. Grimly he walked into the center of the room, stopped and looked around. "I knew nothing of this kick up," he said, "and ought to have been informed. As I have returned home for the purpose of studying, I hope the present company will retire at once." They retired.

#### The Antiseptic Babe.

BY EDNA KINGSLEY WALLACE.

We can sterilize his bottles, we can boil his little mug;  
We can bake his dannel bandages and disinfect the rug  
That envelops him when he partakes of medicated air,  
But there's one impossibility that leaves us in despair—  
And a not unjustifiable one, you will allow—  
To wit: we fear 'twould never do to sterilize the cow!

So we feed the baby Medicus' hygienic dope,  
And we wash his face with germicidal antiseptic soap;  
And we brush his little tootums—or the place where they will be—  
With diluted glyco-thymoline, most sanitari-lee;  
Then despair to see a milky effervescence supervene  
On a countenance which theretofore was surgically clean.

Thus although we strive to conquer every septic circumstance,  
Yet we greatly fear a ghastly alimentary mischance;  
For albeit we bake and boil his things, and scrub and soak and  
souse,

As if in his anatomy forever cleaning house—  
The recklessness with which he sucks his vagrant tiny thumb  
Imperils much his antiseptic little tum.

We are careful of his hours, we are thoughtful of his toys;  
We are mindful of his sorrows and judicious of his joys;  
We are prayerfully considerate of needful discipline,  
Of our little "Mother's Handbook" and the precepts writ therein;  
And we strive to render sterile all designed for mouth or tum,  
But one frightful danger menaces—we cannot boil his thumb!

—Harper's Magazine, August, 1905.

## Opportunities for Export Trade

(Written for the American Druggist.)

### PHARMACY IN EGYPT.

BY ALBERT ZIMMERMANN, PH. G.

Pharmacy is conducted on a very modern scale in Cairo and the other large cities of Egypt. The stores are not so large as our stores at home, but in Cairo they are more spacious than the shops in the more ancient of the Egyptian cities. In the newer portions of Cairo and Alexandria the buildings and stores and methods of business are decidedly modern.

In Cairo the drug stores are about as thickly distributed as we find them in our cities at home, though much smaller in size. They carry a varied stock, including drugs, toilet and other articles, such as are usually found in American drug stores. They sell

Native Apothecary in the Old Quarter of Cairo, Egypt.

French preparations chiefly, but a fair amount of English goods are also dealt in. American goods are not sold to any great extent, though the large number of Americans who visit Cairo annually are creating an increased demand, which will tend to increase American export trade with Egypt.

The European stores have well fitted show windows and use them to advantage in displaying their merchandise; the native stores have no show windows, the narrow fronts of their small stores being used as entrances. The business season extends from October to April, practically no business being done during the summer months. The population of Cairo in the summer time is 900,000, and in winter 1,500,000. Some of the more enterprising American proprietary medicine manufacturers have gone into the country to introduce their goods, advertising

them thoroughly to the foreign and native people, and this advertising seems to be yielding them fairly good financial returns.

But American goods are not, as a rule, well represented in Egypt. To successfully establish a sale for them it would be necessary to keep a stock on hand at some agency or central depot, from which the immediate demand could be supplied at short notice. Most of the established firms in Cairo and Alexandria speak of the distance which separates the United States from Egypt, and complain that it takes too long a time for correspondence by mail and the shipment of goods. They accordingly patronize manufacturers in England, France and Germany.

The most prominent pharmacists in Cairo, who make a specialty of handling American goods, are K. Tchavonchyan, whose store is located in the main street in the newer Cairo, and Max Fischer, who also has a store in Alexandria.

### The Complaint About Insufficient Postage on Foreign Letters.]

Complaints from English sources regarding the carelessness of American correspondents in the matter of properly prepaying letters and circular matter sent by mail are common enough, but it is also a common complaint among New York importers that circular matter sent from England is frequently insufficiently stamped, as a recent communication in the *London Pharmaceutical Journal* attests. A New York house writes: "It is a common complaint over here that circular matter sent from England is frequently insufficiently stamped; for example, on a circular letter we received from an English firm this week we had to pay a tax of 6 pence for deficient postage, caused by the fact that the signature to the letter was apparently written in ink and not printed. Postal officials here are very exacting, and the continual demand for excess postage on foreign mail does not tend to aid the furtherance of amicable business relations. The postage from England for first-class matter is 2½ pence per half ounce, and not 1 penny, as many English concerns seem to think."

### AN OPENING FOR AMERICAN ALKALI MANUFACTURERS.

Special Agent Burrill has sent from Shanghai to the Department of Commerce and Labor a very interesting report on the sale and use of alkali in China. He explains that the entire business is practically controlled by one English firm—Brunner, Mond & Co., Limited, of Norwich, England—which has enjoyed the monopoly since 1901 and which is likely to continue to do so for some time. The firm, he says, established a branch in Shanghai in 1904 and has run the Chinese product out of the market. Continuing, he says:

"By a business agreement among the English manufacturers of this material Brunner, Mond & Co. are entitled for a period of years to sole representation in the Chinese market, and they will not be disturbed in that monopoly until the time expires by limitation, when, it is assumed, English competition will make its appearance. The products sold here and consumed almost exclusively by the Chinese are:

- "1. Ninety-eight per cent. soda ash (carbonate of soda).
  - "2. Caustic soda (three grades), 97 to 98, 90 to 92 and 76 to 78 per cent. Also a small demand for hundredweight drums.
  - "3. Bicarbonate of soda (two grades), refined and mineral water.
  - "4. Soda crystals.
  - "5. Concentrated crystal soda (sesqui carbonate of soda).
  - "6. Chloride of lime.
  - "7. Sulphate of ammonia (artificial manure).
- "There is also a limited call for muriate of ammonia and for

"The business of Brunner, Mond & Co., starting from nothing, has grown to large proportions. Their sales have reached 1,500 tons of 2,240 pounds a month of all products, and rarely fall below 500 tons of 2,240 pounds a month, at an average price of approximately \$50 a ton. In order successfully to compete with this firm it would be essential to build a warehouse on the water front at a cost of \$20,000 in round numbers to carry the stock required for current business. For this amount a three-story building could be erected and the two upper stories could be leased at a good annual rental. Such a warehouse would save storage charges by the wharf company, a considerable item in Shanghai. There are practically no storage facilities here except those owned by Jardine, Matheson & Co., an English concern, and the China Merchants' Steam Navigation Company, a Chinese company.

"Cargoes arriving at this port may remain in a temporary warehouse built of corrugated iron for ten days free of charge. A monthly charge is then made and if the cargo remains one day over the ten days permitted for handling and delivery the consignee is compelled to pay a full month's storage charge. For illustration, on a 9-picul cask 64 cents gold a month is charged for storage, and other packages are assessed proportionately. It would also be essential for a competing firm to possess a capital sufficient to withstand a cut in prices, for Brunner, Mond & Co. would vigorously resent an invasion of their monopoly and would employ every means calculated to discourage a competitor.

"Payments are made by the Chinese buyer in ten-day native bank orders against the delivery of the goods and are regarded as good as gold. The field is open to a live, up-to-date competition and looks promising. An extensive annual increase in the demand for these products is confidently predicted, and there is abundant reason why the American manufacturer should cultivate this territory and obtain a commercial foothold before the existing agreement expires by limitation and English manufacturers begin to flood the market."

#### Turkish Preparations from Grape Juice.

Thomas H. Norton, United States Consul at Harput, Turkey, describes several Turkish preparations from grape juice which strike him as worthy of consideration, possibly of imitation, as follows:

##### BASDUK.

Freshly expressed grape juice is evaporated down to the consistency of molasses. A considerable amount of flour or starch is mingled with it and the mixture is spread in thin sheets upon cotton cloth and exposed for two days to the sunshine. After drying, these are then removed from the cotton (a damp cloth being applied to the reverse side in order to

loosen the sheets), and for three months they are preserved in tightly closed jars. After this period there seems to be no risk of decomposition in the product, which resembles leather in pliability and appearance, the color being that of the grapes employed at the outset.

##### KESSME.

This preparation differs from the preceding in that coarse wheat grits are employed instead of flour or starch, and the resultant product is obtained in cakes half an inch thick after drying on metal plates. It is less tough than the basduk and more savory.

##### SUJUK (BOJIK, IN ARMENIAN).

The meats of walnuts are strung closely together on pieces of stout twine a yard long. These strings are immersed in the mixture of grape molasses and flour described above, and after receiving a coating about one-fourth of an inch in thickness are withdrawn and hung up to dry.

The last two are preserved for a few months in jars, as in the case of the basduk.

These three preparations are excellent articles of food, the last two being especially savory. They offer much nutriment in a compact form and are exceptionally well adapted for the needs of the Oriental traveler.

In these days of "grape cures," when unfermented grape juice is prepared on a large scale for the use of invalids and the anæmic during the months when fresh grapes are not easily

The House in Grimstad, Norway, Where Ibsen Served His Apprenticeship in Pharmacy.

obtained, it might be well to consider whether these condensed forms of grape juice might not be advantageously introduced into American dietaries.

Mr. Norton found these grape preparations attractive and satisfactory additions to the somewhat limited list of comestibles available and exceedingly convenient when journeying.

#### The Mexican Tariff on Proprietarys Not Changed as Reported.

Manufacturers of proprietary preparations in New York who cater to trade in Mexico are not disturbed over press advices from Mexico City announcing that the Mexican Government has increased the duties on patent medicines to a prohibitive figure. The advices stated that the prime object of this action on the part of the Mexican Government was to encourage the manufacture of such articles in that country. One of the largest manufacturers of this class of goods in this city said to a representative of the AMERICAN DRUGGIST that so far as he knew the tariff situation in Mexico, as affecting patent medicines, remains unchanged; in fact, he said that while he had been advised of changes in the duties on other goods the tariff on patent medicines had not been altered, as press reports stated. The Mexican tariff on patent medicines, he added, had always been prohibitive, and in consequence many United States manufacturers of such articles had their own manufacturing plants in Mexico.

## THE AMERICAN FLOATING EXPOSITION.

**A Sixty Thousand Mile World-Girdling Tour of American Products—Main Trade Centers to be Visited—A Combined Exhibit to Represent the Drug Interests.**

The Export Shipping Company, of New York, has adopted a suggestion made by an officer of the Department of Commerce and Labor in an article appearing in the *Geographic Magazine* in 1901. It is proposed to equip a large steamer and furnish space thereon to American manufacturers to make a display of their products and send them around the world on a 60,000-mile trip, to consume about 15 months.

The plan proposed is to allow each person who subscribes for 40 square feet of space or more to display his goods and to send on the steamer a representative whose duty it will be to see that the exhibit is properly arranged at each port, to meet the merchants and dealers invited to inspect the exhibits, explain the utility and advantages of the goods, quote prices delivered in the country of consumption, terms under which goods are sold, appoint agents, extend the sale of the goods, ascertain what the markets of the country demand, the competition to be met, etc. This representative should also satisfy himself by a personal investigation that any agent so appointed to represent his principal shall be of good character and financially able to meet his obligations. If the standing of agents is carefully gone into there should be no objection to extending ordinary business credit, and no more risk in doing so than is experienced in granting time payments to domestic customers.

## KEEN INTEREST AROUSED.

The undertaking is likely to create wide interest in the commercial world, and its progress will be watched keenly by the various trade journals and newspapers, so that every merchant in the countries visited will be familiar with the fact that the exposition is to call at his ports. In these circumstances it will not be a hard matter to induce him to visit the ship. The date of arrival in the ports will be advertised, and all interested will be advised to obtain tickets of admission at the newspaper offices, the Chamber of Commerce, the American Consulate, or at the office of the Export Shipping Company. It is also proposed to print, in the language of each country, a catalogue showing the name of each exhibitor, the name of his representative, the position of the display in the ship, and a full description of the goods exhibited. As in some instances it will not be possible to obtain direct land communication, it will be necessary to bring the visitors off in launches, which will also necessitate serving lunch on the steamer as well as insuring sufficient time for each visitor to examine thoroughly each and every exhibit on the ship. The luncheon should provide a most excellent opportunity for the demonstration of American food products.

## A SCHOOL OF LANGUAGES.

All firms participating will be required to conform to reasonable rules, and the representatives on the ship will be afforded opportunity to acquire a knowledge of French, Spanish and German and expected to improve it. In this way such representatives will gain knowledge of trade conditions and the ability to answer letters, upon returning home, in the language of the inquiry. If sufficient sales are not consummated while on the trip to reimburse the participants for their expenditure, at least the seed will be sown in fertile ground, which will bear fruit in years to come.

The voyage of the American Invasion, or the American Floating Exposition, as it has been named, is to begin with the year 1906, and the itinerary includes stops at the principal ports of Great Britain, Russia, Sweden, Norway, Denmark, Germany, Holland, Belgium, France, Spain, Portugal, Italy, Austria, Greece, Turkey, Bulgaria, Egypt, India, China, Japan, Australia, New Zealand, Ecuador, Peru, Chile, Uruguay, Brazil, the northern South American countries, Central America and the West Indies, making a sea voyage of about 60,000 miles.

The ship is to be equipped with three decks for purposes of displaying samples of what the United States has to sell to her

neighbors, and the space available for the purpose is about 30,000 square feet.

The plan will appeal particularly to firms who already have an export trade and agents in the different countries, as the agents would assuredly be flattered to receive a visit from the representative of the manufacturers, and the opportunity would afford a splendid chance for calling the attention of his customers and others interested to the display, and also allow him to explain on the spot what special facilities or changes in standard goods or manner of putting on sale will lead to an increase in business.

The expense of the trip is to be borne entirely by sale of space on a mutual basis. The available space is 30,000 square feet, and the price is fixed at \$50 per square foot. The prospectus of the promoters shows in detail the estimated expenses, and the surplus remaining at the termination of the trip is to be returned to those who participate pro rata. It is expected that the net cost of space will not exceed \$35 per square foot of space and \$500 for meals and incidental expenses of the representative. This, on a basis of 40 square feet of space, means that the entire cost for traveling expenses and showing samples will be about \$5 a day.

The exhibits will be cared for and all necessary janitor service, lighting and a limited amount of power for working exhibits will be furnished without extra expense. The promoters call attention to the fact that the enterprise is not designed as a money making plan, but is intended to be a dignified, broad minded plan to further the cause of America's export trade.

It is desired, and efforts are being made, to have the exposition representative of as many different lines of prominent American manufacturers as possible or practicable, and to have the exhibits arranged in such a manner that the attention of interested merchants in foreign countries will be held and impressed thereby.

The undertaking is not based on the principle that the manufacturers who engage in the trip are to make deliveries of goods sold, as the rules provide that the exhibits must not be sold or given away, but shall remain intact, and be on display at each port where the steamer may stop. These stops will be of from two to seven days' duration, and during this time the ship will be thrown open to the inspection of invited guests, who will comprise the leading merchants of the countries visited.

The invitations will be distributed by the branch houses of the Export Shipping Company in each country, the United States Consular offices, the Chambers of Commerce and Boards of Trade, care being exercised to secure the attendance only of responsible merchants and jobbers who are anxious to enter into trade relations with the United States.

## MAIN POINT OF EXPOSITION.

The main point of the exposition is to be that each manufacturer participating in the enterprise shall have facilities afforded him of obtaining a resident agent in each country who shall agree to act as selling agent and who shall keep in stock a supply of the articles where this plan is possible, and where impracticable to carry a stock shall at least have a sample to show to intending purchasers.

## DRUG INTERESTS TO BE REPRESENTED.

There are so many nonconflicting lines in the drug trade which could be represented with advantage in this floating exposition, but which could not undertake to send individual representatives, that it has been proposed to have a joint exhibit covering various drug and allied interests of a noncompeting character. Full particulars regarding this proposed joint exhibit will be furnished on application by the Export Shipping Company, Bowling Green Building, or by the manager of the Foreign Department of the AMERICAN DRUGGIST.

Customer: "The doctor said that the medicine was to be taken in a recumbent posture; we have none, and I cannot borrow one at the neighbors. Can you tell me where I can find one? One neighbor said that she had had one, but had lost it."

# Popularity and Price Protection

## POPULARITY

LAXATIVE BROMO QUININE originated as the first product of its kind and through merit and continuous extensive advertising it has become an absolutely staple article.

## PRICE PROTECTION

The terms and discounts on LAXATIVE BROMO QUININE from the beginning have afforded a most liberal profit, and now, by the adoption of the DIRECT CONTRACT AND SERIAL NUMBERING PLAN, this profit is absolutely insured to the retail dealer. The support of this Plan by the Retail Drug Trade demands, simply, that EVERY INDIVIDUAL Druggist shall sign the contract. Those who have not done so should sign and have the contract properly recorded without further delay.

## **SPECIAL DATING OFFER**

**JANUARY 1st. 60 DAYS.**

If a supply of LAXATIVE BROMO QUININE is needed, or if the stock on hand will permit it, the DATING OFFER now in force enables the Druggist to purchase a quantity, obtaining the regular free goods to be delivered at once and invoice dated January 1st, 1906, for cash discount.

## **LAXATIVE BROMO QUININE**

**Price \$1.75 per dozen.**

|  |                                  |
|--|----------------------------------|
| 6 dozen lots, 1 dozen free, . . . . .                          | Cost \$10.50 or \$1.50 per dozen |
| 12 dozen lots, 2 dozen free, 5 per cent. trade discount, " "   | 19.95 or 1.43 " "                |
| 36 dozen lots, 6 dozen free, 8 per cent. trade discount, " "   | 57.96 or 1.38 " "                |
| 60 dozen lots, 10 dozen free, 10 per cent. trade discount, " " | 94.50 or 1.35 " "                |

**PARIS MEDICINE COMPANY,**  
**SAINT LOUIS AND LONDON.**

**On Displaying Goods.**

Some of the goods of the druggist are unlovely but some are so attractive that to see them is to buy them. For this class of goods proper and artistic display is everything, and this cannot be had except by the use of properly constructed show cases. The newly issued catalogue of the Grand Rapids Fixture Company, Grand Rapids, Mich., shows a number of combination show cases which cannot but commend themselves to the discriminating druggist seeking to build up his trade. Write them for a copy of this catalogue. It is full of valuable hints on display. When writing please mention the AMERICAN DRUGGIST.

**Mr. Dooley on "Medical Science."**

"The pa-apers tell me that midical science has kept pace with th' hop-skip-an-a-jump iv mechanical inginooty. Th' doctors has found th' mickrobe iv ivrything fr'm lumbago to love, an' fr'm jandicy to jealousy, but if a brick bounces on me head I'm crated up th' same as iv yore an' put away. Rocyfellar can make a bar'l iv manny out iv a bar'l iv crude ile, but no wan is able to make a blade of hair grow on Rocyfellar. They was a doctor over in France that discovered a kind iv a thing that if 'twas pumped into ye would make ye live till people got so tired iv seein' ye around they cud scream. He died th' nex' year iv premachure ol' age. They was another wan cud insure whether th' nex' wan would be a boy or a girl. All ye had to do was to decide would it be Arthur or Ethel an' lave him know. He left a family iv unmarredgable daughters."

**A Texas Branch of the Liquid Carbonic Company.**

The Liquid Carbonic Company on November 1 opened its Dallas, Texas, establishment as an independent branch, and will hereafter make all shipments to Texas, Indian Territory, Oklahoma, Republic of Mexico, New Mexico and Arizona from the Dallas establishment. The company will carry a full and complete stock of apparatus and supplies for the bottling and dispensing trades, including extracts, fruits, syrups, etc., and will maintain an extensive and fully equipped showroom, where will be exhibited the most recent types of liquid carbonators and soda fountains. This branch will be under the management of L. M. Moyer, who has been connected with the St. Louis branch establishment for the past six years, and who is thoroughly familiar with the trade requirements of the Southwest.

**Artistic Souvenir Post Cards.**

Curt Teich & Co., 117-123 E. Lake street, Chicago, are sending a new list of 100 numbers of comic, fancy and art cards to every dealer requesting it. Every one of these numbers has proven to be an excellent seller.

Comic cards sell at the present time very rapidly, but the colored view card is the card which will always sell and you will make no mistake in placing your order for these illustrated cards, showing the most prominent buildings, churches, schools, street and park scenes or other points of interest in your city.

In order to meet all requirements of the trade Curt Teich & Co. are manufacturing the following kinds: "Black and White," "C. T. Doubletone" and "C. T. Photocrom."

Most of the dealers do not know how certain cards will sell and for this reason they make the "Black and White" cards. They are good sellers and the small quantity you can order will not overstock you.

The "C. T. Doubletone" cards are made by their new process. They add to the Black Card a slate photo effect, which brings all details out perfectly. They guarantee this card. Samples will be finished within three weeks.

But above all their "C. T. Photocrom" is the card of perfection. Duplicate orders from dealers have proven that, no matter how small the demand seemed to be at first, colored cards sell the best, always creating a demand for more.

To-day Curt Teich & Co. are manufacturing for dealers and jobbers in every State in the Union, and their theory that only the best cards will sell is proven by the steadily increasing orders they are receiving every day.

**An Acid Free Mouth Wash.**

Druggists are often asked for an antiseptic mouth wash that they can guarantee is free from acid. Such a preparation is Lythol. It preserves the teeth by preventing decay. It allays inflammation, catarrhal conditions of the mucous membranes of the eye, nose, mouth and throat, and relieves sore throat and hoarseness. It is for sale by all wholesale druggists. Literature will be furnished free of cost by Hudson & Co., Inc., chemists, 489 Fifth avenue, New York.

**Of Value to Horsemen.**

Horses which have been used steadily at work, either on the farm or road, by the fall quite likely have had some strains whereby lameness or enlargements have been caused. Or perhaps new life is needed to be infused into their legs. Gombault's Caustic Balsam, applied as per directions just as the owner is turning the horse out for the winter, will be of great benefit; and this is the time when it can be used very successfully. One great advantage in using this remedy is that after it is applied it needs no care or attention, but does its work well and at a time when the horse is having a rest. Of course it can be used with equal success while horses are in the stable, but many people in turning their horses out would use Caustic Balsam if they were reminded of it. Druggists should call the matter to the attention of the horse owners whom they know.

**A New York Office for the Pasteur Products.**

A New York office has been established for the products of the Pasteur Institute, at 366 to 368 West Eleventh street. These products comprise the veterinary biological series, such as anthrax vaccine, mallein, antistreptococcic serum, antitetanic serum, blackleg vaccine, blacklegine (cord form), blacklegules (pill form), tuberculin, Pasteur rat virus ("Mouratus"), as well as antivenomous serum, Pasteur wine yeasts, eucamphol and traumatol.

These veterinary products have attained a worldwide celebrity, for their use has undoubtedly saved to animal owners many millions of dollars.

Eucamphol, the great external and internal antiseptic, has the favor of the veterinarians everywhere. The wonderful Pasteur rat virus, devised by the Pasteur Institute for the extermination of rats and mice, is successful even where they exist in extraordinarily large numbers.

Any communications on any of these products or preparations addressed to C. A. Welles, either at the above address, Chicago office, 441-445 Wabash avenue, or San Francisco office, 456 Montgomery street, will receive immediate attention.

**The Oldest Industry of England.**

The oldest industry in Great Britain—its existence has been traced back to the prehistoric Stone Age—is still being carried on at the village of Brandon, on the borders of Norfolk and Suffolk, and is said to be in a flourishing condition. It is a manufactory of gun and tinder-box flints. The work is done in little sheds, often at the backs of the cottages where those engaged in this almost out-of-date occupation dwell. It will naturally be asked who buys the products, who wants tinder-box flints and gun flints in these days of "safety" matches, vestas and quick-firing breech-loading rifles. The answer to the first question is that there is a good trade in tinder-box flints with Spain and Italy, where the tinder-box still holds its ground in rural districts. Travelers in remote, uncivilized regions, moreover, are liable to run out of their supply of matches at inconvenient moments and find flint and steel a veritable boon. Then, again, matches are prone to become useless just when they are most needed, through having absorbed moisture, and in very hot climates they may explode and leave the traveler who has no flints and tinder in a very awkward position. Flints are also used in making the ingenious little mechanical devices for lighting pipes and cigars which one often sees in tobacco shop windows and which are among the most useful articles in a traveler's outfit.—T. A. T.

Manufacturing Chemists

277-279 Greene Ave.

BROOKLYN, - - - NEW YORK.

### Sixty-five Years of Success.

A record of sixty-five years of successful business life is so rare in the United States that the Roworth Mfg. Company, 85 Maiden Lane, New York, have just cause for pride in the fact that for sixty-five years they have been engaged in the manufacture of lozenges, cough drops, gum drops, etc. Among their successful specialties are the well-known London Hospital Throat Lozenges, diamond licorice, rose and lemon juice jujubes. They make a specialty of preparing private formulas for customers whose secrets are jealously guarded and who receive absolutely uniform and reliable products. This firm carried an advertisement in our columns for over 25 years from the first issue of this journal under the title of *NEW REMEDIES*, and we are glad to welcome them back. Our readers would do well to confer with them before having special formulas made up.

### A Collapsible Tube Closing Machine.

The collapsible tube closing machine is another new development for manufacturing chemists putting up paste preparations in collapsible tubes. It is a vast improvement over the old method that has been in general use in the laboratory and every live business house putting up preparations of this kind, if it considers profits, should take the time to investigate the saving effected by this machine over the present means employed on this class of work. The important features are:

First: It is adjustable for any given quantity desired, and

Colton's Collapsible Tube Closing Machine.

when once set it will continue to deliver the same quantity in each and every tube.

Second: It has a capacity for filling tubes as fast as the operator can place and take them from the nozzle of the machine.

Third: Each tube, they being filled alike, makes a uniform package.

Fourth: It is constructed so that the working parts are accessible for cleaning.

Fifth: An inexperienced girl can operate it.

Sixth: This is the only practical filling machine that we know of in the market.

For further particulars write to Arthur Colton, Detroit, Mich., U. S. A., manufacturer of pharmaceutical machinery.

### Harvest Time in Hot Soda.

The striking double page advertisement of the American Soda Fountain Company on pages 36 and 37 in this issue is decidedly suggestive, and should awaken the interest of those dispensers who are not fully alive to the possibilities that lie in hot soda.

The American Soda Fountain Company is always on the firing line with effective and reliable appliances, and it especially recommends the "Borneo" as an economical and altogether satisfactory Hot Soda Apparatus that may be depended upon 24 hours a day.

In the way of sundries the American Soda Fountain Company manufactures a large and complete line of everything required or desired by the soda water dispensers. Its name and reputation stand back of every article turned out of its factories. Its advertisements in this issue show a few specialties which are especially seasonable. It will pay you to send for the Hot Soda Apparatus and Sundry Catalogues of the American Soda Fountain Company. Get in touch with the nearest branch and save time.

### How to Tell the Temperature.

The simplest way is to look at one of Taylor Bros. & Co.'s advertising thermometers. They not only tell the temperature but they also tell the observer about your business. They form one of the most—probably the most—effective forms of continuous, permanent advertising within the reach of the retail druggist. Get a hundred or so of these distributed among the householders of your vicinity and you can rest assured that your name, location and business will be kept before every member of the family. If it is hot the young folks will look at it, if it is cold the old folks will examine it. Write Taylor Bros. & Co., Rochester, N. Y., for particulars about these thermometers, mentioning the *AMERICAN DRUGGIST*.

### Joys of Matrimony.

They had just commenced housekeeping.

"Clarence, dear," said bride, "I wish you would stop at the drug store as you come home to-night and get some sponges."

"All right, darling," responded the temporary head of the matrimonial combine. "How many do you want?"

"I don't know, love," she answered. "I guess—oh, well, just ask the man how many it takes to make a medium-size sponge cake."

### The Little Red Book.

The fiery red cover of the little hot soda guide, just issued by the Liquid Carbonic Company, of Chicago (and pretty nearly every other large town in the United States), is an indication of its contents, which is all about "hot stuff." Write them for a copy of it. It's full of good hints.

### "Kinds That Sell."

The pioneer American capsule house, H. Planten & Son, 93 Henry street, Brooklyn, make the "kinds that sell." Write them for their lists and discounts. Their capsules not only sell readily, but sell at a profit to the retailer. When writing them please mention the *AMERICAN DRUGGIST*.

### Prosperity of the German Chemical Industry.

In *Daily Consular and Trade Reports*, Consul H. W. Harris, of Mannheim, writes that at the annual meeting of the German Association for the Advancement of the Chemical Industry special emphasis was placed on the prosperous conditions existing in this trade. The dividends of 143 stock companies, representing a capital of \$157,913,000, average 9.37 per cent. in 1904 as against 8.56 per cent. in 1903. He says:

The annual meeting of the German Association for the Advancement of the Chemical Industry was held at Heidelberg, in this consular district, on September 23 and 24, 1905. The discussions covered a somewhat wide range, and included a survey of the present condition of chemical industry in Germany; the probable effects of the new commercial treaties made by Germany upon this industry and the importance to this branch of manufacture of satisfactory trade relations with the United States and other countries. As is generally known, chemical manufacture in its various branches is justly regarded as perhaps the pet industry of the Empire. In no other single industry has Germany done so much valuable pioneer work as in this one. In none other has the value of her technical schools been so fully recognized as in this one. No other industry has been so little affected by the business depression of the past four years as the chemical industry.

In the report of Director Wenzel, of Berlin, general secretary of the association, the general improvement in the industrial conditions of Germany as evidenced by increased railway earnings, exports and coal consumption, etc., was noted. He stated that the number of workmen employed in factories has increased about 6 per cent. over last year, and wages  $7\frac{1}{2}$  per cent.; that the increase of employees in the chemical industry has been somewhat above 5 per cent. The profits in this branch of manufacture were stated as showing substantial gains over last year, notwithstanding a general rise in the cost of raw materials. One hundred and forty-three stock companies engaged in chemical manufacture, with a total capital employed of about \$157,913,000, show average dividends for their last fiscal year of 9.37 per cent., as against 8.56 per cent. for the previous fiscal year. Taking 1899 as the most favorable year in the industry, and representing the profitability of that year as 100, Director Wenzel stated the succeeding years might be represented by the following figures: 1899 at 100, 1900 at 91.2, 1901 at 90.8, 1902 at 87.8, 1903 at 93.3, 1904 at 93.3, and 1905 at 97.

Among the branches of the chemical industry showing the largest dividends are coal tar colors, commercial fertilizers and explosives.

### How to Make Hot Drinks in Small Towns.

There is probably no more profitable side line during the long, cold winter months than hot drinks if handled along right lines. Say you are located in a city of from 5,000 up and have a fair cold soda trade. The question is simply one of catering to the palates of your customers—beef tea, cocoa, chocolate, coffee, tea, clam bouillon, tomato bouillon, Asparox, etc., are all popular hot drinks and it's the service that decides the success of your efforts. The two points which cut the greatest figure in the results are quality and cleanliness. Be right on these and your success is certain with hot drinks, but the details are important. Your hot water urn must be clean and bright, and the water boiling hot. By all means serve a piping hot drink. A lukewarm one will do incalculable injury to the business. The making of a cup of hot beef tea looks simple, but the difference between a good drink, one that will make a customer come a block out of his way on a cold night, and a poor one is the careful attention to the simple things about making it. Armour's soda expert gives the following directions: "First, get the best grade of beef extract, or, better still, use Vigoral; have the water boiling hot. Draw a little water in the cup to heat it and throw it away, then pour in the Vigoral or beef extract, add a dash of salt and pepper and fill the glass with water. Place a spoon in the cup, stir it once or twice and hand it to the customer. This looks easy, and it is if just a little care is used. Take a very little of the beef extract. If you use Armour's solid extract of beef take but one-quarter teaspoonful, because it is highly concentrated. All that is needed is enough to give a rich brown color to the water. More than this is likely to make it too strong. If you use Vigoral the chances of making a poor drink are very

small, as it is specially prepared for hot drinks. Now your customer has the drink. Place before him a clean plate with a few saltine crackers. Don't run away then, but inquire if the drink is satisfactory, and suggest a little more seasoning or water—something to indicate your desire to serve really good drinks. Now this may look fussy, but is lots easier than to be sloppy and careless, and a hundred times more profitable, for if the sale of hot drinks is small, if they are served properly they attract trade; in other words you satisfy your customer, and a satisfied customer is your best advertisement.

"What I say regarding beef tea applies with equal force to all other drinks, except, of course, the mixing of the drink; but I hear a druggist in the small town of 1,500 saying: 'Oh, yes, this is all right for the city druggist, but I couldn't make my trade buy it in a hundred years. I couldn't make interest on a high priced apparatus, let alone a profit.' Not so fast, Mr. Dealer. You are right in a measure, but you don't want a high priced hot water apparatus.

"We have two of as handsome hot water urns as any one would want, which we will give you free; that is, the urn and mugs are free with Armour's Vigoral case offers. The china urn case has \$25 worth of Vigoral, beef extract, tomato bouillon and chicken broth; the nickel urn has \$20 worth of the same supplies. If you ordered the supplies only they would cost you the price of the case with urn, mugs, etc.; but we can only sell one to a customer. There's a gasoline heater that may cost 5 cents per day to run. There are mugs and signs, and all you have to furnish to start the business is a salt and pepper shaker and a few spoons.

"But, you say, Where are the customers to come from? My trade is mostly farmers and working men. Now here is where your opportunity lies. Don't try to serve a lot of sweet hot drinks. Just serve the Vigoral, chicken broth, tomato bouillon and Asparox. The first real cold day start your hot water urn and place a sign in your window offering a free cup of hot beef tea to out of town visitors. Can you imagine anything more attractive after a ride of a few miles on a cold day? Or say that you serve it free to every grown person on Saturdays. Don't you think it would give you a tremendous lot of free advertising for a little money, and you would be building up a trade that should be very profitable; and then you get the trade in the habit of coming to your store. It's wonderful how strong habit is. There are, no doubt, a great many trading with your competitors that would just as soon trade with you, but you never do anything to give them an excuse for coming to your store." Armour & Co. would like to tell our readers more about this proposition. Write them about it.

### A Profitable Preparation.

Hundreds of druggists everywhere were surprised to find that the proprietors of the Mountain Herb Tea have created a persistent demand for their tea. They allow the druggist a good margin of profit, thus making it pay the seller to handle the preparation, while the consumer is pleased to find the compound an effective constipation cure. Hence the retailer as well as the public look at Mountain Herb Tea with favor. The principal office of the Mountain Herb Remedy Company is located at 132 Nassau street, New York City, where a large business is transacted. Write them for introductory terms, mentioning the AMERICAN DRUGGIST.

### Profit in Right Buying.

Dr. W. C. Alpers, one of the most successful pharmacists on Broadway, in a paper on "Buying Goods," presented at the Atlantic City meeting of the American Pharmaceutical Association, said that it is possible to "make a bigger profit in buying goods than in selling them." The manufacturers of genuine Castoria, and that is the only kind reliable druggists handle, are the Centaur Company, 77 Murray street, New York City. They offer you a saving of 5 and  $2\frac{1}{2}$  per cent. on gross lots, and will supply a high grade of counter wrappers and show cards to the trade without expense.

### Co-operative Cigar Stands.

In another part of this issue will be found an advertisement of the National Cigar Stands Company, which was recently organized upon a co-operative basis. The principles upon which the company will operate are not new, but they have never before been applied to the tobacco end of the drug store trade. The instant favor with which the proposition has been received by the druggists of the country shows that it must possess unusual merit.

When the plans of the National Cigar Stands Company were outlined to over 300 of the shareholders of the United Drug Company at their annual meeting, held at the Hotel Somerset, in Boston, the last week in September, by President Liggett, who is also president of the former company, every

Stand of the National Cigar Stands Company.

one present showed his confidence in the proposition by at once asking to be enrolled as one of the company's representatives. At present nearly 2000 American druggists have decided to co-operate with the company.

Heretofore the retail druggists have been obliged to buy their cigars in small lots from the jobbers, who, of course, had to load the price they paid for them with their own profit. As the stands from which cigars have been sold in the drug stores are usually inconspicuous and often makeshift affairs, they attract little attention.

The National Cigar Stands Company comes forward with a proposition that promises to revolutionize the cigar business of the drug stores. It will sell its own brand of cigars, manufactured in its own factories, directly to the druggists, thus cutting out the jobber's and all intermediate profits, four in all. Under this plan the druggist will be able to get his supplies as low as he would if he bought in ten-case lots. In the second place the company furnishes each of its representatives a costly, artistic cigar stand, made of plate glass, ebony, gun metal and marble, and containing an effective moistener, at a nominal rental. It is such a handsome showcase that its presence in a store cannot fail to attract the attention of every person who enters the place. The value of such a stand as a cigar trade salesman cannot be overestimated. Automatic electric window signs, display cards, etc., are supplied free of cost.

Then, too, the druggists will be able to handle a better quality of cigars than formerly, and because of the reasonable prices at which he can afford to sell them he will be in a position to secure the trade of the most particular smokers in town.

In order to afford the druggists who co-operate with the company every possible advantage only one out of every four in each town or city will be accepted as representative of the National Cigar Stands Company. Those who want to get in line should correspond with the office of the company, 23

East Twenty-first street, New York. All that is necessary is to send in a memorandum of the length of stand most convenient for your store, and all applications made now have the preference when the company's representatives call to select the locations of stands in each district.

### Two Valuable Labor Saving Pharmaceuticals.

The tendency of official syrup of hydriodic acid to become discolored after a few months, thereby becoming unfit for dispensing, has been observed by every pharmacist. To reduce this objectionable feature to a minimum, the Bristol-Myers Company, Brooklyn, N. Y., manufactures Webber's Concentrated Solution of Hydriodic Acid, which is absolutely permanent, both as regards color and composition. The U. S. P. syrup may be prepared extemporaneously by simply diluting the concentrated solution with simple syrup. This firm also makes, for the convenience of druggists, Webber's Concentrated Solution of Hypophosphites for preparing the syrup in a similar manner. Write them for their list, mentioning the **AMERICAN DRUGGIST**.

### The Suggestion System and What It Has Accomplished.

How to get the benefit of your employees' brains as well as the output of their hands is the problem which has been solved by the National Cash Register Company at its factory in Dayton, Ohio. The means of solving the problem is the "suggestion system," which has been in effect at the Dayton factory since 1894, and which has in recent years been adopted to a greater or less extent in other factories.

Any employee desiring to make a suggestion for the betterment of the tools, methods or output in his own or another department, writes it out on a slip of paper and drops it into a suggestion box; or, if he prefers, he writes it out on a manifolded autographic register, retaining the original copy and leaving the duplicate copy in the register. In all cases an employee signs his name to a suggestion and also the name of the department in which he is employed. Upon the receipt of a suggestion it is given a number, and entered in a book provided for that purpose. It frequently happens that the suggestion concerns more than one department, in which case it is investigated through all of the departments and its bearing on each considered. The original suggestion is never sent with the correspondence during the investigation, but it is retained in the office of a committee and a copy is made for investigation purposes, or the subject matter is embodied in the correspondence.

If, upon investigation, the suggestion proves practicable, it is put into effect and the originator is notified by letter, which authorizes him to receive \$1 from the cashier in payment for the suggestion. If, on the other hand, the suggestion is rejected, the author is duly notified.

At the end of each quarter the best suggestions are selected from those adopted during the three months past, and forty-four quarterly prizes are awarded. At present the value of the quarterly prizes is \$750. Twenty-five prizes, aggregating \$450, are offered to the employees in the making division; twelve prizes, aggregating \$200, are offered to the employees in the office division, and seven prizes, aggregating \$100, are offered to the members of the selling force.

The value of the "suggestion system" as carried out in the N. C. R. plant has been demonstrated again and again. The operation of the system involves a large expenditure of money, and the company paid out in prizes from 1899 to 1904, inclusive, the sum of \$12,897.

### Success with Merz Santal Compound Capsules.

Dr. S. S. Slott, of Smithland, Iowa, in a recent letter to the Merz Capsule Company, Detroit, Mich., says: "The box of Merz Santal Compound Capsules sent me was tried on one of my patients with the most flattering results. I ordered more to-day. Would be pleased if you would send me literature for same, as through some mishap I lost what I had."

## Prices Current.

The outside prices quoted are for such quantities as retailers usually purchase. When purchasing original packages the inside quotations should be expected, while a slight advance over the outside quotations given may be demanded for very small lots. Current commercial quality is understood unless otherwise indicated. For extra quality or for specified makes a slightly higher price will have to be paid.

THE C. F. BLANKE &amp; CO.,

ST. LOUIS.

In Ordering Vaccines and Antitoxins

For Veterinary Use, Specify

PASTEUR

and get the original, produced at the Pasteur Laboratories, established in France by Pasteur, 1854.

Blackleg Vaccine was discovered in 1884 and is still produced for us by the discoverers. The original and genuine product which we furnish has been successfully used upon over 20,000,000 calves. The cord form known by the name "Blacklegline" is the most popular and best seller on the market as it is the most convenient, effective and economical method ever devised. Write for literature and prices. In ordering vaccines specify PASTEUR and get the original.

Siberian Bristles.

THE IDEAL  
HAIR BRUSH.

U. S. Patented December 21, 1896.

NOTHING LIKE IT ON THE MARKET.

Do not confound this brush with the rubber back wire brushes. It is entirely different. The "Ideal" has an Air-Cushioned Back and Genuine Siberian Bristles. It is the best selling brush on the market.

## To The Wide . . . Awake Pharmacist

**As the Hay Fever Season will soon be upon us, it is well to see that you carry in stock a sufficient supply of FORMALDEHYDE-KELENE tubes, so as to be ready to meet the increased demand which will follow our advertising it to the medical profession this season.**

We also furnish "GRADUATED KELENE" in tubes for general anæsthesia, also put up for use as a local anæsthetic.

**Write for our Reference Book, which not only describes the above mentioned product, but other preparations of interest to you.**

# FRIES BROS.,

**Mfg. Chemists,**

**92 Reade Street,  
NEW YORK.**

# A Good Showing OUR -- PHARMACISTS

**FOR OUR - -  
PROGRESSIVE**

## Over 23,000 Torsion Balances

## Without Knife Edges or Friction

already purchased by the 35 to 40 thousand Retail Drug-gists of the

**U. S. and CANADA.**

## TORSION BALANCES

**in use over**

# 16 YEARS

**give the same good service today as when they were new.**

**Need Never to be Discarded.**

Send to-day for the PHILADELPHIA FRANKLIN INSTITUTE'S Report, giving the reasons why TORSION BALANCES are MORE ACCURATE, MORE DURABLE, MORE SENSITIVE than any KNIFE EDGE Scales can be made. Also for Illustrated Catalogue.

**THE TORSION BALANCE CO., 92 Reade St  
New York.**

**Inquire about the "TORSION" Laboratory Scale. Just One**

A large Lithograph, 14x21, in seven colors, of the above Rough on Rats illustration (Household Troubles), which has convulsed the world with laughter, with comic descriptive verses, mailed free to any address. E. S. WELLS, Jersey City, N. J., U. S. A.

## Unbeatable Rat Exterminator Equally effective against Mice, Roaches, Ants and Bed Bugs.

### ROUGH ON RATS

Though a poison and originally designed for Rats and Mice, experience has demonstrated it the most effective of all exterminators of Roaches, Ants and Bed Bugs. The only thing at all effective against the large Black Cockroach or Beetle. Fools the Rats, Mice and Bugs, but never disappoints or fools the buyer. Used 30 years.

|  |          |
|--|----------|
| Rough on Roaches (non-poisonous)         | 15c, 25  |
| Rough on Fleas (powder), for dogs, etc.  | 25c      |
| Rough on Fleas (liquid), cans, household | 25c      |
| Rough on Red Bugs (liquid)               | 15c, 25c |

All above at druggists; they are too heavy and too low priced to go by mail or express.

La preparación "Rough on Rats" es un exterminador de ratas insuperable, eficaz también para ratones, cucarachas, sábanas, hormigas y chinches. Se emplea en los Estados Unidos desde hace treinta años. Se enviará a la dirección que se indique una litografía de la ilustración de arriba, 14x21, en siete colores. También fabricamos otras preparaciones semejantes que los droguitas pueden vender fácilmente. Invitamos a los lectores de este anuncio en el extranjero a que nos pidan precios y condiciones. Se venden estas preparaciones por los tratantes al por mayor de Nueva York.

## Attention--Druggists A Paying Business For You

It requires but little capital. It occupies but little of your time. There is money in it for you. For full particulars and information—address

**The National News Co.**

15 Warren Street NEW YORK

**SHEEP DIP, ETC.**—A gentleman with special knowledge of the trade and an extensive connection in South Africa wishes to represent a manufacturer of sheep dip in that country; 11 years' experience. Address "Dip," Box 671, Sells Advertising Offices, London, England.

## THE STRICKLAND DRUG AGENCY AND DRUG CLERK'S REGISTRY OFFICE.

Established in 1863 in our present office for the sale of Drug Stores and allied business only.

At this season our offerings are numerous. Call and see our list in any section. We can supply your wants from \$500 up. If you want a store for removal write any business touching drugs. We are on deck. If you have a drug stock for sale advise us. We will buy anything and everything for a drug store.

This offering is worthy of your respectful thought. We will present the Klondyke Drug business, vicinity of New York City, to a druggist having \$10,000 or \$15,000 cash. An interest will be given at a fair fixed price based close to invoice. Good man more needed than the money, and only to a druggist qualified to assist the owner handling a trade of \$80,000 or over every year. This pharmacy is a marvel of completeness and beauty. A large force in this store requires the man of ability, system and steadiness necessary in an enterprise of this kind.

**NEW YORK CITY.**—\$28,000 yearly sales. 20,000 prescriptions. Rent, about \$1,200 yearly. One of the finest stocks. I can arrange easy terms. We have a party with \$2,000 to join in the purchase.

**BROOKLYN.**—\$30 daily. You can stay two weeks behind the counter on trial and buy for \$5,000, half cash.

**NEW YORK STATE.**—Long Island, \$10,000 yearly sales. Fine corner. Beautiful fixtures. \$50 rent. One of the best towns on South Side. Putnam County, \$15 daily. Rent \$100 yearly.

Only store, \$3,000, half cash.  
Cortland County, \$5,000 sales. Two stores in town. Large, complete stock. Price, \$5,500. Westchester County, Sales, \$40 daily. No heavy goods. A money earner corner. Rent, \$50. Price, \$7,000 cash.

North Long Island, Sales, \$5,000. Price, \$2,500. Rent, \$30.  
Tompkins County, Sales, \$30,000. You can buy this offering at invoice.

**NEW JERSEY.**—Coast town. \$30 every day. Rent, \$400 yearly. Progressive city. First-class trade. Price, \$8,500.

Jersey City, Sales over \$40. Choice corner. Large stock. Price, \$9,000.—Jersey City, \$30 daily. Handsome and convenient pharmacy. Large store. Five or ten years' lease may be had. Price, \$5,000, part cash.

Note this. Lease, 20 years. Sales, \$50,000 yearly. Hustling New Jersey town. Price right. Terms right. The lease is a valuable adjunct to the holder, and is absolutely at variance with the custom these days.

**THE STRICKLAND  
DRUGGISTS' AGENCY,  
36 Beekman St., New York City.**

## SPECIAL ATTENTION.

I buy and sell Drug Stores exclusively. Expert service. Special Plan. Drug Men furnished positions. Employees furnished. It will pay you to write for particulars.

**F. V. KNIEST, R.P.,**

"The Drug Store Man,"

624 N. Y. L., ОПАНА, NEB.

# Antidiphtheric Serum

## THE PHYSICIAN'S FAVORITE SERUM

**P**ARKE, DAVIS & CO.'S DIPHTHERIA ANTITOXIN is manufactured with scrupulous care.

It is exactly standardized, tested and retested.

It is supplied in hermetically sealed glass containers, with syringe attachments—ready for immediate use.

It is the favorite serum of the medical profession.

*Bulbs of 500, 1000, 2000, 3000  
and 4000 units.*

### NOTICE.

*We protect you against loss  
by accepting unsold Antidiphtheric Serum in exchange.*

## PARKE, DAVIS & CO.

LABORATORIES: DETROIT, MICH., U. S. A.; WALKERVILLE, ONT.; HOUNSLOW, ENG.

BRANCHES: NEW YORK, CHICAGO, ST. LOUIS, BOSTON, BALTIMORE, NEW ORLEANS, KANSAS CITY, INDIANAPOLIS, MINNEAPOLIS, MEMPHIS, U. S. A.; LONDON, ENG.; MONTREAL, QUE.; SYDNEY, N. S. W.; ST. PETERSBURG, RUSSIA; SIMLA, INDIA; TOKIO, JAPAN.

**Registered in Connecticut.**

Danbury, October 5.—Secretary Dickinson, of the State Board of Pharmacy, has announced that Thomas F. King, of Waterbury; Thos. E. Guckin, of Bristol; Sidney Negbauer, of New Haven, and James C. Offen, of Stamford, have successfully passed the examination for pharmacists' licenses.

**No Sunday Soda.**

At the request of the clergy of the town the druggists and confectioners of Columbia, Miss., have agreed to discontinue the sale of soda water on Sunday. As total prohibition has long ruled the town this change will make it a pretty dry town on Sundays.

**Louisville Drug Building Sold.**

C. C. Stoll has purchased the building occupied by the Peter-Neat-Richardson Drug Company at 235 West Main street, Louisville, Ky., from that firm for the sum of \$33,000. The formal transfer of the property has been made. Mr. Stoll stated that he bought the property merely as an investment and that the present occupants will continue to do business in the building.

**Bayonne Association to Join N. A. R. D.**

At the annual election of the Bayonne (N. J.) Druggists' Association Samuel J. Weidenhamer was unanimously elected president for the ensuing year. Charles Mitzenius was elected secretary. Two new members were elected, Messrs. Marschalk and Lockwood, and it was decided to have the organization incorporated and to secure membership in the National Association of Retail Druggists.

**Albert Fries Retires.**

Announcement is made that the partnership heretofore existing between Albert Fries and Harold H. Fries, under the firm name of Fries Bros., was dissolved by mutual consent on November 1, 1905, by the retirement of Albert Fries. All debts and other obligations of the partnership have been assumed by Harold H. Fries, the remaining partner, who will continue the business under the same firm name at 92 Reade street, and who is entitled to receive all amounts due to the said partnership.

**Appointed to Vermont Board.**

Rutland, Vt., November 24.—Governor Bell has appointed J. G. Bellrose, of Burlington, to succeed himself as a member of the State Board of Pharmacy. His term expires next month, and he is reappointed for five years. The board is at present made up as follows: C. C. Bingham of St. Johnsbury, president; J. G. Bellrose of Burlington, secretary; W. F. Root of Brattleboro, treasurer; Z. B. Hopkins of Brandon, and H. R. Warner of Vergennes.

**Observations of an American Chemist in Paris.**

Dr. H. H. Fries, of Fries Bros., of New York, who lately returned from an extensive trip to Europe, has given a representative of the *Oil, Paint and Drug Reporter* the following observations of his trip:

Some few weeks ago, when in Paris, said Dr. Fries, I met Prof. August Behal, professor in the Ecole de Pharmacie, and general secretary of the Chemical Society of Science in France. In fact, he has a reputation as one of the most noted chemists of the world and was representative of France at the St. Louis Exposition. Of his most valuable and interesting inventions that he spoke about I was most interested in his synthetical camphor, which was not only being produced in a laboratory way, but on a small commercial scale of 50 to 100 pounds daily and regularly, and which plant I visited. This camphor, he explained, was an absolute synthetical product, having all the qualities of Formosa camphor. On account of the low cost of production of this product it probably can be considered the first successful process of manufacturing camphor in a large way.

Another subject that was extremely interesting was the discovery by an eminent chemist, who is associated with Professor Behal, of a process of producing terpineol at a very

low cost and, in conjunction, a process which has been patented for this terpineol to be used for dissolving gums. It appears that even the hardest gums can be placed into solution by this process without boiling, and at the same time it gives the gums a brilliancy and elasticity and many other advantages which no other solvent does.

Among other matters that interested me was the discovery by Dr. Robert Cambier, of Paris, who is a member of the Bacteriological Institute of the Health Department, of the sterilization of water in a cold way, whereby all bacilli are killed, or, in other words, the water becomes sterilized and still can be used for drinking purposes without boiling. My attention was also called to a process for rendering eatable and animal oils neutral or free from free acid, such as olive oil, fish oil, sesame oil and in general all vegetable and animal oils. The actual rendering of these oils free from free acid, although the cost is very small, in many instances doubles or triples the value of the oils. This is a very interesting subject to the artificial butter maker, etc. By this process linseed oil is made free from free acid so that it becomes water white, and lithopone, when mixed with this water white oil, remains white in the sunlight and does not discolor or turn black, as is usually the case.

**Hints to Buyers.**

High grade prescription corks, fully up to sample, may be obtained from Justus Brauer & Son, 248 North Front street, Philadelphia. This is one of the oldest houses in the line, and fully entitled to the confidence of the retail drug trade.

D. & S. Licorice is an old standard brand which has the confidence of the trade. Write W. G. Dean & Son, 361 Washington street, New York, for quotations and samples, mentioning the *AMERICAN DRUGGIST*.

The removal of the Heidelberg University library, containing more than 700,000 volumes, into a new and handsome sandstone library building has just been completed. The work of removal employed 15 men 32 days. Each separate book was freed from dust by a cleaner operated by an electric motor of the form used in house and carpet cleaning, the back and edges of each book being subjected to the powerful suction of the cleaner, with highly satisfactory results. The library requires about 21 miles of shelf room.

**A Complete Hot Soda Outfit.**

On page 30 we present an illustration of a complete hot soda outfit which is furnished by the J. Hungerford Smith Company, of Rochester, N. Y., for only \$17.50. The high standing of the fruit juices and syrups made by this firm has made its name known to druggists everywhere and is a guarantee of the quality of this outfit. Write for details to the J. Hungerford Smith Company, Rochester, N. Y.

**An Opportunity in Brazil for a Young Man.**

A young unmarried man is wanted to take charge of the office of a resident American agent in Rio de Janeiro. One with a knowledge of druggists' sundries and of the Portuguese language is preferred. A suitable young man will be paid a salary of \$100 per month and given a free passage. Applicants are invited to send full particulars to the Foreign Department of the *AMERICAN DRUGGIST*, 66 West Broadway, New York.

**Every Little Bit Helps.**

One of the spiciest little journals that comes to the secretary is the *American Medical Journalist*. It contains many very readable articles, and its last issue seems to be chiefly directed against the various transactions of the American Medical Association, especially against the *Journal*. We rather think that there is a great deal of truth in what it has to say and advise all who wish to know both sides of the question to read it. It is published by D. A. O'Gorman, of New York.—From the *Journal of the South Carolina Medical Association*, which is published under the direction of the Publication Committee of the South Carolina Medical Association.

# AKARALGIA MERRELL

A new and most attractive form of exhibiting the valuable properties of pure Sodium Salicylate, (From Natural Wintergreen Oil) overcoming chronic migraine by single daily doses.

Send for Literature:  
"A New Remedy and Cure for Migraine."

Generally prescribed:  
"Akaralgia, 1 bot."

The demand for Akaralgia will steadily increase as it is advertised in the leading Medical Journals.

If you do not have it in stock order from your Jobber one-quarter dozen or more and be prepared to fill your Physicians prescriptions promptly.

\$6.75 net—dozen.  
Broken dozen same rate.

**SIMPLICITY**

**PALATABILITY**

**EFFICACY**

**Your Jobber Supplies MERRELL "LINE" Goods at 40% discount, regardless of quantity.**

Fluid Extracts, Tablets, Pills, Elixirs, Granular Effervescent Salts, &c, &c.

WRITE

**"Merrell"** and the results will please you.

San Francisco.

### High Efficiency Obtained by Concentration.

The Herron Soda Fountain Company, 2513 State street, Chicago, make soda fountains and carbonators and nothing else but soda fountains and carbonators. They specialize to a high degree and secure a high degree of efficiency by specialization. If you sell soda water or contemplate selling soda water be sure to get one of their catalogues. When writing them mention the **AMERICAN DRUGGIST**.

### A Belated Sense of Humor.

The tall gentleman with the sandy side whiskers leaned across the druggist's counter.

"Can you oblige me with a lawst year's almanac?" he asked.

"I guess so," the obliging druggist replied. Then he rummaged around and finally found what the man wanted.

"Thanks," said the stranger in a relieved tone.

"And may I ask," the druggist began in his polite way, "why you want a last year's almanac?"

"The explanation is simple," replied the stranger. "There is a joke in last year's almanac that I meant to laugh at this year—and now I find that I've quite forgotten the point. Good day."

The druggist stared after his patron.

"Do you know that man?" he asked a bystander.

"I only know that he's English," the bystander replied.—  
*Cleveland Plain Dealer.*

### Their First Glass of Soda Water.

How many patrons of soda fountains remember their first glass of soda water?

The American Soda Fountain Company of Boston recently had the unique pleasure of offering to the 27 members of the Irish Ladies' Choir their first ice cream soda. The choir, who have recently come from the Emerald Isle, are making a tour of American cities, winning all hearts by their grace and by the charm of their sweet voices. Doubtless one of the pleasantest memories of their trip will be that of the courtesies extended to them by the American Soda Fountain Company at its warehouses. The young ladies, chaperoned by Madame Costlett-Heller, visited the large factories of the company on Congress street, Boston. Here they were each presented with a box of Boston's best confectionery and were served with ice cream soda from one of the most beautiful fountains in the world. May they be pioneers to make soda water as popular on the "other side of the pond" as it already is among American girls.

### Hints for Making Perfumes.

The proper method of making, bottling and labeling the finished article in order that perfumery made and put up in the druggist's own laboratory may be successfully compared with the imported varieties is well set forth in a booklet issued to druggists by Lehn & Fink, 120 William street, New York.

This brochure is particularly apropos at this time of the year, when the approaching holiday season creates a large demand for perfumery, toilet waters, etc. The various ingredients required and the cost of making perfumes and toilet waters in different odors are set forth in a manner that enables the druggist to put up goods that please every variety of taste and suit all pocket books. The druggist by the use of Absolute and Floral Essences can produce perfumes that, while equal in quality to the French assortments, may be offered at a much lower cost to the consumer and still allow a large margin of profit to the seller.

The difference between Absolute Essences and Floral Essences and their utilization is fully covered and a treatise on Aroma Essences for flavoring cakes, candies, ice cream, syrups, etc., is included in the many valuable hints furnished in the booklet.

The indorsements of a number of well known druggists help to give an idea of the popularity these essences have with

prominent members of the trade. Cheapness, simplicity in handling and satisfactory results are special points that prove Absolute and Floral Essences to be an important factor in a profitable line that is steadily becoming a part of every druggist's business—i. e., the manufacture in his own laboratory of perfumes, toilet waters, cold cream, hair tonics, flavoring, etc.

Druggists who are alive to up to date methods and who wish to get the best for the money expended should write for one of these booklets, which Messrs. Lehn & Fink offer to the trade with their compliments.

### Castoria Agent in Trouble.

E. A. Gagnier of New York has been calling on various grocers in this section and offering for sale a brand of Castoria said to be manufactured by the Morrell Medicine Company of New York. Wednesday Gagnier was in Levant and sold a case of his goods to the Levant grocer, Patrick Murnan. Later Mr. Murnan discovered that the Castoria was not the brand he supposed he was purchasing and he hastened to Falconer and procured a warrant for the arrest of the agent on a charge of obtaining money under false pretenses. Gagnier was taken to Falconer late in the evening and arraigned before Justice Griggs. While denying that he misrepresented his goods Gagnier said he would plead guilty, and he was accordingly fined and released. He also agreed to refund the money Mr. Murnan had paid him.

The above is taken from the Jamestown, N. Y., *Journal* and is further evidence of the risk merchants take in buying through other than regular channels. Fletcher's Castoria is the genuine, everybody knows it, and no responsible druggist will handle an imitation.

### Is this a Joke?

[News item in the *Bismarck, N. D. Tribune* for November 9.]

G. J. Keenan is nearly settled in his new store. He got in a fine lot of drugs and stationery this week and has a new stock of shoes and a lot of hardware coming. He has added a meat market, and if you want to make believe you live in the city just follow the sidewalk down Main street to the corner of Nicollet avenue, step into his store and order a nice steak or some of those sausages.

Every tube of Liquid Carbonate manufactured by the American Carbonate Company is guaranteed as to quality and weight. It may be had in either 20 or 50 pound cylinders. An illustrated catalogue and price list will be sent on application. This is one of the few thoroughly reliable concerns in the line, and we heartily commend their product to the attention of our readers.

A medicament which is growing in importance daily is Thigenol. For a generation physicians have employed soluble sulphur compounds which possessed a nauseous, clinging odor and extremely disagreeable staining properties. Many were the plans and formulae to deodorize these compounds or to mask the odor pharmaceutically, and all without success. It is but natural, therefore, that Thigenol should quickly spring into high favor, since it is the one soluble sulphur compound which is odorless on use, and it causes no permanent stains on the linen of patients. Pharmacists who desire literature on this interesting product can secure it by addressing The Hoffmann-Le Roche Chemical Works, 51-53 Maiden Lane, New York.

The rue Dante, Paris, which has recently acquired celebrity by being chosen by President Loubet for his residence when he retires from the Presidency, is a brand new thoroughfare between the Sorbonne (Faculty of Sciences) and the Place Maubert, in the students' quarter. It will be remembered, says the Paris correspondent of the *London Chemist and Druggist*, that Dante's name having been found inscribed on the list of apothecaries of the city of Florence the poet is claimed as a confrère by Latin pharmacists; his bust in bas-relief figures among those of other pharmaceutical worthies on the façade of the Paris Superior School of Pharmacy.

# Popularity and Price Protection

## POPULARITY

**LAXATIVE BROMO QUININE** originated as the first product of its kind and through merit and continuous extensive advertising it has become an absolutely staple article.

## PRICE PROTECTION

The terms and discounts on **LAXATIVE BROMO QUININE** from the beginning have afforded a most liberal profit, and now, by the adoption of the **DIRECT CONTRACT AND SERIAL NUMBERING PLAN**, this profit is absolutely insured to the retail dealer. The support of this Plan by the Retail Drug Trade demands, simply, that **EVERY INDIVIDUAL** Druggist shall sign the contract. Those who have not done so should sign and have the contract properly recorded without further delay.

## **SPECIAL DATING OFFER**

**JANUARY 1st. 60 DAYS.**

If a supply of **LAXATIVE BROMO QUININE** is needed, or if the stock on hand will permit it, the **DATING OFFER** now in force enables the Druggist to purchase a quantity, obtaining the regular free goods to be delivered at once and invoice dated January 1st, 1906, for cash discount.

## **LAXATIVE BROMO QUININE**

**Price \$1.75 per dozen.**

|  |                                  |
|--|----------------------------------|
| 6 dozen lots, 1 dozen free, . . . . .                          | Cost \$10.50 or \$1.50 per dozen |
| 12 dozen lots, 2 dozen free, 5 per cent. trade discount, " "   | 19.95 or 1.43 " "                |
| 36 dozen lots, 6 dozen free, 8 per cent. trade discount, " "   | 57.96 or 1.38 " "                |
| 60 dozen lots, 10 dozen free, 10 per cent. trade discount, " " | 94.50 or 1.35 " "                |

**WHOLESALE DRUGGISTS WILL ACCEPT ORDERS UNDER THIS DATING OFFER.**

## **PARIS MEDICINE COMPANY,**

**SAINT LOUIS AND LONDON.**

### A New Digitalis Derivative.

Digalen, which is advertised in this issue by The Hoffmann-LaRoche Chemical Works, 61 Maiden Lane, New York, will soon become an important remedy. It has long been recognized that digitalin, which was formerly official and considered to be the active principle of digitalis, is in reality a mixture of several bodies, the most active of which is digitoxin. Despite the potency of digitoxin, however, it has been employed comparatively little owing to its insolubility. Digalen (Digitoxinum Solubile, Cloetta) seems destined, therefore, to become a remedy which will be very largely employed. By reason of its solubility in water Digalen can be used subcutaneously, intravenously, or per os. It was discovered by Prof. M. Cloetta, who ranks with Killiani and Schmiedeberg in his investigation of digitalis and its derivatives. Because of its high potency and infinitesimal dosage Digalen is marketed only in solution in  $\frac{1}{2}$  oz. vials.

### The Advertising Value of Quality.

The Tilden Company, the oldest manufacturers of pharmaceuticals in the United States, direct special attention to the advertising value to the druggist of quality. The druggist who carries a stock of Tilden's pharmaceuticals and impresses that fact on the physicians in his territory will secure that advantage which comes from dealing in goods of known quality.

### Sold Only by the Drug Trade.

The druggist who handles Cudahy's Nutritive Beef Extract need not fear competition from the corner grocer, for this preparation is sold only to the drug trade. It has the indorsement of leading druggists all over the United States, who recommend this as a profitable and ready seller. It has a fine flavor, uniform quality, and is guaranteed to keep in any climate.

### An English Mint Julep.

*The Soda Fountain* tells us that an American, clad in tight and fashionable English clothes, said: "Let me describe to you the English mint julep that I tried in London this summer.

"It came in a slim and glittering glass a foot tall, and on the top was a great fluff of ice cream, and in the ice cream three long stemmed pink roses nodded.

"Is this a drink or a bouquet?" said I.

"It was a drink, and after extracting the roses and eating the cream I found it good.

"It had been made by crushing in water a half dozen sprigs of mint and two lumps of sugar. To this mint tincture there had been added a wineglassful of fine brandy. Then had come a half pint of vintage champagne, then a flooring of cracked ice, then some slices of pineapple, orange and banana, and then a crown of light, smooth ice cream, studded with a few superb strawberries and topped with three fresh roses.

"It was quite a drink, that English mint julep, quite a drink. It left me happy and flushed and twenty shillings poorer."

### Graves' Tooth Powder Placed on the Direct Contract Serial Numbering Plan.

A bold move has been made by the Dr. E. L. Graves Tooth Powder Company in placing their powder on the Direct Contract Serial Numbering Plan, and one which will prove welcome news to the retail drug trade of the United States. The Dr. E. L. Graves Tooth Powder Company is the first manufacturer making toilet articles exclusively to place its goods on the Direct Contract Plan, a fact which should be fully recognized and appreciated by the retail drug trade. The step involves great sacrifices, as it means the cutting off of department stores, etc., which now furnish a large outlet for goods of this class. As the pioneer of toilet goods makers in the adoption of the N. A. R. D. plan the Dr. Graves Company will bear the brunt of the battle and should receive the honor due them for taking the lead.

Of course there are large quantities of these goods now on the market which have no number and which cannot be re-

called by the manufacturers. It will naturally take some time for these goods to be cleaned up, so that if sporadic cases of cutting occur druggists must not assume that the plan is not being lived up to. If you will pitch in and show your appreciation of this action on the part of the Dr. Graves Company other manufacturers will be more apt to fall into line.

### Common Errors in Speech.

Who does not make errors in everyday speech? As a matter of fact, it is very unusual to find any person whose use of the English language is absolutely correct. The following are examples of some very frequent errors or faulty expressions often heard:

"Let you and I go"—should be "you and me."

"I am as good as her"—should be "as she."

"You are younger than me"—should be "than I."

"Come to dinner with John and I"—should be "John and me."

"Between you and I"—should be "you and me."

"Where are you going? Who? Me?"—should be "Who? I?"

"Who do you see?"—should be "whom."

"If I was her"—should be "If I were she."

"Was it him?"—should be "Was it he?"

"Who was it by?"—should be "whom."

These examples of "Faulty Diction" are so common that many people look upon the improper form as being the correct one, and Thomas H. Russell, L.L.B., editor-in-chief of Webster's Imperial Dictionary, has done the public a great service in having written the new book, entitled "Faulty Diction; or, Errors in the Use of the English Language and How to Correct Them," which the publishers have, by printing it on thin Bible paper, succeeded in getting into what may be called vest pocket size.

Illustrating the comprehensive treatment that has been given the subject by the author, there are 1,017 headings treated in the book, under some of which—"plurals" for instance—over 50 errors that are not at all unusual are to be found illustrated and corrected.

It is rarely one's good fortune to become possessed of so valuable a book, and especially one so compact and of as much general interest. It is handsomely bound in embossed Russia leather, and will be sent postpaid on receipt of 50 cents to any address by Geo. W. Ogilvie & Co., publishers, 169 East Randolph street, Chicago, Ill. They also publish the same book in cloth binding, and will send a copy of it in that style on receipt of 25 cents.

### The Wholesale Trade and Antiphlogistine.

E. S. Leadbeater & Sons, the well known wholesale druggists of Alexandria, Va., in a recent letter to the Denver Chemical Company say:

"We will instruct our stock clerk to anticipate our needs for Antiphlogistine and carry a larger stock of same to meet the constantly increasing demands. We take this occasion to thank you for the liberal discounts which you give the wholesale trade and wish to assure you that we appreciate your liberal treatment and in return are always glad to do what we can to promote the sale of your preparation. We believe that we were the first druggists, either wholesale or retail, in this part of the country to carry or handle Antiphlogistine. We carried it in stock long before we ever made a direct purchase from you. It was brought to our notice by an acquaintance of ours, who lived for some years in Denver. We can testify from our own experience to the unusual merit of Antiphlogistine. It is gratifying to us to note that your sales have shown such remarkable increase within the past twelve months."

On the page directly facing the first editorial will be found the advertisement of the old house of E. R. Squibb & Sons, 78 Beekman street. This house properly describes itself as "manufacturing chemists to the medical profession since 1858." The name of Squibb needs no commendation on our part.

### Patent Medicines from the Newspaper Standpoint.

*Collier's Weekly* is conducting a fierce crusade against patent medicines. It claims to have excluded from its columns all patent medicine advertising on the broad ground that the remedies exploited are frauds upon the public. It is undeniably true that some patent medicines are frauds and some are even worse, for apart from the fact that they are not cures for the diseases they purport to cure they are oftentimes positively injurious. But it is likewise true that a great many of these patent medicines are of real worth and some are even recommended by physicians of recognized standing. Almost every physician prescribes certain proprietary remedies, which differ from the so-called patent medicines only in that they are put up more expressly for the practitioner and are not intended for popular consumption. Most of these remedies have the list of ingredients printed on the package, but very few of them state the proportions used. Because some patent medicines are frauds and their use may be positively harmful it is not fair to class all as such. How the publisher is to discriminate we do not know.

If a concern has an honest medicine we see no reason why the public should not be made acquainted with it in the usual way. As to the most effective way of wording the advertisements, manufacturers differ. Some lay stress on the fact that the remedy is not a cure-all, but is an excellent therapeutic agent in certain diseases. Others extend to great length the list of diseases that their remedies will reach, basing their statements mainly on the fact that a train of disorders follows some main cause, and that with the elimination of the cause the other troubles disappear. Some illustrate their advertisements with cuts of persons said to have been cured, precisely as a merchant pictures clothing, neckwear, furniture, kitchen utensils or whatever he may have to advertise. Just as some merchants display better taste than others in their advertisements so do some patent medicine concerns show better taste than others. Some clothing that is advertised does not keep its shape, some furniture goes to pieces, some kitchen utensils quickly leak, but because of this no one thinks of saying that all clothing and furniture and kitchen utensils are frauds on the public and therefore should not be advertised. It is the same with patent medicines. Some are not what they are represented to be. But because some merchants advertise unreliable goods, shall we say that merchants should not advertise? Because some patent medicines are not what they are represented to be, shall we say that no patent medicines should be advertised?

While *Collier's* is to be commended for exposing patent medicine frauds according to its best lights, it seems to be somewhat inconsistent in its position. It advertises a soap that is guaranteed to cure all sorts of skin disorders. Undoubtedly the article has merit, but does *Collier's* know it will do all that is claimed for it? The magazine would not perhaps advertise a liquid hair restorer, but it does not hesitate to lend its columns to the exploitation of a mechanical device to make hair grow. It tells you to drink a certain kind of beer if you would have health and strength as against pain and remorse. Flatfoot, rheumatism of the feet and kindred ailments the columns of *Collier's* tell us can be speedily cured by a device worn inside the shoe.

Some people may think that mechanical hair growers, mechanical rheumatism cures and soaps that produce peach-like complexions are quite as fraudulent in their claims as anything put up in the form of a patent medicine.

All sorts of legislation has been proposed to deal with this so-called patent medicine evil, but none of it has been satisfactory from the standpoint of the public, while all of it has been unjust from the standpoint of fair play to the manufacturer. All laws thus far proposed have been so sweeping in character as to make no discrimination between the really meritorious remedy and the medicine that is a fraud or worse. The crusade which *Collier's* is conducting makes the same mistake. It recognizes nothing good in a patent medicine, although any physician will tell it that many patent medicines are of

value. A Springfield physician has been offered \$10,000 by a patent medicine concern for the formula of a certain remedy he has used with marked success in his private practice. If he should sell the formula and the remedy be put upon the market as Dr. So and So's cure it would be under the ruling of *Collier's* a fraud, and its advertisements should be excluded from the columns of every reputable journal.—*Springfield, Mass., Republican.*

### A Prescription.

#### SPASM I.

'F you've got a hoodoo-microbe  
An' you really want to kill it,  
Here's a rattlin' good prescription,  
An' it don't cost much to fill it;  
When your liver's numb and lazy  
An' your stomach's out of whack,  
When your eyes are getting hazy  
An' your voice begins to crack,  
Go to Nature's sanatorium  
And stay a month or so,  
For there's health an' joy galorium  
Where the pine trees grow.

#### CHORUS (The Prescription):

R Mix some summer sunshine  
With some mountain air and dew,  
Take a dose of out-door scenery—  
If it doesn't work, take two;  
Put a little woodland climbing  
In some Oil of Pure Delight,  
Exercise and plenty of it  
Taken morning, noon and night;  
Get some Extract of Ambition  
And a little Sportive Strife,  
(For a tonic nothing's better  
Than a month of mountain life);  
Fill your lungs with air and ozone,  
Let the perspiration run,  
Mix it, shake, and take it daily  
With a fishing rod or gun.

#### SPASM II.

I have tried the salts and senna,  
Sassafras, an' all such dope,  
From their patent panaceas  
To their pills of bread and soap;  
But the best and surest physic  
Is the sunlight of the hills,  
If will wake your liver quicker  
Than a ton of blue-mass pills;  
If you're feelin' like the devil  
An' your hopes are ebbin' low,  
Then it's time to take a revel  
Where the pine trees grow!

#### CHORUS.

R *Semper idem.* Only double the dose.

#### SPASM III.

If you've tried this old prescription  
For a half-a-year, or more,  
An' your liver's still a-dreamin'  
In its Rip Van Winkle snore—  
If you're still a feeling meaner  
Than the villain in the play—  
Just as though the world in general  
Was a standin' in your way—  
If the huntin', climbin', fishin',  
Fail to cut the needed figure,  
Get a gun that "isn't loaded,"  
Turn it on, an' pull the trigger!

—T. Shelley Sutton in the *Pacific Coast Magazine*.

The druggist who does not carry Dentacura in stock is missing an important and growing sale, for this product has not only been extensively and persistently advertised, but is of such peculiar efficacy that dentists and users find good reason for recommending it. We invite the attention of our readers to the advertisement of the Dentacura Company, of Newark, N. J., which appears in this issue.

It is high time for any druggist who is not fully prepared for the hot drink season to "get busy." Cold weather will be here soon, and failure to be able to cater to the demand for hot drinks will mean loss of trade, which it will be hard to make up later. Very complete outfits and splendid offers are made by Armour & Co. The company gives a handsome carnation china urn free with every carnation china urn case. The case contains, beside the china urn, attractive hangers and display signs, china mugs, four 2-pound jugs of Vigora, one 12-ounce bottle of tomato bouillon, a 5-pound bottle of same, fluid beef, French bouillon, chicken broth, etc. Each case contains supplies to make about 2000 drinks. The cost of the case is \$25 east of the Missouri and \$30 west. Send for catalogue which gives particulars of this and other offers.

**Tomorrow  
Is the  
Day  
That  
People  
Order  
Things  
That  
Never  
Get them**

THIS must be so or we wouldn't be saying it—and perhaps you know of some things you were sure you were going to order "tomorrow" that haven't showed up yet. We would like to suggest that TODAY you write us asking for a trial package of our handsome and impressive advertising matter that sells the goods. We've been offering this trial package of expensive printed matter which, together with the express, costs us over a dollar, for one cent—the price of a postal card—and we'll keep on offering it in the hope that we'll catch you tomorrow if not today. Our advertising matter in your store will increase your sales; it positively will; and you won't have to order a penny's worth of our goods till you want to. We're doing a lot of high-class magazine advertising, and the counter advertising supplements this and adds to its value. Let us send you the package today—to increase your business.

**MRS. GERVAISE GRAHAM,**

**Case Record**

# System for Physicians

We have devised a Case Record System for physicians for recording all the information concerning each patient, including treatment and prescription. Every physician knows the value of being able to refer to cases similar to those under his immediate care, and this system becomes one of his most valuable assets. The cards are so arranged that any patient, or the prescribing for any disease, can be referred to instantly, furnishing a double or "cross" index. It is the most practical and convenient arrangement known, and one that is very popular with the medical profession.

**\$2<sup>75</sup>** Cash with order, *express prepaid*, buys this **complete** outfit consisting of

**One Desk Drawer Case**, made of solid quarter sawed white oak, best golden wax finish and hand rubbed; equipped with an adjustable follower-block for keeping contents in an upright position at all times; 9 inches long, for 4x6 in. cards, with felt feet to protect desk.

**200 4x6 Ruled Cards**, highest quality medium weight linen bristol, white, pen-ruled in colors, printed and tabbed.

**One Set 4x6 25-Division Alphabetical Guides**, made from heavy weight buff, linen bristol, for indexing cards.

It is worth at retail \$4.50. We offer it at this very low price simply to advertise our labor-saving systems for physicians' use. Mention this ad and publication.

## Profitable Perfume Points

**N**OW is the harvest time in perfumes and if you grasp the opportunity we offer, you can do a larger and more profitable business than is possible in any other way. By our plan you can carry a larger line, make larger profits and give your customers greater satisfaction and still invest a smaller sum in stock.

### LETTER OF ONE DRUGGIST

"I have been agreeably surprised and pleased with the results obtained from your Absolute and Floral Essences. My best customers, after sampling the different manufacturers' perfumes I carry, invariably select those made from your Essences. When the merits of these Essences become known to the retail drug trade they will be very generally used."

### WHAT ONE FIRM SAYS

"That your Floral and Absolute Essences have pleased both our trade and ourselves is sufficiently evidenced by the repeated orders sent you."

The finished product compares favorably with foreign manufacturers' costing quite as much wholesale as we would be pleased to sell for at retail."

Which gives minute details of our Absolute and Floral Essences by which you can manufacture perfumes equal to the finest imported brands for much less than you pay for inferior manufactured products.

**LEHN & FINK 120 William Street NEW YORK**

# ORIGINAL PACKAGE PRICES.

It should be understood that the prices quoted in this column are strictly those current in the wholesale market, and that higher prices are paid for retail lots. The quality of goods frequently necessitates a considerable range of prices.

## Prices Current.

The outside prices quoted are for such quantities as retailers usually purchase. When purchasing original packages the inside quotations should be expected, while a slight advance over the outside quotations given may be demanded for very small lots. Current commercial quality is understood unless otherwise indicated. For extra quality or for specified makes a slightly higher price will have to be paid.

**Thigenol** The one soluble sulphur compound that is odorless on use.  
\$4.00 lb. \$0.32 oz.

**Airol** An odorless wound antiseptic; three times as bulky as iodoform.  
\$1.00 oz.

**Digalen** *Digitoxinum Solubile, Cloetta.*

A distinct advance in digitalis medication. Marketed only in solution, because of infinitesimal dosage, in ½-oz. vials, \$1.00.

Stocked by the Wholesale Drug Trade.

Literature, for your own files or for distribution among local physicians, on request.

Has it a conspicuous place on your shelves? Are you pushing its sale?

There are good reasons why you should be able to answer "Yes" to all these questions.

It is an exceptionally good emulsion—permanent, palatable, nutritious. It is a capital seller. It yields a generous profit. It has the favor of the medical profession.

PRICE TO THE TRADE:

Per dozen pint bottles, net, \$7.50.

# PARKE, DAVIS & COMPANY

### A Woman Appointed Assistant Professor of Pharmacy at Purdue University.

Hartford City, Ind., December 14.—Miss Daisy Emshwiller, of Montpelier, who is a sister of Prosecutor Ashley G. Emshwiller, of this city, has accepted the position of assistant instructor in the pharmacy department of Purdue University, at Greencastle. The place was tendered by Prof. A. L. Green, dean of chemistry at that institution, and Miss Emshwiller will enter on her duties January 1.

Miss Emshwiller is a daughter of John Emshwiller, the oldest druggist in northeastern Indiana. He has owned the store in which Miss Emshwiller is now interested at Montpelier for the last 45 years. Miss Emshwiller accepted the Blackford county scholarship of the university, spent two years in the institution and was a graduate of the class of 1905. She had the distinction of being the only young woman in the class and attained the highest honors possible as a student. She is not only a striking young woman in appearance, but a first-class business woman as well.

### A Commercial Training for Swiss Pharmacists.

The *Société Suisse des Droguistes* consider that the practical knowledge of Swiss pharmacists' assistants is insufficient for modern requirements, and have established at the Neuchâtel Commercial School a special class for pharmacists. The first term commenced on October 2, and will last until July 16, 1906. The Société is giving a certain number of scholarships to its young members who desire to attend the school. The programme of instruction includes organic and inorganic chemistry, chemical technology, practical chemistry, photography, physics, pharmacy, book-keeping and commercial arithmetic, commercial and special law, French, German, English and Italian.

### Druggist Kills Customer.

Charles Stevenson, a druggist at Herndon, Kan., killed a man the other day rather than sell him a drink of whiskey. John Tutt went into the drug store and asked for a drink. Stevenson refused to sell it to him. He said he would have it if he had to get it by force, whereupon Stevenson picked up a revolver. That didn't frighten Tutt. He said he might as well be dead as not to be able to get a drink of liquor, and brushing the druggist aside started for the liquor bottle. Stevenson then shot and killed him. It is the first time on record that a Kansas druggist committed murder to keep from violating the prohibitory law.

### Quinine Sold by the Italian Government.

According to the *Bollettino-Chimico Farmaceutico* the figures relative to the great increase in the sale of State quinine in Italy during the last working year have just been published. From July 1, 1903, to June 30, 1904, the sales amounted to 6,174 kilos value 672,927.40 lire, with a profit of 183,038 lire; while for the year 1904-1905 now quoted the sales weighed 14,061 kilos quinine, value 1,150,597.85 lire, with a profit of 183,382.47 lire, which has been allocated to the fund for combating the malaria. As for the current year the sales up till now have again increased by one-third.

### Registered in Alabama.

At a meeting of the Alabama Board of Pharmacy held in Montgomery, Ala., October 18 and 19, the following candidates for licenses were successful:

W. W. Perdue, Farmersville; J. W. Payne, Scottsboro; R. A. Hamrick, Montgomery; H. G. Chandler, Mobile; S. M. Mims, Greensboro; J. O. Kelly, Saltpa; J. H. Moore, Eutaw; R. A. Gunber, Montgomery, and T. L. Barrett, Pratt City.

It was resolved that after January 1, 1906, the board would require all applicants for examination to conform to the Eighth Revision of the U. S. Pharmacopœia in their answers, and that after that date all druggists in the State would be required to make their official preparations by the new Pharmacopœia.

The next meeting of the board will be held in Birmingham, February 14-15, 1906. Applications should be filed in advance with E. S. Galt, Secretary, Selma, Ala.

### Registered by the Arkansas Board of Pharmacy.

At the November examination held by the Arkansas Board of Pharmacy the following were registered, having obtained the required 70 per cent.: W. R. Christoppe, Gregory; J. H. Ray, Lavacca; C. G. Rosa, Mountain View; W. C. Alston, De Queen; J. K. Mast, De Vallis Bluff; Jas. R. Pugh, Earle; Earle S. Green, Jonesboro; A. D. Bunn, Humphrey; C. E. Ellis and C. J. Humphreys, jr., Hot Springs; I. Kaufman, Pine Bluff, and J. A. Guise, Hartford. The next examination will be held at Hot Springs, Ark., May 11, 1906. Applications should be filed with Secretary J. W. Biedelman, Little Rock.

### A New Office Created for Mr. Daniels.

Geo. H. Daniels, who has been for many years the general passenger agent of the New York Central Railroad, has been made manager of the General Advertising Department of all the New York Central lines, including the New York Central & Hudson River Railroad, the Rutland Railroad Company, the New York & Ottawa Railway Company, the St. Lawrence & Adirondack Railway Company, the Lake Shore & Michigan Southern Railway Company, the Cleveland, Cincinnati, Chicago & St. Louis Railway Company, the Michigan Central Rail-

road Company, the Lake Erie & Western Railroad Company, the Indiana, Illinois & Iowa Railroad Company, the Indiana Harbor Railroad Company, the Lake Erie, Alliance & Wheeling Railroad Company and the Dunkirk, Allegheny Valley & Pittsburgh Railroad Company. Mr. Daniels, whose portrait is presented herewith, is well and widely known among newspaper men all over the United States, and the creation of this new office for him is a tribute to the effectiveness of his work in the newspapers on behalf of his lines.

### Running No Risk.

"Indeed," she told the druggist's clerk, "I don't know what to do—These patent remedies hold risks of which I never knew; This week I've read of lots of them and find that alcohol is made the base—how terrible—of nearly each and all." The druggist's clerk said that the doctors frowned on competition; However, it might be well to exercise discretion.

"But can you tell," she asked the clerk, with something like a shrug, "If I am apt to get a craze for spirits or for drug? I shudder when I think of how I may be tempting fate, And possibly become a slave to drink or opiate." The clerk remarked: "I know it's true the magazines abuse 'em, But as to all these remedies, there's lots of people use 'em." She bit her lips, she frowned, and thought, she rubbed her dimpled chin, Then sighed in fretful wise and said: "I'd think it was a sin If I should"—then upon the soap and powder case she leaned—"If I should wake an appetite and be a liquor fiend!" The clerk said: "Really, Miss, some folks can go and get a habit From using stuff that wouldn't phase the make up of a rabbit."

"Well, if you're sure," she murmured then, "I really think that I Will, just this once, test what I have been often urged to try." The clerk turned to the shelf of cures and asked: "Which is it, please?" His hand uplifted, ready on the chosen one to seize, She blushed and said: "My family, my closest friends and pastor Advise me that it's what I need. I'll take a porous plaster!"

—W. D. N. in the *Chicago Tribune*.

# AKARALGIA MERRELL

A new and most attractive form of exhibiting the valuable properties of pure Sodium Salicylate,  
(From Natural Wintergreen Oil)  
overcoming chronic migraine by single daily doses.

Persons who deal in drugs, but who do not write prescriptions, must pass a "limited" examination showing a general knowledge of the nature and effects of various drugs.

#### PATENT MEDICINES AND TRADEMARKS.

By a treaty between the Greek and United States Governments (1894) the Hellenic Government gave citizens of the United States the same rights as its own subjects in all that relates to the registration and protection of trademarks.

When the applicant resides in a foreign country he must name or appoint an attorney in Athens and prove registry in his own country. Proof of registration in the United States must be authenticated by a certificate from a Greek Consul in that country. The attorney must not only take the necessary steps to secure the registration of the trademark, but shall also continue to be the legal representative of the applicant before the tribunals of the kingdom should there be any infringement of his trademark in Greece.

Application for registry of trademark must be made by the local attorney of the applicant, and must include a description of the mark, three copies of the mark upon detached paper, 8 x 10 centimeters, a metal typographical block of the same dimensions, the products to which it is applied, whether used in relief or intaglio, and a receipt for the fee. The fees and expenses are: For registration fee (gold), 60 drachmas; for stamps and copies, 12 drachmas; for attorney, 30 drachmas.

Specialties imported in bottles pay a duty on liquids of 2.70 drachmas per oke, 40 per cent. off for tare solids in bottles, 5.40 drachmas per oke, 50 per cent off for tare. Goods in paper boxes (pills, tablets, etc.) pay 6.75 drachmas per oke; no tare allowed.

An oke is 2.82 pounds avoirdupois, and the custom house here reckons the drachma at 1.35 to the gold franc.

#### American Surgical Dressings in the Orient.

The *Pharmaceutical Journal*, of London, in referring to the trade of Hong Kong and the classes of goods to which preference is given the American, British, German and French manufacturer, says that in dressings the American manufacturer is said to outclass all competitors.

The actual trade of this colony amounts to over £20,000,000 per annum, Hong Kong being the center of a large trade in various kinds of produce. The British manufacturers control the business in drugs and chemicals, buyers placing most confidence in them, although their prices are above those of foreign competitors. As regards medicines, most of the new remedies are of German and American origin. Surgical instruments of British manufacture are considered the best, and are almost invariably preferred by local surgeons, who, as a rule, buy direct from home. On account of their high price they are undesirable stock for the retailer to hold; cheaper instruments of foreign origin suit the Chinese doctors. As regards such articles as brushes, rubber goods and earthen ware, English manufacturers again take the lead, but in glassware the English are entirely outclassed by the Germans and French.

#### HIGH QUALITY OF AMERICAN GOODS.

In surgical dressings the American manufacturers outclass all competitors. Their success, says our informant, is due to the high quality of their goods, the close observance of scientific principles embodied in their ingenious and elegant packages, their energy in sending out traveling representatives, and their keeping in touch with their buyers by the regular posting of pamphlets and occasionally personal letters. The plainer and more useful toilet articles are of British origin, but the fancy and more expensive lines come from France. The class of medicines for which there is the best sale includes medicines for venereal diseases, tonics, alteratives, salines, antipyretics and antiseptics. Proprietary medicines are in moderate demand. The French captured the market for fancy soaps and toilet articles many years ago; their products are most elegant. The Germans are also beginning to make headway.

There is a fair demand for surgical instruments, spectacles, photographic cameras, plates, paper, etc. British traders who wish to further their trade with this colony should send out representatives, including Hong Kong in their tour, send a set of samples to likely buyers or appoint local agents to get up elegantly printed and illustrated price-lists, which should contain all information necessary for the buyer to judge of what he is buying, and avoid missing such an important detail as the dimensions of the goods for sale. It is also advisable to find out the names of buyers, and circularize them regularly. In the case of proprietary articles, a copy of the Hong Kong directory should be obtained and circulars posted to all the leading residents.

#### A Visitor from the South.

The welcome news reaches us that Señor José F. Portugal, a well-known wholesale and retail druggist in Arequipa, Peru, contemplates making his first visit to America in March, 1906, his principal object being to attend the graduating exercises of his son, José F. Portugal, Jr., at the Philadelphia College of Pharmacy.

Señor Portugal is probably the largest importer of drugs, chemicals and proprietary articles, also surgical instruments and hospital, as well as physicians', supplies of all descriptions, in southern Peru, because his trade is very widely distributed throughout the whole of that portion of his country. In his establishment, which is equipped in a thoroughly modern manner, we understand that there are employed 21 clerks in the various departments, seven being required in the prescription department alone. His orders for drugs, proprietary medicines, etc., from the United States have been large for a number of years past and are increasing, and Señor Portugal is regarded as being favorable to still closer commercial relations between the United States and Peru. His opinion of our standing and pharmaceutical technique is evidenced by the fact that he sends his son to this country to study pharmacy instead of sending him to Germany, France or England, where most young men go from the southern countries.

Señor Portugal will probably be accompanied on his visit by the Misses Portugal, two very charming young ladies, as we have been told, and possibly by Mrs. Portugal.

#### Drugs and Chemicals in Japan.

*Daily Consular and Trade Reports* for November 7 contains an interesting report on trade conditions in Japan contributed by Special Agent Crist, from which we take the following reference to drugs and chemicals:

The standard required in Japan for drugs and chemicals is the *Pharmacopœa Germanica*, fourth edition. In all tests and analyses made of imported chemicals and drugs a strict technical compliance with the requirement is observed. This rigid interpretation of the German standard has led to the rejection of chemicals received from America, which for all practical purposes have conformed to the United States Pharmacopœia, a standard equally exacting. Notice should be taken by manufacturing pharmacists in America of this technical requirement. Germany supplies the bulk of the fine drugs and chemicals in this market, while much of the heavy chemicals come from England. The fact that prices offered by English concerns are much lower than those by American houses is sufficient reason for purchase in that market. As a fair illustration of the relation between prices it may be stated that carbolic acid is quoted by a large American drug house at 26 cents per pound in 50-pound cans, while an English concern quotes 13 cents. Acetic acid is offered at 10 cents per pound by manufacturers from both countries. From these prices English concerns give discounts of 2, 5 and even 10 per cent., with an alternative of extended time on the quoted price, and Americans allow no discounts, requiring cash with each order. Borax is consumed to a considerable extent, but England and Germany divide the market of \$25,000 annually between themselves. With prices averaging around £12 10s. per ton, f.o.b. London, it would seem that from the almost limitless output of this product in America the market could readily be supplied.

# Popularity and Price Protection

## POPULARITY

LAXATIVE BROMO QUININE originated as the first product of its kind and through merit and continuous extensive advertising it has become an absolutely staple article.

## PRICE PROTECTION

The terms and discounts on LAXATIVE BROMO QUININE from the beginning have afforded a most liberal profit, and now, by the adoption of the DIRECT CONTRACT AND SERIAL NUMBERING PLAN, this profit is absolutely insured to the retail dealer. The support of this Plan by the Retail Drug Trade demands, simply, that EVERY INDIVIDUAL Druggist shall sign the contract. Those who have not done so should sign and have the contract properly recorded without further delay.

## **SPECIAL DATING OFFER**

**JANUARY 1st. 60 DAYS.**

If a supply of LAXATIVE BROMO QUININE is needed, or if the stock on hand will permit it, the DATING OFFER now in force enables the Druggist to purchase a quantity, obtaining the regular free goods to be delivered at once and invoice dated January 1st, 1906, for cash discount.

## **LAXATIVE BROMO QUININE**

**Price \$1.75 per dozen.**

|  |                                  |

## News of the Pharmacy Boards.

### Registered in Pennsylvania.

Philadelphia, December 4.—There is to be one more examination of applicants who are desirous of practicing the drug profession in Pennsylvania before the new law goes into effect. At the October examination held by the State Pharmaceutical Examining Board in Philadelphia and Pittsburg there were 558 applicants for certificates, of which 287 secured certificates as pharmacists and 90 as assistants. Out of this number 181 failed, which is equal to almost 30 per cent. The following applicants from this city passed successfully:

Registered pharmacists—Howell G. Crothers, William M. Neller, Henry A. Fistel, Albert O. Darrow, Benjamin C. Snyder, Wilbur C. Strawinski, Arthur E. Shirer, Jeremiah T. Roach, Anderson E. Sells, J. Howard Frick, M.D., Thomas F. A. O'Connor, Charles C. Weakley, Samuel G. Shepherd, Maxwell M. Becker, Samuel Castor, George E. Merscher, Louellen A. Peters, Charles G. Hanschild, Alexander W. Herman, Hanna W. Slifer, Katie M. Davidowitch, Rebecca E. Killon, Sister Pauline Strable, Sister Euphemia Murray, Sister Mary Bennet, Edward H. Raker, Guy B. Fitch, Edmund G. Harkness, Joseph P. Stein, Charles F. Myers, Harry B. Holland, Charles A. Monaghan, George Krouse, Howard B. McAllister, Erwin H. Erney, Joseph A. Quinn, Henry Picarelli, Thomas B. Doud, Harry M. Linde, Benjamin H. Jenkins, William F. Schlitzer, Earl Y. Fetterly, Alexander F. W. Mackie, Harry W. Wilson, Samuel Kramer, Isidor Priluker, Robert W. Moss, George W. Skeath, Daniel W. Crittendon, Charles R. Gramer, Hamilton Russel, Celia J. Lubin, William H. Schenmel, Edwin W. Bray, Frederick Slandi, Willis A. Ossman, Samuel Kaufman, Joseph Weber, Jr., Raymond A. Acuff, Frank M. Garton, Harry Dixon, Albert W. Hassenplug, William A. Rabb, Henry S. Fitch, Mack T. Ringer, Samuel R. Lazowski, Charles Kramer, William W. Wittmer, Frederick Becht, Matthew Welsband, B. Russel Hurst, Darnley W. Catford, John K. Stouffer, Charles A. Walter, Jacob M. Faust, Robert J. Keller, Paul R. Donmoyer, Harry L. Snyder, Luther H. Gage, William Major, John P. Krause.

Registered qualified assistant pharmacists—Charles F. Kennedy, Frederick J. Burt, Pressly L. Morehead, Garline Gnass, Walter E. Smith, William Ganter, Michael J. Lovenstein, David S. Grossman, Maurice Mervine, Martin K. Glassman, Harris Kimmelman, Jacob F. Ebert, Max B. Savitz, Boyd A. Santer, George E. Fisher, Harry C. Zelsig, Samuel C. Goodman, Charles Leibel, Oliver G. Billings, Charles Welsband, Bernard L. O'Connor, Bertha Whaland, Walter G. Brown, Arthur G. Kochler, Frank Clebo, Joseph Murray.

The next meeting will be held in Philadelphia December 3.

### Registered in Michigan.

The Michigan Board of Pharmacy held a meeting at Grand Rapids on November 21, 22 and 23. There were 47 applicants present for registration as registered pharmacists and 41 applicants for certificates as registered druggists. The following is a list of those who received certificates as registered pharmacists:

Roy E. Bodimer, Vassar; Charles A. Carter, Sandusky; John Courtney, Detroit; F. W. Erwin, Battle Creek; C. J. Gallagher, Port Huron; John Heyboer, Grand Rapids; John J. Mercer, Bay City; William McGregor, Big Rapids; Charles L. Pickel, Clare; Ashley B. Rice, South Haven; William P. Reed, Calumet; Charles J. Sparks, Saginaw; Horace B. Williams, M.D., Marlette; J. R. Cowdrey, Ithaca; Roy L. Cook, Calumet; I. A. Dowsett, Battle Creek; A. C. Fankboner, Grand Rapids; Dwight Goodrich, Marcellus; Dent E. Murray, Jackson; Walter E. Meyer, Adrian; Arthur W. Peterson, Manistee; Ernest J. Plotrowski, Manistee; George E. Reay, Onoway; Bernardus Schutte, Grand Rapids, and J. J. Graham, Saginaw.

The following is a list of those who received certificates as registered druggists:

Harry L. Allen, Cadillac; Leon J. Campbell, Muskegon; Alfred Duquoy, Alpena; George G. Field, Bay City; P. K. Gage, Detroit; Don M. Griswold, Grand Rapids; Will Gleason, Marlette; Robert S. Jennings, Charles King, Maple City; Frank W. Keillor, Clifford; Max Ladwig, St. Joseph; Albert Mallard, Detroit; Warner McSweeney, Reed City; Claude A. Randall, Grand Rapids; Ernest Stegmeyer, Saginaw; E. J. Van Sickland, Clifford; M. J. Watters, Marlette; Arthur Blakely, Tuslain; Clark B. Cretsinger, Kalamazoo; Leland A. Foster, Chelsea; William H. Grinnell, Midland; Lee Garvey, Mt. Pleasant; Joseph H. Grazeadel, Port Huron; Chris. Hansen, Ludington; E. Walter Jongejan, Grand Rapids; John P. Kowalski, Manistee; William S. Leach, St. Clair; Clyde R. Livings, Jackson; Thomas Martin, Grand Rapids; Roy A. Randall, Grand Rapids; Henry Ratz, Howell; William Settersten, Menominee; John Van Holt, Kalamazoo; and A. A. Woolpert, Kalamazoo.

The next meeting of the board will be held at Ann Arbor January 16, 17 and 18, 1906.

### Registered by the Kansas Board of Pharmacy.

At a meeting of the Kansas State Board of Pharmacy, held at Hutchinson, Kan., November 15, 1905, there were 43 applicants present to take the examination, 23 of whom passed the examination and were registered. The following are the names of those who passed:

Louise B. Buford, Nickerson; James W. Brown, Topeka; T. D. Blasdel, Haven; Ed. B. Cummings, Bronson; A. B. Cleverdon, Leavenworth; L. L. Cole, Hutchinson; Elmer Finley, Ft. Scott; E. R. French, Herndon; Walter I. Hess, Humboldt; H. W. Kessel, Pittsburg; O. R. Kearby, Edna; Mart P. Kuhn, Toia; Mamie A. Mullenbruch, Fairview; Mrs. William B. Roche, Geneseo; Otto H. Rummel, Waterville; John

Routsahn, Leavenworth; W. H. H. Smith, Alta Vista; Alex. H. Tripod, Bucklin; Eva H. Tillotson, Newton; Arthur Tarbet, Florence; Hugh Wallace, Phillipsburg; W. Ogden Weeks, Mankato, and John H. Waterman, Washington.

Assistant Pharmacist: Nora Clymer, Greenburg.

W. J. Janeway, Crestline, was registered since the last meeting of the board by virtue of being a graduate of a recognized college of pharmacy.

Since the last meeting of the board duplicate certificates were issued to Frank B. Broderick, Holton, and James H. Field, Winchester.

Following are the names of those who were restored to the register during the last quarter:

W. D. Groff, Nortonville; H. G. Ferris, Moline; Taylor Riddle, Jr., Alton; Henry J. De Vries, Helper; C. H. Kerr, Independence; Albert N. Miller, Junction City; E. P. Miller, Junction City; A. L. Ross, Chanute; Clarence A. Carter, Junction City; Frank Hardesty, Chanute; John H. Bordeaux, Wichita; C. W. Baldwin, Osborne.

Licenses were issued to the following merchants during the past quarter:

E. P. B. Wilder, Sharon Springs; O. J. Benson, Gove City; Skonberg Bros. & Co., Rapp; J. W. Bean, Seward; W. W. Stice, Beman; F. V. Frankenstein, Alexander; R. N. Rahn, Broughton; M. F. Roller, Rexford; B. F. Cantrell, Barnard; M. D. Smith, Mortimer; John Wall, Clonell; V. H. Wagner, Alden; H. C. Hamlet, Crestline; B. H. Jordon, Waldron; Rein H. Wohler, Rossett; L. S. Derby, Clayton; George S. Hoerath, Herkimer; J. G. Pettet, Basehor; O. J. French, Corbin.

The next meeting of the board for examination will be held at Atchison, February 15, 1906, beginning at 9 a.m. Those desiring to take the examination should notify the secretary, W. E. Sherriff, Ellsworth, at least five days before the date of meeting, who will furnish the necessary blanks on application.

### The Illinois Board.

At the meeting of the Illinois State Board of Pharmacy in Chicago November 13-12 23 of the 55 applicants for registered pharmacist, 15 of the 28 applicants for assistant pharmacist and 8 out of a class of 12 applicants for locality registration were successful. Their names follow:

Registered Pharmacist—Lee E. Ennis, Samuel M. Farrar, Ray Porter Kile, Cornelius F. Koehler, Arthur F. Kohn, Henry J. Krueger, Charles F. Lenz, Michael J. Markowski, Clarence S. Norton, John G. Roesing, George L. Scharringhausen, Hugo J. Schumm, Julius H. Schmidt, Fred L. Shelby, August Sundline, John A. Thomas, Isaac Leslie Walton, Wallis B. White and David Zamentowsky, of Chicago, and Ethelyn Belle Arnold, Watseka; Bertram L. Briethaupt, Peoria; Edwin V. McAllister, Geneva, and Adolph A. Puhl, of Fairbury.

Assistant Pharmacist—Frank H. Cavanagh, Edward De Stefano, Henry L. Eberhardt, Thomas M. Glenn, George F. Haffner, William M. E. Hawk, George N. Huard, John D. Lyons, Herbert A. Petry, Will C. Quinn, Frederic G. Ruggles, Harvey A. Waston and Rufus E. G. Zaleski, of Chicago; John A. Klingstedt, Rockford, and Thomas J. Mulligan, Braceville.

Locality Certificates—Corydon DeKalb Bundy, Broadlands; J. Ottis Hart, Carrier Mills and Carl E. Tragardh, Rockford; Frank C. Cooper, Solomon Epstein, Fred L. Fanaff, Peter P. Jirka and Carl A. Strom, all of Chicago.

The next meeting of the Board of Pharmacy for the examination of applicants for registration will be held in Springfield on Tuesday, January 16, 1906.

On Tuesday, February 20, 1906, the board will hold a meeting in Chicago for the examination of applicants who have not heretofore passed the preliminary test required by the board. On the following day, Wednesday, February 21, an examination will be conducted for those who have passed the preliminary examination required by the board.

The board has suspended the registered pharmacist certificate of John S. Roach. Roach passed a successful examination before the board, but it later developed, according to F. C. Doods, the board's secretary, that he had filed fraudulent affidavits in support of his application for registration.

### Close Their Stores at 9 P.M.

Druggists of Waynesboro, Pa., have decided to close their stores at 9 p.m. The agreement took effect October 2 and is to remain in force until April 1.

**Professor Lloyd and Mark Twain's Birthday.**

At the birthday dinner to Mark Twain at Delmonico's on Tuesday, December 5, which was attended exclusively by writers, men and women, pharmacy was well represented by one of its most eminent exponents—a gentleman who has also attained fame in literary fields. This was Prof. John Uri Lloyd, of Cincinnati, author of "Etidorpha," "Stringtown on the Pike," "Red Head" and other novels and tales of the imagination. The speech of the guest of the evening was in Mark Twain's most characteristic style. Having reached his seventieth birthday, he undertook to teach others how to live to be seventy in the following terms:

We have no permanent habits until we are forty. Then they begin to harden, presently they petrify, then business begins. Since forty I have been regular about going to bed and getting up—and that is one of the main things. I have made it a rule to go to bed when there wasn't anybody left to sit up with, and I have made it a rule to get up when I had to. This has resulted in an unswerving regularity of irregularity. It has saved me sound, but it would injure another person.

In the matter of diet—which is another main thing—I have been persistently strict in sticking to the things which didn't agree with me until one or the other of us got the best of it. Until lately I got the best of it myself. But last spring I stopped frolicking with mince pie after midnight. Up to then I had always believed it wasn't loaded.

And I wish to urge upon you this—which I think is wisdom—that if you find you can't make seventy by any but an uncomfortable road, don't you go. When they take off the Pullman and retire you to the rancid smoker, put on your things, count your checks and get out at the first way station where there's a cemetery.

I have made it a rule never to smoke more than one cigar at a time. I have no other restriction as regards smoking. I do not know just when I began to smoke; I only know that it was in my father's lifetime and that I was discreet. He passed from his life early in 1847, when I was a shade past eleven. Ever since then I have smoked publicly.

To-day it is all of sixty years since I began to smoke the limit. I have never bought cigars with life-belts around them. I early found that those were too expensive for me. I have always bought cheap cigars—reasonably cheap, at any rate. Sixty years ago they cost me four dollars a barrel, but my taste has improved latterly, and I pay seven dollars now.

As for drinking, I have no rule about that. When the others drink I like to help; otherwise I remain dry, by habit and preference. This dryness does not hurt me, but it could easily hurt you, because you are different. You let it alone.

I have never taken any exercise except sleeping and resting, and I never intend to take any. Exercise is loathsome. And it cannot be any benefit when you are tired; I was always tired. But let another person try my way and see where he will come out.

I desire now to repeat and emphasize this maxim: We can't reach old age by another man's road. My habits protect my life, but they would assassinate you.

**The Murine Eye Remedy Company's N. A. R. D. Offer.**

The Murine Eye Remedy Company, of Chicago, offers to the N. A. R. D. \$1 out of every \$6 received on their special coupon offer. This offer gives 100 per cent. profit on the goods to the retail druggist. These coupon offers are being mailed to the retail drug trade who, if they want to help secure profit for the N. A. R. D., should fill out the \$6 coupon order blank, attach it to the original contract and forward both to the Murine Eye Remedy Company, Chicago, keeping the duplicate contract for reference. The goods offered are staple sellers, and being extensively advertised can be stocked with safety.

**May Inherit \$180,000.**

Anderson, Ind., November 24.—If he has not been deceived by a letter from New Yorkers who represent that they are closing up the affairs of his uncle, Henry Gante, a druggist of this city is in a fair way to inherit \$180,000. The letter represents to Mr. Gante that his uncle, Emanuel Gante, had died recently at Barcelona, Spain, leaving a fortune of more than a million dollars and that Mr. Gante, of this city, is entitled to a nephew's share of \$180,000. Mr. Gante knows nothing of the fortune, but he says he had an uncle abroad.

**Recent Customs Decisions.**

According to a decision of the Board of General Appraisers on the protest case of Catton, Bell & Co., Little's sheep dip, the main component of which is a product of coal tar, is dutiable at 20 per cent. ad valorem as a coal tar product. The board held that it was not a chemical compound, but rather a mechanical mixture, the chief ingredient of which is a derivative of coal tar, and therefore assessed it as a coal tar product, reversing the action of the collector at San Francisco in assessing it for duty at 25 per cent. ad valorem as a chemical compound.

Dried papan milk in the form of small lumps, imported at Dayton by Loy & Wood, was assessed for duty as a drug advanced in value.

Chr. Hansen's Danish lactic ferment has been held to be dutiable at 5 cents a pound by the General Appraisers as being composed chiefly of sugar of milk. The article, which was imported at New York by Amerman & Patterson, is not enumerated in the tariff act.

**H. K. Mulford Company Loyal to the Retail Trade.**

The H. K. Mulford Company, of Philadelphia, makes the following significant announcement to the drug trade of the United States:

"In view of the recent proceeding in the United States Circuit Court brought by C. G. A. Loder, in which he has recovered a verdict of \$20,000, we deem it advisable to state our position clearly.

"It has been our policy to refuse to sell or solicit business from any individual, firm or corporation known as aggressive cutters, catalogue or mail order houses, or from department stores. Our action has always been independent of what any other firm, corporation or association may do, as we appreciate the fact that the cutting of prices demoralizes the general trade and interferes with our welfare.

"In order that the policy of our house may be clearly understood, we beg leave to advise you that acting upon our own initiative, and upon our individual rights, we shall continue to refuse to accept direct or indirect business from druggists known as aggressive cutters, catalogue or mail order houses, or from department stores.

"We believe the policy of aggressive cutting is solely a selfish one, and a design to secure for a very few, usually of large capital, unfair advantage over the general trade."

This announcement, which is dated December 1, after the rendition of the verdict in the Loder case, is based on the following letter of advice from W. Horace Hepburn, the attorney of the H. K. Mulford Company:

**LAW OFFICES OF**

W. HORACE HEPBURN, WILLIAM A. CARR, SIDNEY L. KRAUSS,  
1335 ARCH STREET, PHILADELPHIA, December 1, 1905.  
H. K. Mulford Company, 428 South Thirteenth street.

Gentlemen,—I have considered your inquiry respecting the subject of your refusing to sell goods manufactured by your house to what is known as aggressive cutters.

I understand that you have adopted a policy, which has been in force for many years, of refusing to sell the goods manufactured by you to aggressive cutters, and that this policy was entered upon because you believed it to be to the best interest of your company to dispose of your manufactured products to the retail trade generally throughout the country, and thereby secure to you a wider distribution of your manufactured product.

I advise you that in my judgment it is entirely lawful for you to refuse to sell your products to aggressive cutters, and you are not called upon to give any reason for such refusal; it is sufficient that you believe it to be to the best interest of your house. The fact that the method adopted by you prevents the aggressive cutter from disposing of your goods at cost, or below cost, or that it tends to enhance the price of the commodity manufactured by you, is not of the slightest moment.

If, therefore, you deem it to your best interest not to sell aggressive cutters, you may continue to do so. The life of trade depends upon your absolute right to do as you please with your own products, so long as you do no unlawful act in disposing of the same. In the carrying out of your policy I would suggest and advise you that your acts be free from any alliance with others engaged in a similar business, or any combination or association of persons engaged in the wholesaling, retailing and vending of your product, or similar or allied products.

Hopeing that the above will answer your inquiry upon this subject.

I am  
Yours very truly,  
(Signed) W. HORACE HEPBURN.

This is strong evidence of the real friendliness of the H. K. Mulford Company for the legitimate drug trade, and the retail trade should show in a substantial manner their appreciation of the stand taken by this firm.

**G. REIS & BRO.,**

Dept. B.

640 Broadway, New York.

## Hints to Buyers.

In ordering ointment boxes of your jobber be sure and specify "Mt. Washington." This line of goods is made of various woods. They are impervious to oils and even to liquids, and are not only strongly put together, but have the added advantage of sightliness.

Victor Koechl & Co., of 122 Hudson street, New York, are sole American agents for Lanoline "Liebreich" and Adeps Lanae "B. J. D.," both anhydrous and hydrous. These goods may be recognized by the Dartring trademark and may be obtained from all jobbing druggists.

Most of the assayed drugs which were put upon the market 20 years ago by Gilpin, Langdon & Co., of Baltimore, have been incorporated in the last revision of the U. S. P. This is a substantial compliment and a deserved one to a house that has done original and valuable work in pharmacy. Druggists may obtain a price-list upon application.

The Quaker City Drug Mill will be sent on trial to druggists by mentioning the AMERICAN DRUGGIST when ordering. This little mill is not alone inexpensive, so as to be within the reach of all, but it is capable of grinding all kinds of difficult substances. A descriptive booklet may be obtained by applying to A. W. Straub & Co., of 3737 Filbert street, Philadelphia, Pa.

The firm of Justus Brauer & Son, of 248 North Front street, Philadelphia, was established in 1865, and their reputation as manufacturers of prescription corks stands very high. As druggists have learnt to their cost, it is a dangerous thing to buy prescription corks from miscellaneous sources. We very heartily commend this old house to the attention of our readers.

Syringe boxes of white wood, bass, oak, ash, etc., may be had of Henry H. Sheip & Co., 529 Columbia avenue, Philadelphia, Pa. This old house has exceptional facilities for turning out fine work at close prices and has established a name for itself in the matter of prompt delivery. Concerns in the market for goods of the kind should certainly get samples and quotations from this house.

The C. L. Flaccus Glass Company, of 41 Barclay street, New York, is sole selling agent for the famous Appert glass containers, an advertisement of which will be found in this issue. These goods are particularly valuable for laboratory and storage uses, as the glass is of such a character as to resist the action of acids and of climatic conditions, as well as being so tough as to be practically indestructible.

Particular attention is invited to the advertisement of the Osborn-Colwell Company, of 46 Cliff street, New York. This firm of pharmaceutical manufacturers has made a distinct place for itself in the estimation of the retail drug trade. Its goods are always strictly high grade and attractively packed. The Osborn-Colwell Company's treatment of the retailers has done much to make them warm and abiding friends.

In ordering vaccines and antitoxines for veterinary use specify Pasteur and you will get the original products of the Pasteur Laboratories, Paris, France, established by the famous discoverer, Pasteur, in 1854. The Pasteur Vaccine Company has three branches in this country—namely, New York, Chicago and San Francisco—and has branches in most of the countries of the world as well.

Licorice is the old-fashioned and very popular remedy for coughs and colds, and in this connection the advertisement of the National Licorice Company, of 106 John street, Brooklyn, N. Y., would be of interest. The line of licorice specialties made by this concern have a strong popular demand and should be carried in stock by every interested dealer. Advertising matter for counter and window display will be furnished upon application. It is particularly requested when advertising matter is asked for that the brand of licorice used be specified.

The old style shaving brush and the new are cleverly illustrated in the advertisement of the Rubberset Brush Company, of 61 Ferry street, Newark, N. J. The particular feature of this new form of brush is that the bristles are permanently im-

bedded in hard, vulcanized rubber and cannot by any means fall out. Not only is the brush durable, but it is one of the handsomest on the market. By writing the company for catalogue K interesting information on this brush may be obtained. It is something that every druggist should sell. It gives unquestioned satisfaction to the customer.

We invite the attention of AMERICAN DRUGGIST readers to the facilities of the American Ferment Company for supplying special formulas of powder pills in quantities. This concern has succeeded in producing a particularly slightly and soluble pill of this character, which is shown by the long list of goods they are manufacturing for this and other countries under their own name. Retail druggists can stock this line with advantage to themselves and to the prescribing physician. The advertisement of the house will be found in another part of this issue.

### Plausible Theory.

"I think I'll try filling the tires of my automobile with illuminating gas," said the amateur chauffeur.

"Good joke," gurgled his fool friend. "Expect to make it light. Ha! Ha!"

"Nothing of the kind," rejoined the amateur chauffeur. "I thought it might increase the speed of the machine. Just think how the stuff makes the wheels of a gas meter spin around."—*Columbus Dispatch.*

### The Uses of Ammonol.

A full realization of the progress of medicine hardly ever comes home to one until a person is ill himself. Then, in all probability, his first desire will be for relief from pain. In no department has modern medical practice made greater strides than in the milder methods of relieving pain. Every physician frequently needs a medium which not only furnishes this relief, but also exerts a healthful stimulating effect on the general system. Ammonol possesses these characteristics, and is well and favorably known to physicians and druggists. It is claimed to be a stimulant and possesses analgesic and antipyretic properties. The Ammonol Chemical Company, of New York, is the manufacturer, and it puts it up in 1-ounce bottles only.

### Gascony Wine.

The *Daily Telegraph*, commenting on the drinking customs of a hundred years ago, gives the recipe for the above-named marvelous confection. Take ginger, galangal, cinnamon, nutmeg, grains of paradise, cloves bruised, fennel seed, caraway seed and origanum, one ounce of each. Sage, wild marjoram, pennyroyal, mint, red roses, thyme, pellitory, rosemary, chamomile and lavender, one handful of each. Beat the spices small, bruise the herbs, put all into an alembic with wine for twelve hours, then distil. The rare distinction attaching to this preparation is that it "comforts the vital parts, cures dropsy and keeps the old alive." Venice treacle was also warranted to "rectify and maintain the body, clarify the blood, surfeit the cheek, perfume the skin, tinct the hair and lengthen the appetite."

### "The Soap That Makes You Pretty."

John R. Thompson, of the P. C. Schilling Company, Pittsburgh, favors us with the following verses, which he is using to advertise NARD soap:

The druggist said with a smile so bland,  
Of the cake of soap in his outstretched hand,  
"This one is NARD, the leading brand,  
The soap that makes you pretty."

Mama said to Baby Fred,  
"Wash 'im first and then to bed."  
"Use NARD Soap on me," he said—  
"The soap that makes you pretty."

The maiden asked of her drug-clerk beau,  
"What soap is the best? I know you know."  
"It's NARD," he answered, bowing low,  
"The soap that makes you pretty."

Oh, see the dude—his cheeks aglow,  
And his little hands as white as snow,  
He used NARD Soap to make them so—  
"The soap that makes you pretty."

# VIGORAL CASE OFFERS

## VIGORAL

### THE MOST DELICIOUS OF ALL HOT BEEF DRINKS

The success of our Vigoral Case offers has tempted others to adopt similar methods, and in some instances packages and labels so closely resembling ours that it is difficult to distinguish between them.

We ask that you specify "Armour's" or "Vigoral" in ordering. This protects against inferior quality.

All jobbers carry our goods in stock, and will supply you with any quantity desired.

## HOT DRINK SUPPLIES

**VIGORAL DISPENSING CASE**—Price, \$7.20. This Case contains an assortment of Beef Extract, Vigoral and Tomato Bouillon to the value of the price of the Case; also half a dozen Carlsbad China mugs, glass signs, hangers and other advertising matter.

*Order through your jobber. All the good hot drink season is before you.*

# ARMOUR & COMPANY, Chicago

**Equal to the Emergency.**

Dr. S. M. Brickner tells this story of a reporter for a New York newspaper who was assigned to cover a mysterious death in Harlem. He telephoned the city editor and said that the death was caused by uric acid poisoning. He immediately received instructions over the telephone to "visit every druggist in Harlem to ascertain who sold or purchased uric acid."—*Alumni Report.*

**The Pacific Coast Borax Company.**

The Pacific Coast Borax Company, the producer of the famous "20 Mule Team" brands of Borax, Soap, Boraxo, Boric Spangles, Boric, etc., has recently established an advertising and publicity department. With the thorough organization of this department, the large appropriation for the coming year and the plans for spending this money judiciously, the trade may expect a constantly increasing demand for "20 Mule Team" kitchen, laundry and toilet requisites.

**A Pharmaceutical Author.**

The *Bollettino Chimico-Farmaceutico* reports the death of Sig. Silvio Plevani at Pontevico. Sig. Plevani was well known in pharmaceutical circles on account of his books on pharmacy. He founded the *Giovanni Polli*, a weekly pharmaceutical review, in Pontevico, and to him was also due the publication of the *Revista Internazionale Ebdomadaria di Farmacologia e Scienze Affini*, in Milan, which became fused with the *Corriere Sanitorio*, of the same town. He was a member of various scientific societies, Italian and foreign, and among his books were a "Manual of Galenical Pharmacy and New Remedies," the "Polygot Dictionary of Pharmacy, Chemistry, Therapeutics and Hydrology," and "Pharmaceutic Technique." The committee intrusted with the translation of the Geissler and Moeller "General Encyclopædia of Pharmacy" was presided over by him. He was recently appointed a member of the commission on the laws on the adulteration of wines, and drafted a law thereupon which was adopted by the commission.—*Chemist and Druggist.*

**A Special Premium Offer.**

On page 57 will be found the advertisement of the Chichester Chemical Company, Philadelphia, which should interest every retail druggist. This company announces a special premium offer which gives the dealer an extra profit of \$6 per dozen on Chichester's Pills. This special premium consists of half a dozen boxes of their new \$1 trial size Chichester's Pills with every purchase at one time of one dozen of the regular \$2 size. As Chichester's Pills are recognized everywhere as a standard emmenagogue, the retailer assumes no risk in purchasing in dozen lots.

The Chichester Chemical Company calls especial attention to and emphasizes the fact that its remedy, Chichester's Pills, is in no sense an abortifacient, not intended for and cannot be used to prevent conception, induce miscarriage, nor produce abortion.

Drop the company a postal to 2315-19 Madison square, Philadelphia, Pa., and it will send you premium order blanks covering its offer, as well as application blanks for membership in their newly organized C. C. Co. Spatula Club.

**Papaya Juice.**

A. J. Lespinasse, United States Consul at Tuxpam, Mexico, describes the collection of papaya juice as follows: Papaya juice is extracted from the fruit of the papaw tree, which grows rapidly, attaining its full bearing capacity in a year. It produces from 40 to 50 papaws of a dark green color, ripening to a deep yellow, in shape resembling a squash. A very light superficial incision is made in the fruit, from which exudes a clear, water-like juice, which, on exposure to the air, becomes opaque. As it drips from the fruit it is received in a porcelain-lined receptacle. As it is very corrosive metal receptacles would injure its appearance and qualities. It possesses great digestive virtues, and the refined article is considered superior to all

animal pepsins. After the desired quantity has been collected the juice is placed in shallow porcelain or glass lined pans and allowed to evaporate. While this is not a very delicate or difficult operation, it requires considerable attention, so that the juice will dry uniformly and the product be white and well granulated. In its granulated state it is shipped to the United States, undergoes a refining process and is sold as the papaw of commerce for medicinal purposes. The ripe papaw is palatable and an excellent aid to digestion. Meat wrapped in papaw leaves for a short time becomes quite tender without any impairment in appearance or taste. In extracting the juice the hands should be protected by rubber gloves, as in its crude state it attacks the tissues. An average tree will produce about one-fourth of a pound of the granulated juice. It sells in the United States for from \$4 to \$6 per pound in the crude state.

**Baseball in the Bible.**

The Devil was the first coacher. He coached Eve. She stole first. Adam stole second. When Isaac met Rebecca she was walking with the pitcher. Samson struck out a good many times when he beat the Philistines. Moses made his first run when he slew the Egyptian. Cain made a base hit when he killed Abel. Abraham made a sacrifice. The prodigal son made a home-run. David was a long-distance thrower, and Moses shut out the Egyptians at the Red Sea.—*Drug Topics.*

Let's see, didn't Paul make a short stop at Athens?

**Kuttruff-Pickhardt Incorporation.**

The Continental Color & Chemical Company has been incorporated under the laws of the State of New York. The directors are Adolf Kuttruff, I. J. R. Muurling, Carl Pickhardt and William Diestel. The management of the company is vested in an Executive Committee, consisting of Adolf Kuttruff and I. J. R. Muurling. From January 1, 1906, the company will have the exclusive sale in the United States of America and Canada of the products of the Badische Anilin and Soda Fabrik, Ludwigshafen and Farbenfabriken, vormals Friedr. Bayer & Co., Elberfeld, the business of Kuttruff, Pickhardt Co. and the Farbenfabriken of Elberfeld Company being transferred to the new company. The New York offices of the company will be located at 128 Duane street. The company will have branches in Boston, Providence, Philadelphia, Chicago, Charlotte, N. C., and in Canada.

**Taylor Bros.' New Thermometer Factory.**

During the 53 years that Taylor Brothers Company, of Rochester, N. Y., has been making quality thermometers for the trade it has several times been obliged to move into larger quarters to accommodate the constantly increasing demand.

To provide for future as well as past growth the company has purchased a tract of some 4 acres, on which it has erected a model manufacturing plant having 85,000 feet of floor space with room for three times present space.

The building has a frontage of 280 feet and is arranged in the form of the letter "E," so that the manufacturing is done in four wings, each wing 40 feet wide, thus giving that important advantage—plenty of light.

While the building is situated within 100 yards of the main street in Rochester, N. Y., it has special transportation advantages, being located on the line of the New York Central and having its own switch for fuel, supplies and shipping purposes.

To give an idea of the extent of this business it is only necessary to say that the space needed for handling the office work alone is 40 x 130 feet, or 5,200 square feet.

This building not only trebles its capacity, but gives it many other advantages such as naturally follow manufacturing carried on under modern factory equipment.

Host: "I've been smoking an awful lot of cigars lately."

Guest (who has been offered one): "Well, if this is a sample, I don't doubt your word, old man."

That is one reason why Lactated Food is endorsed by all Retailers.

Here are some more:—

**REASON No. I.**—Lactated Food is the only protected food upon the market. You can't help making a big profit.

**REASON No. II.**—Lactated Food is the only standard food on the \$2-\$4-\$8 basis.

**REASON No. III.**—Lactated Food is universally indorsed, and has the good will of all leading physicians.

We are pushing Lactated Food with vigorous newspaper advertising. Keep your stock up.

## New Remedies Compendium and Prices Current.

In this list, which is intended to serve as a ready reference work for the dispenser at the prescription counter, and which will appear in alternate issues of the AMERICAN DRUGGIST, the order of arrangement followed is to give the trade name of the substance, followed by the chemical name, where the length of the latter permits. The physical characteristics of the substance, whether powder, liquid or tablet, are named in the opening sentence, accompanied by details regarding solubility, incompatibilities, therapeutic uses, dose, the kind of container in which it is put up, price, and maker's or agent's name.

The aim has been to make the Compendium and Price List as condensed as possible without at the same time interfering with the practical utility of it; for it is by its practical utility that the editors hope it will be judged, the list being intended for the use of dispensing druggists, and not for analytical chemists. Because of this, chemical formulas, melting points and other data of no immediate use to the dispenser have been omitted; not that such information is unimportant, but because particulars of this kind have no immediate bearing on the everyday work of the dispensing druggist.

Corrected to December, 1905.

**ACETAL.** (ETHYLIDENE DIETHYL ETHER.) Colorless, volatile liquid, soluble in 18 parts of water, very soluble in alcohol. Used as a sedative and hypnotic in doses of 2 to 3 fluid drachms, usually in form of emulsion. Pure medicinal, per oz., \$1.00; commercial .....65c.

**ACETOZONE.** (BENZOYL-ACETYL PEROXIDE). White powder, very slightly soluble in water (1:1000); soluble in alcohol. Bactericide; used internally and externally in diseases of germ origin. Dose, 1 to 3 grains in solution. Boxes containing 6 vials of 15 grains

each, per box, \$1.25; ¼ oz. bot., \$1.40; ½ oz. bot., \$2.70; 1 oz. bot. ....\$5.25 (Parke, Davis & Co.)

**ACET - THEOCIN - SODIUM.** White crystalline powder, readily soluble in water. Powerful diuretic; used in dropsy. In doses of 5 to 7 grains, two to three times daily. ¼ and 1 oz. bot. ....\$1.90 to \$2.30 per oz. (Farbenfabriken of Elberfeld Co.)

**ACOINE.** (DI-PARA-ANISYL-MONOPHENETHYL GUANIDINE HYDROCHLORIDE). White crystalline powder, soluble in 17 parts of water. Local anesthetic like cocaine, used hypodermatically in eye surgery; dental anesthetic in normal saline solution, 2 per cent. 15 grain vials, each, 40c.; capsules, 2½ grains, 28 in box. ....75c. (The Heyden Chemical Works.)

**ADNEPHRIN SOLUTION.** A 1-1000 solution of the chloride of the active principle of the suprarenal gland. 1 oz. vials .....60c.

**EMOLLIENT.** Tubes, each...80c.

**OIL SPRAY.** 1 oz. vials, each.60c. (Frederick Stearns & Co.)

**ADRENALIN.** Grayish-white powder; with difficulty soluble in water. The blood-pressure-raising principle of the suprarenal glands. 1 grain vials.85c. Invariably employed in the form of

**CHLORIDE SOLUTION, 1:1000.** a solution of 1 part of adrenalin chloride in 1000 parts of physiologic salt solution, with 0.5 per cent. of chlorotone. Powerful astringent,

hemostatic and cardiac stimulant. Used for the control of hemorrhages, internal and superficial, for the reduction of congestion and inflammation of mucous membranes, as a heart stimulant in collapse, and as an adjuvant to the local anesthetic action of cocaine. Internal dose. 1 oz. bot...85c. INHALANT, 1 oz. bot. ....85c. OINTMENT, ¼ oz. tubes. ....48c. SUPPOSITORIES, boxes of 1 doz. 88c.

**TABLETS,** vials of 25. ....88c. (Parke, Davis & Co.)

**ADRIN.** (EPINEPHRIN HYDRATE). Whitish nonhygroscopic powder; the active principle of the suprarenal gland, same properties as adrenalin. 1 grain vials, each, 75c.; 1-1000 solution, 1 oz. vials, each, 75c.; tablets in tubes of 12, tablet, q. s. to make 15 minims of 1-1000 solution, each, 40c.; in 100's each .....\$3.10 (H. K. Mulford & Co.)

**AGURIN.** (ACET-THIOBROMINE-SODIUM.) White hygroscopic powder, soluble in water; incompatible with acids. Diuretic in dropsy. Dose, 7 to 15 grains, twice daily. ¼ and 1 oz. bot. ....\$1.55 to \$1.70 (Farbenfabriken of Elberfeld Co.)

**AIROL.** (BISMUTH OXYDIOGALLATE.) Grayish-green powder, insoluble in water or alcohol. On admixture with water airol partly decomposes and turns red. Should be mixed with water only with intervention of glycerin. Used externally as application to wounds, burns, skin diseases, eye, nose, gonorr-

AMERICAN DRUGGIST'S  
PRICE BOOK A

?

It only costs a dollar—it helps you know where you are at, commercially. A very important thing in these troublous times.

The cut shows how the pages look. There are 200 of them, 4 x 7 inches.

The book is printed on good quality writing paper, is bound in grain seal leather. We will send it by mail on receipt of \$1.00. THOUSANDS OF DRUGGISTS USE IT, ALL LIKE IT.

AMERICAN DRUGGIST PUBLISHING CO.  
66 West Broadway, New York

- rhea, either pure, in 10 per cent. suspension, equal parts glycerin and water, or 10 to 20 per cent. ointment. 1 oz. cartons .....\$1.00 (Hoffmann-La Roche Chemical Works.)
- ALBARGIN.** (GELATOSE SILVER.) Light brown powder, readily soluble in water. Contains 15 per cent. of silver. For gonorrhea a 2 per cent. solution is injected 4 or 5 times daily. 1 oz. vials, \$1.10; tubes of 50 tablets, 0.2 gm. each, per tube .....50c. (Victor Koechl & Co.)
- ALPHOZONE.** (SUCCINIC PEROXIDE.) White fluffy powder, quickly soluble in 80 parts of water. Germicide and antiseptic, internally and externally. 1 oz. bot., \$4.50; ¼ oz., \$2.30; ¼ oz., \$1.20; 1 grain tablets, bot. of 90 .....\$1.00 (Fred. Stearns & Co.)
- ALYPIN.** White crystalline powder, easily soluble in water and alcohol, but dissolving very sparingly in ether. Watery solutions have a neutral reaction and can be sterilized by boiling for a short period. Local anesthetic, substitute for cocaine. The strength of the solutions ordinarily employed varies from 1 to 5 and even up to 10 per cent. It can be combined with adrenalin and antipyrine. Alypin should not be used in connection with silver nitrate, owing to the formation of a precipitate. This objection, however, does not apply to protargol solutions, which, although they become slightly turbid at first, soon clear up. 15 grain vials, each, 20c.; 10 vials, per vial, 16c.; ¼ and ½ oz. bots., per oz., \$4.20; 1 oz. bot., per oz. ....\$4.10 (Farbenfabriken of Elberfeld Co.)
- ALUMNOL.** (ALUMINUM NAPHTHOL DISULPHONATE.) Whitish powder, very soluble in water; slightly soluble in alcohol and glycerin; astringent and antiseptic; dissolves in pus and penetrates tissues. Used in 1 per cent. solution in gonorrhea; 10 to 20 per cent. mixture with talcum as a dusting powder. 1 oz. tins, per oz. ....50c.
- AMINOFORM.** (HEXAMETHYLENETHETRAMINE.) White granular crystals, readily soluble in water, prepared by combining ammonia and formaldehyde. Antiseptic for urinary passages, diuretic and solvent in uric acid concretions; dose, 5 to 10 grains, well diluted, three times daily. 1 oz. bot., 60c.; 7½ grain tablets, oz. ....70c. (C. Bischoff & Co.)
- AMYLOFORM.** White powder, insoluble in water; condensation product of starch and formaldehyde. Surgical antiseptic, used pure or with talcum and boric acid. 1 oz. carton .....25c. (Stallman & Fulton.)
- ANTHRASOL.** Yellow, oily liquid, with a distinctive tarry odor; soluble in alcohol, acetone, fats and petrolatum. A distillate from coal tar, used in diseases of the skin where coal tar is employed. 1 oz. vials .....55c. (Knoll & Co.)
- ANTINONNIN.** (POTASSIUM OXETHODINITRO-CRESOL.) Paste of brilliant orange color, soluble in water, slight soapy odor, nonvolatile. Deodorizer, disinfectant, prevents the growth of fungi, mildew and dry rot in cellars and human habitations. Used in form of solution. 1 lb. to 5 to 15 gallons of water. Cans, ¼ lb., \$1.10 per lb.; 1 lb. cans, 95c.; 50 lb. cans, per lb. ....77c. (Farbenfabriken of Elberfeld Co.)
- ANTITUSSIN.** (DIFLUORODIPHENYL OINTMENT.) Ointment containing lanolin, 85 per cent.; petrolatum, 10 per cent., and difluorodiphenyl, 5 per cent. A whooping cough remedy applied as inunction to patient's neck, chest and back once a day, in doses of 5 Gm. 20 Gm. collapsible tubes, 40 c.; 40 Gm. ....75c. (C. Bischoff & Co.)
- ARGENTAMINE.** A colorless, alkaline liquid representing a solution of silver nitrate, 10 per cent., and ethylenediamine, 10 per cent.; soluble in water. Used in all cases where silver nitrate is used, mostly in gonorrhea, in strength of 1 in 2000-4000 solution. 1 oz., g. s. bot. ....75c. (Schering & Glatz.)
- ARGONIN.** White powder, very slightly soluble in cold, but freely so in hot water. A compound of silver nitrate and sodium casein. Antiseptic, germicide and gonococcicide, less caustic than silver nitrate. Solutions of 2 to 10 per cent. strength recommended for injection in gonorrhea and 8 per cent. solutions for use in the eye. 1 oz. vials .....65c. (Victor Koechl & Co.)
- ASAPROL.** (ABRISTOL.) Whitish powder, freely soluble in water and alcohol. It is the calcium salt of betanaphthol-sulphonic acid. Antipyretic and antirheumatic in doses of 5 to 15 grains. Used also as test for albumin in urine. 1 oz. bot. ....\$1.25
- ARISTOCHIN.** (CARBONIC ESTER OF QUININE.) White powder, tasteless, insoluble in water. Decomposes in the system to yield 96.1 per cent. of quinine. Prescribed like quinine, but in somewhat larger doses. ¼ and 1 oz. cartons, per oz. ....\$2.20 (Farbenfabriken of Elberfeld Co.)
- ASPIRIN.** (ACETYL SALICYLIC ACID.) White crystalline powder, insoluble in water; incompatible with alkalies. Used instead of the salicylates in articular and muscular rheumatism and other therapeutic indications for the salicylates. Dose, 5 to 15 grains, three to five times daily. 1 oz. bot., per oz. ....33c. to 43c. (Farbenfabriken of Elberfeld Co.)
- (Farbenfabriken of Elberfeld Co.)
- ATOXYL.** (META-ARSENIC ANILIDE.) White powder, containing 37.69 per cent. of arsenic in organic combination. Soluble in 6 parts of water and used in this strength solution for hypodermic injection; relatively nontoxic. Dose, 1 to 3 grains, 1 oz. vials .....\$8.00 (Victor Koechl & Co.)
- BENZONAPHTHOL.** White, crystalline powder, soluble in alcohol and chloroform; insoluble in water. Employed as intestinal antiseptic in doses of 5 to 15 grains. 1 oz. vials, 22c.; ¼ lb. bottles, \$2.20; ¼ lb., \$2.10; 1 lb. ....\$2.00 (Schering & Glatz.)
- BENZOSOL.** (GUALACOL BENZOATE.) Small colorless crystals, nearly insoluble in water. Contains 54 per cent. of gualacol and, as it is slowly saponified by the gastric juice, the gualacol being liberated gradually, it is recommended as an intestinal antiseptic and as an agreeable substitute for creosote in incipient phthisis. Dose, 4 to 8 grains. 1 oz. tins .....\$1.25 (Victor Koechl & Co.)
- BETA-EUCAINE HYDROCHLORIDE.** White, crystalline powder, soluble in 80 parts of water. A synthetic compound chemically allied to cocaine, being the hydrochloride of benzoyl-vinyl-diace-ton-alkaline. It is slower in action than cocaine, but anesthesia is more prolonged, and a third less toxic. Used generally in 2 per cent. solutions in dental and ophthalmic work. ¼ oz. and ½ oz., per oz., \$3.60; ¼ oz. and 1 oz. ....\$3.50 (Schering & Glatz.)
- BETA-EUCAINE LACTATE.** White powder, possessing the same properties as the hydrochloride, but is more soluble in water (about 1 in 5). Prices and containers same as for beta-eucaine hydrochloride. (Schering & Glatz.)

## Profitable Perfume Points

**N**OW is the harvest time in perfumes and if you grasp the opportunity we offer, you can do a larger and more profitable business than is possible in any other way. By our plan you can carry a larger line, make larger profits and give your customers greater satisfaction and still invest a smaller sum in stock.

### LETTER OF ONE DRUGGIST

"I have been agreeably surprised and pleased with the results obtained from your Absolute and Floral Essences. My best customers, after sampling the different manufacturers' perfumes I carry, invariably select those made from your Essences. When the merits of these Essences become known to the retail drug trade they will be very generally used."

FOR OUR  
FREE BOOK

### WHAT ONE FIRM SAYS

"That your Floral and Absolute Essences have pleased both our trade and ourselves is sufficiently evidenced by the repeated orders sent you."

The finished product compares favorably with foreign manufacturers' costing quite as much wholesale as we would be pleased to sell for at retail."

Which gives minute details of our Absolute and Floral Essences by which you can manufacture perfumes equal to the finest imported brands for much less than you pay for inferior manufactured products.

**LEHN & FINK** 120 William Street **NEW YORK**

**BISOL.** (SOLUBLE BISMUTH PHOSPHATE.) White powder, soluble in water, faint alkaline reaction. Intestinal antiseptic and astringent in gastric and enteric catarrh. Dose, 3 to 7½ grains. 1 oz. vials, .....70c. (C. Bischoff & Co.)

**BROMETONE.** Powder; slightly soluble in water. Compound of bromoform and acetone; recommended as a substitute for bromides; contains 77 per cent. of bromine. Dose, 15 to 20 grains. 1 oz. bot., 85c.; 5 grain capsules in bot. of 100 .....\$1.25 (Parke, Davis & Co.)

**BROMIPIN.** (BROMINIZED SESAME OIL.) Yellow, oily fluid, used as a nerve and sedative in epilepsy. Dose, 1 teaspoonful. 1 oz. vial, 18c.; per lb. ....\$2.10 to \$2.35 (Merck & Co.)

**CACODYLIC ACID.** (DIMETHYL ARSENIC ACID.) Small colorless deliquescent crystals, the ultimate product of oxidation of arsenum-dimethyl (cacodyle) and of cacodyle oxide. Contains 54.4 per cent. of arsenic trioxide, but is relatively nontoxic. Dose, 1 to 3 grains. ½ oz. vials, per oz. ....\$4.00

**CALOMEL OINTMENT.** White mercurial ointment made from colloidal calomel for the inunction treatment of syphilis and especially for the cure of its cutaneous manifestations. 2 oz. graduated tubes, per tube .....55c. (Heyden Chemical Works.)

**CALOMEL POWDER.** Grayish-white powder of neutral reaction, tasteless and odorless. Yields a milky solution when added to cold water in the proportion of 1 to 50. Used as a dusting powder in the treatment of papular eruptions and ulcerations, and as external application to ulcerated chancres in 2 per cent. solution. 1 oz. vials .....70c. (Heyden Chemical Works.)

**CAMPHORIC ACID.** (Colorless crystalline scales, very slightly soluble in water; formed by the oxidation of camphor with nitric acid. Used in night sweats of phthisis, also in cystitis and as an intestinal antiseptic in doses of 10 to 20 grains. 1 oz. vials, 45c.; 1 lb. bot. ....\$7.00

**CEROLIN.** Pills of a fatty substance isolated from yeast. Acts same as yeast in furunculosis, acne, etc., but more cathartic. Pills containing 0.1 Gm., box of 100, each .....50c. (C. F. Boehringer & Soehne.)

**CHINAPHENIN.** (QUININE CARBONIC ESTER OF PHENETIDINE.) White tasteless powder, representing synthetic quinine-phenacetin and having medicinal properties of both. Insoluble in water, but easily soluble in alcohol, ether and chloroform. Dose, 5 to 10 grains, thrice daily. ½ and 1 oz. cartons, per oz. ....\$1.25 to \$1.30 (Farbenfabriken of Elberfeld Co.)

**CHINOTROPINE.** (UROTROPINE QUINATE.) A combination of quinic acid and urotropine (hexamethylenetetramine) used as uric acid solvent in the various manifestations of the uric acid diathesis. Is said to liberate formaldehyde freely internally and to form soluble compounds with uric acid. Dose, 10 to 30 grains. ¼ oz. and 1 oz. vials, \$1.75; tablets, 7½ grains, 25 in tube, 2 tubes in box .....\$1.75 (Schering & Glatz.)

**CHLORETONE.** White crystals, slightly soluble in water (1:200); hypnotic, local anesthetic and antiseptic. Dose, 5 to 20 grains, in cachet, tablet or capsule. Externally as a dusting powder for wounds, combined 23 with zinc oxide, 120, and French chalk, 90 parts. ½ oz. vials, per oz., 90c.; 1 oz. ....85c. (Parke, Davis & Co.)

**CINNAMIC ACID.** (CINNAMYLIC ACID.) Transparent micaceous crystals, very slightly soluble in water; soluble in alcohol and ether. Injected intravenously in tuberculosis in doses of ¼ to ½ of a grain, twice a week; per oz., 1-20 to ½ grain twice daily. 1 oz. vial, 85c.; 1 lb. bot., per lb. ....\$5.00

**CITARIN.** (SODIUM ANHYDROMETHYLENCITRATE.) White, crystalline powder, easily soluble in water. Antithrombic for gouty and chronic rheumatic conditions; liberates formaldehyde in the blood. Dose, 15 to 30 grains, thrice daily. 1 oz. bot., per oz. ....70c. to 75c. (Farbenfabriken of Elberfeld Co.)

**CITROPHEN.** (PARAPHENETIDIN CITRATE.) White, crystalline powder, soluble in 40 parts of water. Antipyretic and antineuralgic in doses of 3 to 8 grains. 1 oz. vial, 90c.; 5 grain tablets, bot. of 100, \$1.15; 2 grain, bot. of 100.60c. (Victor Koechl & Co.)

**COLLARGOL.** (COLLOID SILVER.) Shining, black scales, soluble in 1 in 20 of water. Used as a bactericide, 1 in 100 to 10,000 in water or glycerin. Internally a 1 to 500 or 1 to 100 solution may be added to the food in teaspoonful doses. ½ oz. and 1 oz. vials, \$2.75; tablets, 1 grain each, tubes of 50 ....60c. (Schering & Glatz.)

**COTARNINE HYDROCHLORIDE.** See Syptictin.

**CREOSOTE CARBONATE.** (CARBOSOL.) Yellow, transparent viscous liquid, insoluble in water, but miscible with alcohol; contains 92 per cent. creosote combined with 8 per cent. of carbon dioxide. Used in tuberculosis and pneumonia in doses of 5 to 60 drops several times daily. 1 oz. vials, 65c.; ¼ lb. bot., per lb., \$9.25; ½ lb., \$9.10; 1 lb. ....\$9.00 (Schering & Glatz and Farbenfabriken of Elberfeld Co.)

**CUPROL.** Green powder, readily soluble in water; a chemical combination of nucleic acid and copper; solution does not coagulate albumen. Applied locally as an astringent; of use in granular ophthalmia in the form of 5 per cent. instillations, or may be applied in the dry form with a brush. ¼ oz. vials, \$1.30 per oz.; 1 oz. vials .....\$1.20 (Parke, Davis & Co.)

**DERMATOL.** (BISMUTH SUBGALLATE.) Yellow, insoluble powder; nonirritant antiseptic, especially serviceable in burns, ulcers and moist eczema. Used internally in diarrhoea, dysentery, intestinal fermentation and gastric ulcers, in doses of 10 to 30 grains three times daily. 1 oz. tins, 19c.; 1 and 5 lb. tins, per lb. ....\$2.50 (Victor Koechl & Co.)

**DIATHESIN.** White crystalline leaflets, soluble in 15 parts cold water, freely soluble in hot water or alcohol. Is ortho-oxybenzylalcohol, or synthetic saligenin. Used in place of salicin in rheumatism, neuralgia, pleurisy, etc., in doses of 7½ to 15 grains. 1 oz. cartons .....\$2.40 (C. Bischoff & Co.)

**DIFLUORDIPHENYL.** White crystalline powder of pleasant aromatic odor, insoluble in water, soluble in alcohol, ether, chloroform and oils. Used as antiseptic dusting powder mixed with talc in proportion of difluordiphenyl, 10 parts; talc, 90 parts, or in 10 per cent. ointment with lanolin as dressing for burns. Dose, 1-16 to ¼ grain. 5 Gm. envelopes, each .....\$1.50 (C. Bischoff & Co.)

**DIGALEN.** (CLOETTA'S SOLUBLE DIGITOXIN.) Marketed only in solution in 15 Cc. (½ oz.) vials, on account of infinitesimal dosage. Active principle of digitalis leaves, nonaccumulative heart tonic and diuretic. 1 Cc. of solution represents 0.0008 Gm. (0.0045 grain) of digalen,

## PRESCRIPTION FILES

### THE RELIANCE

The Only Practical Device on the Market

Cabinet has perforator for top. Each drawer has our patented arch file. Capacity of each drawer is 500 prescriptions. File is quick and handy, and saves time and labor in referring to old numbers. Transfer cases have removable arch wires. Capacity is 1,000 prescriptions.

Send for testimonials and our catalogue of our line of druggists' filing devices and specialties.

which is the average dose, by the mouth, hypodermatically, or by enema intravenously. The dose is from 3 to 10 Cc. 1/4 oz. vials.....\$1.00 (Hoffmann-La Roche Chemical Works.)

**DIONIN.** (ETHYL MORPHINE HYDROCHLORIDE.) White crystalline powder, very soluble in water and alcohol. Recommended to replace codeine and morphine in bronchitis, emphysema and asthma. Dose, 1/4 to 1/2 grain. 1 oz. vial, \$8.00; 1/4 oz. vial, per oz., \$8.25; 15 grain vials, each, 35c.; tablets, 1/4 grain, bottle of 100.....60c. (Merck & Co.)

**DIURETIN.** (THIOBROMINE SODIUM SALICYLATE.) White powder, soluble in water, decomposed by acids. Must be kept dry and air-tight. Diuretic, antispasmodic and vascular stimulant. Dose, 15 grains four to six times daily. 1 oz. bot., per oz.....\$1.75 (Knoll & Co.)

**DORMIOL.** (AMYLENE CHLORAL.) Oily, colorless liquid, with a camphoraceous odor, insoluble in water, soluble in alcohol and ether. Hypnotic in mania; 50 per cent. solution supplied commercially. Dose, 5 to 60 minims. 1 oz. vial, 28c.; 1/4 lb. bot., per lb.....\$4.10 (Merck & Co.)

**DUOTAL.** (GUAIACOL CARBONATE.) White, crystalline powder, soluble in alcohol, insoluble in water. Same therapeutic action as Creosotal, which see. Dose, 5 to 20 grains, gradually increased. 1 oz. vial, \$1.50; tablets, 7 1/2 grains, 50 tablets in box, \$1.50; 4 1/2 grains, 50 tablets in box.....90c. (Schering & Glatz and Farbenfabriken of Elberfeld Co.)

**DUOTONOL.** White powder; a mixture, equal parts of the lime and sodium glycerophosphates. Nerve nutrient in doses of 5 to 10 grains three times daily. 1 oz., 50c.; 1 lb.,

\$6.00; tablets, 5 grains, 100 tablets in bottle.....65c. (Schering & Glatz.)

**DYMAL.** (DIDYMUM SALICYLATE.) Pinkish powder, odorless. Applied as powder and ointment in skin diseases, notably dry and weeping eczema. 1 oz. cartons, each, 85c.; 4 oz. cartons, each.....\$1.20 (C. Bischoff & Co.)

**EKA-IODOFORM.** A chemically pure iodoform, prepared by electrical synthesis, and sterilized with paraform. 1 oz. vial.....50c. (Schering & Glatz.)

**EMPYROFORM.** Brown powder; condensation product of birch tar and formaldehyde; insoluble in water, readily soluble in acetone, chloroform and solutions of caustic alkalies. Used like tar in ointment, paste and tincture. 1 oz. vial.....65c. (Schering & Glatz.)

**EPICARIN.** (CONDENSATION PRODUCT OF BETANAPHTOL AND CREOSOLIC ACID.) Colorless or yellowish needles, difficultly soluble in hot water, easily soluble in alcohol, ether and oils. Nontoxic substitute for naphthol in parasitic skin diseases. Employed chiefly in ointments (5 to 10 per cent.). 1 oz. cartons, per doz., \$0.70 to 70c. (Farbenfabriken of Elberfeld Co.)

**EUGALLOL.** (PYROGALLOL ACETATE.) Yellowish, syrupy liquid, soluble in water and acetone; applied pure or diluted with acetone as paint in skin diseases, especially psoriasis, and deemed superior to pyrogallol. 1 oz. vial.....\$1.00 (Knoll & Co.)

**EUMYDRIN.** White crystalline powder, obtained from atropine; easily soluble in water. Powerful mydriatic, less poisonous than atropine. Dose, internally, about 1-70 grain. 1 or 2 per cent. solution dilates the pupil after 10 to 25 minutes. 1 grain tubes. 45c. to

55c. per box of 10 tubes; 1/4 oz. and 1/2 oz. packages, per oz. \$16.50 (Farbenfabriken of Elberfeld Co.)

**EUNATROL.** (SODIUM ACID OLSATE.) Light yellow substance, readily soluble in water and alcohol; supplied as powder and chocolate-coated pills. Recommended in treatment of gallstones, being excellent chologogue. Dose, four pills, 4 grains each, three times daily, or in solution, 25 Gm. bot., each, 75c.; bot. of 50 pills, 70c.; 100 pills.....\$1.80 (C. Bischoff & Co.)

**EUPHORIN.** (PHENYL-URETHANE.) White, acicular crystals, slightly soluble in water, freely in alcohol. Energetic antipyretic and analgesic in doses of 7 1/2 to 15 grains, 2 to 8 times daily. 1 oz. vial.....\$1.00 (Schering & Glatz.)

**EUPHTHALMINE HYDROCHLORIDE.** White crystals; a synthetic derivative of beta-eucaine; soluble in water; 2 to 5 per cent. solutions dilate the pupil, without causing discomfort or accommodation disturbances. 1/4 and 1 Gm. vials.....\$1.25 (Schering & Glatz.)

**EUPHYRINE.** (PARA-PHENETIDINE VANILLIN ETHYL CARBONATE.) Light yellow crystals, sparingly soluble in water, readily in alcohol, chloroform and ether. Stimulant antipyretic in doses of 7 1/2 to 15 grains. 1 oz. cartons, each.....\$1.50 (C. Bischoff & Co.)

**EUROPHEN.** Yellow light powder, containing 25 per cent. of iodine, insoluble in water and glycerin. Iodoform substitute used in dry powder and in ointment. 1 oz. bot., per oz. \$1.65 to \$1.80 (Farbenfabriken of Elberfeld Co.)

**EUZONE.** (PURE SODIUM PERBORATE.) White, odorless powder, containing about 7.1 per cent. boron, 15 per cent. sodi-

um, 81.2 per cent. oxygen and 48.2 per cent. water; represents 22 per cent. by weight of hydrogen dioxide, equivalent to 10.4 per cent. by weight of nascent oxygen. Soluble in water 1 in 10, such a solution being taken to represent a 2 per cent. solution of hydrogen dioxide. Tablets, 2 1/2 Gm. each, in boxes of 20, 40c.; powder, in 100 Gm. cartons, 85c.; 1 lb. boxes.....\$1.20 (Schering & Glatz.)

**EXODIN.** Yellowish powder; a synthetic oxyanthraquinone derivative; tasteless, mild aperient in doses of 7 1/2 to 15 grains. 1 oz. vial, \$1.40; tablets, 7 1/2 grains each, 10 tablets in box, 80c.; 50 in bottle.....\$1.40 (Schering & Glatz.)

**FERRATIN.** Reddish-brown powder, slowly soluble in ordinary liquids, but readily in hot beverages. Used in anemia and chlorosis in doses of 7 1/2 grains three times daily. 1 oz. vial, 85c.; tablets, 7 1/2 grains, 50 in box, per box.....85c. (C. F. Boehringer & Soehne.)

**FERRATOGEN.** (IRON NUCLEINATE.) Grayish-yellow powder, obtained by growing yeast in a ferruginous medium; insoluble in water. Used in chlorosis and anemia in doses of 5 grains, three times daily. 1 oz. cartons, each.....90c. (C. Bischoff & Co.)

**FERRIPYRIN.** (FERRIC CHLORIDE ANTIPYRIN.) Orange-red powder, soluble in 5 parts of water, very soluble in alcohol, but insoluble in ether. A compound of ferric chloride and antipyrine. Styptic and analgesic when applied in solution or powder. Given internally in chlorosis and anemia as a hematinic in doses of 7 1/2 grains. 1 oz. tins.....\$1.50 (Victor Koesch & Co.)

**FERROPYRIN.** (Same as Ferripyrin, but made by Knoll & Co. and sold in 1 oz. cartons, \$1.40.)

THE IDEAL  
HAIR BRUSH.

U. S. Patented December 21 1896.

NOTHING LIKE IT ON THE MARKET.

Do not confound this brush with the rubber back wire brushes. It is entirely different. The "Ideal" has an Air-Cushioned Back and Genuine Siberian Bristles. It is the best selling brush on the market. Order through your jobber or direct from

**HENRY L. HUGHES,** Exclusive Licensee and Importer,  
Room 439, 78 Monroe St., American Express Bldg., CHICAGO, ILL.

Kindly mention AMERICAN DRUGGIST when writing to Advertisers.

**FLUORFORMOL.** (FLUORYL.) Colorless, tasteless liquid, a 2.8 per cent. solution of fluorform. Used in phthisis. Internally and externally; also in pneumonia, acting as an antiseptic. Dose, 1 tablespoonful four times daily. 1 lb. bot. ....\$1.00 (C. Bischoff & Co.)

**FLUORRHEUMIN.** Ointment composed of petrolatum, 10; lanolin, 85; difluordiphenyl, 4; fluorphenetol, 1. Used in rheumatism, sciatica and lumbago; dose by inunction, 4 to 5 Gm. Collapsible tubes, 20 Gm., 40c.; 40 Gm. ....75c. (C. Bischoff & Co.)

**FORTONE.** (METHYLENEDICOTOIN.) Yellow crystals, with slight cinnamon flavor, obtained through action of formaldehyde on cotone; insoluble in water, sparingly soluble in alcohol, ether and benzol; easily soluble in chloroform, acetone and alkaline liquids. Astringent antiseptic in protracted diarrhoeas of consumptives. Dose, 4 grains three times daily. 10 Gm. envelopes, each .....\$2.00 (C. Bischoff & Co.)

**GALLOGEN.** (ELLAGIC ACID.) Yellowish, tasteless powder, insoluble in all acid and neutral media, but soluble in alkaline solutions. Resembles tannic acid, being the astringent principle of divi-divi. Used in dysentery and diarrhoea. Dose, 10 to 15 grains for adults, 5 to 8 grains for children. 1 oz. cartons, 80c.; chocolate coated tablets, 8 grains each, 24 in box .....35c. (C. Bischoff & Co.)

**GEOSOTEL.** See Gualacol Valerate.

**GLUTOL.** (FORMALDEHYDE GELATIN.) Whitish, granular, insoluble powder; recommended as an antiseptic dressing for burns, cavities and suppurating ulcers. 1 oz. tins, 65c.; vials of 1/4 oz., with sprinkler top, each .....25c. (Schering & Glatz.)

**GUAETHOL.** (AJACOL; THANATOL.) Oily liquid, or purer in crystals resembling thymol, insoluble in water. Succedaneum for gualacol. Allays pain by direct application. Dose, 4 to 8 minims. 1 oz. vials. ....\$1.40

**GUALACOL VALERATE.** (GEOSOTA.) Yellow, oily liquid; a combination of gualacol and valerianic acid, having the characteristic odor of the latter. Insoluble in water, soluble in alcohol and ether. Said to be useful in tuberculous and chlorosis and as intestinal antiseptic in doses of 3 to 10 minims three times daily. 3 minim capsules, per 100 .....\$2.10

**HEDONAL.** White, crystalline powder, insoluble in water, but soluble in alcohol, chloroform and ether; best administered as a dry powder. Given in mild forms of insomnia as a hypnotic in doses of 15 to 80 grains. 1 oz. bot. \$1.50 to \$1.60 (Farbenfabriken of Elberfeld Co.)

**HELMITOL.** (HEXAMETHYLENETETRAMINE-ANHYDROMETHYLENE CITRATE.) Colorless crystals, freely soluble in water; insoluble in alcohol and ether. Urinary antiseptic in cystitis, phosphaturia, urethritis, etc., in doses of 15 grains, three or four times daily; liberates formaldehyde in the urinary tract. 1 oz. bot. ....60c. (Farbenfabriken of Elberfeld Co.)

**HEMICRANIN.** White powder; a mixture of 5 parts phenacetin, 1 part caffeine and 1 part citric acid, used in migraine, headaches, intercostal neuralgia and sciatica, in doses of 5 to 10 grains. 1 oz. cartons, per oz. 90c. (Farbenfabriken of Elberfeld Co.)

**HEROIN.** White, crystalline powder, difficultly soluble in water, but readily so in alcohol and in water to which a little acetic acid has been added; in-

compatible with alkali carbonates. Substitute for morphine, of which it is the diacetic acid ester, in doses of 1-24 to 1-12 grain; used for relief of cough and dyspnoea in phthisis pneumonia, etc. 15 grain vials, 23c. per vial; 10 vials, 15 grains each, 18c.; 1/4 oz. vials, per oz., \$5.15; 1 oz. vials, per oz., \$4.85 (Farbenfabriken of Elberfeld Co.)

**HEROIN HYDROCHLORIDE.** (WATER SOLUBLE SALT OF HEROIN.) White, crystalline powder, used in same indications as heroin, but is adapted for hypodermic injections. The dose and prices are the same as those of hero's.

**HIPPOL.** (METHYLENE HIPPIRIC ACID.) Colorless, prismatic crystals; sparingly soluble in water; urinary antiseptic in bacterial diseases of the urinary tract. Dose, 22 1/2 grains. 1 oz., \$1.50; 20 tablets in box .....\$1.10 (Schering & Glatz.)

**HOLOCAINE HYDROCHLORIDE.** White, crystalline powder, difficultly soluble in cold (1 in 75), but readily so in hot water. Chemically para-dihydroxyethenyl-diphenyl-amidine hydrochloride, produced by combination of phenacetin and para-phenetidin. Antiseptic and germicidal in 1 per cent. solution. Used entirely as anæsthetic for operations on the eye, a 1 per cent. solution being equal to 2 per cent. cocaine solution. 1 Gm. vials, 35c.; 5 Gm. vials, per Gm., 30c.; 1 oz. vials, per oz. ....\$7.00 (Victor Koechl & Co.)

**HYRGOL.** (COLLOIDAL MERCURY.) Dark solid body, fairly soluble in cold water, insoluble in alcohol and ether; used in syphilis as 10 per cent. ointment by inunction, and pills and tablets internally. Dose, 1/2 to 1/4 grain thrice daily. 1 oz. vials. ....80c. (Schering & Glatz.)

**ICHTHARGAN.** (ICHTHYOL SILVER; SILVER ICHTHYOL SULFONATE; SILVER THIO-HYDROCARBOSULFONATE.) Brown powder containing 80 per cent. silver; soluble in water and glycerin. Used in urinary diseases in injections of 1 to 500 and 1 to 3000 in water; in diseases of the eye, as trachoma, by brush applications of 1 to 3 per cent. solutions. Dose, 1-24 to 1-12 grain in water. 1 oz. vials, \$3.00; 1/4 oz., \$3.10; tablets, 5 grains, 100 in bottle .....\$1.00 (Merck & Co.)

**ICHTHOFORM.** (ICHTHYOL FORMALDEHYDE.) Blackish-brown powder, insoluble in water. Used externally as succedaneum for iodoform. Internally as intestinal antiseptic in the diarrhoea and intestinal disorders occurring in tubercular diseases, and in typhoid fever and dysentery. Dose, 15 to 30 grains three or four times daily, in powder or capsules. 1 oz. vials. ....\$1.00 (Merck & Co.)

**IODOFORMOGEN.** Light yellow powder, odorless in use; combination of iodoform and albumin, insoluble in water; used as a dressing for wounds. 1 oz. cartons. ....55c. (Knoll & Co.)

**IODIPIN.** (IODIZED SESAME OIL; IODINOL.) Thick, yellow oil, odorless and of oily taste, made similarly to bromipin by repeated iodisation of sesame oil by means of iodine monochloride in alcoholic solution; insoluble in water and alcohol, soluble in ether and chloroform. Made in two strengths, 10 per cent. iodine and 25 per cent. iodine, respectively, the former for internal and the latter for hypodermic use. On unspecified orders the 10 per cent. strength is supplied. Used in all cases where iodine and iodides are indicated; hypodermically in syphilis. 10 per cent. strength, 1 lb. bottles,

## To The Wide . . . Awake Pharmacist

As the Hay Fever Season will soon be upon us, it is well to see that you carry in stock a sufficient supply of **FORMALDEHYDE-KELENE** tubes, so as to be ready to meet the increased demand which will follow our advertising it to the medical profession this season.

We also furnish "**GRADUATED KELENE**" in tubes for general anæsthesia, also put up for use as a local anæsthetic.

Write for our Reference Book, which not only describes the above mentioned product, but other preparations of interest to you.

New York.

Inquire about the "**TORSION**" Laboratory Scale. Just Out

\$3.65; ¼ lb., \$3.90; 1 oz. vials, 28c.; 20 per cent., 1 lb. bottles, \$8.25; ¼ lb., \$8.30; 1 oz. vials, .65c. (Merck & Co.)

**IODOTHYRINE.** Whitish powder, representing the active principle of the thyroid gland, combined with sugar of milk. Alternative in goitre, myxedema, obesity, psoriasis, menstrual disorders of women, etc., in daily doses of 15 to 30 grains. Powder, in ¼ oz. vials, per oz., \$3.90; 1 oz. vial, \$3.40. Tablets, 5 grains, each, vials of 25, per vial, \$1.00; 100 ..... \$3.90 (Farbenfabriken of Elberfeld Co.)

**IOTHION.** Syrupy, yellowish-brown liquid, difficultly soluble in water, easily soluble in alcohol, ether, benzol and chloroform; miscible with petrolatum and with anhydrous lanolin, which takes up twice its weight of Iothion. Organic compound of iodine, of which it contains 79 to 80 per cent. Applied in form of ointment by inunction as a substitute for potassium iodide in doses of 30 to 60 grains a day. 1 oz. bot., per oz. .... \$1.10 (Farbenfabriken of Elberfeld Co.)

**IRON TONOL.** (IRON GLYCEROPHOSPHATE.) Powder; soluble in water; tonic, nerve nutrient. Dose, 3 to 10 grains. 1 oz., 85c.; 1 lb. .... \$3.50 (Schering & Glatz.)

**ISOPRAL.** White crystals, soluble in water up to 3 per cent. and easily in alcohol and ether. A nondepressing substitute for chloral in doses of 7 to 15 grains, indicated in all forms of sleeplessness in which chloral is employed. Powder, in 1 oz. bot., per oz., \$1.40; 8 grain tablets, bottles of 100, \$3.00; 15 grain tablets, tubes of 20 ..... \$1.40 (Farbenfabriken of Elberfeld Co.)

**KRESAMINE.** Clear, watery liquid, representing a solution of trikresol, 25 per cent., and ethylenediamine, 25 per cent.; soluble in 3 parts of water, and in all proportions of glycerin; antiseptic and sedative to inflamed tissues. 1 oz. .... \$1.00 (Schering & Glatz.)

**KRYOFINE.** White, granular crystals, sparingly soluble in cold water (1 in 600); freely soluble in alcohol and ether. A compound of parphenetidin and methylglycolic acid. Antipyretic and antineuralgic in doses of 4 to 7½ grains. 1 oz. cartons, powd., \$1.00; tablets, 4 or 7½ grains, per oz. .... \$1.00 (C. Bischoff & Co.)

**LACTOPHENIN.** (LACTYL-PARAPHENETIDIN.) Small, white crystals, soluble in 330 parts of water. Differs from phenacetin in containing a molecule of lactic acid in place of acetic. Antipyretic and analgetic in doses of 4 to 8 grains. 1 oz. cartons, each, .... \$1.00 (C. F. Boehringer & Soehne.)

**LENIGALLOL.** (PYROGALLOL TRIACETATE.) White, crystalline powder, insoluble in water, possessing the same reducing properties as pyrogallol and used in acute and chronic eczema as ointment. 1 oz. vials ..... \$1.00 (Knoll & Co.)

**LYCETOL.** (DIMETHYLPIPERAZINE TARTRATE.) White powder, readily soluble in water. Urlic acid solvent, antirheumatic and diuretic in doses of 5 to 10 grains three times daily. 10 Gm. vials, \$1.50; ¼ oz., ½ oz., 1 oz. cartons, per oz. .... \$4.25 to \$4.40 (Farbenfabriken of Elberfeld Co. and Schering & Glatz.)

**LYGOSINE.** (SODIUM LYGOSINATE.) Glossy, greenish crystals; a condensation product of salicylaldehyde and acetone; readily soluble in water, forming ruby red solutions. Non-irritant substitute for alver as urethral injection in gonorrhea, 5 per cent. strength. 10 Gm. vials ..... 85c. (C. Bischoff & Co.)

**LYSIDIN.** (ETHYLENE-ETHYLDIAMINE HYDROCHLORIDE.) Pale yellowish liquid, containing 50 per cent. of pure lysidin, the substance itself being very hygroscopic. Used in acute gout and uric acid diathesis in doses of 10 to 30 minims. 1 oz. vials ..... \$1.75 (Victor Koechl & Co.)

**MARETIN.** White, glistening crystals, very sparingly soluble in water (1 to 1050). Antipyretic, being a methyl acetanilid with a urea nucleus in place of the acetyl group. Dose, 3 to 5 grains. 1 oz. cartons, per oz. .... \$1.25 to \$1.40 (Farbenfabriken of Elberfeld Co.)

**MERCUCOL.** (Brownish powder, soluble in water; insoluble in alcohol; a chemical combination of nucleic acid and mercury, containing 10 per cent. of the metal. Does not coagulate albuminous liquids. Applied to ulcers and suppurating mucous membranes in from ¼ to 5 per cent. solution, or in ointment. ¼ oz. vials, per oz., \$1.60; 1 oz. vials ..... \$1.50 (Parke, Davis & Co.)

**MESOTAN.** (METHYLOXY-METHYLESTER OF SALICYLIC ACID.) Clear, yellow fluid, insoluble in water, but miscible with alcohol, ether and fixed oils. External application mixed with equal parts of olive oil in muscular and articular rheumatism, pleuritis and gout. 1 oz. bot., 47c.; 25 oz. lots, 42c. (Farbenfabriken of Elberfeld Co.)

**NARGOL.** Brownish powder, readily soluble in water. Compound of silver and nucleic acid containing 10 per cent. of the former; does not coagulate albumen. Used in gonorrhea, conjunctival and other pyogenic inflammations. ¼ oz. vials, per

oz., \$1.80; ¼ oz., per oz., \$1.75; 1 oz. .... \$1.70 (Parke, Davis & Co.)

**NEODERMIN.** Ointment containing lanolin, 85; petrolatum, 10; difluordiphenyl, 4; fluoropseudocumol, 1. For ulcerated surfaces, burns, etc. Collapsible tubes, Gm. 20 and Gm. 40, each, .... 40c. and 75c. (C. Bischoff & Co.)

**NOVARGAN.** (SILVER PROTEINATE.) Fine yellow powder containing 10 per cent. of metallic silver, readily soluble in water. Used as injection in gonorrhea; is very penetrating and free from irritating effects upon mucous membrane. 1 oz. vials, ..... \$1.40 (Heyden Chemical Works.)

**OLEOCREOSOTE.** Pale brown, oily liquid combination of beechwood creosote, 33 per cent., with oleic acid. Used in affections of the respiratory organs, tuberculosis, etc. Dose, 10 to 30 minims. oz., .65c. (Schering & Glatz.)

**OREXINE TANNATE.** (PHENYLDIHYDROQUINAZOLINE TANNATE.) Yellowish powder, tasteless and odorless; insoluble in water, slightly soluble in dilute acid solutions, readily so in hydrochloric acid. Should not be prescribed with preparations of iron. Used in anorexia (lack of appetite) as stimulant of gastric secretion; in seasickness and vomiting of pregnancy. Orexine base is no longer on the market. Dose, 8 to 12 grains two times daily, in powder or in tablets. 1 oz. vials, \$1.00; orexoids, Merck's tablets, 4 grains, 50 in bottle ..... 55c. (Merck & Co.)

**ORPHOL.** (BETA-NAPHTHOL BIS-MUTH.) Odorless and tasteless fawn colored powder, insoluble in water; consists of 80 per cent. bismuth oxide and 20 per cent. beta-naphthol. Intestinal antiseptic in doses of 5 to 15 grains three or four times

A large Lithograph, 14 x 21, in seven colors, of the above Rough on Rats illustration (Household Troubles), which has convulsed the world with laughter, with comic descriptive verses, mailed free to any address. E. S. WELLS, Jersey City, N. J., U. S. A.

**Unbeatable Rat Exterminator** Equally effective against Mice, Roaches, Ants and Bed Bugs.

**ROUGH ON RATS**

Cockroach or Beetle. Fools the Rats, Mice and Bugs, but never disappoints or fools the buyer. Used 30 years.

**Rough on Roaches** (non-poisonous) ..... 15c, 25  
**Rough on Fleas** (powdery), for dogs, etc. .... 25c  
**Rough on Fleas** (liquid), cans, household ..... 25c  
**Rough on Bed Bugs** (liquid) ..... 15c, 25c

All above at druggists; they are too heavy and too low priced to go by mail or express.

La preparación "Rough on Rats" es un exterminador de ratas insuperable, eficaz también para ratones, cucarachas, sabandijas, hormigas y chinches. Se emplea en los Estados Unidos desde hace treinta años. Se enviará a la dirección que se indique una litografía de la ilustración de arriba, 14 x 21, en siete colores. También fabricamos otras preparaciones semejantes que los droguitas pueden vender fácilmente. Invitamos a los lectores de este anuncio en el extranjero a que nos pidan precios y condiciones. Se venden estas preparaciones por los tratantes al por mayor de Nueva York.

each, \$3.75; 10 grain tubes, \$2.50; 5 grain tubes.....\$1.25

**SILVER CITRATE.** (ANTISEPTIC CREDE; ITROL.) White powder, soluble about 1 in 4000 of water. Recommended in Cr  de's treatment as an antiseptic for wounds, in lotion, ointment, or powder. For disinfection of hands, skin and instruments, 1 to 1000-5000 watery solution; as gargle 1 to 5000 to 10,000; in gonorrhoea, 1 to 8000. Oz. ....\$1.20 to \$1.25 (Schering & Glatz and Merck & Co.)

**SILVER LACTATE.** (ACTOL.) Whitish powder, soluble in 15 parts of water; recommended in solution 1 in 200 to 1000 as an antiseptic for surgical use.    oz. and 1 oz. vials, per oz., \$1.80; tablets, 3 grains, boxes containing 5 vials of 10 tablets, per box.....\$1.15 (Schering & Glatz.)

**SIROLIN.** (SYRUP OF THIOCOL.) Syrup solution of thiochol, containing 6 grains of thiochol in each teaspoonful, 4 oz. bot., per doz. ....\$8.00 (Hoffmann-La Roche Chemical Works.)

**SOMATOSE.** Light yellow almost tasteless powder, easily soluble in water, prepared from meat and consisting of dextro and hetero albumoses. Nitrogenous food product for the sick and convalescent. Dose for adults, 90 to 180 grains daily; for children, 50 to 100 grains. 2 oz. tins, per doz., \$8.25;    lb. tin, per lb., \$5.25;    lb. tin, per lb. ....\$5.00 (Farbenfabriken of Elberfeld Co.)

**SOMNOS.** (CHLORETHANAL ALCOHOLATE.) Clear liquid, miscible with water, produced by the synthesis of chloroethanal with a polyatomic alcohol radical. Hypnotic and cerebral sedative in doses of from 2 to 4 fluid drachms. Pint bottles, \$1.10 per pint; \$12.00 per doz.; 4 oz. bottles, per doz. ....\$4.00 (H. K. Mulford Co.)

**STOVAINE.** (AMYLENE HYDROCHLORIDE.) White crystalline powder, readily soluble in water and in methyl alcohol; less soluble in ethyl alcohol and almost insoluble in ether. A substitute for cocaine, approximately one-fifth less toxic. Aqueous solutions are slightly acid and bitter to the taste. Put up in solutions of various strengths,    per cent., 1 per cent., 10 per cent., in tubes; tablet triturates,    grains each; pastilles, 3-100 grain each. Original packages, 1 oz.,    oz. and    oz. bottles, per oz. ....\$4.00 (Walter F. Sykes & Co.)

**STYPTICINE.** (COTARNINE HYDROCHLORIDE.) Yellow amorphous powder, the salt of an opium base (cotarnine is a product of the oxidation of narcotine), soluble in water and alcohol. Because of its chemical resemblance to hydrastrine, it being methoxyl-hydrastrine, it is recommended in all forms of uterine hemorrhage. Used in functional dysmenorrhoea and in the menorrhagia of puberty and the climacteric. Dose as styptic,    to 4 grains; as needed, per oz. or by injection (10 per cent. solution). Sugar coated tablets,    grain, per tube of 20, 35c.; 1 oz. bottles, per oz., \$7.50;    oz. bottles, per oz., \$7.80;    oz., per oz., \$8.00; 15 grain vials, each, 40c.; hypodermic tablets,    grain, per box of 40 (4 tubes) .....75c. (Merck & Co.)

**STYPTOL.** (COTARNINE PHTHALATE.) Yellow, crystalline powder, readily soluble in water. It is the phthalate salt of an opium base. Recommended in uterine hemorrhage in doses of    to    grain internally or hypodermically. 1 oz. vials, \$6.50;    oz., per oz., \$6.75;    oz., \$7.00; 15 grain vials, per vial, 35c.;    grain tablets, bottles of 100, per bot. ....\$1.20 (Knoll & Co.)

**STYRACOL.** (GUAIACOL CINNAMIC ESTER.) White granular crystals, insoluble in water, readily soluble in alcohol; contains 85 per cent. of guaiacol. Given in phthisis, catarrh of the stomach and intestines and in gonorrhoea in doses of 5 to 15 grains thrice daily. 1 oz. cartons, \$1.20; 5 grain tablets, bot. of 100.....\$1.40 (Knoll & Co.)

**SUBLAMINE.** MERCURIC ETHYLENE-DIAMINE SULPHATE.) Crystalline powder, containing 43 per cent. of mercury; very soluble in water. Used in solutions of 1 to 1000 as a substitute for corrosive sublimate. 1 oz. vials, 50c.; tablets, 15 grains, 100 tablets in bottle, \$1.10; 20 tablets in tube, 5 tubes in box.....\$1.30 (Schering & Glatz.)

**TANNALBIN.** (TANNIN ALBUMINATE.) Pale brown, insoluble, tasteless powder, containing about 50 per cent. of tannin. It is not affected by the gastric juice, but is split up in the intestinal canal; hence is used as intestinal disinfectant and for diarrhoea. Dose, 15 to 30 grains three to five times daily. 1 oz. cartons, 85c.; 5 grain tablets, bot. of 100.....\$1.00 (Knoll & Co.)

**TANNIGEN.** (ACETILTANNIN.) Grayish powder, insoluble in water, soluble in alcohol; incompatible with alkalies which decompose it. Intestinal astringent in chronic diarrhoea and intestinal diseases of children. Adult dose, 3 to 10 grains, three to six times daily; children, 1-3 to    that quality. 1 oz. bot., per oz. ....55c. to 75c. (Farbenfabriken of Elberfeld Co.)

**TANNOPINE.** (HEXAMETHYLENETETRAMINE TANNIN.) Brownish powder, insoluble in water, decomposed by alkalies; compound of tannin and urotropine, containing 87 per cent. of tannic acid. Intestinal astringent and disinfectant.

Adult dose, 10 to 15 grains; children, 3 to 8 grains four times daily. 1 oz. cartons, per oz. ....55c. to 75c. (Farbenfabriken of Elberfeld Co.)

**TESTADEN.** Powdered extract of the testicle juice of animals. Used in impotency, anemia with irregular menses, diabetes and uraemia. Dose, 15 grains three to four times daily. 1 oz. vials, \$1.30; 4 grain tablets, bot. of 100.....\$1.80 (Knoll & Co.)

**THEOBROMINE.** White crystalline powder, almost insoluble in cold water or alcohol; organic base obtained from seeds of *Theobroma cacao*. Diuretic in dropsy of cardiac and renal affections. Dose, 5 to 8 grains. 1 oz. bot., per oz. ....90c. (Farbenfabriken of Elberfeld Co.)

**THEOBROMINE - SODIUM - SALICYLATE.** White powder, very soluble in water, decomposed by acid solutions. Diuretic in dropsy of cardiac and renal origin. Dose, 7 to 15 grains. 1 oz. bot., per oz. ....60c. (Farbenfabriken of Elberfeld Co.)

**THEOCIN.** Fine, colorless crystals; synthetic alkaloid of tea (theophylline); difficultly soluble in alcohol and cold water, more easily in warm water; forms salts with alkalies. Powerful diuretic in doses of 3 to 6 grains, two to three times daily.    and 1 oz. bot., per oz. ....\$2.50 to \$2.70 (Farbenfabriken of Elberfeld Co.)

**THEOPHYLLIN.** White crystalline needles, soluble in 225 parts of water. Identical with theocine, being the synthetic alkaloid of tea. Diuretic in doses of 4 to 8 grains. 1 oz. vials, \$1.40. Theophyllin sodium, 1 oz. vials, \$1.50. Theophylline sodium salicylate, 1 oz. vials .....\$1.10 (C. F. Boehringer & Soehne.)

The Ammonol Chemical Co., MANUFACTURING CHEMISTS New York City.

#### AMMONOL AND COMBINATIONS.

Ammonol Powdered.  
Ammonol Salicylate Powdered. In one-ounce bottles only.  
Ammonol Tablets.  
Ammonol Salicylate Tablets.  
Ammonol Lithiated Tablets.  
Ammonol Peptonate Tablets.  
Ammonol Bromide Tablets.  
Ammonol Camphorated Tablets.  
Ammonol with Camphor and Codeine Tablets.  
Ammonol with Ipecac and Opium Tablets.  
In five-grain flat oval tablets, put up in one-ounce bottles.
